—A few days ago Mr. Samuel P. Kidder, Superintendent of Locks, caught in the Merrimac River, at Manchester, at a salmon weighing eight pounds, the first caught in that river for thirty years.

Bridgeport, June 25, 1877.—We are just now between haying and grain as regards the fishing here about. A few weak-fish and blue-fish have been taken. Two fine salmon were caught in the Housatonic River, at Stratford, a few weeks since, weighing 9 and 11 pounds, and were sold here for 65 cents per pound. They were caught in a shad seine. This was a general surprise to every one. Anglers are patiently waiting till the close season ends for black bass. A week since I had fine sport fly-fishing for shad at the Derby Dam, on the Housatonic River. They have been taking the white miller fly very well along back—made better than they did last season. G. H. J.

Kingston, June 18.—I have just returned from a two weeks camp out at the head of the Rondout and a tramp up the Neversink. Met Judge Gildersleeve and a number of sportsmen friends, while there. The trout fishing is very fine; caught any quantity of the speckled beauties while there. Tried to preserve a mess for the editor of FOREST AND STREAM, but they were spoiled before I reached home. I am sorry to tell you of the death of old Benny Peters, one of the oldest sportsmen of Ulster County. He died at his home in Bloomingdale on Sunday last. While on the Roundout we tried a new kind of bait, to-wit: the seventeen-year locust, which are swarming through here very thick just at present. The trout went for them like a thousand of brick. OUR HARRY.

Malone, June 11.—We are in the midst of one of the best trouting seasons I have yet seen, and from all points come basketfuls of the shining beauties to gladden the stomachs of cruel man in their delicious crispiness.

One needs travel but few miles on any of our well appointed road running southerly toward the Adirondacks, to encounter the miniature cascades tumbling across his pathway.

Hitching your team, or, better still, accepting the invitation of an hospitable granger to "hev your horse put up," tuck trousers into your boots, turn brim of hat over your eyes, seize rod and flask, follow the foaming brook, and the thing is—well—commenced. Such is the programme of an afternoon's angling in immediate vicinity.

To such of us as "slip out for a day," I know of no better water to wet line than Hatch Brook, distant eight miles from town.

Suppose we are journeying further toward those towering mountains that ever bid us welcome, and purpose casting line in fair Meacham—blushing, dimpled, shadowy Meacham, then, reader, if such ever be your fate, you will not have lived in vain.

Rising Studley Hill, 15 miles from Malone, a grand panorama suddenly spreads out and surrounds you, as if by magic; and if our departure from town is timed to arrive at the summit by sunrise, pen nor brush can paint the loveliness of this enchanting view of fairyland.

But we do not linger, for already—the soul being filled—we "scent the battle afar," and know that mine host, William Ayers, is superintending, in his masterly style, one of those "Adirondack breakfasts," through the dispensing of which he has become justly famous.

On a level plateau of one and a half miles—a curious geographical formation in this mountainous region—our genial friend William has reared an elaborate hotel, attractive to the eye on the exterior and equally so to the inner man while forgetting life's sorrows indoors.

The "Duane House" is destined to become a favorite resort. Good fishing abounds handy by, and the new fledged landlord can point out the best spot every time.

On again—we suddenly pull up at Woodford's—shake a friendly hand with "Uncle Henry," who, by the way, has oft been heard in song and story, varying but little from the departed "Benny havens O!"

Seven miles to the lake, and off we roll, up hill and down through dense woods, finally reaching Carpenter Hill, where a halt is invariably made for a magnificent view of this circular bit of shimmering water. Banks timbered to the very edge, barely allowing roadway along the sandy beach to our rendezvous.

Half hidden in a grove of gigantic pines, we catch a glimpse of the house—a commodious "wing," under which many a time and oft wearied by a day's wading in the outlet, have I sought the downy comfort of this overspreading wing."

As we rein up, we are met by "Lou," our time-encrusted friend and host, glad to see us and eager to have us eat. But, no! the mountains Ayers has filled us up already, and we can but feebly say, "No, Fuller."

Ho, for the "Old Bridge!" and having taken up our favored claim by right of discovery, trout succeeds trout, basket filled and several strings, also, we rejoin the "little boat" and paddle triumphantly homeward. Supper announced, and being less inflated with oxygen than eight hours previously, we summon our waning strength, and suffer ourselves to be thrust into position at all hazards.

We struggle heroically with the third dish of untamed straw berries, while we intimate with failing voice and gesture to sympathetic Lou that "Doubtless God might have made a better berry than the S. B., but doubtless He never did."

After supper, more smoke, and with half closed eyes we watch the fading rays of a warm day's sun. But why dilate, "Those whom the gods love, die early," I'm told. H. E. CANTWELL.

NEW JERSEY.—*Kinsey's Ashley House, Barnegat Inlet*, June 23.—Sheepshead biting only middling. For the week the average would be about 50 per day taken from the grounds. Best catch by one man, 20. A sheepshead weighing 17½ pounds was caught by C. Grim, and bought by Gov. Hartranft, of Penn., the largest fish of the species ever known to be taken here.

Bluefish are still plenty, but do not take the squid well. Chas. Ott & Co., of Philadelphia, 33, 17 of which averaged 7 pounds. J. E. Soule and E. C. Prosser, Philadelphia, 38, 12 of which average 8 pounds. B. E. Miller & Co., 20.

Blackfish and sea bass biting better. Wm. Young took some 30 odd on one slack water. B.

MICHIGAN.—*Grand Rapids*, June 22.—A few of my friends came down the other night with fifteen hundred brook trout, after two days' fishing on the Jordan. The party consisted of J. B. Mullikin, Gen'l Sup't D. L. & W.; S. Keeler, Gen'l Sup't F. & A. M.; Josh Tuttle, a Saginaw horseman, and five others. J. H. P.

—William H. Holabird, Esq., of Valparaiso, Indiana, returned from the River Jordan on June 22. He reports the streams alive with trout. He averaged 100 fish to his rod for each day's fishing.

FISHING IN WISCONSIN.—A Chicago correspondent, "Rob Roy," writes:

Messrs. A. B. Chamberlain and M. Riley, of the party which on Thursday last left the city on an excursion to Butternut Creek, on the line of the Wisconsin Central Railway, near Ashland, returned home this morning. During one-half

day of trolling the two gentlemen named captured seven muskallonge, whose aggregate weight tipped the scale at 105 pounds. As for pike and fish of like comparatively small variety, they report that there is no limit to the quantity which may be taken. Speckled trout are also numerous in streams nearer the lake, 25 pounds having been taken during a half day of fishing. The gentlemen of the party express special obligation to Conductor Rhodes, of the Wisconsin Central, and also to H. C. Matthews, station agent at Butternut creek. They pronounce the section visited, unmistakably the paradise of fishermen in the northwest, and I "know how it is myself." I have been there, and I saw one of our party wrestle with a muskallonge that measured almost four feet in length, and a wall eyed pike that measured twenty-eight inches. You are safe in calling it "Fisherman's Paradise"—it is the best fishing south of Lake Superior. ROB ROY.

THE TROUT STREAMS OF THE AROOSTOOK.

PRESQUE ISLE, Me., May 27, 1877.

In looking over the map of Maine I was favorably impressed with the great watershed of the St. John's, in northern Aroostook, and resolved to pay it a visit. It being *terra incognita*, I had no recourse but maps, railroad guides, and correspondence with postmasters in the backwoods' towns, which has resulted very happily thus far, and landed me 180 miles from home at this place, where I lay over one day to rest and gather more facts and details for the remaining fifty miles I propose to go. In view of the principle that "He who causes two blades of grass to grow where one grew before is a benefactor to his race," I intend to deserve the good wishes of brother anglers by giving the results of my trip, together with such details as may be needed. My first stop was, for a few days, at Boston, where at Anthony's and Lovell's I replenished my tackle. While at the "Hub" I enjoyed the society of such sports and crack shots as Abbott, Hunt, Nichols and Tucker, and with the first-named gentleman visited the Braintree meadows to witness the working of his famous pointer Jack on snipe. A brief hour also at the place of the genial Schaeffer, viewing his nice guns and listening to intelligent descriptions of their manufacture, was pleasantly and profitably spent. Finally at 8 o'clock P. M., I took a berth in a Pullman sleeper, at the Eastern R. R. Depot, arriving at Bangor next morning, 15th, at 7:30 A. M. At 8 I stepped on board train of European and North American R. R., arriving at noon at Vanceboro, changing cars after dinner for McAdam Junction, on the line of New Brunswick and Canada R. R. Thence to Debeck Junction and changed cars again for Houlton, where I arrived at 5:30 P. M., putting up with Philbrook at the Snell House. A good table, courteous and attentive servants, and the very reasonable terms of $1.50 per day well recommends it.

Thirty miles from there is Rocky Bemey Lake, reached by livery team over a good road. During the evening two residents came in with the result of one day's fishing—41 trout, weighing 42 lbs, several turning the scale at over two pounds each. The lake, I am informed, is but little fished. Before reaching Houlton, and between McAdam Junction and Debeck, is a wilderness lake, said to be the best trout fishing in the Provinces. A fine string of twenty, taken the day previous, were seen, running from one to four pounds. The lake is about one mile from the track, not in sight, and fitted with fair camp and boat—a birch—by the owner of the lake, —— Stewart, Supt. of N. B. & C. R. R., who lives at St. Stephen. He, in company with a few friends, fish there two or three times in a season, and that is about all the fishing there is done there.

Wednesday, 16th, left Houlton by stage, at 8 A. M., for this place, distant forty-two miles, arriving at 5:30. The Presque Isle House is kept by George Whitney, a man of aldermanic proportions, whose avoirdupois is a living advertisement of his table, and one of the most accomplished followers of "gentle Isaak." What he does not know about trout and trouting is hardly worth knowing. His fit-up with rods made by Leonard of Bangor, and other tackle, is large and beautiful, and last night was far spent in listening to his experiences with *Salmo fontinalis*. At three several times last summer he landed five fish at a time with a cast of five flies, thirty-six pounds being the aggregate, or twelve pounds at each cast. He relates that two years ago, at the same place —Squaw Lake, fourteen miles distant—he took eighty trout in thirty minutes, estimated to weigh 200 lbs, several of four pounds and upwards. I find his statements verified by reliable business men here in the place. Besides, I have conversed with many others in the vicinity, all of whom give the same account of the vast resources of these waters for trout. Rocky Bemey Lake before mentioned is accessible by team, same distance as from Houlton. That and Squaw Lake is furnished with boats and camps. Any one stopping at the P. I. House will be aided in every detail necessary for the enjoyment of sport by the landlord and assistants, the former delighting in the sport, and ready at all times to attend parties free of expense for time. Hotel terms, $1 per day, and good enough too. Expense of travel—Boston to Houlton, through tickets, $10; sleeping car, $2. Houlton to P. I, $3. When I reach my objective point will write again. CORR'L LOT WARFIELD.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

E. B. J., Wilmington, Del.—Can you give me the name of the maker of paper boats? Ans. Waters & Son, Troy, N. Y.

H. S., Austin, Minn.—Is there a book printed explaining the different strain of setters? Ans. Yes. See Hallock's Sportsman's Gazetteer. We can furnish it.

F. B., Jr., Wilmington, Del.—Can you give me the name of the maker of paper boats? Ans. Waters & Son, of Troy, N. Y.

H. W. A.—There is no American bird known as chaffinch, which is a British bird. The Latin name is *Fringilla cælebo*.

W. Q. N. Y.—For snipe shooting go to Good Ground, or Great South Bay, L. I. Take South Side Railroad to Babylon, Islip, or Pon Quogue. William Lane and Orville Wilcox furnish all necessary outfit at Good Ground.

J. T. M., New York.—Can you tell me whether I can get good black bass fishing in Greenwood Lake, and whether there is a good house at which gentleman and wife could put up? Ans. Fair bass fishing and two excellent houses.

A. K. F., Sing Sing.—There is a dispute among sportsmen here as to when the close season on woodcock and quail will expire. Please answer definitely. Ans. Woodcock between Feb. 1 and Aug. 1, and quail to Nov. 1.

E. H. R., New York.—Is there any snipe shooting (bay birds) in season at Martha's Vineyard, and if so, what part of the island is the best? Ans. Yes, we presume about Gay Head would prove a good locality.

T. B. D., Hoboken, N. J.—Where can I buy a good retriever pup, a cross between a water spaniel and a Newfoundland? Ans. Best way is to advertise.

L. D. S., Germantown.—Can any kind of game be shot or fish be caught in the vicinity of the Bushkill River in the northeastern part of Pennsylvania in the month of July? Ans. Woodcock July 1st and, black bass on and after August 1st. Trout, perch, pike in season now,

Boss, Philadelphia.—Please inform the writer if when shooting at glass balls from a Bogardus trap it is usual for the balls to break after being hit while in the air, or when they reach the ground. Ans. The balls must be broken in the air to score.

C. H. N., Cranston, R. I.—To whom should I write in New York, or any other city, to know what alligator hides are worth, if anything? Does Mahrenholz, of New York, buy them? Ans. Alligator hides of large size are worth $8. We think Mahrenholz buys them?

F. H., Turner Junction.—Please give me some instructions regarding the construction of an aquarium? What size would look best for a parlor ornament? Is not 12x22 inches a good proportion? Where can I obtain a work upon the manner of making same? Ans. Full particulars given in our paper of July 8, 1876, with illustrations. The size you give would be very pretty.

T. D. R., Staunton, Va.—A short time since I broke the left hand hammer of my gun. I want a new one. Can I get one ready made in this country? The gun is a breech-loader. Ans. Send drawing of size of hammer to any one of the gun dealers that advertise in our columns.

Z. McD. M., Phillipsburg, Pa.—Your specimen is a hemipterous bug belonging to the family *Nepidæ*, a group which dwell chiefly in the water, though often leaving it for short flights. They are predacious, feeding on other insects. Your specimen belongs to the genus *Belostoma*, which is widely distributed throughout North America. Some of its relatives are the cicadas the aphides, squash bugs, chinicbas or bed bugs, etc., etc.

C. H. S., Marshall, Texas.—Be kind enough to tell me the price per bag in New York of the English hard shot made at Newcastle, the nearest corresponding size of Tatham's New York shot, and of whom the English shot can be purchased? Ans. Chilled shot, to be obtained from Henry C. Squires, No. 3 Cortlandt street. No. 2 English shot and No. 3 Tatham are nearly the same size; price $3.50 per bag.

E. R. L., Bethel, Conn.—What is the most direct route and the fare to the Rangeley Lakes via the White Mountains? What game is found there? Ans. Go by Eastern Railroad from Boston to the White Mountains; fare, $5. $3.50. From Mount Washington via stage to Gorham, rail to Dixville Notch, stage to Middle Dam Camp, fare $10. The gunning is for deer, caribou, bears, foxes, etc.; geese, ducks, woodcock, partridges, pigeons and others.

C. B., Shakapee, Minn.—Please name the nearest point in or to this State where I could purchase a well-bred red Irish setter dog or pup, and name the breeder or owner? Do owners or breeders of dogs in the Eastern States guarantee to purchasers the safe delivery of a dog, or has the purchaser to stand the risk? Ans. Look in our advertising columns. Don't think seller would guarantee.

G. N., New York.—Please give me the names of four or five of the best imported English setter dogs now in this country. As it is only for breeding, pedigree is everything. Ans. Address any of the following: Westminster Kennel Club, city; L. II. Smith, Strathroy, Ont; Arnold Burges, Hillsdale, Mich.; M. Von Culin, Delaware City, Delaware; W. J. Farrar, Toledo, Ohio; Jesse Sherwood, Edina, Knox Co., Mo.

J. S. S., Bloomington, Ill.—On what diet should I keep a setter and pointer bitch just before and after they whelp? Would brook trout live in an artificial pond in this State? We get our city water from a well, and the water is slightly mineral. Ans. Sops and vegetables mixed with biscuit or oat meal forms the most suitable diet. She must be lowered in condition, but not too much so. The trout would not thrive.

FRANKLIN, Philadelphia.—Please decide the following: Is it not better to keep a setter dog in the country during the summer than in the city chained in a cellar at night, though exercised during the day? Ans. Certainly! A dog should never be kept in a cellar, night or day. You will have a sick dog first you know.

O. A., Wolcottville, Conn.—Whose book is the best and most instructive on training pointer dogs, and where can I get it, and what is the price of it? Ans.—Hutchinson on Dog Breaking. We can get it for you; price in the neighborhood of $3 50. Hallock's new Sportsman's Gazetteer is still better, price $3; 800 pages, maps and illustrations.

C. A R., New York.—I have a new and handsomely finished breech-loader, laminated barrels, 28½ inches and number 10. Weight 8 lbs, manufactured by Ed. Whistler, London, England, costing $225 gold here. How does Mr. W. rank as a manufacturer? Is the gun of desirable style for general upland and duck shooting? What is the proper charge of powder and shot for same? Ans. Do not know the maker, but from the price paid ought to be a first class gun. Yes, as near as you could desire. 3 oz. powder, 1¼ oz. shot.

JOHN GOULD, Warrantsville, Col.—I have a valuable deer hound suffering from worms, and am told your areca is a certain cure. I should be much obliged if you would kindly forward a small packet by return mail, with directions for use. Ans. The following is preferable to the areca nut, and may be obtained at any drug house: Santonine 12 grains quinine 6 grains, leptandrin 3 grains. Mix and divide into three powders. Give one three times a day, following it the next morning by a dose of castor oil, to which a few drops of turpentine may be added. If necessary, repeat on the third and fourth days.

G. A., Indianola, Calhoun Co., Texas. I wish to know if cutting off two inches of the muzzle of a breech-loading gun will injure its shooting, mine being longer (34in.) than I have been accustomed to handle? Also, what would be the best book for me to buy to guide me in training a setter pup for retrieving ducks and general field use? At what age ought I to commence to train the dog? Ans. Shortening your gun barrel as you propose will not affect its shooting for general use. Buy Hallock's Sportsmans Gazetteer for instruction in training dogs. For sale at this office. Price $3, 800 pages, 12mo. Begin your training as early as possible.

READER, Attleboro.—I have just received an Irish setter, and find he has some disease of the nose. It looks like a great seed wart, and is very dry. By nipping same, or picking, little seeds like come off 1-8th of an inch long. There is some running from the nose, too? Will you advise me how to treat it? Also inform me the cause, and if the scent, or "nose" is impaired? Has not been trained yet. Ans. Give your dog 4 drops of Donovan's solution three times a day in teaspoonful of water, taking care that it is not given on an empty stomach. If nausea supervene, or the eyes become injected, reduce the dose. Apply glacial acetic acid to wart, taking care that it does not touch the surrounding parts. 2. May arise from a variety of causes. The scent is not injured

SUBSCRIBER.—I have a Lefaucheux action, 12 gauge, straight-bore, B. L. shot gun, 32in. barrels, which weighs 9¾ lbs., rather heavy, especially for wing shooting. 1. Would it injure its pattern or penetration to have it shortened to 30 ins., and would you advise having it done? 2. Does it require a larger charge of shot for a straight-bore than for a choke-bore in order to do execution? 3. What would be a proper charge for this gun? 4 In using metal shells, should there be one or two wads on the powder? 5. Should there be a very light, medium or heavy wad on shot for ordinary shooting to get best result? 6. Would you recommend the New Fibre wad as a proper wad on shot in metal shells? Ans. Probably would not change the shooting; if it did, could have it re-bored at a trifling expense. We know of several guns having been shortened with good result. 2. No. 3. 3½ drs. powder, 1½ shot. 4. One thick wad a size larger than calibre of shell. 5. Light wad on shot. 6. Some of our best sportsmen highly recommend the fibre wad for metal shells.

E. P., Philadelphia.—Can you give me the address of any one who furnishes dyed feathers and hackles for making flies? Ans. No such person; you will have to pick up your feathers as you best can. Joi n Krider can furnish you with some, no doubt, corner Second and Walnut streets.

E. F. S., Boston.—Can you please inform me of what disease and at what time and place the Rev. G. W. Bethune died? He was the American editor of "Walton's Angler," published by Wiley & Putnam, N. Y., 1847. Ans. He went to Europe for his health about the year 1859, and died on the return voyage. We do not recollect what his disease was, but believe it to have been a complication of ailments.

L. H. L., Aspinwall, Panama.—Why do my shells (Ely's best Green No. 10, 4 drs. powder, 1⅛ oz. shot) collapse when fired, leaving a deep crease the length of the shell? Does it hurt the shooting? What is the remedy? Ans. The cause is not yet satisfactorily known. No. None known—a thicker shell would likely prevent the collapse.

C. W. F., Glens Falls, N. Y.—Can you inform me where I can procure a copy of the N. R. A. rules for target practice. Also, information as to size of Creedmoor targets and method of reducing targets for shorter distances. Ans. Write to Geo. S. Schmerhorn, Jr., Sec. Nat. Rifle Ass'n for copies of Creedmoor rules, targets, etc. Dennison & Co., 198 Broadway, will furnish reduced targets.

J. B., Ridgefield, N. J.—Were there ever any salmon or trout put into the Hackensack? If so, in what year and where would be a good point to strike the river to fish for them? Which of the following fly rods would you consider the best for general use: First and second joints ash, tip, lancewood or greenheart? or first joint ash, second hickory, tip lancewood or greenheart? or all greenheart? Ans. We prefer ash with lancewood tip. We have never heard of salmon being caught in the Hackensack, or put there.

A. P. P., Helena, Montana.—I wrote you several weeks ago inquiring concerning the practicability of making explosive bullets by inserting in the end of them the caps used to explode giant powder. I have scanned the columns of "Answers to Correspondents" in vain for an answer. Ans. Not having made any experiments, and not knowing of any one who has, we will be pleased to hear from you after you have tried it. It looks as if it would work well.

S. S. J., Baltimore.—1. What is the cal. of the latest model U. S. standard rifle? 2. Does Remington & Sons make it? 3. If not where can one be procured? 4. What is the weight of ball and how many grains of powder? Ans. 1. .45 Springfield. 2. No. 3. Springfield, Mass. U. S Armory. 4. One ounce; 40 to 70 grains of powder. The Remington Co. make a U. S. model R. R., cal. .50, and Springfield model, cal. .58.

H. B. E., Plymouth, N. H.—A large flock of "black heads" or, as they are sometimes called, "Bonapart's gulls," made their appearance here last week. There were about 100 in the flock. A farmer killed three of them, but unfortunately he used large shot and the white feathers were badly soiled. These birds have made their appearance here every year for the last three years. They only remain for a few hours and are not seen again during the year. Is it not unusual to find them so far inland as this? Ans. The species to which you refer is frequently found at a distance from the seaboard, especially during its migrations.

C. S. S., Fairport.—1. About what time does the departure of the woodcock take place? 2. Has the question as to whether the woodcock goes north to hill tops, etc., ever been satisfactorily settled? 3. I see advertised for sale one share of Bloomingdale Grove Park, is that the same as the Blooming Grove Park? Ans. 1. The time of the woodcock's departure varies considerably, depending in a great measure on the severity of the weather. They are usually all gone by Dec. 1, but sometimes stay a week or two later about warm spring holes. 2. We do not get your meaning. Woodcock are supposed to resort to the high ground during August and early September when they are moulting. 3. Yes

N. V. K., New Orleans, La.—I inclose two worms or parts of worms that crawled out of my dog last night, and I have a great curiosity to know if they are not tape worms, or a portion of one. When they first came out they were white, flat and crawled quite rapidly. The dog is and apparently well, has a good appetite and is in good spi its, but is not very fat which, however, I blamed the fleas for and not worms, although I may be mistaken. I have to thank your Kennel Editor for his reply to my letter in regard to distemper in my dog, and by following his directions I am happy to say that the dog has entirely recovered from it. Ans. A case of thread worms (*Oxyuris vermicularis*) very common. Give the dog an injection and physic him with a dose of aloes.

A. D., Jersey City.—Do gyps ever have hydrophobia unless bitten by a mad dog? And does hydrophobia ever result if a person is bitten by one? Ans. Whether rabies originates spontaneously or not is a mooted question. The fact is that most careful pathological research has failed to reveal the nature of the disease. We do not believe that it originates *de novo*—the weight of evidence being opposed to such a theory—for, although the disease frequently prevails as an epidemic, thorough investigation has revealed the scar through which the animal was inoculated. If rabies does originate spontaneously, the gyp, owing to the psychological conditions induced by sex, would seem most liable. For a like reason we may expect the bite of the female to be more virulent than the male in about the percentage of 3.07 to 3.

AGILE, Phila.—Please inform me when the time is up to fish for black bass in the Schuylkill, and where would be the best place to go for a day's pleasure? 2. A friend of mine has a setter bitch that was just getting over the distemper and has caught cold. As near as he can judge, he got her in this condition, and did not know it. She has an abundance of phlegm in her throat all the time, which makes her very thin and droopy. Please name some relief? Dover powders have been tried without any relief. Ans. 1. The season for black bass fishing in the Schuylkill extends from 1st day of March to 1st day of July. 2. Muriate of ammonia 50 grains, sweet spirits of nitre (Squibbs) 2 drachms, compound syrup of squills ½ ounce, fluid extract of hyoscyamus (Squibbs) 15 drops. Water sufficient to make four ounces. Give tablespoonful every 4 or 6 hours.

W. L. S., Jersey City.—Can you describe briefly, in your paper to me, the requisites in the make-up of a good pointer pup? Mine is liver colored, with tan legs and chest, feet large, eyes gray, ears good size, tail medium length and legs medium height? Also, can you inform me concerning what is proper food for orioles? Ans. 1. Head moderately long, tapering from skull, which should not be too prominent above the eyes; rather deep in lip; ears thin, hanging flat on cheeks; neck medium, body rather inclined to be long, thickening from head to the seat in of the shoulders; no looseness of throat skin, leg and foot well rounded and symmetrical; muscular, but not great heavy-boned; chest moderately deep, back level, loins wide, hips wide and full of muscle, not straight in the hock, but moderately bent; stifles full, stern nearly straight, tail tapering to a point, set in level with the back, carried straight, not above the level of the back. Weight 50 to 65 pounds. Best color liver and white. 2. Figs, raisins, hard boiled eggs and insects, also, finely minced, half raw beef.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oil-cloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAY, SONS & Co., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him, or with any orders sent him. It is a good, reliable house.—[Adv.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 28, 1877.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

CHARLES HALLOCK, Editor.

T. C. BANKS, Business Manager. S. H. TURRILL, Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Thursday, June 28.—Trotting: Catskill, N. Y.; Ithaca, N. Y.; Marshalltown, Ia.; Jackson, Mich.; St. Petersburg, Pa. Running meeting at Rochester. Base ball: St. Louis vs. Chicago, at Chicago; Louisville vs. Boston, at Boston; Buckeye vs. Maple Leaf, at Guelph, Can.; Alaska vs. Keystone, at Jersey City; Indianapolis vs. Memphis Reds, at Indianapolis.

Friday, June 29.—Trotting: Jackson, Mich.; St. Petersburg, Pa. Base ball: Indianopolis vs. Memphis Reds, as above; Enterprise vs. Keystone, at Jersey City; Star vs. Live Oak, at Syracuse. Regatta of Harvard and Yale, at Springfield.

Saturday, June 30.—Trotting: Cincinnati, O.; Chicago, Ill.; Monmouth Park and Long Branch. Base ball: Louisville vs. Boston, at Boston; Chicago vs. St. Louis, at St. Louis; Star vs. Live Oak, at Syracuse; Nameless vs. Osceola, at Brooklyn; Alaska, of S. I., vs. Seneca, at Staten Island; Enterprise vs. Orange, at Orange, N. J.; Crystal vs. Winona, at Brooklyn. Harvard vs. Yale, at Hartford. Regattas: Port Hope, Can.; Guelph, Can. Two mile race between the four-oared crews of the University of Virginia and the Tobocco City Boat Club, on the James River at Lynchburg.

Monday, July 2.—Trotting: Cincinnati, O.; Chicago, Ill.; Oskaloosa, Ia. Base Ball: Chicago vs. St. Louis, at St. Louis; Tecumseh vs. Hartford, at London, Can.; Brooklyn vs. Volunteer, at Poughkeepsie; Mutual, of Jamesville, vs. Racine, at Racine, Wis.

Tuesday, July 3.—Trotting: Poughkeepsie, N. Y.; Macomb, Ill.; Detroit, Mich.; Beacon Park, Boston. Running meeting at Utica, N. Y. Rod and Gun Club shooting tournament at Burlington, Ia.

Wednesday, July 4.—Trotting as above; also at West Meriden, Conn.; Monmouth Park, Long Branch; Albany, N. Y. Base Ball: Boston vs. Chicago, at Chicago; Hartford vs. St. Louis, at St. Louis. Cricket Match: St. Georges vs. Germantown. Rod and Gun Club shooting Tournament as above. Bench show of Dogs and bird exhibition, at Toronto, Canada. Regatta of the Argonauta Rowing Association. Rifle Match at Jacksonville, Florida.

—Prof. D. S. Jordan is now engaged at Washington upon the fishes of the Smithsonian Institution.

—A large quantity of valuable information relating to game laws and game protection in a dozen different States is in type, but unavoidably deferred.

—We are sorry to mention that we are constantly in receipt of insulting letters from contributors who are disappointed because their favors are deferred, declined, or curtailed. We have understood that sportsmen had the reputation of being always gentlemen. If insults continue, we shall expose the perpetrators at any personal risk.

STATE CONVENTION AT SYRACUSE.

We gave in our last issue an abstract of proceedings of the convention of the State Association, and of President Smith's address. The latter we print in full herewith:

About nineteen years ago a few earnest sportsmen met in the village of Geneva, in this State, and organized the New York State Sportsmen's Association, now known as the New York State Association for the Protection of Fish and Game. Prior to that time laws for the protection of game did not, I think, exist in our State, but to-day, with but few exceptions, our game laws are above reproach. Nearly fifty local organizations have budded their laurel leaves on the wreath of the State Association, and our forests, fields and streams bear happy testimony to our labors by the rich rewards which they offer, not only to the disciples of Diana and Sir Isaak Walton, but to the farmer, mechanic, laborer, and indeed to almost every inhabitant of our State. Our laws concerning quadrupeds have, it seems, been wisely passed, our bird laws not so wisely. We find the ruffed grouse, and the quail, or more properly speaking the Virginia partridge, increasing in numbers, but we cannot say as much of the woodcock, and will never be able to say it until cocking is put off until September. As most of our ducks and snipe do not as a rule breed in this latitude, they might with more reason be shot in the spring, than our summer game residents, but who can deny that snipe and ducks in the fall are far more valuable for the table than in the spring, and is there a sportsman or an epicure who does not take more pleasure in encountering a woodcock, either with gun or fork in October than in July? If it shall be a misdemeanor to be in the field, forest or marsh with dog and gun before the first of September, many a ruffed grouse, snipe and duck would grace our autumnal game bags in future that now go to satisfy the appetites, or rather the eyes of self considered epicures in immaturity and leanness. Summer cocking is, moreover, very apt to be attended with the killing of young grouse mistaken for woodcock, especially in thick cover where it is hard to see and be seen. That the forbidding by law of the wanton killing of song and other than game birds, at any season, has been beneficial can not be doubted, if we will but observe the immense numbers of insects, injurious to vegetation, that are destroyed by our companionable and industrious feathered friends.

It is probable that nearly, if not all, birds are useful to man, although some of them take a little pay for services rendered, in the shape of grain and fruit.

Our wild pigeon, although, perhaps, not a game bird, should have protection, not only on his own account, but for our benefit. It is cruel to pursue these birds with nets or guns as soon as they begin to nest. Why not give them a chance, as we do other birds that furnish us with food and amusement? Suppose we protect them until, say, July or August. I admit that a late lot of birds would comprise a majority of young; but young birds properly cared for fly well and are excellent for the table. A close season for pigeons would necessitate the postponement of our State shoot until fall; but if we don't have a close season for them, our State shoot will, ere long, be postponed to eternity.

There are probably more pounds of edible fish in the waters of the State to-day than there have been at any time during the past twenty years, for which fact we should be especially thankful to the New York City Association and to that fishy old patriarch, Seth Green, as well as to our State Association. Let me call your attention to this very valuable suggestion of Mr Royal Phelps, concerning the quail season. He urges that the open season for this bird shall be from November first to February first, and I sincerely hope that this may become law, that we may secure birds in good condition, without any half-fledged specimens, to mar the result of a day's shooting, and I feel by no means certain that the open season for ruffed grouse should not run to the first of February also.

It has been thought by many of our sportsmen that a list of dogs, with description and number, should be kept in books of the association, to facilitate the recovery of lost and stolen dogs. Mr. Townsend, of the Onondaga Club, once presented this plan of the association, and let us hope it may receive due consideration at no late day.

Game and fish laws are easily made but apparently hard to enforce, and must remain so, until our citizens are sufficiently educated to appreciate the benefits accruing from wise game legislation. We ought to use every effort to educate the ignorant, on these subjects, as well as to bring offenders to justice. I would suggest that we bar from our membership, any local organization that has not expelled from its members, persons known to be cognizant of infringements on game and fish laws, without reporting the same. If any member of a sportsmen's club is afraid to inform against law-breakers, he does not deserve to be one of the members, and no local organization should be admitted to the State Association until it shall have purged itself of all such unworthy membership. When we hear of a violation of game law, let us exclaim with Hamlet,

"Haste we to know it—
That I, with wings as swift as meditation or the thoughts of love,
May sweep to my revenge!"

In framing laws for the protection of game and fish, let us bear in mind that these laws should not be sumptuary, should not be made solely, or even any more than incidentally, for the benefit of the wealthy sportsman, but for the purpose of increasing the amount of game and fish, that it may come within the reach of all. Every American citizen has an inborn right to fish and hunt, and it comes under our jurisdiction to regulate, to the best of our ability, the seasons during which he may fish and hunt, that he may, in the end, secure more game and in better condition than he could if no laws were imposed. And further, we must bear in mind that a game bird or fish, when dead, having been killed according to law, is *personal property*, although if killed out of season, is a very important witness against law-breakers.

A supplementary meeting of the Convention was afterward held, Col. Wagstaff acting as Recording Secretary *pro tem.*

The Treasurer submitted a document of the character of a report, which was referred to a committee for examination. Balance in the treasury, $743.50; cash in bank to credit of Dean Richmond Cup, $950.

Col. Wagstaff moved that the thanks of the Association be tendered to the Committee of the Legislature on Game Laws.

On motion of Mr. Flanagan, the motion was amended by tendering special thanks also to Senator Wagstaff, and then adopted.

President-elect Pierce offered the following resolutions:

Resolved, That the thanks of this Convention be and are hereby tendered to the Sumner Corps for the use of their hall for the meetings of this Convention.

Resolved, That the thanks of this Convention be tendered to the retiring officers for the faithful discharge of their duties. Thanks were also voted to the givers of prizes and to the Onondaga County and Central City Sportsmen's Clubs.

Remarks in recognition of the valuable services which President Smith has rendered to the Association were strongly applauded.

The President elect submitted the following standing committee: A. Wagstaff, Jr., of Syracuse; James Manning, of Syracuse; Henry Faulkner, of Dansville; W. C. Jacus, of Buffalo; W. M. Smith, of Watertown.

Considerable discussion was indulged in relating to the fires in the North Woods and the killing of game out of season in that section. A committee of five was appointed to take the matter into consideration and take such action as was deemed necessary. The following gentlemen were appointed: A. Wagstaff, Jr., of New York; Greene Smith of Peterboro; C. C. Morse, of Rochester; D. H. Bruce, of Syracuse; Chas. Hutchinson, of Utica.

The Convention then adjourned *sine die.*

DECOYING DUCKS BY THE THOUSANDS—A FORTUNE TO BE MADE IN SPOILED MEAT.

NEW GLASGOW, Nova Scotia, June 10, 1877.

EDITOR FOREST AND STREAM:

I had the pleasure of writing to you last year about the possibility of forming a company to establish decoys for taking wild fowl, which must resort in millions in the winter on the marshes of the Southern States. It seems no one has yet given the subject the attention it deserves, when at the present time the European market, as well as your own, has been anything but well supplied with wild fowl. I cannot imagine how this profitable business has been overlooked. The difficulty in killing them in large enough quantities to make it a business, no doubt, has deterred many from trying, and they did not know the mystery of decoys, for the method by which so many thousands are annually killed is always kept a secret both in Holland and England, and for all, some favored parties are allowed sometimes to witness a "take." The way the birds are enticed and prepared nobody but the thoroughly initiated ever know.

I can imagine no more profitable business than to start a decoy (or if a company engage in it, a number of them) in the neighborhood of some place where the ducks stay all the winter, and the carriage handy to the principal American and European markets. They send beef, lobsters, prairie hens, etc., to England, even in the summer, why not send wild ducks? The price is increasing every year. Last January mallards were quoted at Leadenhall Market, in London, at 10s. 6d., and teal and widgeon at 2s. 6d. per couple, and not to be had at that price. One hundred thousand birds sent annually to London would not nearly supply the place of the numbers that used to be imported from Holland, where drainage has in a great measure ruined so many decoys, and the comparatively few now left in England cannot nearly supply the demand. It is not that the birds are any scarcer, but the privacy required makes only a few estates in England able to keep them, and the few that are shot very seldom go further than the table of the person who is lucky enough to obtain them.

The expense of making a decoy with, say four pipes, would not be great, and of course would depend on the value of the property; but as this would be in some neighborhood that is very thinly inhabited it could not be great. Independent of the land, such a decoy would not cost over $1,000; that is, building the four pipes. Of course I am presuming the pond to be already there. I should never recommend a larger pond than five acres—the most successful decoys in England are a little more than one. You will see that any one who owns and has complete control of a large extent of land in the neighborhood of marshes where ducks resort, could easily start a decoy if he knew how to go about it, but if he cannot command perfect privacy he had better not try it.

My idea was, could a company be formed with a few thousand dollars capital to establish ten or twelve decoys in different places where ducks resort, it would be one of the most paying concerns it would be possible to conceive, for should you ever stock the market with the fowl, surely good wild duck or teal canned up as the other kinds of poultry are canned, would be far preferable to the old cocks and hens that they put up in such numbers in London, and no doubt American cities as well. Then look at the feathers; what a trade might be done with those alone!

No doubt some of your readers will think killing them in and establishing decoys will lessen the quantity of wildfowl. I assure you this is not the case, for there is no waste as in shooting—perhaps in wildfowl shooting more than any other; for every bird that is killed and hanged ten go away and die, or are rendered useless for breeding. This is partly because parties will fire at birds too far off to kill, and they usually take such a hard blow to kill them outright, and if not killed dead are generally lost. The season would last from October till February, during which time the birds would be in the best condition, and all that are caught would find a market. When they are killed in a decoy they always obtain the best price, and the skin not being broken they would stand the carriage better.

To give you some idea of the way wild fowl can be enticed to a decoy I will mention the one on my father's estate in Yorkshire, where wild ducks were quite a rarity and seldom seen to fly over. One spring I found a nest of eleven eggs; took them home and set them under a hen. In a short time they hatched, and I reared eight. When they were old enough, neglecting to cut their wings, they flew away and seldom came back; but when they did, generally brought others with them. I persuaded my father to let me go and see Lord Wenlock's decoy, some ten miles away, which I did, and on my return made one pipe at the end of the pond they frequented. During the first winter I caught my own again and nine wild ones, all the wings of which I cut and turned them out again to breed the next spring. The next winter I killed 250, after which the wild fowl came regularly. I added three more pipes to my pond, and the last season I killed 7,700 head, and I suppose 5,000 were on the pond when I ceased killing. Previously, the flight of fowl, when they came over from Holland after they struck the Humber, was to follow the Trent and Ouse; but my decoy brought them from their course at least twenty miles. In fact I have seen birds on decoys in Lincolnshire that a week before I had with me, a distance of 100 miles. I hope you will excuse me for troubling you at this length. E. C. D.

[REMARKS.—The above is the most singular proposal we have ever published. The writer's name we decline to give, that we may not be instrumental in encouraging the procedure. We will, however, put approved parties in communication with him if they desire. It is proper to say that he is a Canadian Game Commissioner, and probably sincere. We have communicated with him before. His idea is that the ducks will not be diminished, and that the procedure will not come within reach of the game laws: "A decoy being private property and inclosed, makes what fowl come to the pond also private property, and you can kill them as you

like. This is so in England; wild ducks in a decoy ceasing to be *fera natura*." Aside from "what they do in England," we think it pertinent to ask how the proposed procedure would be affected by the laws of the many Southern States, which prohibit game killed within the State to be exported out of the State? The caption of the accompanying is our own. It came to us without a head, and we confess that we are not fully able to see the point.—ED.]

—We have been honored during the week with a visit from H. E. Dalzell, Esq., President of the Pittsburg Sportsmen's Club, one of the strongest and most efficient protective organizations in the country; and, also, from Prof. G. Brown Goode, who has recently returned from Bermuda, where he accomplished very valuable scientific work during the winter in designating and identifying, in connection with J. Matthew Jones, Esq., of Nova Scotia, the fishes of Bermuda, a catalogue of which we are pleased to have.

—Prominent among the exhibitions at the Convention of the N. Y. State Sportsmen's Association last week, were the glass ball traps of Capt. Bogardus, which were kept in constant use near the field, giving general satisfaction. Other traps were tried for throwing the balls, but with very poor success. Mr. Wm. Lyman had a boat equipped with his bow faced rowing gear on the creek where the fly-casting took place, and a number of the sportsmen present took a pull at the oars, fully indorsing them as a great improvement over the old style for general use.

—The excursion rates via the Grand Rapids and Indiana Railroad this season are: From Buffalo to Traverse City and return, $23.35; to Petoskey and return, $24.20. From Pittsburg to Grand Haven and return, $19.70; to Traverse City and return, $24.25; to Petoskey and return, $26.10. From points east of Buffalo and Pittsburg the regular rates must be added.

—Maj. T. W. Walker, of Vineland, New Jersey, the President of the West Jersey Game Protective Association, has gone to Europe with his family for mental rest and bodily improvement, and will remain until the result is attained.

—The Virginia Fish and Game Protective Association, of Richmond, have issued an address to the people of that State calling public attention to the game laws, and urging the organization of clubs throughout the different counties and neighborhoods for the purpose of aiding in the enforcement of these laws. The coming State Fair is appointed as the time for a general State convention for an interchange of views and the perfection of plans for the most efficient work.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

P. O. BOX, 1,294.—[*Adv.* ABBEY & IMBRIE, 48 Maiden Lane.

The Rifle.

LETTER FROM A BLIND RIFLEMAN.—Doubtless many, if not all of our readers, have noted a paragraph floating about through the newspapers concerning the wretched condition into which Captain R. C. Coleman, of Goshen N. Y., had brought himself by too great a devotion to the rifle field. All the paragraphers had been blind in one eye, the majority in both eyes, and others added sensational bits about darkened rooms, early grave, etc. The story appearing improbable, we wrote to Captain Coleman, and upon his return from the fishing excursion he was then enjoying the following characteristic letter from the dry Orange County joker was received:

GOSHEN, N. Y.

EDITOR FOREST AND STREAM:

Of course the paragraph you mention, and similar ones, have come to my notice. I did, some three weeks ago, suffer from a very severe acute attack of catarrhal opthalmia, but to in any manner connect it with rifle shooting is most absurd. In the first place, I have done very little shooting this season; then, too, the season when I did nearly all the rifle shooting of my life my eyes were altogether better and stronger than usual. But I suppose some enterprising newspaper chap saw in it an item.

While I have been a good deal bored about it, I have now come to look upon the matter as quite funny.

The writers of the articles and paragraphs you mention did not first consult me or my physician before writing, or I am sure they would have published the whole story, which, from the view they have taken of it, must have run about in this wise. The first "evil consequences of rifle shooting" happening me, as I now look back and see it, was apparent in the eyes of two of my little daughters. Not then recognizing the cause, I still occasionally used my rifle, and then became myself the victim, chiefly, however, in my right eye. Afterward, using it again, my little boy in consequence became the next victim. I suppose that this state of affairs would have continued until not only all my family (except my wife, for she never could see what gentlemen found interesting in rifle shooting), but all my neighbors would have become involved in this misfortune had it not been for the light which the public press shed into our darkened habitation; for there, for the first time, we learned that these afflictions were caused by rifle shooting. The doctors, in their ignorance of the weapon and its drift, had attributed our troubles to an inflamed condition of the eye, caused by cold settling there; and from the fact that this condition of the eyes appeared to be epidemic in our village. Still retaining sufficient eyesight to recognize a bank note at any reasonable distance, I remain, yours, R. C. COLEMAN.

CREEDMOOR, June 20.—One of the best short range matches Creedmoor has ever enjoyed was that held as the first contest for the Ballard rifle, presented by Schoverling & Daly. The match occurred on Wednesday, the 20th instant. One peculiarity in the condition was the prohibition of cleaning between shots. To do this with fifteen shots required care, and lest their arms should become over dirty and liable to lead, many of the marksmen used reduced charges of powder, 45 and 50 grains in place of the usual 70 grains in military rifles, and corresponding reductions in sporting rifles. The distance was 200 yards; position, standing; open to all comers. The winner was Mr. Thomas Rogers, of the Jamaica Rod and Rifle Association. The scores, with the names of the rifles used, ran as follows:

Theodore Rogers, Maynard	5 4 5 5 4 4 4 3 5 4 4 4 4 4 4	63
J. T. B. Collins, Rem Sport	3 4 5 4 4 5 4 4 5 5 3 4 4 5 4	63
E. B. Lewis, muzzle	3 4 4 4 4 5 4 4 5 4 5 4 4 4 4	62
J. L. C. Clarke, Rem Sport	4 4 4 5 4 4 5 3 4 4 4 5 4 4 4	62

MILITIA SCORERS—It has been the custom in the rifle practice of the militia at Creedmoor to order down a few men from some regiment other than the one of practice to act as scorers. The scores have been very well kept, but Col. Clark of the 7th Regiment protests against the practice in a letter to Gen Shaler commanding the 1st Division, in which he says:

This is not a legitimate military duty, but is a clerical service, which if performed at all by members of the National Guard should be entirely voluntary. It is a service which is usually paid for (as legitimate military service is not), and it should be paid for the same as transportation to Creedmoor, ammunition, etc. There is no good reason why a few men in any regiment should be taxed in time and money to act as scorers for other regiments at Creedmoor, while other members of the same regiment are exempt from a similar burden. All compulsory service of this kind is onerous and disagreeable, and therefore demoralizing, and the practice of sending men to Creedmoor except for duty under their own officers should for obvious reasons be discontinued. The time of officers and members of the National Guard, especially of those companies that labor to excel, is already taxed to the utmost, and any additional burdens which are not readily and generally recognized as entirely just and necessary, do great injury to the service.

June 23.—The Remington $250 gold prize was first shot and soon disposed of, Major Jewell coming out ahead with 151 in the possible 200—20 shots. The lowness of the scores may be accounted for in the restrictions to use factory filled ammunition only. The scores ran:

H. S. Jewell	151	H. F. Clark	136
L. L. Allen	143	Geo Waterman	130
G. E. Bridenburgh	143	J. J. Waters	130
F. F. Millen	142	F. H. Holton	105
G. Lamb	138		

In the afternoon the Winchester Company match was fought for the third time, with only four contestants, nobody caring to enter against the well known skill of Capt. J. E. Stetson, of New Haven, who had taken the first place on the two previous contests. The result of the day's shooting was a third victory for this crack snap shot. The match was instituted by the N. R. A. as a compliment to the Winchester Co, for their gift of the running deer and shooting butts. The result has shown that, as a repeating rifle, the Winchester has beaten all competitors, Capt. Stetson and a majority of the entrants using that arm. The match was open to all comers; distance, 100 yds.; any rifle; sights to be on centre of barrel; 6 runs of deer, 3 each way; length of runway, 88 feet. First prize, $50 gold, to be won three times before passing into possession of winner. First competition, Nov. 18, 1876, 8 shots, 6 hits—score, 16; second competition, May 12, 1877, 28 shots, 16 hits, score, 43—one haunch hit; third competition, June 23, 1877, 24 shots, 14 hits, score, 38—one haunch hit.

—At a meeting of the Board of Directors, N. R. A., held on Tuesday afternoon last, Pres. N. P. Stanton, Gen. D. D. Wylie, Gen. J. B. Woodward, Capt. Casey and Col. Wingate were appointed a special committee to "have sole charge of the fall meeting and International matches, with full power to make such arrangements in relation thereto as they shall consider necessary to make such matches a success." On motion of Col. Sanford, Inspector of Rifle Practice for the 1st Division N. G. S. N. Y., the following was carried:

Whereas, The Inspector General of Rifle Practice has authorized certain alterations to be made in the sights of the State Model Rifle; Therefore, be it

Resolved, That the Adjutant-General of the State of N. Y. be addressed by the Board of Directors, N. R. A., requesting that all the sights on the military rifles of the N. G. S. N. Y. be altered if necessary to some standard pattern to be officially adopted by the State authorities.

CANADIAN RIFLE TEAM.—The Wimbledon Rifle Team, under command of Major Aylmer, M. P., and Capt. Casey, M. P., sailed from Quebec for England on Saturday, June 23, per steamer Sardinian.

—In response to the letters of inquiry which followed the receipt of the first telegram from England about the international trophy match, Capt. Sir Henry Halford, of the United Team, has sent a cablegram stating positively that it is the intention of the coming team to shoot for the Centennial trophy.

HARVARD VS. CAMBRIDGE.—The fifth and last of the series of matches between the Harvard University and Cambridge Rifle Clubs took place last Friday, and resulted in a victory for the Harvards by a score of 229 to 224. The shooting was at 200 yards, off-hand, Creedmoor rules.

STAMFORD, CONN.—The third competition for the "Leeds Challenge Cup" took place on the Cove Range on Monday, June 18. The following shows the scores at 100 and 200 yards.

	100 yds.	200 yds.	Tl.
H H Keene	24	20	44
W H Safford	23	20	43
T Smith	23	20	43
S Swartwout	22	19	41
H Burdett	20	19	39
H Swartwout	21	16	37
R H Williams	21	16	37
C Minor	18	17	35
A White	20	14	34
C Humphreys	21	7	28

The Williams' Challenge Badge was shot for Saturday, June 16, on South End. The following is the score:

C E Nichols	27	J H Swartwout	23
H Wilson	27	R H Williams	21
W H Sanford	26	P C Klugman	12
T F Smith	23		

MIDDLETOWN RIFLE ASSOCIATION.—At a meeting of the Middletown Rifle Association on Friday, Mr. O. V. Coffin won the Dr. Shew badge over a 200 yard range, seven shots, Wimbledon target, and the same number of shots at 500 yards at a Creedmoor target, making 59 out of a possible 70. His competitors were Orange Judd, who made 56; H. Woodward, 56, and J. T. Elliott, 50. The badge has been won once by Dr. Shew, the donor, twice by Mr. Judd, and now twice by Mr. Coffin.

WILLOWBROOK, June 23.—The fourth of the semi-monthly meetings took place on the Connecticut State Rifle Association's range, at Berlin, to-day. The mid-range badge was taken by Wallace Gunn, of Bridgeport, with a perfect score, 50 in possible 50. The badge was first won by Mr. Henry Woodward, of Middletown, who made 47; C. S. Davidson was the second winner, by a score of 46, and third by H. P. King, of New Britain, by a score of 48. The badge becomes the property of any member who wins it three times. The following are the leading scores to-day:

Wallace Gunn	5 5 5 5 5 5 5 5 5 5—50
O. V. Coffin	5 4 5 4 5 5 4 4 4 5—45
Henry Woodward	5 4 5 4 4 5 4 4 3—43
J. L. Woodbridge	3 5 4 5 4 5 5 3 5—43

The long range match received the greatest attention, and it was not until the last shot was fired that the winner was positively known. Mr. Orange Judd, Mr. Gunn and Mr. William Parker, of New Britain, had each made 113, when Mr. Coffin came up for his turn. With his ninth shot at the last range he had timed the others, and as he took his place to make his last shot, the sun was so low in the west that the marker's quarters cast a shadow just half across the bull's eye. To add to the disadvantage, the wind blew in fitful puffs. However, he succeeded in making 4, and won the badge. The following are the principal:

	800 yds.	900 yds.	1,000 yds.	Total.
O. V. Coffin	46	44	27	117
Wallace Gunn	42	33	33	113
William Parker	45	37	31	113
N. Washburn	45	41	27	113

At the first meeting this year the badge was won by J. L. Woodbridge by a score of 127 in a possible 150. It was won a second and third time by Orange Judd, of Middletown, formerly the well known editor of the *Agriculturist*, by a score of 126 and 135. There was considerable excitement over this contest.

The Fourth Regiment, New Jersey National Guard, paraded for rifle practice at Tyler Park, Jersey City, last Thursday. The occasion was the second competition for the purpose of selecting teams to shoot at Creedmoor with the First Brigade team. The order of merit by companies was as follows: Companies D, A, C, F, D and E. Sergt. Scott, of Co. B, made 36 out of a possible 50 at 200 and 500 yards, which was the leading score.

CALIFORNIA, *Auburn*, June 18.—Auburn is thirty-five miles east of Sacramento. The surrounding country abounds in quail, doves, hare and rabbits; deer are also found. Several amateur hunters have formed a team of six; and yesterday shot a match with a like team from Sacramento. They fired at glass balls, 21 yards rise. The following was the score out of a possible fifty:

Sacramento Team.		Auburn Team.	
Todd	46	Crisman	50
Ackerman	45	Brown	47
Corbin	44	Tuttle	44
Maulden	41	Craig	46
Vermylea	41	Fulweiler	41
Ruhl	48	Ritlinger	46
Total	265	Total	274

DENVER, Col.—The Denver Rifle Club contested on the 19th instant for the prizes recently donated the club by Col. Archer. It was one of the first attempts of the club at long range, and consequently very fair. Mr. Goye was unfortunate in having mixed cartridges, hence his drop at the extreme range. The scores stood:

W J Fay	38	44	42	128
M Spangler	32	34	43	109
G B Patterson	28	40	40	108
J Freeman	31	29	42	105
C A Treat	35	33	30	98
C Gove	43	35	16	94
H Miner	28	31	32	91
F Church	12	36	28	76
W B Sherman	19	15	21	55

LONG ISLAND VS. NEW JERSEY.—The Bergen Point (N. J.) Rifle Club paid a friendly visit to the range of the Jamaica (L. I.) Rod and Rifle Association on the 22d inst., and enjoyed a team match at 200 yards, off-hand, any rifle. The scores were not up to the usual Jamaica standard; though the day was clear the wind was gusty. The visitors came out victors by 10 points, as follows:

BERGEN POINT CLUB.

Vredenburg	42	Schilling	36
Millville	42	Hickman	35
Rathyen	40	Simmonds	86
Colduis	39		
Dunne	38	Total	349

JAMAICA CLUB.

Lloyd	40	Crane	37
Reed	38	Oakley	37
Creed	37	Rogers	36
Elmendorf	37		
Cogswell	37	Total	299

SYRACUSE, N. Y., June 23.—At the State shoot, this morning, the Livingston Sportsmen's Cup, valued at $800, was won by the Central City Club of Syracuse by one bird, and the Dean Richmond Cup, valued at $800, was won by the Forester Club of Buffalo. This being the third time they have won it, the cup remains the property of the club.

AUBURN, N. Y.—The Forty-ninth Regimental Rifle Association held a very successful rifle meeting in connection with the Fair of the Cayuga County Agricultural Society, at their ground at Auburn, N. Y., on the 14th and 15th inst.

Competition I. was a short range contest, open only to Cayuga County residents, 200 yards, seven shots, any rifle. The winners were:

Fred. A. Wright	4 4 4 5 4 4—29	James Rowley	3 5 5 4 4 4—29
S. Westoven	3 4 5 4 5 4—29	Morris Barnes	5 4 4 3 4 4—28

Competition II. was for a $52 silver set, presented by John Choate, Esq., of Auburn, 200 yards, any rifle, seven shots; prize to be won three times before passing ownership; matches to take place as any regular fair of the society. Won by Capt. D. M. Dunning, Rem. Mil. Score—5 4 4 5 4 4—30.

Competition III. was team match, open to teams of four from any company or from the staff of the Forty-ninth Regiment. Three team prizes and ten individual prizes were given, the scores running up to a good average, as follows:

Company B, team No. 1.

	200 yards.	500 yards.	T'ls.
James Rowley	4 4 5 5—18	4 4 5 4—17	35
Joel Mills	4 2 4 5 4—19	4 5 5 2 5—21	40
F. A. Wright	4 4 4 4 5—21	2 5 3 2 5—17	38
Charles Talladay	3 4 3 5 5—20	2 2 0 4 5—13	33
Total			153

Company E, team No. 1.

H. A. Van Gulider	3 4 4 4 4—19	5 5 5 4 5—24	43
Captain Jno. McCartin	5 5 4 3 3—21	5 5 3 5 0—18	39
P. H. Stafford	4 3 3 4 5—19	3 5 4 3 4—19	38
Michael Kelly	4 3 4 3 4—18	0 3 3 3 3—12	30
Total			150

Company E, team No. 2.

T. Stafford	4 4 5 4 4—21	5 3 4 3 3—18	39
M. Dorsey	3 4 4 4 4—19	2 3 4 4 3—16	35
John Stafford	4 4 5 4 4—21	4 5 2 3 0—14	35
John Winters	4 3 3 3 4—17	4 4 2 3 5—18	35
Total			144

INDIVIDUAL PRIZES.—1st, H. A. Van Gulider, 43; 2d, James Rowley, 42; 3d, Joel L. Mills, 40; 4th, Captain D. M. Dunning, 39; 5th, Thomas Stafford, 38; 6th, Capt. John McCartin, 39; 7th, P. H. Stafford, 38; 8th, F. A. Wright, 38; 9th, Adjt. W. M. Kirby, 36; 10th, John Winters, 35.

Competition IV. was an all-comers short-range, any rifle; but the scores made were not very extra—30 in a possible 35 taking it easily—the scores standing, five prizes:

Sergt. Major G. W. White	4 5 4 5 4 3 5—30		
F. A. Wright, Auburn	4 4 4 4 4 4 5—29		
Joel Mills, Auburn	4 4 4 4 5 4 4—29		
Sergt. L. L. Barnes, Oswego	5 5 4 4 4 4 3—29		
J. L. Reamer, Seneca Falls	4 4 3 5 4 4 4—28		
Col. Jay E. Storke	28	Lieut. J. S. Barton, Oswego	26
W. A. Townsend	28	R. T. Perkins, Oswego	25
C. Talladay	27	J. A. Wood, Oswego	23
Seymour Westover	27	Sergt. M. Barnes, Oswego	24
H. A. Van Gulider	26	Jos. Cook	22
R. H. Stafford	26	Wm. Clark	33
Capt. D. M. Dunning	26	Jno. Stafford	22
Capt. John McCartin	26	Adjt. Wm. M. Kirby	21
M. Kelly	26	T. Dunnivan, Oswego	13
James Rowley	26		

In competition V., open to teams of six from any company of militia in the State, Remington rifle, .50 cal., the Oswego Forty-eighth boys came down and just managed to win the first place by a single point, and capturing a $180 reaper and mower. The shooting was first-class all round, and if some of the teams will step down to Creedmoor in the fall it will do our metropolitan military marksmen good. The scores stood:

Forty eighth Regiment team, Oswego.

	200 yds.	500 yds.	T'ls.
Sergt. L. L. Barnes	4 4 4 3 4—19	3 3 5 5 5—21	40
J. P. Hall	3 4 4 5 3—19	4 5 3 5 3—20	39
Sergt. Geo. White	4 4 4 5 4—21	4 5 3 4 3—19	40
J. S. Wood	3 5 3 3 4—18	4 4 3 2 4—17	35
Sergt. C. A. Barton	4 4 3 4 4—19	4 3 3 2 4—16	35
Lieut. F. F. Barton	4 4 4 4 5—21	4 4 2 5 3—18	39
Total			228

Forty-ninth Regiment team, No. 1.

J. B. Rowley	4 5 4 4 5—22	5 3 4 5 3—20	42
Chas. Talladay	4 5 4 4 4—21	3 4 5 3 4—19	40
Captain McCartin	4 4 3 4 5—20	3 5 4 3 4—19	39
Joel Mills	4 4 5 4 4—21	3 3 5 3 4—18	39
Captain D. M. Dunning	4 3 4 5 5—19	0 3 4 3 3—13	32
Fred A. Wright	4 4 5 4 3—20	3 3 2 3 4—15	35
Total			227

Forty-ninth Regiment, team No. 2.

H. A. Van Gulider	5 4 4 4 4—21	3 3 3 3 3—15	36
P. H. Stafford	4 4 5 4 4—21	5 5 3 4 5—22	43
Col. Jay E. Storke	4 3 4 4 5—20	2 0 4 4 2—13	33
Seymour Westover	5 4 4 2 4—19	4 5 4 2 4—19	38
T. Stafford	3 3 3 5 5—16	3 3 3 2 4—15	31
Joseph Cook	3 4 4 4 4—19	2 4 4 3 4—17	36
Total			217

A mid-range match followed in competition VI., and here again the scores ran low, Captain Dunning again coming in winner. Four prizes were as follows:

Captain D. M. Dunning	4 5 5 5 4 2 5—30
Captain John McCartin	2 4 4 5 3 5 5—28
Private P. H. Stafford	4 0 5 4 5 5 5—28
Sergt. L. L. Barnes	4 4 4 3 4 5 3—27

Competition VII. was for the State prize, a hunting case gold watch, manufactured by Jules Jurgenser, Copenhagen, solid 18 karat, fine, valued at $125, to be won three times before becoming the property of the winner, 200 and 500 yards, five shots each, any rifle except special military and long range weapons, won by Private Joel L. Mills, Company B, Forty-ninth Regt., with a score of 4 4 4 4 4—20 at 200 yards, and 4 4 5 5 2—20 at 500 yards.

The last competition was for a Burdick mower, presented by O. H. Burdick, of Auburn, also to be won three times, etc., 300 yards, any position with head to target, military rifles. Private Mills again headed the list with a very good score as follows: 5 5 4 4 4 4 5—31.

The officers of the Forty-ninth Regimental Rifle Association are, Capt. D. M. Dunning, President; Adj. W. M. Kirby, Vice-President, and Col. Jay E. Storke, Secretary, etc.

FROGMOOR, New Orleans, June 21, 1877.—The second competition for the Lilienthal Cup took place yesterday under very unfavorable circumstances. During the 800 yards it was raining constantly, and during part of the firing a heavy shower was falling, which, however, did not delay the shooting. Mr. Selph came too late to enter, but commenced firing with the rest at 900 yards, and shot the 800 yard score after the firing ceased at 1,000 yards. Mr. Eyrich having forgotten to put a ball in his gun was scored a goose egg on his first shot at 900 yards. The shooting master decided he had a right to take another shot, as the gun was not loaded; a vote, however, overruled his decision, and the goose was scored.

[The goose-egg was properly given to Mr. Eyrich. Marksmen must take the consequences of their own errors. If we mistake not, a shot was lost to the Irish team in one of the International matches from this cause. It has always been the rule at Creedmoor to score a miss for a blank cartridge.—ED.]

The Lilienthal Cup scores stood:

Wm. Arms, Ballard Creedmoor.

Game Bag and Gun.

GAME. IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States. In New York shooting is prohibited until August 1.

—There will be an opportunity for marksmen to test their skill at Blooming Grove Park, Pa., on the 4th, 5th and 6th of July. The prizes will be three silver plated pistols (Remington's), a gold association badge, and a glass ball trap, which is presented by Messrs. Wellington & Glenney. A match will be shot at the balls, for a prize.

IOWA.—*Bloomfield*, June 19.—Our hunters are keeping up their practice on young squirrels. Quail, grouse, prairie chickens and wild turkeys promise to afford good shooting this fall. T. V. W.

Clarinda, June 15.—The Clarinda Sporting Club was organized last evening, with Henry Bedwell, President; Herman Morsman, Treasurer; E. Stoney, Secretary, and James E. Caldwell, George Dair, E. E. Ramsdell, O. A. Kimball, and John Closson. The first regular tournament of the club will take place on the Fair Grounds, on the Fourth of July, with glass balls and purdy trap. Prairie chicken's broods are very plenty and large, numbering often as high as nineteen in a covey. The season has been favorable for hatching, there has been no hail storms or heavy rains to disturb them.

E. S.

FLORIDA.—*Jacksonville*, June 18.—The game law is not being enforced in the counties as yet, though much needed around Live Oak, in particular. It is only three days since that a party of so-called hunters returned from a trip, bringing with them sixteen deer and large numbers of turkeys and squirrels. They claim that does are out of season in summer, but bucks are good all the year round. Cannot something be done to them? Old Uncle Paul, whose name the readers of Camp Life in Florida are familiar with, is still living, though much crippled up with rheumatism. He is considered to be the best fisherman about the city. It was only Saturday I saw him bringing a fine bass of 26 pounds weight through the city.

The sheepshead fishing at Doctor Lake has been superb. I have caught some weighing 5½ pounds. Bass fishing has also been good there.

There is to be a rifle match here on the fourth of next month, distance 200 yards; any rest allowed. Chances in favor of Frank Knapp, of this city. Mr. Chappel, of this city, is building two catamarans. They are just the boats for this river.

Alligators are still numerous here. At the foot of Hogan street, under the dock, there are two large ones to be seen sunning themselves every day. WILL MURRAY.

MASSACHUSETTS, Northampton, June 13, 1877.—The Nonotuck Sporting Club held their fortnightly shoot at glass balls, sprung from traps, the shooter not knowing which trap was to be sprung, *a la* Bogardus' rules, with the following result:

At twenty balls, five balls at a time.

Captain Gabb	11	Captain Dewey	10
Maynard	13	Foster	13
Metcalf	10	Rust	6
Total	34	Total	29

The club holds these shoots for practice every two weeks. Will send you result of each hereafter. J. M.

NEW JERSEY, Washington, June 18.—The sportsmen of Washington, Warren County, N. J., organized a game protective society and shooting club, and named it the Forest and Stream Shooting Club, of Washington, N. J.

I have the pleasure of reporting a shoot of three members of the club at Hornbaker's Trotting Park, situated in one of the finest valleys in the United States. Appended you will please find the following score:

Ten common pigeons, 21 yards rise, 80 yards boundary.

A. R Strader	1 0 1 1 1 * 1 0 0 1—7	
Jno. Hornbaker	* 0 1 1 1 1 1 1 1 0—8	
R. P. Cummins	0 1 0 1 1 1 0 1 1 1—7	

Second match. Bogardus' glass balls, 18 yards rise, 18 each.

A. R Strader	1 0 1 1 1 1 1 1 1 1 1 1—12	
Jno. Hornbaker	1 1 1 1 1 1 0 1 1 1—11	
R. P Cummins	1 1 0 1 1 0 0 1 1 1 0 1—8	

We are new beginners; are the above scores a fair average?

ALABAMA, Montgomery, June 18, 1877.—The Montgomery Shooting Club of this city having lately put up a club house on the beautiful ground overlooking Jackson's Lake, a magnificent sheet of water, only five miles from town, and easy of access by either carriage or rail, concluded on Friday last they would christen it by a barbecue, fish fry, bird shoot, etc., and so, getting on board the cars, together with about twenty or thirty of the fair sex, they soon landed at the lake, and proceeded in various ways to amuse themselves, some dancing, some fishing, and others shooting, the score of which I send you. The birds flew very poorly, being wet in a shower, and frequently would dart right down to the ground, requiring very quick shooting. In the glass ball shooting very few of the shooters had ever shot at them before, but I am sure by a little practice our club cannot be beaten by any club in the country. After the shooting was over, dinner was announced, and only those who have enjoyed a good "Southern barbecue" can imagine what justice we paid to the fat barbecued lambs, done to a rich brown, the lake fish just caught, and fluttering as they went into the frying pan, the rich pigeon stew, so delicious it makes me hungry now to think of it; and when the engine soon whistled for "All aboard" it was with much reluctance we bade good-by to the charming place. If nothing prevents, we will again make its acquaintance on July 4.

Challenge match for the club pitcher, between C. Spears and J. P. Caffey, five birds each, twenty-five yards rise.

C. Spears	1 1 1 1—5	J. P. Caffey 1 1 1 1 1—5

Ties on five—30 yards, first miss and out.

C. Spears	1 1 1 1 1	1—7—12
J. P. Caffey	1 1 1 1 1	0—6—11

Club match, five birds, twenty-five yards, prize nominal.

W. L. Reese	1 1 0 1 1—4	V. M. Elmore	0 1 0 1 0—2
C. T. Pollard, Jr.	1 1 1 0 1—4	P. B. Wilkinson	1 1 1 0 1—4
W. H. Stockton	1 0 1 0 1—3	G. H. Todd	1 1 1 1 1—5
W. D. Brown	0 1 1 1 0—3	H. C. Davidson	0 1 1 0 1—3
J. P. Caffey	1 1 1 1 1—5	Jno. L. Cobbs	1 0 1 0 0—2
W. R. Taylor	1 1 1 0 1—4	J. N. Barker	1 1 1 1 1—5
C. A. Mathews	1 0 1 0 1—3		

Caffey and Todd divided first prize. Pollard and Wilkinson, after tieing on nine birds, shot the balance at double birds, twenty-one yards rise, Wilkinson winning by one bird. Other ties not shot off, the birds giving out.

Glass ball match, shot by Montgomery Shooting Club at Jackson Lake, June 15, 1877. Five balls, eighteen yards rise.

	Single Balls.	Double Balls.
J. P. Caffey	0 1 1 1—4	00 10 — 6
G. H. Todd	1 0 1 0—3	00 — 3
J. N. Barker	0 1 1 1—4	00 10 — 5
J. F. Johnson	1 1 1 1—5	11 11 11 — 12
C. T. Pollard, Jr.	1 1 1 1—5	10 11 11 — 11
V. M. Elmore	1 1 1 0—4	00 11 — 6
H. C. Davidson	1 1 0 1 0—3	10 — 4

TEXAS, Houston, June 16, 1877.—A few members of the Houston Rifle Club were out yesterday shooting at glass balls (which we combine with rifle shooting at long-range) with the following result. First match, double birds, under Bogardus' rules, 10 yards rise:

Porter	11 11 01—6	Watson	10 00 11—3
Mason	01 11 11—4	Errickson	10 00 10—2
Dunn	11 00 01—3		

Second match, 5 balls, first four double.

Watson	11 11 1—5	Mason	11 01 0—3
Errickson	11 11 0—4	Porter	01 10 1—3
Dunn	11 11 0—4		

T. C. DUNN, Sec.

PITTSBURGH, June 21, 1877.

EDITOR FOREST AND STREAM:

Your correspondent, "J. J. E.," in his article in your issue of 14th inst., evidently thinks I have not quoted Mr. Dougall fairly in the communication which appeared in your issue of 31st ult.

Now, to deliberately garble an author's language I hold to be, to the last degree, mean and contemptible, and beg to assure "J. J. E." that the quotations are verbatim (except an unimportant error of the printer in putting "on" for "over" in the quotation from page 74), and faithfully convey the author's meaning—Mr. Humphreys, in the review alluded to, to the contrary notwithstanding.

I gave the edition of Mr. Dougall's work on "Shooting, etc.," quoted from, and referred to the pages on which the quotations are to be found. If "J. J. E." will examine the text for himself, he will doubtless be able to determine where the "illusions" and "phantasms" he speaks of (whatever, in the connection used, they may mean) "come in."

W. O. M.

—Typhoid Fever, Sore Throat and Chapped hands are better treated externally with Cocoa Butter than with Glycerine, and at much less cost. Walter Baker & Co. prepare this article, which may be had of druggists everywhere.—*Adv.*

THE SYRACUSE SHOOT.

We continue our report of the State shoot at Syracuse.

THE PROGRAMME.

Tuesday, June 19.—There were eighty-five entries in the amateur shoot by members of clubs represented, and at the close the prize winners were: First, H. Silsby, of Seneca Falls, clean score, prize a silver set, value $100, presented by Dickinson & Austin, proprietors of Globe Hotel, Syracuse; second, Mr. Dayton, of the Wayne County Club, clean score on ties of nine, cash $75; third, Mr. Sheridan, of Seneca Falls, dress pattern by Edward F. Rice, Syracuse, valued at $50; fourth prize, $30 worth of powder, presented by Hazard Powder Co., was won by Dr. R. V. Pierce, of Buffalo; the fifth prize, R. P. Flower, recapper and loader, Geo. E. Hart & Co., value $15.

Wednesday, June 20.—Under Mr. Greene Smith's arrangements the shooting proceeded with military precision. The amateur match, open to all who had never before won a prize, was the order of the day, and ninety-nine men were called to the score to take their chances on the good and lively wild pigeons from the traps. The first prize, silver bowl, presented by J. H. Cook & Sons, Vanderbilt House, Syracuse, value $100, was won by A. H. Sheridan, of Seneca Falls, with a clean score on ties of ten.

Each at five birds, 25 yards rise, for the first prize:

A. H. Sheridan	1 1 1 1 1—5	T. P. Dennison	0 1 1 1 0—3
T. Fraser	0 1 1 1 1—4		

Second prize, French clock, D. Valentine, Syracuse, donor, value $60 by J. York, Jr., of the Wayne County Club, with a clean score on ties of nine, eleven competitors; third prize, hunting shirt, by Kent & Miller, Syracuse, value $35, by R. P. Flower, of Watertown, ties on eight, twenty-two competitors; the fourth prize, given by Captain Bogardus, value $15, by Mr. Heins, of Buffalo, and the fifth, a cartridge loader, by C. G. Stoddard, of Washington, D. C., by Oscar Morse, of Yates County. We append summary of the foregoing:

Ties on nine.

F. H. Andrews	1 0 0 w —1	A. N. Cowden	1 0 0 w —1
H. Chismore	1 0 w —1	R. V. Pierce	0 1 w —1
W. B. Briggs	0 0 1 w —1	C. Link	1 0 0 w —1
C. C. Morse	1 0 0 w —1	J. P. Fisher	0 0 1 w —1
L. H. Briggs	1 0 1 w —2	C. S. Burgess	0 0 1 w —1
J. York, Jr.	1 1 1 1—5		

J. York having made a clean score was declared the winner of the second prize.

Ties on eight—25 yards.

G. W. Kendall	0 0 w —0	S. R. Aspell	1 1 1 1 0—4
R. P. Flower	1 0 1 1—4	W. B. Sutton	0 0 w —0
F. W. Dunham	1 1 0 1 0—3	W. M. Tiesdon	0 0 w —0
E. Reiner	0 0 w —0	W. Foye	1 1 1 1 0—4
S. Danewood	1 0 1 1 1—4	C. F. Tabor	1 1 0 w —2
W. Christian	0 1 1 0 0—2	D. J. Warner	1 1 1 0 0—3
G. W. Smith	0 0 w —0	C. W. Sharpley	1 0 0 w —1
A Robinson	1 1 0 w —2	H. K Compson	1 1 1 0 1—4
S. S. Baines	1 0 1 1 0—3	H. Knapp	1 1 0 0 w—2
C. Chamberlain	1 1 0 1 —4	G. R. Vine	1 1 1 0 1—4
J. J. Burroughs	1 1 1 1—4	Lockwood	1 0 0 w —1

Second trial—ties on eight—31 yards.

R. P. Flower	0 1 1 0 1—3	J. R Aspell	0 1 1 0 0—2
S. Danewood	1 0 0 0w—1	W. Foye	0 1 1 0 1—3
C. Chamberlain	1 0 1 0 0—2	G. R. Vine	0 0 1 1—3
J. J. Burroughs	1 0 1 0 1—3	H. K. Compson	0 1 1 1 0—3

Third trial—ties on eight—31 yards.

R. P. Flower	1 1 0 1—4	G. R. Vine	1 0 1 1 1—4
J. J. Burroughs	1 0 0 w—2	H. K. Compson	1 1 0 1 1—4
W. Foye	0 1 0 w —1		

Fourth trial—ties on eight—31 yards.

R. P. Flower	0 1 1 1—4	H. K. Compson	1 1 0 0w—2
G. R. Vine	0 1 1 1—4		

Fifth trial—five birds.

R. P. Flower	0 1 1 1 1—4	G. R. Vine	1 0 1 1 0—3

Mr. Flower, of the Jefferson County Club, was awarded the third prize.

Ties on six—25 yards.

C. Russell	0 0 w —0	J. W. Stewart	0 1 0 w 1
C. D. Bartholomew	0 0 w —0	A. D. Lewis	0 1 1 w—2
E. Chadee	0 1 w —0	G. S. Rider	1 0 1 0—3
R. Denne	0 0 w —0	W. Fryling	0 1 1 1 0—3
H. Lewis	1 0 0 w —1	G. W. Compson	0 1 1 1 0—3
E. Isaacs	1 0 0 w —1	H. Connors	1 1 0 1 0—3
C. P. Curley	1 0 0 w —1	Oscar Morse	1 1 0 1 0—3

Oscar Morse, who won the fourth prize, is a member of the Forester Club of Yates County.

The judges were L. F. Latta and L. C. Davenport; referee, H. Thomas.

Thursday, June 21.—This morning everything favorable. The ten pairs double bird shooting match, begun yesterday afternoon, was finished at noon, William Christian, of Buffalo, winning first prize (valued at two hundred dollars), with 17 birds against 9 competitors; P. Gerber, of Buffalo, second prize—seventy-five dollars cash; M. Mayhew, of Utica, the third—value, fifty dollars; Howard Soule, Jr., of Syracuse, fourth—value, twenty-five dollars, and A. Sheridan, of Seneca Falls, the fifth.

CONTEST NUMBER FOUR.

Single trap shoot; ten single birds; same conditions as other matches. This match was called at noon yesterday, and after four squads had shot it was discontinued on account of rain.

FLY CASTING.

L. B. Heyser, of Niagara Falls; L. Barber, of Syracuse, and Henry H. Morse, of Rochester, acted as judges.

FIRST CONTEST.

In the all-comers contest in fly casting there were five entries, who cast as follows:

	Distance.
Ira Wood, Syracuse	72 feet.
A. M. Kenyon, Watertown	70 feet.
John J. Meldram, Syracuse	65½ feet.
George Wood, Syracuse	61 feet.
Dr. A. H. Fowler, Ithaca	56 feet.

First Prize.—Silver mounted rod, by McHarg & Co., of Rome, N. Y. Value $75, to Ira Wood.

Second Prize.—Fly book, flies and English water-proof line, by Sarah J. McBride, Mumford, N. Y. Value $40, to A. M. Kenyon.

Third Prize.—Barrel extra flour, by Jacob Amos & Sons, Syracuse. Value $12, to J. J. Meldram.

Fourth Prize.—Best linen bass line, 900 feet, by Henry Hall, Highland Mills. Value $7.50, to Dr. A. H. Fowler.

Fifth Prize.—A fine English rubber reel, by Reuben Wood, Syracuse. Value $5, to George B. Wood.

SECOND CONTEST.

Single-handed; open to all who have never won a prize. For this there were seven entries, with six prizes. Following is the record:

	Distance.
Dr. A. H. Fowler, Ithaca	75 feet.
Ira Wood, Syracuse	69 feet.
John J. Meldram, Syracuse	59 feet.
W. Stuilbaum, Syracuse	62½ feet.
George Wood, Syracuse	61 feet.
George Sisson, Fayetteville	65 feet.
C. W. Smith, Syracuse	60 feet.

Prizes awarded as follows:

First Prize.—Eight strip bamboo fly rod, by Hoskins & Waring, Oswego, N. Y. Value $75, to Dr. A. H. Fowler, of Ithaca.

Second Prize.—Patent nickle-plated rowing gear, by William Lyman, Littlefield, Conn. Value $25, to Ira Wood, of Syracuse.

Third Prize.—Centennial cigar holder, by Homer A. Ostrander, Syracuse. Value $25, to John J. Meldram, of Syracuse.

Fourth Prize.—Salmon line, by Henry Hall, Highland Mills. Value $15, to W. Stallbaum, of Syracuse.

Fifth Prize.—Best linen bass line, 600 feet, and 300 feet cable laid silk trout line, by Henry Hall, Highland Mills. Value $10, to George Wood, of Syracuse.

Sixth Prize.—Trout line, by Bradford & Anthony, Boston. Value $5, to Geo. Sisson, of Fayetteville.

It may be here stated that distance is but one element in the determination of the relative merits of fly casting, accuracy and delicacy entering into the question largely.

EXHIBITION SHOOT BY CAPT. BOGARDUS.

There was a fair attendance at Wieting Opera House last night to witness Captain Bogardus in his wonderful feat of breaking glass balls rapidly. The Captain was more successful than ever before, breaking 391 out of 399. His longest run was 104 consecutive balls. Time occupied, 23½ minutes, the quickest time the Captain ever made.

The long range rifle shooting was postponed on account of a heavy rain this afternoon. The dog show and exhibition of fish at the armory building is a perfect success.

Friday, June 22.—The fourth day of the field sports of the New York State Sportsmen's Association, at East Syracuse, has been as favorable as could be desired, and the brisk west wind helped the birds to take wing very lively. The first match finished was at double birds, eighteen yards rise, ten pair each, E. Hudson, of Syracuse, winning first prize, one hundred dollars cash; G. W. Crouch, second prize, value eighty dollars; R. Newell, of Buffalo, third prize, thirty dollars; T. H. Bex, of Syracuse, fourth prize, twenty-five dollars, and A. H. Sheridan, of Seneca Falls, fifth prize.

Next in order was a single trap shoot, fifteen birds each, at twenty-one yards rise, in which there were seventy-six entries. John A. Nichols, of Syracuse, won first prize, valued at 200 dollars; A. H. Sheridan, of Seneca Falls, second prize, 100 dollars in cash; W. Fryling, of Seneca Falls, third prize, value 60 dollars; E. Wakeman, of Batavia, fourth prize, 18 dollars, and Dr. R. V. Pierce, of Buffalo, fifth prize, 15 dollars.

In the rifle shooting contest at eight and nine hundred and one thousand yard ranges, O. G. Jones, of Syracuse, took the first prize, M. Cooper the second, Major Mauer the third, G. T. Stillson the fourth and W. F. Belknap the fifth. The valuable State Association prizes will be shot for to-morrow by club teams.

The double-bird shoot was commenced at 5 P. M., and as the entries were about fifty in number, but a small portion of them could shoot last night.

At the short-range rifle shooting there were nine entries. Distance, 200 yards; open to all comers; off-hand. Creedmoor rules, except weight of rifle and trigger pull; ten shots. Following is the score of the entries:

O G Jones	4	4	4	4	4	3	4	4	4	4—39
J V Norton	4	3	4	4	4	5	4	4	3	4—39
G White	4	3	5	3	4	4	4	5	3	4—39
G Payne	5	4	4	5	3	3	4	3	4	3—37
M B Nicholson	5	4	4	3	5	3	4	4	4	4—38
M Auer	3	3	5	3	3	4	4	4	3	3—35
W H Nicholoy	3	3	5	4	5	3	4	4	4	0—75
A B Smith	4	3	3	4	0	4	3	4	4	2—31
A C Yates	3	2	4	3	4	3	5	3	0	2—33
G W Falling	2	0	0	3	4	4	5	4	4	4—30

O. G. Jones, of the Yates Dragoons, Syracuse, took the first prize, a silver water set, presented by Louis Windholz. John V. Norton, of Memphis, the second prize, a rifle presented by W. S. Barnum. George White, of Oswego, the third prize, a revolver presented by Fowler & Fulton, of New York, and G. Payne, of Rome, fourth prize, $15 cash.

Handicap Match—Entrance for each weapon for each distance, $3. Ten shots. Persons allowed to enter in all by paying entrance fee for each. Distances—carbines, 350 yards; military rifles, 500 yards; mid-range rifles, 600 yards; Creedmoor rifles, 700 yards. Following is the score (when an individual's name appears twice, he shot at two ranges):

O G Jones	4	5	5	5	5	5	4	5	4	4—47
A B Smith	5	5	5	3	5	3	5	4	4	4—43
M Auer	4	4	4	5	3	5	5	4	4	4—42
M B Nicholson	3	5	5	3	4	4	3	5	4	5—41
W H Nicholoy	4	4	5	4	3	5	3	5	3	4—40
A B Smith	2	0	2	0	3	5	4	4	4	4—31
O G Jones	4	4	3	5	2	2	2	0	4	3—31
M B Nicholson	4	3	2	4	0	4	0	4	3	5—29
George White	0	0	2	0	0	5	4	4	0	2—17
D H Bruce	3	0	2	0	0	3	3	0	0	3—14

Mr. O. G. Jones, of the Yates Dragoons, took the silver water service donated by Patten & Sons of the Empire House, valued at $75 (Remington); Mr. A. B. Smith, of Geneva, the second prize, a hay rake, valued at $45 (Rem.); Captain M. Auer, the third, a calendar clock, valued at $25; Sergt. M. B. Nicholson, the fourth prize, a hunting cap and coat, valued at $15, and Mr. W. H. Nicholoy, a $7 air pistol, the fifth prize (Sharps).

The competitions, scores and winners in the Empire State Association matches were as follows:

Competition 1.—Distance, 220 yards; open to all comers. No restrictions, 20 shots, string measure; seven minute rule; entrance fee, $5. For this there were ten entries. The strings of the winners only were measured, as follows:

	Inches.	Eighths.	Sixteenths.
H R Frazer	23	5	1
H W Martin	23	6	1
Dan LeFever	30	5	1
L Eggleston	30	4	1
G W Fowler	32	6	1

The first prize, a pair of Roman silver vases, donated by Frazer & Frazer of this city, valued at $25, and $25 in cash, was won by Mr. H. R. Frazer of this city; the second prize, $25, by H. W. Martin of Rochester; the third, $15, by Dan LeFever of Syracuse; the fourth, $10, by L. Eggleston of Baldwinsville.

Competition 2.—Distance, 200 yards; 20 shots, string measure. Shot under the rules and regulations of E. S. R. A. Entrance, $3; fill or pro rata. Open only to members of Empire Rifle Association. In this there were eight entries. The strings of the winners only were measured as follows:

H R Frazer	12 5-16 inches	L Eggleston	21¾ inches
H Martin	24⅝	Chas Frazer	35⅝

Though Mr. Eggleston's string is less than Mr. Martin's, yet the weight of his gun more than made up the difference.

Saturday, June 23.—Contest No. 6 was called at 8:30 A. M., for the Livingston Sportsmen's Association Cup, donated by Jas. W. Wadsworth, Esq., Geneseo, N. Y. Opened to all organized clubs of this State members of the State Association. To be held by the winning club each year in trust, to be accounted for to the New York State Association. To be shot for by two members resident of the county in which the club is located; 15 double rises each, in accordance with the rules of the New York State Association. Entrance fee, $30, the entrance fees to belong to the club holding the cup. This cup has been held by the Audubon Club, of Buffalo, since last year. The weather was fine, and everything favored the shoot. The following is the official result:

Central City Club.

J A Nichols	11 10 10 10 10 10 01 10 11 11 11 10 10 11 11—21
H Soule, Jr.	10 11 11 01 11 11 01 11 11 11 10 10 10 11 11—21—42

Forester Club.

R Newell	11 00 11 10 11 01 10 00 11 11 11 11 11 10 11 11—22
H R Jones	11 10 11 10 10 11 11 11 00 11 00 11 10 11—22—44

Audubon Club.

J H Fisher	10 11 10 11 11 10 11 00 11 11 11 11 10 11 10—23
W C Christian	10 10 10 10 10 11 10 01 00 10 10 11 10 11 10—17—40

Onondaga County Club.

Geo Lodder	00 11 10 11 11 00 10 10 10 11 11 11 01 01 10—19
H Gale	10 11 11 10 10 11 01 00 10 10 01 10 10 11 10—18—37

Monroe County Club.

G W Crouch	11 11 10 10 10 11 10 11 10 11 11 01 11 11 10—23
G F Stillson	11 11 11 00 11 11 10 10 11 10 00 11 00 10 10—19—42

The shooting moved along very smoothly and without controversy, ending in favor of the Central City Club of Syracuse by a single bird. The team were warmly congratulated by all, and bore their honors gracefully.

Contest No. 7 was for the Dean Richmond Cup, open to all organized State clubs members of the State Association; and to become the property of a club the cup must be won by that club three times, and is to be held by the winning club each year in trust, to be accounted for to the State Association until it is finally won. To be shot for by three representatives of each club, in accordance with the rules of the New York Association. Entrance fee, $50 per club of three representatives residing in the county where such club is located. Twice had this cup fallen to the possession of the Foresters of Buffalo, and twice the Central Citys of Syracuse had borne it from the field, winning the second time last year. It was thought the contest for it this year would be between the Foresters and Central Citys, but when the match was called at about half-past eleven, the Jefferson County and Monroe County Clubs were represented among the contestants. A. Kleinman and S. H. Turrill, of Chicago, were appointed judges, and Capt. A. H. Bogardus, of Elkhart, referee. J. J. Burroughs, of Seneca Falls, was shot judge. Following is the score:

Forester Club.

R Newell	1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1—18
R V Pierce	0 1 1 1 0 1 1 1 1 1 0 1 0 1 1 1 1 1 1 0—14
H Jones	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20—52

Central City Club.

H Soule, Jr	1 0 1 1 1 0 1 0 1 1 0 1 1 1 0 1 1 1 1—15
J A Nichols	1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1—19
Ed Hudson	1 1 1 1 1 1 1 1 1 1 1 1 0 1 0 1 0 1—17—51

Monroe County Club.

G Crouch	1 1 1 1 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1—18
G Stillson	1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1—18
J H Brown	0 1 1 1 0 1 1 1 1 0 0 0 0 0 0 1 1 0 1 1—11—47

The tenth round had been fired, when the Jefferson team, seeing that victory for them was impossible, and desiring to give the field entirely to the other teams to effect a saving of time, withdrew.

The shoot was ended at 1:30 P. M. in favor of the Foresters by one bird—the same lead by which the Central City won the Wadsworth Cup. The Dean Richmond Cup now becomes the property of the Foresters, who have won it fairly, and who value it highly. The Central Citys have simply exchanged cups, taking what is of the most benefit to them financially.

Contest No. 8 was for the New York State Association president's badge, presented by President Greene Smith. The contest was open to all organized clubs which are members of the association. Entrance fee, $50. The badge becomes the property of the club winning it. The match was shot: English rules, 30 yards rise, the shooter not knowing which of five traps will be pulled. There were five entries. Mr. J. A. Nichols represented the Central City Club of Syracuse, Mr. T. H. Bix the Onondaga Club, Mr. H. Silsby the Phœnix Club of Seneca Falls, Mr. Greene Smith the Madison County Club, and Mr. Robert Newell the Forester Club of Buffalo. The match was commenced at 2:30 P. M., and completed at 7:15. The following is the score:

Robt Newell—0 0 0 1 0 1 1 0 1 0 0 1 1 0 1 1 1 1 1 1
0 1 1 0 1 1 1 1 1 1 1 1 0 0 1 1 1 1 1—25.

Greene Smith—0 0 1 1 1 0 0 1 0 0 1 0 1 0 1 1 1 0 1 1
1 1 1 0 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 0 1 0 1 0 0—34.

H Silsby—0 0 0 1 1 0 1 1 1 1 1 1 0 1 0 0 1 1 1 1 0 1 1 0 0
1 1 1 1 0 1 1 0 1 0 1 0 0 1 1 1 1 1 1—31.

T H Bex—1 1 0 1 1 1 0 1 0 0 0 0 0 0 0 0 0 0 0 1 1 1 0 1 1 1 1
1 1 1 1 1 1 0 0 0 0 1 1 0 0 1 0 1 1 1—29.

J A Nichols—0 1 1 1 1 1 1 0 1 1 1 1 1 1 1 0 1 1 1 0 1 1 0 1
0 1 1 1 0 0 0 1 0 0 1 0 0 0 0 1 0 1 1 0—28.

This match was by far the most exciting contest of the tournament. As will be seen by the score, Mr. Nichols led the rest at the beginning of the third ten birds. He was shooting in excellent style, and it was generally expected that he would win. The excessive strain which he has been subjected to, however, for the past week, had begun to tell upon him, and he was so ill that he was unable to complete his score. Mr. Greene Smith, the giver of the badge, next passed to the front and held it nearly to the finish, closely followed by Mr. H. Silsby and Mr. Robert Newell. It was not till the last bird was killed that the contest was decided. The most intense interest, coupled with the best of feeling, was manifest throughout the contest. In shooting for the President's badge, which was the most valuable of any of the prizes offered at the recent convention of the N. Y. State Sportsmen's Association, Mr. Robt. Newell, of Buffalo, the winner, began shooting in the match with a muzzle-loader, and missed 10 out of the first 20 birds shot at. He then changed guns, taking his Parker breech-loader, and killed five birds without a miss, and succeeded in killing 25 out of the last 30 birds, which gave him the victory.

Mr. Robt. Newell, the winner, accepted the badge from the hands of the President, Mr. Greene Smith, with a few appropriate remarks on their arrival in the city, which closed the proceedings for 1877, and after a hearty greeting, most of the jubilant sportsmen took the evening trains East and West for home.

T. C. Banks.

NEW YORK, Lowville, June 21, 1877.—I inclose a score made by the Lewis County Sportsmen's Association, June 12, in a contest for the victor badge, which has been worn for the past month by Charles K. Doig. The president of the association, R. J. Richardson, carried off the honors of the day.

C. H. Doig	8	S. W. Henry	7
H. W. Hayt	9	G. R. Easton	2
R. J. Richardson	10	Hiram Gray	10
C. P. Kirley	7	Henry E. Turner	9
F. D. Howell	4	S. S. Raine	7
T. M. Reed	4	L. B. Richardson	4
V. L. Waters	6	E. E. Fowler	6

Tie on ten.

R. J. Richardson	1 1 1 1—5	Hiram Gray	1 1 1 1—5

Second tie.

R. J. Richardson	1 1 1 1—5	Hiram Gray	1 0 0 0—2

THE DITTMAR POWDER.

SEWANHAKA YACHT CLUB.—*Saturday*, June 23. Corinthian Ocean Race, 20 miles to sea from Buoy No. 5 and return, each yacht to be sailed and steered by her owner. Two prizes, $250 each. The conditions barred out the timid, so that there were only two entries in the first class and one in the second, viz: The Rambler (Capt. Thomas) and Idler (Capt. Colgate), 1st; Peerless, Capt. Maxwell, 2d. The latter did not sail, as the rule provided that there must be two starters to constitute a race. The steamer Cyclops took down the regatta committee and a party of friends, and the newspaper reporters. The committee were Messrs. M. Roosevelt Schuyler, James H. Elliott, C. Wyllys Betts, Henry de F. Weeks and Louis P. Bayard. The breeze was light southeast at the start, hauling to southwest toward the finish and blowing fresh—a twelve knot breeze. The running time was said to be the quickest made over the same course. Summary:

	Start.	Finish.	Elapsed time.	Corrected time.
Rambler	10 42 26	3 17 19	4 34 53	4 34 53
Idler	10 43 32	3 26 03	4 42 31	4 38 23

The Rambler, therefore, wins, beating the Idler 3m. 30s., corrected time.

—The schooner yachts Fleetwing, Osgood, Vesta, Mills and Reckless, Kane, of the New York Yacht Club; the Triton, Thayer, of the Atlantic Yacht Club; the Madeleine, Dickerson, Brooklyn Yacht Club, and the sloop Vision, Alexander, have gone on a cruise to the eastward.

CENTRAL HUDSON YACHT CLUB.—The annual June regatta took place on Monday, June 18, over the ten-mile course at New Hamburg. There were three starters in the first class, three in the second class, and only one in the third, as follows:

First Class.—Victoria, owned by J. R. Roosevelt, of Hyde Park; W. R. Brown, owned by C. Frank Brown, of Newburgh; Fidgett, owned by Irving Grinnell, of New Hamburg.

Second Class.—Mollie, owned by the Osborn Brothers, of Poughkeepsie; Freak, owned by J. H. Weddle, of Newburgh; Eloise, owned by H. Newbold, Hyde Park.

Third Class.—George W. Shaw's A. S. Ring, of Newburgh. The Madcap (formerly the Le Roy), the Dare Devil, Commodore, Julie and Shadow did not put in an appearance.

The boats made a flying start. The following is the summary:

	Start. H. M. S.	Finish. H. M. S.
A. S. Ring	11 24 55	4 11
Mollie	11 22 27	4 53 22
Eloise	11 23 40	.....
Freak	11 25 06	4 41 33
W. R. Brown	11 20 40	4 25
Victoria	11 32 29	4 11
Fidgett	11 31 25	4 23 40

BOSTON YACHT CLUB.—*Boston, June* 25, 1877.—The First annual picnic of the Boston Yacht Club was enjoyed at Downie's Landing, Hingham, Mass., June 23. At 1 o'clock P. M. the members and friends assembled at the spacious rooms of the Boston Yacht Club where the steamer Mischief lay in readiness to take all that could not be accommodated by the sailing yachts. At 1:30 every body was aboard and the lines were cast off. The yachts that participated and carried the fair sex to the place of rendezvous, were the Effie Mary, Dawn, Sunbeam, Wanderer, Fairy, Violet, Julia, Mist, Era and Contest. The Melville gardens were engaged for the company, and a very pleasant afternoon and evening was enjoyed. Only one accident happened to mar the time. The Sunbeam was run down at her anchorage by a schooner from Hingham, bound out. The Sunbeam's jib halyards, crosstrees, topmast (topmast stay and main shrouds) on port side were carried away. The captain of the schooner, whoever he was, showed his principles by sailing away, thus covering his act with the condemnation of every honest person. Capt. Nickerson thanks the owner of the schooner Dawn and the captain of the Clio for their kindness. KEDGE.

EASTERN YACHT CLUB.—*Boston, June* 23.—The annual regatta of the Eastern Yacht Club was sailed Thursday June 21, under most favorable auspices and proved a success, weather clear, and with a strong wind flowing from the S. W. The starts took place off Marblehead Point, the course being round Halfway Rock, Harding's Bell Buoy and Egg Rock, leaving them all on starboard hand, then outside the Pig Rock stakes and home. The club steamer, Gov. Andrew, with members and ladies aboard, and the Regatta Committee steamer were in attendance. The Shadow and Alarm failed to put in an appearance. The schooners agreed not to carry club gaff top sails or balloon jibs. We give a summary herewith:

FIRST CLASS SCHOONERS.

Name.	Owner.	Time of st. H. M. S.	Actual time. H. M. S.	Cor. time. H. M. S.
Magic	C. V. Whitten	11 18 57	4 15 24	4 15 24
Halcyon	G. H. Brooks	11 15 50	4 07 02	4 06 30½
Brenda	James L. Little	11 17 31	4 40 31½	4 31 32½
Foam	T. D. Boardman	11 18 12	4 29 28	4 27 24
Azalea	Com. Forbes	11 20 00	4 37 23	4 26 58

SECOND CLASS SCHOONERS.

Romance	Vice-Com. Amory	11 11 38	not timed.	
Fearless	E. B. Phillips	11 19 25	4 36 30	
Latona	D. L. Pickman	11 20 00	disabled.	

FIRST CLASS SLOOPS

Madcap	W. C. Cabot	11 16 42	5 02 33	5 01 59½
Wayward	Rear-Com. Sears	11 18 25	4 58 05	4 58 05

Azalea lost ten minutes by not starting till after the second whistle had blown.

The interest of the race centered in the first class schooners and sloops. The Halcyon, who for the last four years has swept off the prizes wherever she appeared, had had a new overhanging stern put on by her builder, J. J. Harris, of Port Jefferson, L. I. She also had a new sailing master, whose management was looked at with a good deal of interest. Her chief competitor, the Magic, has changed her trim considerably since last year's drifting match, and under the charge of her new sailing master—who had been so accustomed to show his heels to the fleet—in the coming race, with a strong wind blowing, was looked upon by many as the winner. The Foam, as usual, was sailed by her owner and looked remarkably well.

The prizes were won by the Halcyon, Fearless and Wayward, being purses of $200 for first class schooners and $100 for each of the other classes. The contests between the Magic and Halcyon and between the two sloops was very interesting. Many other yachts of the club were present as spectators, and added considerably to the effect.

The Halcyon, though not much known south of the Cape, is a very fast boat, particularly to windward, though her new stern aids her greatly while running free. There are many people around Boston who would be glad to see her sail with the Comet. X. Y. Z.

QUINCY YACHT CLUB.—The annual regatta was sailed on June 19th with the result appended:

FIRST CLASS.

Name.	Rig.	Owner.	Dimensions. ft. in.
Vision	c.b.s.	B. F. Curtis	27 8

Gracie	Parmenter	17 03	1 26 20	1 07 08

MARBLEHEAD YACHT CLUB.—The regatta was the fourth of a series sailed there each successive 17th of June, and was the best ever sailed off Marblehead. The judges were D. K. Phillips, L. G. Pitman, Isaac Atkins, M. J. Kieley, George H. Brown and S. S. Goodwin. Prizes were awarded to the Triton and Gemsbok of the first, Breeze and Gael of the second, Posey and Ripple of the third, Helen and Mabel of the fourth, and Lurline and Fun of the special classes. The first and second classes started at 1:58, the third and fourth at 2:25 and the special classes soon after 2:30. The summaries are as follows:

FIRST CLASS.

Name.	Owner.	Length, Ft. In.	Time. H. M. S.
Addie Elmer	A. Hay	88 0	3 04 45
Gemsbok	O. Atwood	26 0	3 15 09

FLORIDA YACHT CLUB OF JACKSONVILLE.—On the evening of the 6th of June the Florida Yacht Club, of Jacksonville, met at the Metropolitan Hotel, in accordance with notice, and the large attendance of members and the enthusiasm manifested shows that success is assured.

The treasurer made his report, which was a flattering exhibit of the financial affairs of the club. The land and building committee submitted their report, which included the plans for a club house, grounds for the erection of the house, etc. The report was received and adopted. The election of officers for the ensuing year resulted as follows:

Wm. Astor, Commodore; C. J. Ikenworthy, Vice-Commodore; E. W. Denny, Captain; W. H. Bent, Secretary; A. D. Basnett, Treasurer; A. M. Beck, Measurer. House Committee—W. A. Dell, E. C. Stetson, H. D. Bonnetheau. Building Committee—S. Conant, D. Greenleaf, H. T. Baya, M. W. Drew, J. R. Campbell. Finance Committee—D. G. Ambler, L. McConihe, C. B. Benedict. Board of Trustees—W. Stokes Boyd, H. Bisbee, Jr., E. M. Randall, J. R. Campbell, Dr. Geo. R. Hall. Regatta Committee—J. P. Childs, R. McLaughlin, E. B. Kellogg.

The building committee were instructed to erect a club house, in accordance with the plans submitted by G. Hoover, architect.

The club house, by these plans, will be a two-story building, seventy feet long by thirty wide, with a gallery all around the second floor; and, upon the top of the house, an open promenade, with railings, seventy feet long by eleven wide. The first floor will be five feet above high water, with a rectangular opening or dock in it of seventy feet long by seven wide, in which row boats can be moored, or even small sailing craft, as the first floor will be eight feet from the second. The first floor, on either side of the dock, is to be the receptacle of the spare rigging, sails, oars, etc. The second floor, which is to be used for hall, reception room, bath room, etc., will be ten feet high at the sides and nineteen in the centre, being surmounted by an octagon roof, upon which is the promenade before mentioned; and this breezy retreat is to be reached by a flight of stairs from this floor. The boats in the club house dock can be entered, according to the plan, either from the first floor or from two platforms, each eighteen feet long by eight wide, situated on each side of the water end of the building. The club house, when completed, next fall, will be an ornament to the river side of the city.

It is the intention of the club to establish a reading room where will be found the leading papers and journals of the country. To enable winter visitors to participate in the advantages of the organization, without the delay attending a nomination and election, the constitution and by-laws provide that upon the recommendation of a member a stranger can obtain provisional membership and all the privileges of the club from the house committee, by paying the annual subscription of fifteen dollars—subject to future action of the club at its next meeting. If the provisional member should not be elected, the subscription will be refunded. It is the intention of the club to strictly guard its portals, so that objectionable persons cannot secure advantages offered. The by-laws and rules and regulations are very stringent, and gambling, drinking, or ungentlemanly or disorderly conduct will result in immediate suspension, if not in ultimate expulsion.

With a grand river, in some places miles in width, and with deep water, every advantage will be offered for yachting and boating. As evidence of this, we need but refer to the fact that deep and open water extends from the bar to the head of Lake George, a distance of over 150 miles. With an excellent climate, and one of the best rivers in the country for aquatic sports, we are sanguine that the club will be a success, and that many visitors will take advantage of the facilities offered.

JACKSONVILLE, Fla., June 8, 1877. AL. FRESCO.

[The members of this club are among the best citizens of Jacksonville. Scarcely ever did a similar organization start under better auspices, as regards men, means, influences, and opportunities. The provision for non-resident members is well conceived, and will add backbone to the club.—ED. F. & S.]

THE YALE AND HAVARD RACE TO-MORROW.

EDITOR FOREST AND STREAM:

It was the fond hope of all Yale men, and I am not so sure that I cannot say of all Harvard men also, that after the odium and abuse which were so liberally showered on us upon the occasion of our withdrawal from the Rowing Association had been lived down, we were at last to have a university race which should be entirely free from what the "Graduate of '67" calls side-shows. Here, however, is Havard going to row Columbia on the 26th of June on the same course and nearly the same date fixed upon for the great race. Many are the conjectures here as to Havard's motives in taking such a step. The general opinion, and the one to which I myself am the most inclined, is that she has agreed to row for the sake of the benefit she will derive from the practice. But how if she be beaten? I am afraid that this is a contingency which she has not looked at. Yet why should not such a thing happen? The Columbia is composed almost throughout of large, heavy men, and, as far as pure muscle is concerned, is stronger than the average college crew. They have all been doing good, solid work since the opening of the season, and the last and greatest argument of all in their favor, they are under the supervision of Kelly, the Cambridge graduate who drilled the Yale men so well in the smaller minutiæ of their stroke last year. He will row bow, and being a man of sound boating and other judgment, would not enter a race which he did not have more than a mere chance of winning. So if Harvard is defeated she can thank herself alone for the humiliation, for there was no reason in the world why, had she been so inclined, she might not have declined the challenge. If the reason above stated for rowing the race be not the correct one after all, then we cannot see why the challenge was not accepted and a more distant date named, that the Columbias might have more chance to train, and that the result of the race might in no manner go to point out the result of the university contest. If the day goes against the Crimson the 26th June I am inclined to believe that the Harvard men will promptly pack their traps, and, leaving the crew without backers, depart in disgust. Let us hope, if only for the sake of good sport, that nothing of the kind will take place.

The eight is doing well and will shortly leave for Springfield. The 29th inst. is the day now fixed for their departure. They are rowing twice a day. In the morning they go off for a long pull, generally rowing down to the lighthouse and back if the weather permits. On their return they have a hearty shower bath in the boat-house and don't go on the water again till the evening about six. The annual examinations and the cramming so necessary to enable a man to pass them properly, are making these few days very trying indeed for the crew, and some of them will have to look sharp if they don't want to discover the 29th of June that they are too fine. Luckily the weather is and has been deliciously cool up here, and they are able to hold their flesh better than they could expect to if it were warmer. I gave the list of men as they sat in the 8 oar in my last letter. I give them again here with the amended weights;

Name and position.	Age.	Lbs.
Bow—G. W. Hart, '78, S.S.	20	142½
No. 2—H. Livingston, '79, A.C.	20	161½
No. 3—F. E. Hyde, '79, A.C.	19	158½
No. 4 —W. K. James, '78, A.C.	24	164
No. 5—E. C. Cooke, '77, A.C.	25	169
No. 6—O. D. Thompson, '79, A.C.	21	172
No. 7—N. W. Collin, '77, A.C. (captain)	21	171
Stroke—F. Wood, '78, L.S.S.	23	159
Average	24 ⅝	163 1-16
C. F. Aldrich, cox, '79, A.C.	18	105
Sub., Clark, '78, A.C.	21	169

Hart, of the Scientific School, is a short and very muscular man. His back, arms and loins are perfect, and he is in every respect a beau ideal of a bow oar. He has never pulled in a race of any importance, but has much boating experience, and is looked upon as an eminently reliable man. His stroke is nearly perfect as regards style; sometimes he cocks his oar a little at the beginning of the stroke, but he is rapidly overcoming this habit. This is really about the only fault he has, and it is not a bad one.

Herman Livingston, of New York City, pulls "two." He is a beautifully built young fellow, being more gracefully put together than most boating men. He pulls a clean, good stroke, though he still has something of his old habit of jerking a little at the end and hoisting his shoulders. He also sometimes cocks his oar. He never loafs in a boat. A correspondent writing in one of the New York dailies has said of him, that he is an "earnest, fiery worker." That is the correct expression. He puts more zeal into his work than any man in the boat, and for this reason he was not retained in the position of stroke, which he once occupied, the coach fearing that he would kill himself and all the rest of the crew before the end of the race. He has never pulled in a university race, but is an old oar, being champion sculler of the college.

F. E. Hyde, No. 3, is another new man (the forward half of the boat are all new this year). He is the youngest man on the crew, but is looked upon as one of the sure ones. He has a fine, deep chest and good loins. He is so young that one feels safe prophesying almost anything of him provided he does not overdo before he reaches his maturity. He pulls his oar out at the end; puts too much muscle into it, and makes the boat rock with the vigor of his feather.

N.H. James was last year's substitute. He is long and wiry, and pulls the stroke well enough when he remembers to. I am told he is somewhat absent-minded in the boat, and continually lapses into errors for which he cannot plead the excuse of ignorance. In his build he reminds me somewhat of Kellogg, his strength being of the same nervous, wiry order as that good oarsman's. He has the same fault as Nos. 2 and 5. He pulls out at the end, i. e., throws too much vigor into the stroke just before it leaves the water. When he waxes careless, he swings out of the boat.

E. C. Cooke rowed last year. He is a mass of muscle, and if he could only utilize it to its utmost capacity, he would pull one of the best oars in the boat. Unfortunately, he is somewhat clumsy, and occasionally sticks his elbows out. His rowing varies somewhat. A good judge told me that the other day he saw Cooke pull as gracefully as any man in the boat. He is certainly doing much better than last year, both in the amount of work which he is putting in and his manner of doing it. He don't get his hands away quite quickly enough, and he throws the water a little at the finish.

O. D. Thompson pulled last year, and is one of the best men in the boat. He is immensely powerful and the most athletic man in the boat. His physique is chiefly remarkable for his immense breathing space. His record in everything he has ever gone into is good. He was left fielder on the nine before going on the crew, is a good hurdle jumper and sprint runner, and was one of the best men on the football team last year. His only fault is that he don't always get his hands over his knees quickly enough to prevent his splashing up the water with the blade of his oar.

N. W. Collins is captain of the crew. He rowed on last year's crew, and also on the famous Philadelphia four. He pulls the strongest oar in the boat, and pulls it in good shape. He is the heaviest and strongest man of the eight, and has great staying powers. He is popular with his men, and with the college, a thing which is indispensable with the captain of the crew.

F. Wood, of Norwalk, is stroke. He pulled in the same position on the winning freshman crew of '75. A better stroke than he pulls could not well be imagined. He is an old oar, having pulled constantly since '75, with the exception of '75, when he broke his leg and had to lie by a season. He is now setting the crew a stroke of 34 and 36 to the minute. This will probably be kept up through the race, though, on a spurt, it may go up to 38. He throws water a little at the end of the stroke, but as he is pulling "8" in the boat it is a fault of no consequence. He also is given to caching too quick. As a whole, the crew rows very finely, and only a critical eye can detect any faults among them. The shell to be used is a paper one by Waters of Troy. Length 58 ft., beam 25 in., depth 8 inches from slide, and weight 240 lbs. It is modeled on the English eight used last year at Springfield. Harvard has a boat of the same kind by the same builder, and has also a cedar shell by Blaikee, of Cambridge. She has not yet decided which she will use in the race. The contest is going to be a close one. Harvard's crew, physically, is magnificent. They have a good stroke and plenty of pluck to back it. The days of walkovers have, I think, gone by, and whoever is at Springfield the 29th of June will be ready for his visit. A full account of this race, and also of the race of the 26th, will appear in the issue of the FOREST AND STREAM for July 3.

[The foregoing letter was written for publication in our issue of June 21st.—ED.]

HUDSON RIVER ROWING ASSOCIATION.—*Troy*, June 23.—The second day's regatta was a great success, with wind and weather altogether satisfactory. The winners were:

Tompkins, of the Wolvenhooks, won the single scull race in 10 min. 53¾ sec.

The double scull race was taken easily by the Wolvenhooks in 10 min. 40⅝ sec.

Davey, of the Mutuals, won the senior single scull race in 10 min. 51 sec.

The great event of the day, the four-oared race, was won by the Wolvenhooks amid great excitement. Time 9 min. 6⅝ sec. The Fileys were second, in 9 min. 13⅝ sec.

NEPTUNE ROWING CLUB.—*West New Brighton, S. I.*, June 23.—Annual regatta. The first race, pair-oared shells, for a pair of gold oars, was won by T. R. Keater and O. T. Johnson. A single-scull for the club badge and the junior championship was won by F. L. Rodewald. The "Punch and Judy" race was won by "Punch." In the tub race, which ended the sport, H. Southworth Pratt was the winner.

COLUMBIA AND HARVARD BOAT RACE AT SPRINGFIELD.—At the boat race between Columbia and Harvard at Springfield, Mass., on Tuesday, Harvard won easily by three lengths, having made the successive miles in 4:55, 5:20, 5:45 and 5:27, and the whole distance in 21:37. Columbia's time was 21:50½. The crews were: Columbia—Edmund Kelly, bow; Charles Eldredge, 2d; G. P. Seeley, 3d; Cyrus Edson, 4th; H. G. Ridaback, 5th; R. R. Colgate, 6th; E. E. Sage, 7th; J. T. Goodwin, stroke; Henry Casmer, coxswain. Average age, 21½ years; average weight, 152⅜ pounds. Harvard—L. N. Littaner, bow; N. N. Brigham, 2d; B. J. Legate, 3d; W. M. Lemoyne, 4th; M. R. Jacobs, 5th; W. H. Schwartz, 6th; F. W. Smith, 7th; W. A. Bancroft, stroke. Average age, 21; average weight, 165½ pounds. Both crews rowed in Waters' paper boats; length, 58½ feet; width, 24 inches; weight, about 240 pounds. The course was from off Hampden Park, four miles straight away to the finish, just south of Long Meadow station.

SILVER LAKE REGATTA.—*Boston*, June 14, 1877.—Yesterday, June 13, will long be remembered by the rowing fraternity in the vicinity of Boston, especially by those who witnessed the contest at Silver Lake.

The trains that left the Old Colony Depot were crowded with anxious ones, proceeding to the beautiful sheet of water that was to be the scene of contest in muscle and skill. Although every available place was taken by the surging crowd, no distinction of any character was noticed during the entire day. A fine band of music enlivened the scene, and those that wished could please themselves dancing. Too much compliment cannot be paid to the referee and starter, James F. Ormand, Esq.; the judges, Messrs. C. O'Brien, John W. Frazier, J. Dogherty, and J. Flanly, with F. Bibber, Esq., time keeper.

The lake is a beautiful sheet of water over seven miles in circumference, from ten to fifty feet deep in places. The courses were marked out to give ample opportunity for all to see, at any point of the race. The buoys were sunk low in the water, so that the boats should not be impeded. Every precaution was taken by the Old Colony Road to insure individual safety and comfort. This lake is only one hour's ride from Boston, and has been fitted up with every possible care for the convenience of the public. A base ball ground has recently been added to its many advantages; it is one of the most desirable places for picnics and pleasure parties. There is a nice little steamer, Lady of the Lake, together with rowing and sailing boats, that give ample opportunity for those that desire a trip on the surface of the lake.

The single scull race had twelve entries.

Name.	Weight. lbs.	Length boat. ft.	Weight. lbs.
Plaisted	170	29	35
Johnson	174	31	29
Landers	132	30	32
Hanlon	165	30	34½
McCann	175	30	40
Ahearn	154	31	35
Brown	177	29-6	32
Mahoney	—	34	38
Harrington	165	33	34
Driscoll	159	30-1	33
Hosmer	148	32	32
Kelly	162	33	31

A fair start was obtained at 2:40 P. M., Plaiser taking the lead, Johnson second, and Landers third. Plaisted's time was 21 minutes, 49⅗ seconds; Johnson's 22 min., 8 sec., and Landers 23 min., 20 sec. The others time were not taken. First prize, $150; second, $75.

SECOND RACE, PAIR OARED BOATS.

Name.	Weight. lbs.	Length boat. ft.	Weight. lbs.
Biglin & Maxwell	180-175	34	51
Gookin Bros.	160-165	36	60
Connelly Bros.	152-160	35	36

Biglin & Maxwell won first, 21 min., 49½ sec., 1st, $150. Gookin Bros. won second, 21 min., 54½ sec., 2d, $75.

THIRD RACE, PAIR OARED BOATS.

Name	Length boat. ft.	Weight boat. lbs.	Av Weight men. lbs.
Lakeman	34	190	155
Riverside	34	160	159
Portland	35	180	162
City Point	32	198	150
St. James	37	150	192
Lynn	35	169	149

The Lakeman came home easy winners, in 19 min., 59⅗ sec., $150. Riverside second, 20 min., 20 sec., $75; Portland, 20 min., 37½ sec. KEDGE.

MICHIGAN.—*Detroit, June* 23, 1877.—A six-oared shell race for the champion cup was rowed by the Excelsior and Zephyr boat clubs, at Detroit, June 22. The crews were: Excelsior—Earl, Telfer, Goldsmith, Campbell, Kimball and Standish. Zephyrs—Craig, Dings, Reynolds, Henkel, Keating and Linn. The race was won by the Excelsiors in 18:41, the Zephyrs following in 18:49. Distance, three miles.

Rational Pastimes.

FOX HUNTING IN WEST VIRGINIA.

EDITOR FOREST AND STREAM:

As a few remarks relative to our sport last week after foxes may not be out of place, I venture to write.

On hearing Minor and "Bills" hounds on the chase, I hastened to a stand; there waited until near noon; music of hounds had died in the distance, and I had about concluded Mr. Fox had given them the slip. And I guess he had, for he stepped out from under a bank and stood within fifteen yards of me! I can never tell how he got there without my seeing him coming, unless I was looking at my new gun, a combination (rifle and shot) just received from Nichols & Lefever, of Syracuse, N. Y. Now I had it all "made up" as to how I would proceed. Of course I would see the fox coming, and if he stopped then I was going to try the inserted rifle barrel; if no stop, then with shot. By his slipping up on me he got the better of me so suddenly I "roostered" both barrels, got rifle sight, but couldn't find rifle trigger; could not manage this handful of triggers, and as Reynard didn't care to wait till I made the selection, he (about the time I had found the right one) started to trot off. Then where! oh, where was the shot trigger? Well, I didn't find it just then! And away he went unhurt.

I was much vexed over this, as I would have liked much to take that fox in with me. Was so thoroughly disgusted with myself, to give vent to feelings I told the candid truth (what sportsmen don't always do about such things as this) and the folks had a good laugh at me. Still I had a hankering after that fox, and told the boys I would have him by the hind legs before night if he didn't look sharp. So out I went; dogs had him up again. I slipped up on Minor, shook a bush and "housed" him near out of his boots. We took our stands. I sat there educating myself in the *modus operandi* of my fowling piece, and had just graduated, when Minor's "heavenly music" broke the stillness, and here came foxy. His line lay some fifty yards to my right, and as he was passing I gave him a dose of No. 1. Those pellets caused him to cut a "pigeon wing" then and there. Then he came nearer toward me. When within a rod I gave him the contents of the rifle (never thought to slip in another shot shell!) It happened just as well, as the rifle "curled him up."

How proud I was to take him in! Why, I walked as lofty as I did the first time that Ella (my wife) allowed me to "accompany her home." I might remark that I didn't feel quite so "tall" when it came down to asking the "old gentleman" for his favorite daughter. Well, I am off my subject. To resume. We planned another hunt for next day which was to be a raid on some "dens." "Bill" went to his and came over to help me after he had killed one and "splattered" another. Mine had gone to hole. We dug awhile, and out jumped one half grown, and away it went. Dogs soon caught it, and while we were rejoicing, out went another. Dogs did not see it, nor did we until it was quite a way off. I blazed away and turned him a somersault. Law, man! how I instantly fell more in love with that gun! I could hardly keep from patting it; guess I did stroke it down a little. This kind of gun is certainly just what we want. Won't I flirt the deer with it next winter if all is well? This rifle is as fine shooting as any I ever handled. I did not expect to "puff" this gun when I started, but you know how natural it is to talk of what we admire and know to be O. K. Let me see; guess I had just shot a fox a while ago. Yes; well old "Frank" went in the hole and brought out the third fox "dead muff." We all had "lots of fun" and foxes.

I am afraid I have lengthened this article too much. I certainly would not make a good preacher, for good ones stick to their texts, which I have not done in this. However, if you think this of sufficient interest you may publish, and I may give you something better after awhile.

Should you ever come this way, think I could give you a little modest sport of some sort.

Am your well wisher, D. M. S.
Petroleum, W. Va., May 20, 1877.

CRICKET.—*Saturday, June* 23.—Germantown Club of Philadelphia vs. Staten Island Club, at Camp Washington, S. I. Attendance unusually large. The five brothers Hargreaves, despite Jones' swift bowling, rolled up a score of 105, or 11 more than was made in the total of the two innings of the Staten Island Club. The following is the score:

GERMANTOWN.

First Inning.	
R. Hargreaves, b. Brewster	10
H. Hargreaves, b. Jones	2
J. Hargreaves, b. Jones	1
T. Hargreaves, b. Jones	43
John Hargreaves, not out	49
F. A. Brewster, c. Outerbridge, b. Brewster	7
J. W. Hoffman, l. b. w., b. Brewster	7
J. P. Simms, b. Jones	2
H. W. Thurman, b. Brewster	4
J. L. Thurman, Jr., b. Brewster	1
Byes, 11; leg bye, 1	12
Total	138

STATEN ISLAND.

First Inning.		*Second Inning.*	
W. M. Donald, b. Brewster	2	b. Brewster	107
J. Lee, run out	3	hit wicket, b. Brewster	0
A. Harvey, c. Brewster, b. R. Hargreaves	6	c. T. Hargreaves, b. Brewster	2
B Jones, b. Brewster	5	c. Hoffman, b. Brewster	20
W. Brewster, c. J. Thurman, Jr., b. R. Hargreaves	5	not out	5

Total	41	Total	53

Umpires—James Smith, for Staten Island; Daniel Oakley, for Germantown.

—The International cricket match, between the Montreal Club and the St. George's Club, of New York, at Montreal, June 19th, resulted in a defeat of the former by a score of 244 to 95.

—The greatest truths are the simplest; so are the greatest men. The same thing may be said of manufacturers. The patent fact about B. T. Babbitt's Toilet Soap is that its elements are so perfect and pure that they need no unnatural scent. An effort to conceal argues something to be concealed. This new toilet soap conceals nothing by false fragrance, for it has all the open simplicity of truth and honesty, being compounded of the best materials.—*Ade.*

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York

SCIENTIFIC.—Prof. S. F. Baird, Assistant Secretary of the Smithsonian Institute, Washington, and United States Fish Commisioner, will locate in Salem for the four summer months. A dredging steamer will be in Salem harbor, and science in this direction will be carefully studied.

A STRANGE BIRD.—A correspondent writes us saying:

"Robt. E. Best has received a nondescript sort of a bird that is an exact resemblance to a pigeon with the exception of its feet. A sporting man looking at the bird would be willing to stake his bottom dollar that it was a pigeon, and that Best by some ingenious device, had put on it a pair of web feet. The web feet, however, is the peculiarity of the bird, and it was shot while swimming on Cooper's Lake near Little Shandaken by a young man, the son of William Cooper who lives at or near Bearsville. Best has stuffed the bird very nicely, and will hereafter preserve it as a specimen of Ulster County game."

[We have heard of this bird, or one very like it, several times within the last year, and wish that some correspondent would furnish us with a categorical description of it. We venture to predict that it would turn out, after all, something not very uncommon.—ED.]

THE N. Y. SCHUTZEN CORPS FESTIVAL.—The twentieth annual festival of the New York Schutzen Corps opened June 25, at the Schutzen Park, Union Hill, Hoboken.

At the grounds the several associations, among which were representatives of the Jersey City Schutzen Corps, the Zettler Rifle Association, the North American Schutzen Bund, the Brooklyn Schutzen Corps and others marched at once to the banquet hall, where, after being welcomed by Captain George Aery, all sat down to partake of a substantial repast. Speeches were also made by General Dakin, Mr. William Hayes (of Newark), Captains Bruce, Harding, Busch (formerly President of the Schutzen Association) and other gentlemen, and toasts innumerable were drenched in beer. Between four and five hundred riflemen were present, and a goodly array of ladies took part in the terpsichorean pleasures that followed.

The shooting did not commence until after two o'clock, when, the signal gun being fired, the captain of the New York corps led off with the usual four shots—first, in honor of the President of the United States; second, in honor of the Governor of New York; third, in honor of the Governor of New Jersey; and fourth, for the New York Schutzen Corps. The ball now opened at all of the targets, and the shooters began to roll up their respective scores in handsome fashion. The targets consisted first of the double-headed eagle, which was placed at a distance of 75 yards. During the afternoon Mr. Albert M. Lemke carried off the middle crown and prize of $20; Mr. Augustus Schaffel, the left crown and prize of $10, and Mr. John R. Groman the right crown and $10. On the ring target Mr. Fenning, a young member of the Zettler Club, out of a possible 75 in three shots made 68. We shall give the results of the meeting in our next issue.

—The bark Adolph, from Bremen, lost her fore and main royal masts by getting them caught in the storm-wires of the East River Bridge, as she was being towed up to her dock in New York.

—Artificial flowers called barometers are now seen in many Parisian shops. They are colored with a material composed of chloride of cobalt. When exposed to sun and dry air the leaves become deep blue; when the air is moist they turn pinky.

—Charles Kemble once set the house in a roar of laughter by transposing two letters. In a very solemn passage, instead of reading: "Shall I lay perjury on, my soul?" he cried in tones most tragic: "Shall I lay surgery on my poll," and the house would not be satisfied till he had in a measure done so by taking off his wig.

THE

Sportsman's Gazetteer

AND

GENERAL GUIDE.

WITH MAPS AND ILLUSTRATIONS, 750 pp., Price, $3.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM;" AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST and STREAM" PUBLISHING COMPANY.

AMERICAN NEWS COMPANY, AGENTS.

1,000 Copies Sold in Advance of Publication.

The book is a complete manual for sportsmen:

It gives every sportsman alike method for capturing every known game animal, bird, and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)

It gives the set initial name and specific characteristics of each species it describes, with the habitat and breeding season of each—a most valuable contribution to science.

It describes 297 varieties of edible fish alone, that may be taken with the hook; 60 varieties of ducks, 5) varieties of snipe or waders, and the different methods of shooting each.

Its instructions for capturing large game are very minute, and the chapters on woodcraft, outfitting and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and his points for bench judgments fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.

Every scientific portion of the work has passed the inspection of an officer of the Smithsonian Institution.

It contains very useful recipes and remedies for wounds, bites, poisons, illness, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.

It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

ENDORSEMENTS.

"I can judge from your advanced sheets that your book will be a *vade mecum*, invaluable to sportsmen."—*Dr. H. C. Yarrow, U. S. A., Smithsonian Institution.*

"Your forthcoming book will indeed be a treasure. The labor of preparation must have been immense."—*S. C. Clarke, Lanesboro' Pittsfield, Mass.*

"Having examined the proof sheets of your forthcoming book, I predict an extraordinary sale."—*G. Bird Grinnell, Peabody Museum, Yale College.*

"That portion of your book relating to woodcraft, outfitting, camping, etc., is simply complete. I can scarcely add anything."—*H. M. Litchell ("El Cazador"), Los Angeles, California.*

"Your book is much needed, and I have every confidence that you are capable of covering the whole ground. We need something more recent than Frank Forester."—*D. C. Estes, M. D., Lake City, Minnesota.*

BINDERS.

JORDAN ALUM SPRINGS,
ROCKBRIDGE COUNTY, VA.,
Eight miles from Goshen Depot C. and O. RR.

JNO. W. CAMERON, Prop'r.

To old patrons it is only necessary to say that the management will be strictly first-class, with reduced terms to meet the hard times.

The hotel appointments are unequalled by any summer resort in Virginia, comprising all modern appliances which characterize first-class city establishments—hot and cold water on each floor, gas and electric bells, with hair mattresses in each room.

Mr. JOSEPH N. WOODWARD, so well and favorably known at both Rawley and Orkney Springs, will be in charge as manager, where he will be happy to see his patrons.

For pamphlets or particulars address
JOHN W. CAMERON, Prop'r.
je21 8m Jordan Alum Springs, Va.

Metropolitan Hotel,
WASHINGTON, D. C.

"The Bermudas."
NOW A FAVORITE AND DELIGHTFUL WINTER RESORT, is reached in seventy hours from New York, and being surrounded by the warm waters of the Gulf Stream enjoys an equable temperature of about 70 deg.

The elegant British Steamships "Bermuda," and "Canima," 1,000 tons, fitted expressly for the passenger travel, are dispatched from New York for Bermuda fortnightly, making connection at Bermuda with steamers for St. Thomas and West Indies. For full information apply to A. E. OUTERBRIDGE, Agent, 29 Broadway, N. Y. Dec 21 1y.

THE "FISHING LINE."
Brook Trout, Grayling and Black Bass Fisheries
OF NORTHERN MICHIGAN, VIA
Grand Rapids and Indiana Railroad.
(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscelonge, Pike and Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Clubs" at home, as **ice for packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

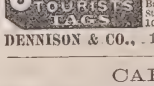
SAPONOID.

Mosquito & Black Fly Repellent.

This Composition contains no ingredients injurious to the skin, is saponaceous and removed at once by the application of water, possesses great healing and cooling properties free from all grease. Certain and instant cure for the bite or sting of insects, mosquitoes, flies, wasps, bees and other insects, removing all inflammation, neutralizing the poison and allaying the swelling at once.

DIRECTIONS.



For repelling flies and mosquitoes rub the Saponoid on the exposed parts freely with the hand. One application to the sting or bite of the insect, in most cases, is certain relief.

Sold in collapsible tubes, mailed to any address on receipt of 50 cents by

BRADFORD & ANTHONY,

374 Washington street, Boston, Mass.

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

THE

HAZARD POWDER CO.

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

FUR, FIN and FEATHER.

This is a publication that should be in the hands of every lover of shooting, fishing and trapping. It contains the

GAME AND GAME FISH LAWS

of every State in the Union and the Dominion Provinces, and also gives a description of all the best places for shooting and fishing in the United States and Canada, tells how to reach them, and what kind of accommodations you will find when you get there. It tells you what kind of tackle to use for the various kinds of fish, and where the best can be procured, and also where you can get the best of every description of shooting apparatus. It contains a number of interesting sketches of hunting and fishing adventures, and a vast fund of useful information on field sports and angling that renders the work indispensable to all who use either gun or rod. It is, in fact, a complete

Hunting and Fishing Directory

and no matter how much or how little recreation you take in the woods and along the streams, you will find *Fur, Fin and Feather* worth many times its price to you. It is a bi-monthly (every two months) publication of from 176 to 208 large octave pages, 50 cents a number, or $3 a year.

SEND FOR DESCRIPTIVE CIRCULAR.

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when, set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.

No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.

No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

All goods sent, charges paid, to any address on receipt of price. Address

Chas. L. Coate,

330 Fulton St., Brooklyn, N. Y.

P. O. Box 214.

Highest Honors

AT THE

CENTENNIAL WORLD'S AIR, 1876.

SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the **Judges** in their **Report**, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.'S** exhibit as **the best instruments** at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS RANK.**

This Medal and Award was granted after the most severe competition of the best makers, before one of the **most competent juries** ever assembled.

New styles and prices just issued, which are in accordance with our rule, the **BEST ORGANS** for the least money.

We are prepared to appoint a few new Agents.

TRIPLEX.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent-Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $115, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.

[Extract from FOREST AND STREAM, Now York, December 26, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

Paper and Metallic Shells

FOR

Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2⅝, 2¾, and 3 inches; No. 12—2⅝, 2¾, and 2⅞ inches. Longer Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.

Volume 8.—No. 22. No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

BIRCH BARK.

Yes, yachting is pleasant, when breezes are fair
And the trim craft bowls gaily along,
With a few chosen shipmates, the cruising to share,
And reel off a yarn or a song;
But when the winds fails us and idly we float,
Becalmed on our way up the Sound,
We chafe at such bobbing about in a boat
And long for a tramp on the ground.

There is pleasure in rowing when waters are still,
With a shell boat so taper and slim;
But the catching a "crab" may result in a "spill,"
And your muscles are in for a swim.
"Or the water is "lumpy" and "wobbles" your "spoons"
Just when you stretch out for a "spurt,"
Perhaps it is jolly to cut up such loons
While the spray soaks the back of your shirt.

With the bright-eyed young Delia for half of the road
(The afghan tucked carefully in),
Some seekers of pleasure are found on the road,
In the dust, for a "two-forty spin."
Yet from all such beguilements I beg to be free,
Also "Polo," fox-hunting and "sich;"
They may each in their turn serve to cure the ennui
That troubles the painfully rich.

But the sensible plodder whose ducats are few,
When for brief recreation he strays,
Will strike for the wildwood, whose charms ever new,
Are free from conventional ways.
There the shady nooks nestle and limpid lakes gleam;
There the trout leap, and startled deer run;
So for jolly good cheer give me forest and stream,
With a friend, and the rod and the gun.

T. W. A.

For Forest and Stream and Rod and Gun.

Upon the Marsh.

A WEEK among the Grundy County, Illinois, chickens, in September, with the thermometer at 90° had not satisfied me, particularly the wonderful unaminity with which our dead chickens took on the process of decomposition. The last week in October Seymour, just returned from the marshes near Toledo, gave such glowing accounts of the duck shooting there that I straight off repacked my traps and took the evening train for the city where they "never have the ague."

The next morning I made my way up to "Captain Ned's," who, as I had been informed, ran a yacht to the marshes twice a week, and who had general supervision of matters there during the season. I found him without difficulty. But it was election day. He had on his store clothes, was just starting down-town to exercise his elective privileges, so we had to lie over until the day following, when we started off bright and early in the morning, our party including "Captain Ned," a little the worse for wear, but with a conscience balanced up to date; "Young Ned," a twelve-year-old, and a young Frenchman, who said he was a priest, or preparing to be one, going down to see his brother, who was tent-keeper at the marsh. The said tent-keeper was a baker, but he had left his alum and ammonia and 2d quality spring wheat xxx flour to exercise his slaughterous propensities upon ducks. Both brothers could sing right regally. Around the camp kettle stirring up the mud hens, compounding what they called "boullion," they would ring out many a French melody with a liveliness and vigor which pleased me exceedingly. The Marseillaise was their favorite and ours. The grand chorous of "Marchon enfans," owing perhaps to my imperfect knowledge of the French, ever brought vividly before my mind's eye a vast regiment of infants with red nightcaps, *et preterea nihil*, marching forward savagely with cries and squalls and cutting of teeth. The wind was contrary; with many tacks at four o'clock we reached the outlet of Frenchman's Creek, chilled through and hungry. A small boat containing the baker came off and took us ashore. Camp consisted of a tent upon the sandy point—near by two crotches with a pole across held the camp kettle. The table, a plank with a four-foot high support at each end; a bench upon each side of like formation completed the arrangements for feeding and comfort and fresh air. The camp kettle contained the "boullion, just arrived at perfection," so the baker informed me, and he brought me a bowl of it, which was very welcome, also coffee strong enough to bear up an iron wedge, without milk but with plenty of sugar and sand. "Boullion" was a new experience. I learned its composition: pepper, potatoes, beef, salt, sugar and sand, and last, the main thing, mud hens,

All boiled together
With many a feather.

Black bread q. s. This was our constant bill of fare. It was always good, only the difference between old mud hens and young mud hens.

The life-giving compound hastily swallowed, anxious to get at the ducks, I inquired where I should go. "Oh, push out into the rice anywhere, but no use to shoot for an hour yet." I fancied I could see upon a stretch of open water the black heads of a mass of ducks. Considering there was nothing morally wrong in killing ducks by daylight, I picked out one of the small clinker built boats, secured the only pair of oars, happy over this—how fortunate that I went first and pushed out. The oars didn't work first-rate on account of the mud and weeds, a hundred pounds of which I raked up at every stroke. One spot of open water gave me a little headway, which, checked suddenly, pitched me forward into the bottom of the boat upon my knees. The position was prayerful, but the three inches of water was not at all conducive to a proper spirit. No time to bale out; the ducks were ahead, their black heads bobbing about. Within ten rods I dropped the oars and grabbed my firearm for a sitting shot. Then first I comprehended that they were mud hens, every blessed one of them. I had one of their friends inside of me and did not care for more. Slowly and sadly I rowed and poked my way into the first patch of rice. An hour's waiting—a flock of blue bills came circling along at a mile a minute. One barrel six feet ahead sent me backward into the three inches of water, now increased to four. Didn't feel so wet as it did the first time. One duck dropped dead, another wounded. Pushed out, secured the dead bird, the wounded one dove; the water not deep I could see the ripple of his swimming. When his head came up I pushed carefully within easy range, raised an oar and let him have—— By some surprising deflection the blade came not nearer than two feet, splashing me thoroughly. Three times tried I this, my best stroke ten inches; becoming desperate, I shoved the boat up near him and grabbed him, vengefully wringing his head off, and with much toil returned to my rice as evening came on. The mallard flying in from the Lake circled around everywhere except where I was. One at last came almost over me, I dropped him, but he fell in the rice; one wood duck I cut down as he flew past. As it grew darker the mallard came in more carelessly, with many a teal fairly brushing my face with their swift moving wings. I banged away a dozen or twenty shots, wishing I had eyes in the back of my head. Securing two mallard and two teal, as many more dropped, but unless killed dead had better not have been hit at all. Now dark. I rowed and poked and dug my way to the camp fire. The others were all in. Found that with my seven ducks I was two ahead of the biggest bag. All said that the flight was not good. Thought so myself. The blue bills and teal a little too fast, the mallard too slow, so that with my inexperience I fired too far behind and too far ahead systematically. Changed my wet clothes in the sand and darkness of the tent. There was a lamp—great comfort to know it—but there was no oil; went out to the camp fire, swallowed my dose of mud hen and coffee, then back into the tent, bunked in under the buffalo skins spoon fashion, slept cold and half awake all night. At four A. M. we were routed out, swallowed our hot coffee hastily, and each man to his boat, pushed off into the darkness.

This time I left the oars and took a hunting pole, a new experience, delightful and refreshing. Jabbing it furiously into the mud until it struck bottom, I shoved ahead vigorously, congratulating myself upon this effective mode of propulsion. Then with much effort, steadily pulling upon the pole, the boat slowly and surely retraced its course. The next trial I gained a foot, but not for a long time did I learn to work the the thing with any sort of satisfaction. Then I could not poke upon both sides at once, and the bow would turn at every poke. It was very tiresome indeed continually changing the pole from one side to the other—like riding a velocipede, apparently impossible. Others did it, why not I? So in spite of blisters and wondrous waste of muscle I kept at it, bound for my last night's rice patch. But alas, fetching up in the open, fast in the mud, where daylight found me, and where the ducks found me. Not one of them came near enough to see what I was after, whether fishing or digging for turtles. Suffice it to say that being here I am not there yet. At seven o'clock I had worked back to camp, not having had a shot, but lots of practice with the hunting pole, though I could not perceive that I had improved very much in its management. The baker and Ned, the elder, had eight ducks, Young Ned had three large green heads. The priest had not gone out, but had been better employed stewing the boullion and coffee.

The weather was fine, altogether too much so. Toward noon the wind was from the south. Making interest with the baker, we started out together. He said he would take me up Frenchman's creek to some small ponds where we should have good shooting. He went ahead, we were soon in the creek, which I found was a crooked streak of water through the rice, averaging four to six feet wide. I could but admire the dexterity with which he handled that infernal hunting pole, working on one side only, pushing and steering at the same time, whereas I worked upon both sides, every time turning the bow into the mud upon the opposite side of the channel. Every little while I would call to him to "hold on." At last overtaking him I requested him to explain "why my boat wouldn't go straight?" and why his pole didn't stick fast in the mud at every stroke. Said he, "Put down your pole so, with short quick pushes." That, after many trials, I succeeded in doing, but my boat never quite got rid of the habit of turning up into the mud. We kept on and on; Frenchman's Creek appeared to be a very long creek indeed, I judged about twenty miles. At last, greatly to my relief, we came out into a pond some twenty rods long by six or eight wide. Said the baker, "Run your boat into the grass and get out your decoys, I will go to the lower end; in an hour there will be lots of ducks." I did so. A blue wing teal come skimming along. I dropped him. Two pintails came next, flying rather high. Gave them each a barrel. One came down dead, the other with a wing broken fell in the grass beyond reach. A mallard from below came over the marsh straight for me. Just ready to raise my gun when a puff of smoke from the baker, and down pitched the mallard. These two mallard from the same direction appeared to be almost within shot of me, the baker stopped them both, but neither dead. Just then a boat with three men in it pushed slowly by me and down toward my friend, and located their decoys not many rods from him. A few ducks came along, but the new comers wore black coats, and were so conspicuous that none came near. Three-quarters of an hour went by and the baker came rapidly pushing up to me, pouring forth a solid six-inch stream of profanity, exhausting the capabilities of two languages, anathematizing the "black-coated blackguards," as he called them. We again undertook the navigation of the creek back toward camp. When out of the creek we turned sharp to the right, and coming to some moderately large patches of open water I was directed to put out my decoys and push my boat into a clump of bullrushes, while B. took his stand twenty rods below. It was now five o'clock. Not long before a mallard came over the marsh straight for me. As he saw the decoys he lowered a little. I took careful aim and fired. Not a shot touched him, he began to climb and the second barrel dropped him dead. A black duck came for the Frenchman, who broke a wing, the second barrel missed, the duck slanted down straight for my head. I fired at 30 feet, and with a heavy thud he struck in the stern of my boat. As it grew dark the ducks came in plentifully, and we hammered away, dropping them in all directions. This was soon over. The wind was now blowing hard and driving the water out of the marsh, so that we had a hard time getting back to camp, but we did it, and it was nine o'clock. Old Ned and young Ned had gone up to town, the priest was asleep. The fire was out and we were wet and tired, the baker so hoarse he couldn't swear. Quickly we raked up the fire, ripped off the skins of some ducks—couldn't spend time to pick them, and at ten o'clock P. M. precisely we sat down to dinner—coffee and ducks and duck soup and black bread—and first-class appetites. Our dining room was a little cold, for the wind now blew a gale. It blew the tent down before morning, where we let it lie, and froze ice one inch thick. At four o'clock the ducks were quacking all around us, the marsh was crammed full of them. We were dead used up, so we let them quack, and rolling over slept until broad daylight.

ALIQUIS.

For Forest and Stream and Rod and Gun.

A TROUTING PICNIC IN LOUISIANA.

IT was not long after my arrival in Alexandria before I was told some marvellous stories in regard to the trout and bass fishing in the many streams and lakes abounding in the country. I listened with interest, but gave many of the stories a large *granum salis*. During the spring and early summer I tried several of the streams, and, though finding excellent fishing, taking large baskets, yet nothing that would come up to those immense stories recited. I joked many of the "fish blowers," as I called them, but they insisted they had only stated facts, and in order to convince me a trip to the above locality was projected. Two days before the final "get off" I sent forward an escort of eight men with our camp equipage, under Sergeant F., with directions to select a camping-ground, and the sequel will show he did it with much judgment and tact.

Our party consisted of Mrs. P. and son, the Misses F., Miss S., and Mrs. F., Mr. F., Lieuts. P. and W., and your humble servant.

The order for an early start was imperative, having a drive of twenty-five miles before us. The young ladies promised implicit obedience, but we purposely fixed the time one hour earlier than was really necessary, having had some experience in getting the fair sex started on such an occasion, but to their credit be it said they were prompt to the minute, though some of them had a ride of three miles to join us at the house of M. L., our rendezvous.

The peep of day found us stirring; baskets, valises, rods and guns, indeed everything necessary for comfort and sport was brought out on the balcony ready for packing. The hack, as they call it here, a two-horse wagon, with springs under the seats, was anxiously looked for. At last it came, but to our disappointment, and in disregard of promises, was minus a cover. There was no time to send it back, and with some low, but emphatic growls, we concluded to make the best of it. Soon our things were packed. My wife and son, Lieut. W. and myself jumped in, and a ride of a mile brought us to the hospitable mansion of Mr. L., where we were received with that whole soul, hearty welcome so characteristic of the southerners.

Here we found the Misses F. already on the ground full of life and anticipated pleasures.

A council was held, and it was decided that as my vehicle had no cover, all the ladies were to take seats with the Misses F. Now, we gentlemen did not vote in the affirmative for this arrangement, but we were set down at once as selfish mortals, and told that women had some rights which men must respect, and as the fifteenth amendment is in full force down here, we subsided, with a sly look at each other to the effect that we would get even with them before the day was over. The adjustments being satisfactorily settled, and the packing done to give the ladies the most comfort and room, the effort being acknowledged by one of the fair ones in some complimentary remarks, the word was given (it looked a little Quakerish, all the gentlemen in one wagon, the ladies in the other), and off we started as gay and jovial a party as one needs wish to be in.

How can I describe that bright June morning? The sun had not yet shown itself above the horizon, but the brilliant rose-colored hues, with the long spire-shaped rays shooting high into the heavens, showed us in what part of the east to look for his coming. A cool, delightful breeze from the southeast, laden with the fragrance of the magnolia and a thousand other flowers, wafted us on our journey. Soon the sun in all its glorious refulgence burst from its eastern bed. From tree, shrub, flower and grass the dew drops reflected its rays as from myriads of diamonds. The lovely verdure in all tints of green, from the deep shade of the pine to the lightest of the shrubbery, with the dark brown of the tree trunks as a back ground, gave a variety to the exquisite landscape that met the eye on every side, constantly changing as we moved onward over the undulating country. How joyous and lighthearted that party! The hearty laugh was constantly heard, echoed and re-echoed. Suddenly the joyous song broke forth, led by the fine soprano voice of Miss F., soon joined in by all, making the welkin ring.

As I was not familiar with all the roads, Miss L. assuring us she was, we put ourselves under her guidance, following the road she pointed out. A ride of three miles brought us to the Flagon, when I became convinced we were on the wrong road, but we were on a "lark," and we gentlemen determined to go on. The banks at the crossing were rather steep, and sundry little exclamations from the wagon in rear admonished us of the state of feeling there. We only noticed it by asking if they did not think a division of the party admirable; but, being safely over, they only replied, "The horrible things!" Another three miles, having crossed a small creek by a bridge, we ran into the doorway of a farm-house—the end of that road. We now requested Miss L. to show us the road out. She was the picture of distress, and we gentlemen only helped her out by saying, in under tones, "Two hours lost; got to go way back; tire the horses out," etc. We were now set down by our fair companions as a mean, impolite set. At last after having our own fun at their expense I started off, telling them to follow. Lieut. W. and myself on one of our trips had been there, and knew we were not far out of our way, and as you can drive through the pine woods most anywhere, and knowing the direction, we put on a wise face and started. Skirting the fence of the plantation, we drove through the woods, and a couple of miles brought us out on the main road, very much to the gratification of our ladies, especially one. Their anxiety relieved, jollity took the supremacy.

A ride of twelve miles brought us to Clear Creek, a pretty pebbly-bottomed creek, clear as crystal and cold. The bluffs on one side were quite precipitous some sixty or seventy feet; on the other there was a short stretch of bottom land then gradually rising to the pine hills. As it was about noon a halt was ordered, and in a horse shoe bend of the creek, under the shade of the Grand de Flora and other trees, we alighted for a rest. As Lieut. W. and myself had visited this spot before and caught some fine bass, while the ladies were arranging things, and I making some very pointed remarks, we got out our rods and started up stream, which, being very tortuous, soon took us out of sight of our fair companions, and as I had surmised I soon found out the meaning of these "remarks," the splashing in the water, and sundry exclamations, proved that, throwing off all restraint, the conventionalities and immunities of life, they were girls again. Not finding any fish, we slowly moved back, but on reaching camp were challenged, "Don't come here," admonishing us that they were still playing girls. However, we were not kept waiting long. A silvery voice called us to lunch. Lunch! Does anyone know what that word means, or how enjoyable it is, that has not sat down to it under just such circumstances? It is not necessary to say that every basket contained everything that was good. An hour's rest and all refreshed, were ready to resume our journey.

Three miles further brought us to Big Creek, which is of considerable size, and one of the best fishing grounds to be found. We made no halt, but, crossing the bridge, pushed on at a brisk pace, the day being cool, the lovely morning breeze having kept up with us. Seven miles further brought us to Little River, which is nearly, if not quite as large, as Red; navigable, and would be all the year were it not for the spreading out, forming Cattahoola Lake. A flat boat was our means of crossing, for which we paid the moderate sum of $2.25 per carriage. On remonstrating at this extortion, the ferryman remarked: "You uns are the first that has crossed here in a month, and how could I live and keep my boat without charging at that rate." This was a knock-down argument, and we growled no more. This is indeed a beautiful stream; the banks are slightly bluff, with the trees and shrubbery growing to the very edge. The water looks nearly black, but mirrored with unusual distinctness the surroundings. Fish were constantly jumping, but we pushed on to reach our final destination three miles further. About 3 P. M. we drove up to what, in *ante-bellum* times, was the hotel, to inquire the direction to our camp. The polite Mr. B., who has a large, well-furnished store at this point, came up. Greeting most of the party whom he had known before, and being introduced to the rest, he jumped on his horse and guided us to camp. A mile further brought us to Trout Creek; at this point a clear, pebbly stream, some thirty feet wide and from six to twelve inches deep. As we drove into it exclamations were on every lip. There were the trout, sure enough, from the fingerling to the three-pounder, and, what's more, in countless numbers, darting in all directions; but we had to restrain our longing to cast a line, and moved to camp a quarter of a mile further on. Coming to the bluff, which the water reaches when high, we ascended, and a beautiful picture met the eye. At the further end of an open flat, covered with a luxuriant growth of long grass, under the shade of tall pines, stood a large hospital tent, the flaps at both ends thrown back showing the interior—the neat little iron bedsteads, with their pure white coverlids, standing on a white paulin, which was in place of a carpet; the two rows of white A tents on either side, not forgetting the kitchen tent, a little to the right and rear, all nestling under the shade of lovely trees, the rays of the now almost setting sun throwing long shadows diagonally across the camp. It was a sight that drew exclamations from every one.

Soon everything was unpacked and in its place, when *cook* comes up and wants to know when we will have dinner. As it was all ready he gets a sharp retort, and is asked if he did not know we came there to eat fish. No dinner until the fish came. He chuckled to himself, and we, with rod in hand, a man for each rod to catch bait, started for the creek, and a strife as to who would get there first ensued. Lieut. P., being about 200 avordupois, stood little chance, and Lieut. W. and myself took the lead and arrived about the same time. My rod was together in a jiffy, and my man handed me a "top-water" minnow. Away went the line, Lieut. W. following closely. I cast for some large ones I saw, but they were not as quick as some of their younger associates, and away went the line with a whiz, and up comes a fine bass of about a pound weight. At the same time Lieut. W. sings out, "I've got him," and landed one of about the same size. Just now came along, puffing and blowing, our 200-pound companion, with the remark, "You might wait for a fellow," but we were too busy to bandy words; too much excited over the royal sport we saw in store for us. Fish after fish came up about as fast as we could cast, until "Hold on," was cried; "we have got more than we want," and this in less than an hour (it must be recollected there were seventeen all told in the party). With our strings thrown over our shoulders we wended our way to camp, stopping on the way for a good drink of the cool sulphur water which came bubbling up from a dozen springs. Arrived, we found our ladies refreshed, bright and happy, sitting under the fly which was stretched in front of the big tent, awaiting our return. Of course each string of fish was counted and commented on, during which time cook stood waiting, ready and anxious, as we had caught them, to show us how he could cook them; and he did know how, sure. A wash and a little fix up, and we were made presentable, when we sat down to as royal a dinner as ever did king in his palace. How sweet and enjoyable that meal! The long ride had given every one a good appetite (cook said if we had not stopped just as we did another trip to the creek would have to be made). A constant flow of wit and fun was indulged in, and the meal was prolonged to some time after dark. The bright moon came sailing up into the heavens, casting its silvery rays through the tall pines, from which were cast long shadows that it would not require a very imaginative mind to conjure into most anything, creating one of those still loveable quiets. Music was called for, and those woods were soon echoing sounds seldom, if ever, heard before. And so an hour was spent, when an early retirement being considered best, the "Good nights," "Happy dreams," etc., passed around, and soon all were in that sound sleep pre-induced by a long ride and late hearty dinner, and nothing was heard but the occasional step of the sentinel, and a singular noise made by the 200-pounder, to which was given various names. PLUME DEL ROSA.

(*To be continued.*)

VIRGINIA'S VALLEY OF ROSES.

HIGH up among the Alleghany Mountains, in the western part of the State of West Virginia, is an earthly paradise but little known and less appreciated by the sportsmen of the North and East. Porte Crayon, in a series of articles in *Harper's Monthly* in 1872, gave a good description of this region but there was more humor, romance and love-making than descriptive hints of value to those seeking knowledge of the country in these sketches. I will endeavor to give my brethren of the rod and gun a brief sketch of the country, its inhabitants, its game and fish, and the manner and cost of getting thither.

In a valley that has but few equals for beauty or fertility in this broad land of ours, there nestles the charming little town of Petersburg, Grant county, W. Va. It is the very beau ideal of a headquarters for one who loves—and what true sportsman does not—nature in all her softened, chastened loveliness, connected with really first class gunning and fishing.

It is a little town of five hundred inhabitants; a broad, shady street with pretty white cottages and more pretentious brick mansions clustering on either side, each house surrounded by trees and gardens, and having a croquet and flirtation ground beside it, well shaded by apple, peach or pear trees. Well kept flower beds are scattered here and there in picturesque confusion.

Roses bloom in great thickets along the road sides; they clamber in odorous festoons over the porches and around the windows. They are of almost every color, and their variety is endless. Everybody wears them in the afternoon and evening; they glow amongst the tresses of the daughters of Petersburg in dainty little clusters, from whence they are frequently transferred to the lapel of some youth's coat, to the envy of his less fortunate brethren. They seem to be something peculiarly favorable to the growth of his queen of the floral kingdom here, and their profusion is truly wonderful.

About half way down the street I have mentioned is one of the comfortable looking hotels, once so common in Virginia. Its very exterior is suggestive of something good for dinner—say chicken fried in true Virginia style, with cream butter. Mine host, Mr. J. D. Gum, receives you with a country politeness that will astonish you if you are a stranger to the manners of Virginians.

No one asks who you are or where you came from; no clerk takes a mental inventory of your baggage, or estimates its probable value. You can stay here week after week without a particle of baggage, and not have the word "bill" mentioned until you ask for it yourself. From six to nine dollars a week is the price of board. The bill of fare is extensive and varied, each article being well cooked and the best of its kind.

Fruit is grown here in great abundance and variety; apples, peaches, pears, plums, grapes, etc., are cultivated upon nearly every farm in the neighborhood; as there is but a small market for them, they are almost given away.

The inhabitants of Petersburg and of Moorefield (which is eleven miles from the former place), and of the vicinity of each, are as charming a people as can be found anywhere. Many of them are graduates of the first colleges in the country, and before the war were wealthy. I think that whoever visits this section will say that the proportion of pretty and talented girls is greater than in any place in the land. The great pastime here is croquet, and both sexes enter into it with enthusiasm.

Petersburg is about forty miles from the Baltimore & Ohio Rail Road. To the west is a well cultivated valley running at right angles with that in which the town is located, extending thirty miles toward the railroad; on the east the mountains slope nearly to the village, while to the south they are much farther off, and through a magnificent gap in them, the South Branch of the Potomac glides through into the meadows and by the town into another and far more picturesque gap about two miles north of Petersburg. This latter ravine is famous for a "fox and ox" which, through some freak of nature, are plainly visible on the face of a rocky precipice some four or five hundred feet high. Both of the figures are formed of yellow stone, and are as natural as though man, and not chance, was the artist. The roads are broad and smooth, and as horses and carriages are to be had for a trifle, the country for miles can be explored to your satisfaction and pleasure.

The south branch of the Potomac, which I have just referred to, originated in the counties of Highland and Pendleton, where also rise the North and Middle Forks. They flow in a north-easterly direction and unite near Petersburg from whence it flows past Moorefield, through Hardy and Hampshire counties and joins the North Branch of the Potomac about fifteen miles below Cumberland.

The south branch is famous, as you are well aware, for its splendid bass fishing, and nowhere in its course is it so fine as in the neighborhood of Petersburg. You enter the stream, which at this point is about a hundred and fifty feet wide, and abounding in deep pools on either side, some two hundred yards below your hotel, and the fishing begins at once. For nearly a mile there are no trees on the river banks and you could not have a finer stream for fly fishing, but when it enters the mountain gorge it deepens and a boat is necessary. If it is a favorable day and the fish bite well, you will not need to fish more than a couple of miles, for in that distance you will take from fifty to one hundred and fifty bass—a good load for three men to carry. There is no exaggeration about this statement, for one of the best fishermen here, Mr. George D. Lee (a nephew of the General) with two friends, caught eighty odd in two hours, and did not go a quarter of a mile. When the water is clear, in September—which is, by the way, the best time to fish here—the bass can be seen in apparently solid masses of eight or ten feet square, and when your minnow makes its appearance, the rush is tremendous. Fly fishing for bass has not been tried to any extent, and therefore the trial by some one who knows what he is about would be of great interest to himself and others, who, though novices, are enthusiastic ones. Trout streams are plenty, four or five miles away from here, and trout are abundant, as the waters are not much troubled by fishermen. The streams are not very large, and the trout are generally of rather small size.

In the way of game these mountains and valleys are singularly favored. The meadows and corn fields are alive with quail, and from personal knowledge I can say that they are as numerous as in the most famous "quail counties" of New York. There is no cover to bother you, and one can hunt for twenty or thirty miles, if he be inclined to, through corn and wheat, stubble or level meadows. Pheasants (ruffed grouse) gray squirrels, wild turkeys and rabbits are on all the mountains by thousands, while woodcock and snipe are found in the marshes; ducks in small flocks come to the river in the spring and fall. Wild pigeons in millions are here every year; deer, bears, and "sich" are thick in the wilderness, which extends for seventy or eighty miles east of here, beginning some seven or eight miles away. The best time to come here is in the latter part of September, when the gunning and bass fishing will be at its height.

And now as to the manner of getting here. Purchase a ticket to Keyser, a flourishing station on the Baltimore and Ohio Railroad, 200 miles from Baltimore. From Keyser a line of stages runs daily to Moorefield, leaving at 8 A. M., and arriving at Moorefield at 5 P. M. The fare to the latter place is $5.50. From Moorefield to Petersburg (11 miles) you can go in a buggy, if you have much baggage, or if not, on horseback, the charge being very small.

If anybody desires to learn more of this lovely region, let him write to either G. D. Lee, A. S. Norment, J. D. Gum, Petersburg, Grant Co., W. Va., and they will answer all inquiries. If any one coming here is fond of horseback riding, I should advise them to visit Greenland Gap while in this vicinity. It is a lovely little village on the road to Keyser, and is most romantically situated. One of the most famous sportsmen in the State lives here, and I can testify to his great hospitality. He is known far and near as "Uncle Abe" Smith, and celebrated for his humor and eccentricity.

[We will run the risk of incurring our correspondent's displeasure by stating that he is the nephew of Elwood Walters, Esq., our lamented late President of the New York Board of Underwriters. His statements are wholly reliable, and we trust that the four score of friends who have been asking us for some cool retreat from the coming summer heats will evince their faith in them by going to Petersburg.—ED.]

Fish Culture.

SALMON IN THE HUDSON.—It is a mooted question whether the natural habitat of the Eastern salmon extends south of the Connecticut River, although it is claimed that Hendrick Hudson, the navigator, saw them. Many interesting facts have been published in this paper going to verify or disprove the statement, to which we might refer; but at present we are willing to "let by-gones be by-gones," and deal only with modern and contemporary history, from which we learn that on and since the 27th of June, 1877, salmon have been found off the mouth of the Hudson in considerable numbers, and also as far up the river as Hyde Park. On the 27th a huge fish, that weighed 27 pounds, was taken in a gill net off Governor's Island, by Dave Snediker, and exhibited by Middleton, Carman & Co., of Fulton Market. On or about the same day, Mr. Eugene Blackford showed a 17 pound salmon that was taken near Staten Island. We are cognizant of two others having been taken at Seabright, near Long Branch. When we were informed of these fish, and had personally inspected them to assure ourselves of their identity, we conjectured that they were the produce of the fish planted some years previous in Fishkill Creek, and referred to by us at that time. Our conclusions seem now to have been verified by the fact that two large salmon have since been taken up the Hudson at Hyde Park, as we have stated. Now, these fish evidently started for their native spawning stream, but having gone as far above as twenty miles, it is possible that they will continue until the dam at Troy obstructs their further progress. If they do not like the water of Fishkill Creek sufficiently well to put in there, we shall have to open a pass for them to headwaters in the Adirondacks.

For the present, however, the object of this writing is answered by the substantiated fact that Hudson-hatched salmon have grown to mature fish, and are now in the river.

MARYLAND FISH CULTURE.—The Maryland Fish Commission, since its establishment in 1874, has been very successful in the propagation of native fish, and the introduction of valuable varieties. The Druid Hill Park hatching house is devoted to the culture of California salmon, many millions of which have been placed in the fresh water tributaries of the Chesapeake Bay. Several ponds for breeding European carp and other varieties are also in successful operation. The chief attention of the commission has, however, been devoted to the increase of the shad and herring supply, which, owing to the wholesale destruction by seine and other devices, had been threatened with extermination. The hatching houses are located on the head-waters of the Chesapeake and Susquehanna Flats, Spesutie Island and Carpenter's Point. The central camp is at present located in Carrot Cove, mouth of Northeast River. The machinery is a five-horse power launch boiler and small engine to move a rod and revolving eccentric wheels, which work on bars connecting with frames on the outside, where sheet-iron buckets are hung. The buckets have wire gauze or sieve bottoms. The machinery operates to give a gentle rising and falling motion to the buckets, in which fish eggs have been placed, and then half immersed in the water of the river. The play of the machinery is calculated for about six or eight inches, and the motion is continuous night and day while there is anything in the buckets to hatch. The capacity of each bucket, twenty-five of which are now in use, is about 100,000 eggs. Rapid transportation between the different stations is effected by a steam yacht, fitted with apparatus of Com. T. B. Ferguson's invention, and designed for the safe transportation of fish eggs, in which the embryo may be kept a day or two without interruption to the processes of nature, but rather facilitating them. "The apparatus consists of a tank supplied with water from overboard by a steam pump, which may be kept in operation whether the steamer is going or not. Pipes from the tank connect with five inverted cones, in each of which as many as 200,000 eggs may be placed. The water supplying these egg chambers comes in from below, so that the eggs, which are of light specific gravity, are kept dancing midway of the vessel holding them. The cones are hung in gambrils similar to the rigging of the compass, so that no matter how violent the rolling of the steamer, the contents of the egg chambers are never spilled. The great object to be attained is secured—gentle and continued agitation of the eggs and the water in which they are placed from below. In salt water the pump is stopped, and the tank supply furnishes fresh water circulation." During the past season an estimated aggregate of more than five millions of shad have been hatched, of which several lots of 100,000 and 300,000 each were turned over to the United States Fish Commission for general distribution. Maryland furnishes most of the shad fry for the Government Commissioner, in exchange for which are given valuable European and other varieties of food fishes.

THE FISH EPIDEMIC.—The epidemic that has destroyed so many fish in New Jersey, has extended to Pennsylvania. It is very singular that its origin and cause cannot be discovered. A correspondent sends us the following interesting information:

The fact that an immense number of fish are dying through unknown causes throughout this section of Pennsylvania, is just now attracting great attention from our Waltonian disciples. The reports of dead fish being found on the surface of the waters of the Susquehanna, Lehigh, Delaware and Schuylkill Rivers, have been circulated at intervals since last spring, and even in our own native county (Berks) the smaller streams which have afforded so much enjoyment, appear to have become infected with the unaccountable disease. First, the finny tribe was scattered along the banks of the Tulpehocken creek, in their inanimate forms; then came the rumors from the Northkill, telling of similar destruction, and a little while longer, the disease has invaded the waters of the classic Maiden creek. Other streams outside of the county are said to be similarly affected, and though the utmost researches and investigations as to the origin and nature of the strange fatality are made, very little of a satisfactory nature has thus far been developed. Its general outbreak is what proves that it is not the effect of some despicable means that is sometimes resorted to in the capture of fish, *i. e.*, by the administering of drugs or chemicals. The journalists from different localities are reporting fruitless investigations. It was at one time thought that the locusts which have made their appearance in myriads in some districts were perhaps accountable for this unusual state of affairs. This, however, is rather fallacious, for the reason that these "seventeen year locusts" have not made their appearance *in all* those sections alluded to. At first only a few dead fish of the chub, sucker and sunfish species were discovered along the shores. This number has been vastly increased lately, and the Delaware River in the vicinity of Easton is said to be literally lined with dead fish that are becoming a putrid, decomposed and tainting mass. The theory that these fish were killed by black bass was also advanced at one time, but upon examining some of the bodies floating upon the surface, its absurdness was soon made manifest. Mr. Henry Vogel, who has endeavored to elicit new information relative to the mystery, reports that at Martin's Creek, seven miles up the river, there is but comparatively little evidence of the disease; but below that point, down to Riegelsville (nine miles below Easton), the destruction of the members of the finny tribe is by no manner of means inconsiderable. In the waters of the Delaware, none but suckers, chubs and sunfish have died. In the streams of Berks county, however, the disease is less restricted, embracing other species as its victims.

An examination of the dead fish revealed various portions of the body covered with blotches of a whitish hue, some of which have turned into sores, which on some had destroyed the fins. Since all these propositions and theories have proved so fallible, your correspondent will not venture an opinion, but would respectfully submit the discussion of this mysterious subject to the more able and advanced pisciculturists who are so inseparably connected with the FOREST AND STREAM. O. D. S.

Hamburg, Pa., June 26, 1877.

PROPAGATION OF OYSTERS.—A Fairhaven oysterman about two years ago leased a salt pond at Block Island and began operations raising oysters. He established permanent communication between the pond and the sea by means of a flume, and after much care and labor is about to begin gathering his harvest. Over 300 acres of oyster beds are now thriving well in the pond, and Mr. Thomas expects soon to begin transplanting in suitable waters to fatten the bivalve for market. They promise to be of superior quality. The pond covers over 1,000 acres—*Cape Ann Advertiser.*

CALIFORNIA.—We believe that fish culture will ere long become an important interest in Sonoma County and throughout the State. Mr. Poppe, of Sonoma, who imported some carp from Germany about three years ago, was the first to give attention to the matter in our county. One of the first to follow was Levi Davis, of Forestville, who has thus far been very successful. He says:

"My success in raising carp has been good. Last season I raised 4,044 fish from five, which is an increase of nearly 4,000 per cent. This season I anticipate double that number from the same five fish. Last season they commenced hatching June 10th, and this year May 24th. I attribute your failure to mismanagement. The hatching pond should be as natural as possible, with some brush or grass, or both, in it, for the fish to spawn on or in. They spawn in February or March, and hatch in May or June, and then the brush can be removed. Your box-ponds will do very well for feeding, but not for hatching. My hatching-pond has some seven or eight square rods in it, and is from riffle down to four feet of water, with a stream of three-quarters of an inch flowing in. If a large quantity of water is let in, the accruing sediment is liable to cover and spoil the eggs. As to feed, it may consist of wheat, barley, corn-meal, bran, blood, or boiled potatoes. This is for fish of considerable size; for the very young ones, the best food is the curd of sour milk, bread made of middlings, and boiled rice. Carp will eat almost anything that hogs will eat."—*Petaluma (Cal.) Argus.*

ARTIFICIAL CULTURE OF BLACK BASS.—*Rochester, June 25, 1877.*—The question has many times been asked through your paper why black bass were not hatched artificially by the Commission. I have not answered it because I do not like to write, and because I thought that some one would make the discovery from actual observation. As it is so simple, I will explain. There are some kinds of fish that cast their spawn, and the parents never look after them again. Nature has provided the young of this family of fishes with a yolk sac that furnishes them with food from seven days to forty-five days, at the end of which time they need food and know enough to look for it. The above family of fish do not hatch one fish to every thousand that are cast in the natural way, and should be hatched artificially; and, if they were not, they would soon run out. But other kinds of fish that make their nests, cast their spawn and take care of them until they are hatched, and then take care of their young two or three weeks after they are hatched. There is no need of hatching them artificially; if you did, they would not live, as they would need a mother's care for some days after they were hatched. They are hatched with scarcely any sack, and need food. They cluster around the mother, and she takes them where the food is and teaches them how to get it, until they learn how to get their own food—just as an old bird teaches her young, after leaving the nest, how to get their own food—then she leaves them to take care of themselves. It would be just as impossible for a young fish, belonging to the black bass family, to take care of itself just after it was hatched, as it would be a for a bird just hatched to take care of itself.

Sixteen years ago fourteen black bass were put in the Potomac River, and now there are tons taken from it every year. Within five or six years the Delaware and Susquehanna Rivers have had a few hundred put into them, and last year I heard of sixty being caught with one rod and line in a single day. In many of our small lakes in this State, where there were but a few mature fish put in, there will be good fishing this season.

Yours, SETH GREEN.

—A salmon was caught in the Merrimac River, at Amoskeag Falls. The fish was going up the stream, and, while it should not have been taken, its capture proves the fact that these fish are really able to pass the Lawrence fishway.

—Mothers make selections for themselves uptown, but they always go to Baldwin, the clothier, in New York or Brooklyn for boy's outfits. —*Adv.*

Natural History.

THE ESOCIDÆ (or Pike Family.)

BUTLER UNIVERSITY, INDIANAPOLIS, Ind., June 23, 1877.

EDITOR FOREST AND STREAM:

In your last number, June 21, occurs the statement that "Prof. Gill and other careful students of the modern school, recognize but three of the family of Esocidæ," viz., *Esox nobilior, Esox lucius* and *Esox reticulatus*. As to Prof. Gill's opinion, the only reference to the species I have been able to find in his writings has been published in the Rept. Comm. Agr. for 1866 (pp. 411, 413). There he recognizes distinctly *four* prominent species in the North, and alludes to the several representative forms elsewhere. The four northern species are the (1) *Esox lucius*, or estor; (2) the *E. nobilior*; (3) the *E. reticulatus*; and (4) the *E. fasciatus* or *Americanus*. Thus, like every careful student of the modern or any other school, he recognizes four distinct species.

1. *Esox nobilior.* Thompson. The maskelonge.

2. *Esox lucius.* Linnæus. To this species belong the names *Estor* of most authors, *luciuides, boreus*, etc. Your correspondent, "Age 67," has well indicated the difference between this and the maskelonge.

3. *Esox reticulatus.* Le Sueur. To this belong the names *affinis, phaleratus*; etc.

4. *Esox salmoneus.* Raf. This is the *umbrosus lugubrosus*, etc., of writers.

5. *Esox Americanus.* Lacepide. The *niger ornatus fasciatus, vaccinii* of authors.

6. *Esox cypho.* Cope. The little Buffalo Pike or Humpback Pike. *Esox clathratus* and *porosus* of authors.

Of these *reticulatus* and *americanus* are found chiefly, or only, in the Atlantic streams; *lucius* and *nobilior* in the Great Lake Region and Upper Mississippi Valley; and *cypho* and *salmoneus* chiefly in the Ohio and Lower Mississippi Valley.

Here is a little "key" to the species:

A. Branchiostegals, 13 on each side (17 to 19); spots on body darker than ground color; cheeks and opercles with the lower half bare; very large; 20 to 100 lbs.—*Nobilior.*

AA. Branchiostegals, 15 (often 14, very rarely 16); head and snout long; B. opercles half bare; cheeks scaly; spotted, the spots paler than ground color; large, 10 to 40 lbs—*Lucius.*

BB. Cheeks and opercles entirely scaled; color reticulated with various shades of green, etc.; medium; 3 to 15 lbs.—*Reticulatus.*

AAA. Branchiostegals, 12 (often 13, rarely 14); head and snout relatively short; small; ½ to 3 lbs.

C. Back nearly straight; sides reticulated.—*Salmoneus.*

CC. Back nearly straight; sides with many transverse curved bars.—*Americanus.*

CCC. Back "humped;" sides nearly plain.—*Cypho.*

Yours very truly, D. S. JORDAN.

COMMENT.—We are glad to have been the humble means of bringing to the front so valued an authority as Prof. Jordan, who is now engaged in classifying the ictithyc fauna of the Smithsonian Institution. The paper which he contributes herewith is a very fair statement of the *representative forms* of the Esox family, each of which the editor of this paper has admitted and described at sundry times in the columns of this journal and in books. Prof. Jordan has probably misconstrued the meaning of the editor in the article of June 21st, which he refers to, the editor probably erring in his choice of of technical terms which a better scientific scholar might have avoided. The allusion to Prof. Gill might also be pardoned, as it was not his desire to specially commit that gentleman or any other recognized authority. The position taken in the editor's article was simply to group the three distinct or completely distinguished species of Esocidæ in the United States, (there may be four, as Prof. Jordan maintains, though the tendency in these days is toward conformity and not multiplication of species), viz., (1) *E. nobilior*, the 100-pound monster, *wherever found*, whose characteristics of structure, form and color are so distinctive that they cannot be mistaken; (2) the pike, either of the West or East (differing, to be sure, in some trifling respects according to his range or habitat) that reaches his twenty and even fifty pounds in weight; and (3) the pickerel (diminutive for pike) that seldom reaches three pounds in weight.

With regard to the pickerel, there are certainly many "representative forms," but we care not whether, like *E. affinis*, and *E. ravenelli*, the inhabit the warm waters and canals of the rice fields of the south, or, like *fasciatus*, the streams of Long Island; or whether they swim in fingerling schools in Lake Champlain, or grow to larger size in the ponds of Pennsylvania, we maintain that they are still simply pickerel (little pike); and when we catch one of these little fellows we know that he is not of that sort that grows to huge proportions. For lack of a better name we designate him *E. Reticulatus*, which appelation also refers to the markings on his back and sides, which often, but by no means always, are reticulated. For the more minute work of scientific identification, when a fish is presented for inspection, it is well to have a distinctive Latin name to give him that will instantly inform the learned whether he comes from New York or from South Carolina, from Long Island or Pennsylvania; but when, as in the case in question, we are merely requested to state whether a specimen before us is a dwarfed maskelonge or a pickerel, we shall be compelled to reply in such simple language that men who are scholars can understand. As editor of a paper published for the people, we are obliged always to remember that the vernacular of a majority of them is not Latin, and that their interest in Natural History does not extend to the widest distribution of species.

As to the fin system and markings of trout and pickerel, we are bold to say that they vary so much (the fin rays in number, and the markings in shape and color) that we cannot depend upon the variations, however striking, to indicate species. We have seen two pickerel taken from the same wate at the same time which were marked altogether differently; and in counting fin rays, we scarcely ever find them to correspond numerically, the variation being from one to three. The same observations apply to pike, both of the Eastern and Western varieties.

THE PEABODY MUSEUM of Yale College which has recently been completed, has during the past year been furnished with cases, and a large part of the collections in the various departments of Natural History have been placed on exhibition. The fine appearance of the building, its great size and the completeness of its equipments have filled with pride the hearts of the graduates who were present at the recent Commencement exercises.

Although the collections are as yet only partially arranged there is very much to be seen which will interest the most careless observer. The very fine collection of minerals has been completely arranged, and the same is true of the zoological collections. In geology less progress has been made owing to the vast amount of material to be worked over, but the wonderful Otisville Mactodon and the Eichstadt Pterodactyl are sure to be noticed by every visitor. A large quantity of implements and utensil from the mounds and graves of North America are a striking feature of the Archaeological display.

We hope before long to be able to give some detailed account of the present condition of the Museum as a whole.

NOTE.—In our issue of June 21, our correspondent R. G. Carter refers to a bird shot recently in Nebraska as being probably the "Wet Weather Bird" referred to in our issue of February 8th 1877, about which there has since been some inquiry in our columns. If our correspondent will compare the description of the "Wet Weather Bird" with that which he gives of the specimen secured by himself, he will at once see that the two are very different. Mr. Carter's bird was evidently a gull; no doubt one of the species included in the sub-genus *Chroroecephalus*, and very likely *Larus franklini*. An inspection of the specimen would at once decide its position. These comments should have been made when Mr. Carter's note was published, but, by some error, they were omitted at that time.—ED.]

—Prof. Marsh, of Yale College, continues his investigation at Turner's Falls. He has opened a new ledge for "bird tracks." Dr. Field has carried on the work since June 9th.

MOLLUSCA OF NEWFOUNDLAND.—*St. Johns, N. F., June* 21, 1877.—An eminent German conchologist, Herr T. A. Verkruzen, of Frankfort, spent a part of last summer dredging for mollusca around St. Johns. He did not find the ground favorable, the bottom being in most places bare rock, or covered with boulders. Hence the collection he was able to make proved to be small, but it contained many interesting specimens. His persevering efforts, under the difficulties he had to encounter, resulted in securing specimens of eighty-six species of mollusca, of which two or three are new species. In addition he obtained a number from the banks, which were brought in by the captains of fishing vessels whom he was able to interest in the matter. I was able to render him some assistance in his various operations; and when leaving he kindly presented me with a mounted set containing representatives of the different species he obtained here, together with a descriptive catalogue of the same. This valuable collection I at once placed in our local museum which is under the care of A. Murray Esq., F. G. S., our provincial geologist. It is specially interesting as being the first collection of the kind ever made here; and I trust it will have the effect of stimulating further efforts, and that additions will be made to it from time to time by our local conchologists or by collectors who may visit our shores. In time this nucleus may enlarge into a complete collection, containing representatives of the various species of mollusca in the seas around this island. As all naturalists will take an interest in this collection, I forward herewith a catalogue which I trust you will publish in FOREST AND STREAM. It is thoroughly reliable, as the specimens have been identified and named by Herr Verkruzen; and in any case of doubt reference has been made to the highest authorities in Germany.

I may mention that Herr Verkruzen had arranged to accompany Professor Hind, of Windsor, Nova Scotia, on his projected expedition to Northern Labrador, under the sanction of the government of Newfoundland, to examine and report on the new fishing grounds in that quarter. That expedition has been deferred till next year, owing to a demand for Professor Hind's services in connection with the Fishery Commission, in Halifax; but it will be carried out next year. Interesting investigations will be made into the lower marine life of this unknown region. Herr Verkruzen has kindly promised me a collection of the various species he may secure for our local museum. He devotes this summer to dredging around the shores of Nova Scotia, and especially in the Bay of Fundy. He has just commenced operations in the latter.

M. HARVEY.

ANOTHER OPINION OF THE SPARROWS.

POTTSVILLE, Pa., June 12, 1877.

EDITOR FOREST AND STREAM:

Those saucy feathered fellows who swarm the streets, and are the only birds who stay with us all winter, are subjected to severer persecution than they deserve. I think the ways or habits of the sparrows are but little known to the farmer, because they incline to stay around the cities and towns. The swallow, swift and night-hawk are credited for being the guardians of the atmosphere and check the increase of insects that otherwise overlaid it. Woodpeckers, creepers and chicadees are the guardians of the trunks of trees; warblers and fly-catchers protect the foliage; blackbirds, crows, thrushes and larks protect the soil; snipe and woodcock protect the oils under the surface, while the poor little sparrow is denounced as a fruit-destroyer, and battling off our beautiful native birds. From the closest scrutiny and observation, I have never seen the sparrow molest nor eat any kinds of fruits on trees—rather disposed to pass the fruits seemingly unobserved and perch upon shade trees, or light upon the ground in search for food. I have seen the sparrows flying around buildings and pick from the walls and weather-boarding bugs and various kinds of worms that chanced to be crawling thereon, and, on trees, greedily devouring the caterpillar and much dreaded canker worm. The great and estimable service done to the gardener and florist by these birds is only becoming known by sad experience. The little fruit and grass seed taken by the sparrow (as is claimed) is more than compensated by the vast quantities of obnoxious insects and worms he destroys. Upon throwing a chunk of bread in the yard, I have seen two bodies approach it, and suddenly, as if by agreement, a champion from each body would advance and almost simultaneously begin an attack upon each other, both endeavoring to possess themselves of the food. When one champion was exhausted another stood ready to take his place, and so the thing went on until four or five battles had been fought, when the defeated side would throw up the sponge and fly away, leaving the champions in possession of the food. I have never seen the sparrow OFFER fight with any other species of birds outside their own tribe—seem to be family quarrels only. The wren, bulbird, robin, oriole and martin are sociable and as numerous as previous to the advent of the sparrow. Each tribe has its respective duties to perform in the economy of nature, and it is an undoubted fact that, if the birds (sparrows included) were all swept off the face of the earth, *man* could not live upon it; vegetation would wither and die, and insects would become so numerous that no living thing could withstand their attack. Spare the birds.

DOM PEDRO.

MORE ABOUT EELS.—*Pittsfield, Mass., June* 26.—I find a query in a late number of your paper from R. B. Roosevelt as to eels and their young, and several answers to the question. The nearest to the mark comes from your correspondent, R. C. B., and had he been able to save his fish in a tank he would have found they were not *oviparous*. Eels are viviparous and hatch the egg or ova in the body. The egg, when fully developed, is about the size of a herring egg and of about the same general appearance. The hatching operation commences first in the upper part of the body, in the throat, and the eggs are retained there as they are hatched. I have found them in different stages—in one fish about one inch deep of young eels, measuring from $\frac{3}{4}$ to $\frac{1}{4}$ inch, all fully developed and lively as crickets. The upper end of ova, next the young, was of a dark color and full of life. The ova along the body had a different appearance or color as the stages of hatching progressed, the lower end at vent having a bright, fresh color. The time of capture was a few weeks before fall run; the nearest fish to tide water, four miles; the farthest fish taken from tide, 20 miles. I believe they carry their young to tide water, unless obstructed by nets or pads, when they may eject them.

THOS. CHALMERS.

[REMARK.—This is information we have been waiting for. —ED.]

NASHVILLE NOTES.—*Nashville, Tenn., May* 24.—A grey eagle, measuring six feet and nine inches from tip to tip, was killed on Pond Creek, in Monroe county, a few days ago. It weighed eight pounds.

Justice James T. Kernan, residing at Flemingburg, recently shot and wounded a waterfowl, the like of which was never seen in that section of the State before. Its body was about the size of a full grown chicken, and in color it resembled a quail, with the exception that the brown plumage was of a lighter hue. It had web feet, with long legs and thighs. The skin covering its legs was of a rich green color, and its bill was three or four inches in length and very pointed. It possessed a combative disposition. When its wings were stretched it measured nearly four feet.

Thomas Rine captured a veritable horned owl, about two years old, on Mill Creek, several miles from Nashville lately.

A few days ago Dr. W. C. Hankins, of Lawrence county, departed on a visit of two or three days' duration, leaving a house-cat at home with two kittens. When he returned he found that the infantile members of the feline family had gone where the good little kittens go, and that the bereaved maternal relative had adopted two young rabbits, and was nursing them with all the tenderness and devotion peculiar to one of her race.

A gentleman named Parks recently caught three catfish near Hames Ferry, which weighed respectively 75, 88 and 98 pounds.

In concluding this communication, permit me to congratulate the FOREST AND STREAM upon its consolidation with the ROD AND GUN, thus uniting the sterling qualities of both journals, and making it the best journal for sportsmen in America.

FRANK FERN.

[Except for the webbed feet, we should have taken Judge Kernan's bird to be a bittern (*Botaurus minor*). The description agrees almost precisely, except in the point referred to.—ED.]

A STRANGE VISITOR.—*Pottsville, Pa.*, May 28.—The wife of a suburban resident of this city while alone one day last week, suddenly had her attention attracted by a strange and mysterious noise.

She went into their back yard to investigate the matter, and there found a large, long-necked bird, long-billed and web-footed, making the noise. She attempted to capture it, but before she succeeded, the bird pecked her in the face severely several times; she was determined, however, and at last gained the victory. The bird is a "loon," belonging to the family of divers known as *Colymbida*. It has a well shaped clean head, long black bill, bright black eyes; dark feathers on the neck and back, and white breast. The legs are straight, and are placed so far back that it always assumes an erect position when standing. These birds are rapid and powerful divers, are the fastest swimmers, and feed on fish and vegetables; they inhabit northern countries. Nobody knows where the captured bird came from; it seems that it just dropped into that yard and commenced its uncouth music. It is very vicious and dangerous, pecking at people's eyes when close enough, and trying to get a mouthful of flesh from any person who happens to come along.

DOM PEDRO.

DOMESTICATED WILD GEESE BREEDING.—*Scarlett, Northampton Co., Va.*, June 20.—In your issue of June 7, I see a paragraph relating to wild geese, and mentioning, as a curious fact, the going and coming of the geese. A few weeks ago when on Cobbs Island, I saw a number of tame wild geese in the yard. Old Mr. Cobb told me he had tried experiments for the last twenty years with wild geese, and had for the first time, this summer, succeeded in raising some goslings, which I saw. They were accompanied by the goose and gander, who showed fight when approached. The gander has sometimes two wives, but not often. I also saw another goose sitting on eggs, but I forget how many. It is common for these geese to go off on the marsh round the island and return at various intervals, bringing others with them, when they are driven into the goose house and have their wings clipped. Mr. Cobb clips all their wings in summer to keep them on the island for breeding purposes, and as I said above he has succeeded very well. He has, also, brant, but has always failed to raise young from them. All are very tame, and when the old gentleman goes into the yard and says "Good-morning" to his pets, they answer back in a most friendly way. Mr. Cobb is the man to give you information upon the habits of wild geese. I should think he has had as much experience among wild fowl as any one living in this country. Hoping the above may prove interesting to some, I remain yours, etc.,

R. H.

REVERSED SHELLS.—In our issue of June 7th we published an inquiry from a Leesburg (Va.) correspondent in reference to left-handed land shells. The inquiry, we are happy to state, has elicited several replies from gentlemen versed in the science of conchology, which we append:

NEW BEDFORD, June 8, 1877.

EDITOR FOREST AND STREAM:

I notice in the remarks of "T. W.," in your last issue, in regard to *heterostroph*, or left-handed land shells, he mistakes the meaning of Prof. Morse, which is that left-handed, or reversed specimens of normal, or right-handed species, are not common. The fact that certain species, and even some whole genera are normally left-handed is well known to every conchologist, especially in the genus *Helix* from China and Japan, and the genus *Achatinella* from the Sandwich Islands.

JOHN H. THOMSON.

DANVERSPORT, Mass., June 11, 1877.

EDITOR FOREST AND STREAM:

In reply to the query of your correspondent T. W., of Leesburg, Va., "Can it be that latitude has any effect on the way the snail puts on his coat, in Massachusetts twisting to the right, in Virginia to the left?" I should say that it would not. Prof. Morse intended to convey the idea that but comparatively few genera of shells turned to the left, and that the majority were right-handed. It is probable that the shells collected by the boys were fresh-water snails of the genus *Physa*, a large and widely distributed group. If your correspondent would send me a few I will inform him as to the matter. Occasionally monstrosities occur in dextral genera, and occasional specimens are reversed, or turn to the left. I will cite a few instances: Edward A Barber, in an article on *Helix cooperii*, in *American Naturalist* for September, 1876, gives an illustration of a reversed specimen of this species, which is extremely rare. Prof. Morse informs me that he has collected reversed specimens of *Melantho decisa* several times in the State of Maine. Recently I received from Mr. H. E. Call of Mohawk, N. Y., a reversed specimen of *Melantho integra* from the Erie Canal at that place. He says that "probably about two per cent. of the young shells are reversed, but of these not more than seventy per cent. attain any size." Many other instances might be cited, but space will not allow of more.

ARTHUR F. GRAY.

MOHAWK, Herkimer Co., N. Y., June 8, 1877.

EDITOR FOREST AND STREAM:

My attention has been invited to an inquiry about "left-handed shells," appearing in a recent number of your interesting paper, and I venture to offer a few words in reply to the inquiry. Prof. Morse's remarks about left-handed shells were unquestionably intended to apply to the rare instances in which a species normally dextral or right-handed, is represented by a sinistral, or left-handed specimen. Most of our spiral univalve shells are dextral, and certain classes or genera have never been known to produce sinistral forms. The most common variations of this character among our shells are such as are sometimes seen in certain species of *Paludina*, more especially in the modern subgenus *Melantho*, the shells of which are somewhat common in most of the rivers of the United States. An examination of the embryonic young of a large number of these shells reveals the fact that in some species of *Melantho*, about two per cent. are reversed or left-handed. No example of a reversed *Viviparo* having bands is on record in this country. A few of our land shells (snails) have been known to produce, very rarely, reversed specimens. I have one *Helix albolateris* of this character, also one *Helix Mitchelliana*. This latter species is probably more prolific of reversed specimens than any other *Helix* in this country. Prof. Root, of Hamilton College, has a reversed *Helix alternata*. There are records of reversed specimens of other species, among which *Helix thyroides* and *Helix hirsuta* only are at this moment remembered. Probably Messrs. Binney & Bland, who are our authority on land shells in this country, could name other species that have produced reversed specimens. A number of years ago I sent a reversed *Valvata tricarinata* to Dr. Isaac Lea, of Philadelphia, who probably now has it in his collection. More recently I have found another reversed specimen of *V. tricarinata*.

There are certain fresh water, marine and land shells that are always left-handed. Your correspondent who propounded the inquiry about left-handed shells probably has specimens of the *Physa*, the shells of which are always left-handed. In China, and also in some other parts of the world left-handed snail shells occur; and probably a right handed specimen of a species normally sinistral would be as rare as a sinistral *Helix albolateris*. In Africa certain fresh water shells, once classed with *Paludina*, are always sinistral. These sinistral African shells are now set apart under the genus *Lanistes*. In the Sandwich Islands occurs a beautiful and interesting class of land shells known to collectors as *Achatinella*. Some of the species are remarkable for producing indifferently sinistral or dextral specimens, while other species are all sinistral or all dextral. In Europe is found a class of land shells known as *Clausilia*, all of which, I believe, are sinistral.

The occurrence of an occasional left-handed specimen of a right-handed species is one of those phenomena which may possibly be parallel to the rare instances in which a human being has the heart on the right side, and the other vital organs correspondingly transposed. The subject, like many others that are incident to the study of Natural History, is one of interest, and much more might be written upon it. Very little, however, is said about it in works devoted exclusively to discussions of species.

JAMES LEWIS.

NOTES ON SOUTHERN MAMMALS.

LIST OF MAMMALS FOUND IN NORTH ALABAMA, NORTH MISSISSIPPI, WEST TENNESSEE AND CENTRAL ARKANSAS.

BY RAWLINGS YOUNG, M. D.

[*Communicated by Dr. Coues.*]

COUGAR. *Felis concolor*. Very rare in Mississippi; not found at this time in Alabama or Tennessee; not rare in Arkansas

BAY LYNX. *Lynx rufus*. Rare in Alabama and Tennessee; not so rare in Mississippi; common in Arkansas.

GRAY WOLF. *Canis occidentalis*. Very rare in first three named States; rare in Arkansas.

FOXES. *Vulpes fulvus* and *V. virginianus*. First common in the four-named States; the other found in Alabama and Tennessee from "imported stock."

MINK. *Putorius vison*. Very common in the four-named States, especially in Arkansas.

OTTER. *Lutra canadensis.* Very common in Mississippi and Arkansas; less so in Tennessee and Alabama.

SKUNK. *Mephitis mephitica.* Common in the four named States.

RACCOON. *Procyon lotor.* Plenty in the four named States; very destructive on the growing crops of corn along the large water courses. Cooked 'coons are chewed by the darkeys, and *eschewed* by the whites.

BLACK BEAR. *Ursus americanus.* Seldom found in Alabama and Tennessee; rare in Mississippi; plenty in Arkansas in the cane along the rivers; very destructive on the corn when in "roasting ear."

MASTODON (*fossil*). Remains found in Mississippi.

VIRGINIA DEER. *Cervus virginianus.* Very rare in Alabama and Tennessee; rare in Mississippi. Ten years ago very plenty. Common in Arkansas.

BROWN BAT. *Vespertilio subulatus.* Very common; have seen them flying as late as December 15, and as early as March 10.

COMMON MOLE. *Scalops aquaticus.* Exceedingly common.

SQUIRRELS. *Sciurus carolinensis* and *S. ludovicianus.* First numerous, especially in Mississippi and Arkansas; the other not very common.

FLYING SQUIRREL. *Pteromys volucella.* Quite common.

CHIPMUNK. *Tamias striatus.* Not very common.

WOODCHUCK. *Arctomys monax.* Not common.

BEAVER. *Castor canadensis.* Common in Mississippi and Arkansas; not so common in Tennessee and Alabama.

RATS AND MICE. *Mus decumanus* and *M. musculus.* Thick as hops.

PINE MOUSE. *Arvicola pinetorum.* Common. Another species is also common.

MUSKRAT. *Fiber zibethicus.* Quite common in all the small streams, and along the borders of ponds and bayous.

HARES. *Lepus sylvaticus* and *L. aquaticus.* The first exceedingly numerous in Alabama and Tennessee; the other not quite so common. Both quite common in Mississippi and Arkansas.

OPOSSUM. *Didelphys virginiana.* Common and plenty in both Mississippi and Arkansas; have seen them abroad in the daytime in the Mississippi River bottom, in Mississippi and Arkansas. Common in Tennessee and Alabama.

[Our readers and ourselves have again to thank Dr. Coues for his thoughtful kindness in sending us further notes on the mammals of North America. We feel sure that all who are interested in this branch of zoology will show their appreciation of this courtesy by forwarding to Dr. Coues any notes of interest on this subject which they may have brought together.—ED.]

THE FAUNA OF MICHIGAN.

Philomachus pugnax. Gray. Ruff. Two specimens killed by myself. Have he ard of three or four others, all in Sanilac County.

GENUS ACTITURUS.

Actiturus bartramius. Bon. Field Plover. Bartram's Sandpiper.

GENUS TRYNGITES.

Tryngites rufescens. Cab. Buff-breasted Sandpiper.

GENUS LIMOSA.

Limosa fedoa. Ord. Marbled Godwit.

Limosa hudsonica. Sw. Hudsonian Godwit.

GENUS NUMENIUS.

Numenius longirostris. Wil. Long-billed Curlew.

Numenius borealis. Lath. Esquimaux Curlew.

GENUS RALLUS.

Rallus elegans. Aud. Marsh Hen. Common in southern counties.

Rallus crepitans. Gm. Mud Hen. Clapper Rail.

Rallus virginianus. Linn. Virginia Rail.

GENUS PORZANA.

Porzana carolina. Vieill. Sora Rail.

Porzana noveboracensis. Bd. Yellow Rail.

GENUS FULICA.

Fulica americana. Gm. Coot. Mud-Hen.

GENUS GALLINULA.

Gallinula galeata. Bonap. Florida gallinule. Breeds in marshes at mouth of the Saginaw River. Very abundant.

Gallinula martinica. Lath. Purple gallinule. Accidental.

(*To be continued.*)

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING TUESDAY, JUNE 26, 1877: Ten common seals (*Phoca vitulina*), purchased; one water snake (*Nerodia fasciata*), presented; one Virginia deer (*Cervus virginianus*), born in garden; two prairie dogs (*Cynomys ludovicianus*), born in garden; one Bactrian camel (*Camelus bactrianus*), born in Garden. ARTHUR ERWIN, Gen. Supt.

Woodland, Farm and Garden.

GRASSES FOR BOUQUETS.—Just at present in meadows and hedge rows the different varieties of wild grasses can be obtained in perfection, and they should be much more extensively employed in floral decorations than they are, for not even the most delicate greenhouse fern will give the same airy look to a vase of flowers that a few spikes of wild grasses will impart. It is only a few years since they were first brought into requisition, and ever since, especially in England, their use has been steadily increasing. It is a good plan to lay in a store of the different varieties of grasses at the present time, for use during the winter months, when they cannot be obtained in the fields. In cutting them for this purpose each variety should be tied in separate bunches, and care should be taken that they are not bruised together; for, if this is the case, when the bunch is opened, each spike will be found to have dried in its crushed position, and its form will thus be quite spoiled, and its value for decorative purposes destroyed. All grasses should be dried in an upright position, particularly those of a drooping character. Oats and rye while still green, are also very pretty in large arrangements, especially ears of black oats, which are seldom seen used, and which form a charming contrast to grasses and sedges. The great value of grasses is that in addition to their giving a light appearance to a vase, a large plume of handsome grasses and sedges enables you not only to dispense with many flowers but to show those used, to much better advantage. To some this may be no object, but to many it must be a matter for consideration. In this connection, attention may also be directed to the utility of the bloom of the Ribbon grass for mingling with flowers. This spike of bloom has a silver-like lustre in some stages of its growth, while in others it assumes a rosy pink tint, which is equally pretty. In the trumpet of a March vase, in which red and white flowers predominate, a few spikes of the Ribbon grass bloom will help to carry up the color with charming effect, into the green of the other grasses, flowers and foliage employed in its decoration. For a trumpet the graceful drooping oat grass or Bromus is best adapted. Mention need not be made now of their usefulness also for winter decoration in connection with pressed ferns, and autumn leaves, as that will form the subject of another communication, but if our lady friends will only give grasses a fair trial now in their floral arrangements, they will be delighted with their airy, graceful effect in winter when flowers are scarce and hard to procure.

—During the last week we have been favored by Mr. Peter Hanson, Brooklyn, a most enthusiastic cultivator of bulbous plants, with flowers of the following lilies, viz.: L. Coridon, Umbellatum, Hansoni, Croceum, Californicum, Humboldtii, Candidum, Longiflorum, Bulbiferum, Columbianum, Martagon (var. Dalmaticum), Philadelphicum (the northern variety), and others. We consider L. Humboldtii and Californicum both California species, and L. Hansoni a Japanese variety, great acquisitions to our cultivated lilies and likely to be of service in crossing with the L. Speciosum section.

WAX-YIELDING PLANTS.—At a meeting of the Natural Science Society recently held in Hamburg, Mr. G. Wallis remarked that wax was not only obtained from the berries of *Rhus succedanea*—a plant which also supplies the celebrated Japan lacquer, the preparation of which remains a secret—but that three other kinds of wax from entirely distinct trees are known to be obtained in South America. One comes from Northern Brazil, and is produced by the beautiful *Klopstockia cerifera*—called there Carnauba—which grows between the fourth and sixth parallels of southern latitude. Another kind is obtained from a myrica from Peru and New Granada, which passes there under the names of Laurel and Olive. This tree grows in a variety of situations, and even at elevations of 5,000 or 6,000 feet above the sea. A third kind of wax is derived from a tree which, up to altitudes of 10,000 feet, grows in the same republics—viz., the Ceroxylon or Wax Palm. The methods of obtaining the wax from these trees differ greatly, but its subsequent preparation for the manufacture of candles is, in all cases, the same. In the Klopstockia it is obtained from a dusty coating on the leaves. In the Myrica as well as in the *Rhus succedanea*, it is obtained from the berries, and in the remaining instance it is taken from the stem, which is clothed with a thin mantle of wax, and this is scraped off with an instrument made for the purpose. Mr. Wallis stated that a manufactory exists in Brazil for working the wax into candles, of which he had seen fair specimens made from the Carnauba and Laurel kinds. One great drawback is the bad color of the wax, for bleaching which no process is known. The Brazilian kind is green, the others rather of bluish or light yellow tints. Large premiums have for years been offered in Brazil for the discovery of a process that will effectually whiten the wax; but as yet they have not produced the desired effect. In Japan they appear to have some process by which it is bleached, but it is doubtful whether it has not already been tried in Brazil. The Ceroxylon produces the whitest wax; but all kinds suffer more or less from a want of consistency, which, unless they are mixed with other substances, renders them useless for the manufacture of really superior candles.

THE STAKED PLAINS.—The plains extend eastward from the Pecos River in New Mexico, and constitute a large portion of Western Texas. The Pecos seems to have cut its way through the western border of this table-land. The hills rise abruptly from the river until the surface of the plain is gained. That is the highest point, and the surface slopes gently to the east. No tributaries flow into the Pecos from the east. The water which falls on the plains flows eastward, and forms the many rivers of Texas. It is an unknown land, boundless and endless. There is a legend connected with the name. It is said that in the early settlement of Mexico, a party of miners discovered extensive silver mines on the eastern border of the plains, and, in order to find their way back, they drove stakes at intervals along their route; hence the Llano Estacado, or Staked Plain. But little is known of this region, although many have traversed it, particularly Mexicans, for the purpose of hunting buffalo, or trading with the Indians. The gentle depressions in the plains on the eastern border, increase into more pronounced valleys, as the traveller pursues his journey eastward, until the waters have cut their way through the strata of rocks and flow in deep and rugged canyons, from the bottom and sides of which innumerable springs of sparkling water burst forth. These springs form the permanent headwaters of Texas. They are often strongly impregnated with salts from the rocks and sulphuric acid from the vast beds of gypsum underlying the surface. The plains break down the eastern border in perpendicular descents of from 400 to 1000 feet. The outline is most irregular. The rainfall on these plains must be great, as all the important rivers of Texas have their source there. The canyons of the rivers are generally heavy timbered, and afford shelter for the Indians and for game. The surface is covered with flourishing grasses, and lakes and streams of fresh water abound. These plains will be the great herding grounds of the future. They will exceed the pampas of Buenos Ayres in the production of cattle. There the powerful and numerous tribes of Comanche Indians dwelt. Their power is now broken. They have warred with the frontiersmen of Texas until they became weak, and the government finally drove them to their reservation in the Indian Territory. Nothing now disturbs the solitudes of these plains but the herds of buffalo, antelope and wild mustangs. It is a country to be occupied.

THE LOVER'S GARDEN.—There is a land, a delightful country which would in vain be sought for on the waves of the sea or across the lofty mountains. In that country the flowers not only exhale sweet perfumes but intoxicating thoughts of love. There every tree, every plant breathes, in a language more noble than poetry and more sweet than music, things of which no human tongue can give an idea. The sand of the road is gold and precious stones, the air is filled with songs compared to which those of the nightingale and thrushes, which I now listen to, are no better than the croaking of frogs in their reedy marshes. Man in that land is good, great, noble and generous. There all things are the reverse of those which we see every day; all the treasures of the earth, all dignities crowded together would be but objects of ridicule If there offered in exchange for a faded flower, or an old glove left in a honeysuckle arbor. But why do I talk about honeysuckles? Why am I forced to give the names of flowers you know to the flowers of these charming regions? In this country no one believes in the existence of perfidy, inconstancy, old age, death, or forgetfulness, which is the death of the heart. Man there requires neither sleep nor food. An old wooden bench is there a thousand times more soft than cider-down elsewhere: slumbers are there more calm and delicious, constantly attended by blissful dreams. The sour sloe of the hedges, the insipid fruit of the bramble there acquire a flavor so delicious that it would be absurd to compare them to the pine-apple of other regions. Life there is more mildly happy than dreams can aspire to be in other countries. Go then and seek these poetic isles! Alas! in reality it was but a poor little garden, in a mean suburb, when I was eighteen, in love, and when *she* would steal thither for an instant at sunset! So loved I a little shut-up garden.

ALPHONSE KARR.

ROSES FROM CUTTINGS.—I have never failed to strike as many roses as I required by inserting the cuttings in July or August. When the cuttings have been inserted in an open place, and a period of drought has followed, many of them failed to grow, but when planted in a north border failure has been very rare, and cuttings of half or rather more than half-ripened shoots, six inches in length, with all the foliage removed, except the top pair of leaves, firmly planted up to these leaves, are almost certain to grow if properly attended to. The main point to aim at is to keep the foliage fresh as long as possible, and to this end a shaded place and occasional sprinklings of water should be afforded. Another point to be borne in mind is that the cuttings cannot be too quickly made and put in, for if allowed to become dried or shriveled they will not prosper. If your correspondent will only give this method a fair trial (about the beginning of August select firm wood, do the work quickly, afford necessary shade, and water occasionally), not one cutting in twenty will fail to grow, and he will find this method quicker and easier than that described in your last issue. D.

THE ESSEX BREED OF SWINE.

EDITOR FOREST AND STREAM:

Chief among what are known as the small black breeds of swine is the Essex. The pigs, which are entirely black, may be made, by generous feeding and skillful care, to reach such weights as would entitle them to rank among the large breeds, but the principal value is found in their use as smaller pigs for the market. A rapidly growing animal that will mature in one season that it may be brought to market as a "pig," and not as a "hog," is a very desirable one, and it is precisely

for this use that the Essex deservedly stands first amongst the black swine. Another valuable use for the Essex, and one which they are made to serve very extensively, is for crossing upon the coarser classes of swine; thus employed they produce grades with finer form and more valuable meat, with less offal than is common in "native" pigs. In this respect they are rivals of the Berkshire. As this breed is now widely disseminated in the United States, and there are several careful and successful breeders, each of whom is equally entitled to well merited consideration from the public, and lest invidious comparisons might be made against the interests of any one of these breeders we refrain from giving the owner's name. It will be sufficient to say that there are several prize-winners at the various fairs, who possess animals quite equal in merit in all respects to those of the Berkshire breed. The old English Essex pig was originally a coarse, parti-colored animal; black, with white legs, nose and shoulders. Upon this stock the Neapolitan boar, from Italy, was crossed, with the effect of producing a black animal, of rather slender form, of very fine bone, but of a weak constitution, the last being the result of too close inter-breeding.

Nevertheless the improved breed became very popular, and by further efforts in which the strengthening of the constitution by the infusion of new blood, was made a special point, the improvement was rendered more valuable and satisfactory. This was done so far by Lord Western. Then Mr. Fisher Hobbs, a tenant of Lord Western, undertook a course of improvement with these Essex Neapolitan pigs. He soon produced a breed which he called the "Improved Essex," and which, in figure and points of value, were very near like those of the present day. These had all the symmetry of the Neapolitan pig, with its full bone, small head and jowl, and besides the full shoulder, large ham, deep sides, and light offal, which still distinguish it. This brings the history of the Essex, as we know it, up to the year 1860. Importations of the stock of Mr. Fisher Hobbs were made by Samuel Thorne, Esq., of the State of New York, and in a few years the stock became well distributed in this country. Wherever they have been introduced, they have at once become a favorite breed, and have been exceedingly hardy, especially in the Southern States, where they relish the summer heat as well as they do the Northern winter's cold.

They probably exceed the Berkshires as feeders, although this will scarcely be admitted by the friends of that breed; if, however, there is any advantage in this respect it must go to the credit of the Essex. They keep easily in excellent condition—the largest weight of the Essex which has come to our knowledge, namely, over 600 pounds, with a loss in dressing of less than 8 per cent. The Essex is an excellent family pig, and a half-bred animal would doubtless be found one of the most economical for this purpose that could be procured. It may be well to repeat the caution against using half-breeds for stock purposes. As feeders they may not be surpassed, but if fed for breeding the advantage is lost, and deterioration will infallably follow. A thoroughbred boar, selected with care, or procured from a trustworthy breeder, should invariably be used for breeding. It is one of the unavoidable consequences of the improvements of a breed by crossing or careful selection, that care in this respect cannot be relaxed without mischief; it is therefore a necessary division of labor in this business, that a few men should devote themselves to breeding pure stock for the use of the public, who will find that they cannot profitably compete in this respect with those who have made a study and profession of it. The mention of a black breed of pigs is quite sure to call out numerous inquiries if the color is not objectionable in the pork, and we anticipate these in this case by stating that these and other black pigs have their "beauty" less than "skin deep," and that when they are dressed their skin is as white and handsome as any others.

San Francisco, June 15, 1877. OSCAR SPITZER.

The Kennel.

CANINE PATHOLOGY AND THERAPEUTICS.—No. 3.

BY ARCHER.

THE dose of any given medicine, particularly of narcotics and purgatives, should be regulated rather in accordance with the effect it produces in each individual case than from published or written directions on the subject; not that these are to be disregarded, but they should be looked upon rather as guides to the dose generally required than as applicable to every instance. It is impossible in many instances to lay down positive rules as to the quantity of a certain medicine to be exhibited. The tolerance of mercury, for instance, varies much in different animals without any peculiar idiosyncracy existing with respect to it; and a dose which will act beneficially in one case will be productive of great gastric irritation, etc., in another, and perhaps salivation.

Another circumstance, by no means an uncommon one, with several medicines, which requires our notice, is the regulation of the dose. A dog comes under treatment, medicine is administered, and for a time the sufferer improves rapidly; the appetite increases, and the constitution gains tone and vigor. Suddenly, however, from no apparent cause, the reparative process ceases, and the animal, perhaps, retrogrades. Such is a frequent experience when using preparations containing iodine, mercury and arsenic. Under such circumstances the dose requires to be greatly decreased, or, what is still better, the remedy should be discontinued for a few days, when it may be resumed with the original benefit.

The character, period and form of disease influence the operation of medicines to a very great degree, and the person who treats a disease according to its name, without considering the individual circumstances of each case which comes up for treatment, will find his measures prejudicially violent or perfectly inoperative. We know that blood letting, as a general rule, is a remedy for inflammation; but the man who, on the strength of the fact that he has an inflammation to treat, indiscriminately employs this evacuant without taking into account all the concomitant circumstances, is, to express it in the mildest manner, guilty of great indiscretion. Take for instance distemper, which is essentialy an irritation of the brain and spinal marrow, and is often fatal from the supervention of inflammation of the lungs. If for several days the lung inflammation has been allowed to progress unchecked, blood-letting, which under other circumstances might have been highly beneficial, would most probably prove in the highest degree prejudicial. If this be true in individuals, no less so is it in epidemics. It is worthy of remark that in the principal epidemics which have prevailed of late years among our four-footed friends a remedy which is highly beneficial at one period appears to possess no efficacy at another. From the history of the epidemics it appears evident that those animals who are attacked by the disease when it is beginning to decline, recover more rapidly and in greater proportion than those who were attacked when the disease first made its appearance or while it was most prevalent. It almost appears that the violence of the disease exhausts itself by the virulence of its action; however this may be, it seems certain that many remedies will prove successful at the wane of an epidemic which have proved utterly incapable of controlling the disease at its outset or its acme. If this be so—and the history of epidemics appears to warrant the correctness of the statement—it is evident that the period of an epidemic exercises a powerful influence on the action of medicines, the point which it is my object here to illustrate. In individual diseases this influence is often very marked; numerous examples are frequently met with; blisters, for example, are most beneficial in the acute inflammation of distemper after the violence of the symptoms has been subdued by other remedial means. Opium, in the same disease, is especially useful, generally after depletion. Another remark before passing to the consideration of other points may not be amiss: Do not accept unconditionally the advice of men "across the water" regarding your dogs; and to these gentlemen I would suggest the same regarding American authority; for the treatment admitted to be beneficial in Europe does not apply, even to the same animal when imported. Many canine diseases in which bloodletting is the sheet anchor, producing the happiest results when the animal is in England, admit of no such treatment when transfered to the New World, resulting disastrously; and *vice versa;* and the same may be said of the different sections of this continent.

Certain morbid conditions of the body, or the intensity of the disease, must of necessity greatly modify the actions of the remedy. Illustrations of this are constantly met with. It is well-known, for instance, that in severe spasmodic affections, large and repeated doses of opium are borne without a single ill consequence; doses which, if administered under ordinary circumstances, or in milder cases, would almost prove fatal.

A deranged condition of any of the principal functions of the body modifies and interferes with the operation of medicines. This is peculiarly observable in the digestive organs; when these are the seat of functional derangement or organic lesion, medicines whose operations on the canine economy is is mild and beneficial otherwise may be rendered either prejudicially irritant or perfectly inert. Under these circumstances digitalis and nitre may cease to act as diuretics, and tonics, instead of imparting tone and vigor, are converted into distressing irritants.

The influence of diet on the action of medicines is very considerable, and he who contents himself with merely ordering certain medicines, and who does not at the same time regulate the animal's diet, neglects to avail himself of a valuable auxiliary, and may be allowing the presence of an antagonist, which in all probability will counteract all the benefit that might otherwise be reasonably expected to result from his prescriptions. How, for instance, can we reasonably expect benefit from anti-phlogistic* medicines, so long as a full animal diet is simultaneously pursued? and can we be surprised at the failure of a course of tonics, if only weak slops and an anti-phlogistic diet be followed? A stimulant diet notoriously interferes with the action of mercurials, while in many cases the iodides are rendered almost inert by being conjoined with a diet of which amylaceous (starchy) substances form a large part. The diet should in every case be regulated so as to promote, as far as possible, the operation of the medicines which are being employed at the time, *and it must be seen that this rule is carried out.*

Light, air and exercise influence the action of medicines more than is generally allowed. They very sensibly promote the action of tonics and alteratives, particularly iron and iodine; indeed, taken alone, they tend in no inconsiderable degree to invigorate the constitution, to give tone to the digestive organs and energy to the nervous system. For this reason see that your dogs are placed in clean, light and airy situations. Confinement in close, dark, ill ventilated apartments effectually counteracts any beneficial influence which might otherwise be derived from tonics. Moreover, remember that "cleanliness is next to godliness," as applied to animals as well as man, and contributes more than is supposed to the comfort and health of the canine.

The form in which medicine is administered influences, in many instances, its operation. When it is desired to produce a speedy effect, the liquid form is generally preferable, besides being the most easily administered; thus the action of quinine is rendered not only more speedy, but more effectual, if administered in solution than if given in substance. The same remark applies to morphia, and to most of the alkaloids. Tannin, when intended to influence the stomach or bowels, is suitably exhibited in the form of a pill; but if it be designed to enter the circulation, or to act quickly at a distance from the stomach on some internal part, the form of a solution should be employed. Digitalis, when given in the form of a tincture, acts as a direct sedative on the heart and circulatory system; if given in infusion it acts as a diuretic. Decoction is inadmissible as a form for exhibiting ipecacuanha, senna, and some other medicines, their active properties being dissipated by boiling. There are, however, several medicines, which, from their insolubility, cannot be given in the liquid form—calomel and Queveen's iron for example—these are necessarily given either in the form of a pill or powder. In using the pillular, we may, in the majority of cases, advantageously add castile soap to the mass, as it tends materially to hasten its solution in the intestines, and thereby to quicken its operation. It also renders the action of purgatives milder and less irritating. Powders are best given in a thin mucilage, or placed dry upon the tongue. When they are of an insoluble character, as some preparations of iron, the peroxide for instance, and are continued daily for any length of time, an aperient should occasionally be given to obviate their accumulation in the intestines.

The dog is endowed with such a fine sense of taste and smell that he does not willingly take medicinal substances, though many may be made agreeable and administered with meat or sugar. Pills may be fastened at the top of a round piece of wood, or a quill, and thus inserted deeply into the mouth. Liquids are poured into the open mouth, or are still more easily given by raising the nose of the animal, taking hold of one of the corners of the mouth, and drawing it up and sidewise, so that a kind of pouch is formed for pouring in the liquid, which will thus enter through the openings between the teeth. This does not require any particular precaution, as the dog will not be liable to swallow the liquid the wrong way. Above all things the purity of the medicine employed should engage our earnest attention, otherwise the best efforts may prove not only unavailing, but perhaps injurious. In administering remedies, remember that more can be accomplished by gaining the countenance of the animal and by kindness than by force, beatings, cursings, etc. Firmness and kindness is all that is requisite, with careful avoidance of pain. When once over with the administration, a few pats and a kind word will be sufficient, and if care is used the animal will soon look upon his physic as a matter of course. I have seen dogs that would take anything at command, because they knew no harm was intended.

* Anti-phlogistic, a term applied to those means which tend to reduce inflammation. Bleeding, purging, refrigerants and low diet form an important part in anti-phlogistic treatment.

For Forest and Stream.

THE RUSSIAN SETTER.

WE cannot subscribe to the remark of "Amicus Veritatis," in his letter published in your last issue, in reply to "Amicus Canium," viz., "The writer, A. C., evidently was well up in his subject, and handled it with intelligence." We assert that directly the reverse is the fact, as evinced in the following taken from A. C's learned article in review of dogs at the Bench Show:

"There was a dog entered in the miscellaneous class as a 'cross between a St. Bernard and Russian setter.' This provokes the question, what is a Russian setter? There is a well-known class of setters, of headstrong dispositions that will repeatedly rush in upon the game at the sound of the gun, if not before; wide ranging rabbit-chasers that are almost uncontrollable, and these might be appropriately termed *Rushing* setters, but there is no recognized breed of setters peculiar to Russia."

None but a novice or tyro could give public vent to such lamentable ignorance as the above sentence exhibits in canine knowledge. Why, A. C. either has not read Henry Wm. Herbert's "Young Sportsman's Manual," commencing actually *ab initio*, or else he puts himself forward as a teacher to Herbert, and us of his day and school. As that noble and expert sportsman puts on record these facts, viz.:

"The only remaining *pure* variety of setter to be noticed is the Russian, which is rarely or never met with in this country. It is an admirable creature, docile, good and gentle to a charm. Enduring, *beyond* any other race, cold and wet, and dauntless beyond any other in covert, but more susceptible of heat and thirst than the others of his race.

"He is, I think, rather taller than the English or Irish dog, muscular and bony; his head is shorter and rounder than that of this family, and, like the rest of his body, is so completely covered with long, woolly, matted locks, tangled and curly, like those of the water poodle, only ten times more so, that he can hardly see out of his eyes.

"His color is black, black and white, or pale lemon and white. I have never seen a pure one, though I once owned a half-breed—a most superior animal—in America, nor are they common or easily attainable in England.

"I learned to shoot over one in England, which I was permitted to take out alone, because it was well known that Henry could not spoil Charon, and almost everything that I know of shooting that old Russian taught me."

The fall of 1856 the writer had the pleasure of shooting over two good Russian setters—which, for size, might have passed for Newfoundlands—with very long, shaggy hair about the head and face, as curly as a spaniel's. They were a deep rich orange color, with white markings about the neck and chest, and stood about 29 inches at the shoulder. They were presented to Mr. McLain, of Ohio, by some English gentlemen at the end of their sporting tour. They were of untiring industry, great style and dash in action, good nose, staunch upon game, and crouched instead of pointed the birds, and were most admirable retrievers.

Mr. Chas. H. Hinkle, of the *American Agriculturist*, has a half-bred one now that is as good on snipe and other game as any dog that can be named. There are many other setters in the States descendants of Russian stock, as attest many pedigrees traced in the stud book and list published, also in the "Kennel Register," soon to be given to the sporting public.

As to "Amicus Canium's" assertion, "but there is no recognized breed of setters peculiar to Russia," we would assure him and our sporting brotherhood that the setter strain of Russia has been bred and kept strictly pure for the past century, and as a proof of this fact, we will cite the following from the works of an old and sadly lamented friend, Henry William Herbert, viz.: "Russian setters have what is called more point. They crouch lower, and steal in more silently on their game than any other dog, consequently they are the best in the world over which to shoot game when it is wild." "Old Boney," the half-breed mentioned above, acts in the same way, as also did those we shot over in the fields of Ohio in the fall of 1856. If these dogs are not true bred, how is it they all crouch instead of point? We have written the above without any invidious or carping spirit, but in the defense of a most valuable strain of sporting field dogs, and in the interest of a true understanding and proper knowledge of a breed well worthy of the most serious consideration, as a cross on many of the gun-shy and timid brutes emanating nowadays from too close in-and-in breeding to dogs of a certain strain already bred to stunting. If you want size, courage and dash, cross by all means with the Russian. CANONICUS.

A VISIT TO SNIPER.

HONEST ISAAC WALTON once observed that angling was like poetry—a man must be born to it. The same remark may be applied to dog breaking, which we hold to be a natural gift vouchsafed to very few men. In the multitude of sportsmen we have shot with in the last fifty years, we have met with many who handled trained dogs in the field most admirably, but in all the number we have not seen half a dozen who could train dogs to perfection; but among these is our correspondent "Sniper," of Newark, N. J.

Some weeks since we went over to Newark on Sniper's invitation, and passed a most charming evening in his company

and that of his charming wife. Sniper owns half a square of ground in the heart of the city. On one corner of this is his small dwelling, leaving him a large vacant space for his kennel and his game fowls; for be it known, S. is as fond of a good main of cocks as some of the swell bankers and brokers in Wall street; and not long ago he beat them in a main, winning eight out of ten battles.

The Sniper kennel holds but four dogs just now, and one setter puppy, his famous Maud, with a pedigree running back to 1814, a handsome black setter dog and a couple of varmint blue Skyes, which will tackle anything from a mouse to a lion. Maud is a reddish faun colored setter bitch admirably trained and admirable in the field, but she has one hereditary peculiarity which we do not fancy: When we first looked at her her legs hung so low that we took it for granted she was nursing a litter of puppies. But no; she never has had pups. She has inherited from her mother the passion of philoprogenitiveness to such a degree that she has adopted an orphan pup of Sniper's and fulfills all the maternal dues as thoroughly as if it were her own offspring. Maud's mother once robbed a cat of her litter of kittens and nursed them herself. The black setter, as black as a crow, has fine points and will make a crack dog in the field; his pedigree is somewhat obscured, but his owner does not care much for that. The fact is, his control of the canine race is such that he can make a good field dog of any, this with a good nose, a strong loin and good legs. We were greatly taken with the Skyes, which weighing seven or eight pounds are as near the true type of the breed as any dogs of the kind we ever saw. There was nothing at the late show to compare with them.

Our friend Sniper is not a professional breaker, but an amateur sportsman in the most liberal sense. In his parlor he has the finest specimens of taxidermy we have ever seen anywhere not excepting even the collection of the Cuvier Club at Cincinnati. His specimens are few in number, quail, woodcock, snipe and the unfledged of all three and some ducks; so admirably set up are these birds as almost to persuade one that they are actually alive. They were mounted by a plain Jersey farmer, a friend of Sniper's, and not a professional taxidermist. We regret that we have lost his address, but we will say for him that he is a born artist as much so as any painter who ever exhibited at the Academy of Design. Any many with tolerable manual skill may stuff a bird, but it takes a man of the nicest powers of observation and of true genius to set up such a collection as that of our correspondent Sniper. May his shadow never be less.

COMMUNICATED.

SUICIDE OF A DOG.—One of the most singular cases of suicide of which we have any knowledge occured this morning in this city. At an early hour, a large yellow dog was seen slowly walking down the alley at No. 2's engine-house, leading from Main street to the river. Paying no attention to those who were watching his movements, he went directly to the river, carefully stepped in and deliberately plunged his head under the water and held it there a sufficient length of time to drown. There was no struggle, no splashing around, but a cool and determined purpose on self-destruction. From the time the dog put his head under the water, it was not raised out, but the other part of his body was exposed to view. In a few moments life was extinct, and the dog floated down the river. This remarkable case of suicide was witnessed with astonishment by several of our prominent citizens. This rare and interesting circumstance proves that an animal as well as a human being, for causes of which we can form no definite knowledge, can deliberately take its own life.—*Janesville (Wis.) Gazette.*

[An instance somewhat similar to that mentioned above was noticed in an early number of this paper. The cause of the suicide in that case was severe physical agony, the dog having had both forelegs broken, and having suffered intensely for some days.

Although these cases fall properly within the province of Psychology rather that of Natural History (or Biology), they are none the less interesting to all friends of the dumb animals. Evidence which proves conclusively that the lower animals reason has been accumulated by many a student, and at present there are few who will deny to the dog, the horse, and indeed almost all of our domestic animals the possession of reasoning faculties of a comparatively high order.—ED.]

IMPROVING THE NEWFOUNDLAND BREED OF DOGS.—It will be interesting to lovers of dogs to know that Herr Ver Kruzen the eminent German naturalist, when recently passing through Newfoundland, presented Governor Glover with three very valuable young dogs of the celebrated Leonberg (Wirtemberg) breed. These animals are almost world renowned for their size, beauty, sagacity and fidelity. They are an improved breed, resulting from crossing the Newfoundland dog with the renowned St. Bernard dogs and the fine Pyrenese races. These dogs are the favorites of emperors, kings and rich nobility, and fetch a price as high as from £50 to £100 sterling. The Prince of Wales possesses one of them. Our valued correspondent, Rev. M. Harvey, to whom we are indebted for this information, says: "The fine race of Newfoundland dogs is almost extinct here; but thanks to Herr Ver Kruzen, we shall now possess a far superior breed of dogs which, in the course of time, may become of much value to the country, as fine dogs are prized all over the world. He recommends that in time they be crossed with the Newfoundland dogs, the finest that can be met with. He obtained these fine dogs from Count Esseg, who breeds them. They were brought all the way from the borders of Switzerland At present, they are but two months old, so that no progeny can be had for two and a half years. They are placed in charge of a person who understands the management of dogs, and he is furnished with written instructions regarding their feeding and general treatment."

HYDROPHOBIA.—A writer, who signs himself "A Friend to Dogs and Men," writing under the date of June 1, 1877, to the Hartford *Courant*, revives the ancient theory of worming us a preventative of Hydrophobia. It is said that there is "Nothing new under the sun," which is exemplified by this idea, which, as far back as 1789 was thoroughly exploded, dissected, and buried, to be revived A. D. 1877.

Next comes a report in the *Sunday Mercury* (July 1) of rabies cured by *lobelia* and *vapor baths*. We opine the *Mercury* suffers for "copy," as nearly a column is devoted to the subject. Its falsity is sufficiently apparent from the statement that the patients "kept biting, snapping and barking exactly like a dog;" a symptom which has no foundation except in the minds of the vulgar and ignorant, and the "lobelia and vapor bath specific" is almost as antiquated as worming, and equally valueless.

SNAPSHOT.—Mr. Wm. M. Tileston has purchased from R. J. Lloyd Price, Esq., his champion pointer Snapshot, winner of the champion prizes at the New York and Syracuse dog shows. Snapshot, being by Whitehouse's great champion Rap, out of Price's Judy (K. C. S. B. 1,020), combines in his veins the very best pointer blood of Great Britain, and breeders should be pleased to learn that he is to remain in this country. Arrangements for stud services can be made by addressing Mr. Tileston, care of this office.

NAME CLAIMED.—*Grand Rapids, Mich., June* 29.—I claim he name of "Rocket" for my all red Irish setter, pupped April 21, 1877, out of Nell (brought here by myself from Lockport, N. Y.), a red with white cross—Irish with English—setter bitch, by Arnold Burges' champion Rufus.

E. S. HOLMES.

—J. K. Seaver, of Malone, N. Y., raises some very fine Italian greyhounds. He shipped two pups on the 25th of June to Robert Dunlop, Jr., merchant, of Louisville, Ky.; two to Will J. Dowling, merchant, of St. Louis, Mo., and a very handsome ten months old dog to D. J. Willmer, Esq., of Baden, Mo. Dot, the mother of these puppies received a diploma at the Springfield Bench Show last year, and we expressed the opinion in these columns at the time that she should have been awarded the first prize. She is a beautiful animal.

"PET."—On May 26, Mr. E. F. Mercelliott's orange and white setter bitch Pet was on the 26th of May, served by Mr. T. Morford's Don; and Grace, daughter of Pet, was served by Mr. Wm. Morris' Pete.

NIALL'S KENNEL.—*Baltimore, June* 26.—My imported red Irish setter bitch Lilly, from the kennel of John M. Niall, Killaloe, Ireland, has whelped nine, five dogs and four bitches (one dog since dead); sired by the world renowned Champion red Irish setter, Palmerston. Lilly was warded to Palmerston before leaving Ireland. CHAS. F. BANCROFT.

LAVERACK SETTER GONE SOUTH.—Mr. S C. Caudless, of Atlanta, Ga., informs us that a fine bitch pup from Mr. C S. Westcott's Fairy II., out of Pride of the Border, has reached him in good condition, it having been selected and forwarded by Mr. Horace Smith.

LAVERACK STOCK IN TEXAS.—Capt. Chas. D. Vicle, of the 10th Cavalry, who is now north on his first furlough for seven years, has purchased some of Raymond's Laverack stock which he will take back with him to Texas next fall. Texas is foremost as to hounds, but a little of the new strain mentioned will make her beautiful prairies animate with a new life—will setter up, in fact, among sportsmen.

KENNEL PRODUCE.—On the 27th of June Messrs. Fisher & Bickerton's (Brooklyn, N. Y.) Gordon setter bitch Border Lily whelped six, by Dr. H. F. Aten's Gordon dog Glen—four dogs and two bitches.

—W. S. Van Horn's (Franklin, Ohio) English bitch, second from import, whelped, on the 5th, 7 dogs and one bitch, sired by Big Jack.

—J. L. Woodbridge's (South Manchester, Conn.) black pointer bitch Nell threw, on Friday, June 22, 7 pups—four dogs and three gyps; six black and one solid liver color.

FLATBUSH, L. I., June 26, 1877.

EDITOR FOREST AND STREAM:

Allow me sufficient space in your columns to return my thanks and acknowledge the courtesy of Dr. W. S. Webb and the Westminister Kennel Club, in waiving the name of Dutchess for my liver, white and ticked pointer bitch. I should have registered her before but was occupied in my endeavors to save her mate Dominie, who died from distemper and many complications on the 13th June, 1877.

WASHINGTON A. COSTER.

THE DITTMAR POWDER.

Please direct all letters for the above powder to Neponset, Mass Capt. Bogardus and Ira Paine, are using my powder. CARL DITTMAR. —*Adv.*

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
—[*Adv.* Manufacturers, 65 Fulton Street, N. Y.

Game Bag and Gun.

GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States. In New York shooting is prohibited until August 1.

THE VICTORIOUS FORRESTER CLUB AND ITS TROPHY.—We are glad that the Forrester Club, of Buffalo, have captured the Dean Richmond Cup, because they earned it. If any other club had earned it we should have rejoiced in its victory "all's same." It is a magnificent trophy, and in the hands of gentlemen who will do it honor. The following report from the Buffalo *Courier*, of June 24, (which was crowded out of our last issue together with several pages of other interesting matter) shows that the boys in winning the cup found it filled with happiness to the brim. The honors that were bestowed upon several members of the club were also well merited, and we might as well say here, confidentially, about Bob Newell's badge, that there are a dozen fellows ready to declare that they *knew well* that Newell would win it; and, by the way, possibly if they give him another inch he will be ready to take a new ell.

The Buffalo delegation took the evening train west from Syracuse, and being naturally enough elated over the victorious achievements of the day, the Forresters and their friends held high carnival through the return trip. At Batavia they experienced a pleasant surprise. As the train neared that village the roar of cannon broke upon the night air, and alighting, they found the Dean Richmond Club, with the Batavia band, in waiting to help them celebrate. Congratulations were exchanged, the band struck up "Hail the Conquering Hero Comes," with all possible spirit, and cheers rang out on all sides. This reception was as agreeable as it was entirely unexpected. As the cars moved away from the depot the band again played and the cannon thundered.

And if anything were needed to strengthen the Forresters' remembrance of the kindness of their brother shootists of Batavia, a somewhat mysterious and rather bulky package which had come on board filled the bill. It was duly inspected, and cheers for and toasts to the Dean Richmond Club of Batavia were in order until the end of the journey.

RECEPTION IN BUFFALO.

When the telegraph brought the news to the Forrester Club men at home that their representatives at Syracuse had captured the grand honors of the year, and what was greatest of all, had at last finally secured the magnificent Dean Richmond cup, to be henceforth the undisputed property of their organization, they were jubilant, and each passing hour only served to intensify their enthusiasm, until it reached a pitch that nothing short of a public demonstration could satisfy. The train bringing back the victors and the spoils was due here at 12:55, and before it arrived the Forresters in full numbers, with members of the other shooting clubs of the city invited to assist at the celebration, were at the Central Depot with the Germania band. The train was on time. The delegates were received with open arms, and a procession them formed with the band playing enlivening airs, and marched up Exchange and Main streets to the Forrester Club rooms. There the Dean Richmond cup was received back into its old quarters, this time to remain permanently; the Diamond Badge was permitted to dazzle the eyes of a hundred admiring guests, and cheers were given for the three who won the cup, cheers for Bob Newell who won the badge, cheers for Dr. R. V. Pierce, one of the victorious trio and the newly elected President of the State Association, and cheers for everybody else concerned. Then Mr. Henry Richmond being called upon for remarks, made a little speech in regard to the presentation of the cup.

RECOIL.

NEWARK, N. J., May 30, 1877.

EDITOR FOREST AND STREAM:

What makes a gun recoil? This appears to be a question that has occupied the attention of many able reasoners and writers; and, notwithstanding the erudition and observation bestowed upon it, there appears a difficulty in finding two persons that will agree.

With your permission we will briefly review some of the ideas that have been entertained from time to time, and give you our opinion, based on careful thought and observation.

For a long time there has been two parties contending as to whether the recoil of a gun took place while the missile was in the gun, or after it escaped. With due respect to those that contend that recoil takes place while the missile is in the gun, we shall contend that the positive recoil that is experienced when shooting cannot take place while the missile is in the gun, and we shall attempt to account for the phenomenon of motion observed by those who have experimented holding the opposite view. What is recoil? When we have settled this question, we will have a tolerably clear field. We answer. Recoil is the arrest and return of unspent force, in the direction or to the point from whence it was received, and is a property of all elastic bodies.

In the early history of flint-lock guns, it became nearly a settled theory that recoil was the result of the touch-hole entering the chamber in front of the breech-pin, or the ignition of the charge in front of the breech-pin. After experimenting upon this theory for a while, without positive results, it crept under the hair of some philosopher that recoil was the result of the air rushing into the barrel of the gun after the escape of the charge, advancing the argument, perhaps, for the first time, that no gun could project the missile straight, if recoil took place while the missile was in the gun. The advent of percussion guns, and patent breeches, effectually exploded the old touch-hole theory; and the fact that, with the escape of the missile, there is protruded a column of gasses that is capable of resisting, except by slow process, any attempt of the air to get in, will quite as effectually explode the theory of vacuum and rush of air. The next theory that received favor was that recoil came from starting the inert missile; that is, before the missile would accommodate itself to the force of the explosion by motion—that force drove the gun backward.

This theory became so generally received that it found its way into scientific works, and was hardly questioned except by a few inquiring minds, with whom the old question would intrude itself, "How can a gun shoot a missile straight, if it moves before the missile escapes?" This question could

never be answered by the inertia advocates. Another set of expert reasoners have taken the contrary, and have advanced the theory that in the passage of the missile through the gun, the gun was drawn forward, I suppose, either by suction or stretch, and at the escape of the missile or separation of the resistance, the man suddenly drew the gun back and kicked himself. This theory would have cogency, providing the gun was really drawn forward or stretched sufficiently as to produce such a shock at its recovery. In direct opposition to the last foregoing, there is another class who argue that the gun recoils or is driven back from the time the missile starts until its escape. To make the thing brief, the gun is driven back with all the force of the charge, less the resistance of the missile and the weight of the gun. This theory has the merit of presenting something tangible to reason from; but the old difficulty of bucking against one hundred pounds, and getting the missile in the bull's eye, would most effectually knock the bottom out of this theory. The advocates for the theory of recoil while the missile is in the gun, have ingeniously experimented with guns on a level plain and then on an inclined plain, and have found the gun moved; have suspended them by string, or strings, with the same result, and have, by using a charge of powder so small that it failed to propel the missile entirely from the gun, discovered motion; and it is claimed by them that this is a knock-down argument for their position.

It will be borne in mind, and, really, I would like for the reader to hold his finger on this point, that, so long as a body moves forward without check there is no recoil, and it does not matter what amount of force propels it. Like the fellow who, in attempting to fly, jumped out of the chamber window, found it easy flying, but the alighting played the mischief with him. If we place a small quantity of powder on the end of a sheet of note-paper, hold the paper by the opposite end, and explode the powder, the end of the paper on which the powder was placed will be driven down, exhibiting recoil, and there is no missile to move here! Now what produces the recoil? Simply that the column of gas in its tendency to project upward is arrested by the unyielding air, and the unspent force that could not all escape in that direction is driven back upon the paper, and the paper not possessed of strength enough to resist this recoil is driven down. Here we will introduce a series of experiments with vehicles that will represent gun barrels of equal weight, and place them successively on some indicator that will measure force, charged each with an equal quantity of powder and no wad.

The first of these vehicles will open with a divergence of forty degrees, and the last one will end with vertical walls (a cylinder). As we explode these charges in these vehicles it will be found each time we close one of them laterally, and condense the column of gas, that we will increase the recoil: and now if we add missile to consolidate this column of gas, and increase its force from time to time, we may increase the recoil indefinitely, at any rate to the full tolerance of the vehicle.

We claim that the missile plays no part in the action of recoil except that it retards and consolidates the column of gas, and which gas, when arrested by the air, being more consolidated and virulent, yields a greater amount of recoil. We will now introduce one instance of prolonged recoil. When we ignite a sky-rocket, we see the column of blazing gases protruding against the air some time before the rocket starts, but as soon as the column of gases press against the air with greater force than the weight of the rocket, we see the rocket at once driven away by the recoil. How, really? Why, the intercepting air arrests the force that would escape, and returns it again to the rocket, just the same as when we throw a rubber ball against a wall, the force that took the ball away being unspent on its arrest, brings it back to the point of starting.

By reversing the cartridge of this rocket on the stock, and placing the stock on some scale that will indicate force, and, igniting it, we can tell just how much recoil a man would experience if the stock was placed against the shoulder.

Can any one suppose that the recoil of a gun is different from that of any other receptacles for the burning of gunpowder? We don't see how they can. The air always resists in proportion to the suddenness of attack, and in this resides the secret of one explosive discharging its force upward and another downward. Commencing with those that are slow in their combustion, we find when ignited they make but little impression on things on which they rest, but as their suddenness is increased, we find things beneath begin to yield, until they can be made so sudden and powerful that rocks are crushed beneath them in open air, and, why? Because the unaccommodating air is less yielding than the rock. On the same principle, with ordinary black powder, that is slowed down with charcoal to accommodate the strength of guns, rocks can be crushed under water.

Now, those who contend that a gun recoils while the missile is in it, would like to know why a gun is forced back before the missile escapes if it is not the recoil we are contending for, since the fact that a gun is driven back has been determined by careful experiments, as admitted above.

This we propose to show immediately after showing that a bullet in its passage through the gun produces no recoil directly.

Almost every one knows that pent force in the form of gases pushes in every direction alike, and the gases generated and pent in a gun-barrel furnishes no exception to the rule, and we claim that the passage of the missile through the gun only enlarges the receptacle. But we admit the gun moves, but not from the cause that has been previously claimed, that is to our knowledge. If we take a gun-barrel so arranged that we can force in air or gas, charge it with a bullet, air tight, which will require 8 pounds to move, place it on a scale and force in gas until the bullet is forced to the muzzle we surely will find no additional force manifest on the scale except the specific weight of the gas, which would be, if air, a little short of 31 grains to the 100 cubic inches; but if we now add gas until the bullet is forced from the muzzle at once on the compressed gas striking the air, we will have extra force indicated on the scale in the form of recoil. By this we settle two questions—first, that the swelling of the receptacle by the moving of the bullet produces no recoil; second, when there is no extra force used the gun does not move until after the bullet escapes. But there is an extra force developed where the bullet is driven through the gun so suddenly, it is compressed or impacted air. If this column of air preceding the bullet is urged forward with force enough upon the external air, the gun will be crowded back before the escape of the bullet, and a sort of prelude recoil will take place previous to the bursting upon the air of the more powerful column of exploded powder; and it is this motion that has been observed by experimenters with gun-barrels suspended on strings and on plates. With an ordinary gun and an ordinary charge the gun must be arranged favorably for motion, since this force could scarcely exceed several pounds, and would hardly overcome the gravity of an ordinary gun when intact, stock and all; but a barrel alone may be decidedly driven back so as to disturb the shooting. At any rate this force does not disturb the shooting at Creedmoor, with a firm holding and a 10-pound gun. Some not acquainted with certain phenomena in rifle shooting may view this column of air-pack preceding the missile as a sort of chimera; but what flattens the apex of leaden bolts and compells the use of tin to harden them? Surely it is not a chimera! We have one more experiment to clear up, and that is, what makes a gun recoil when the missile is not entirely ejected from it.

If we charge a gun with a bullet that will take the force of 8 pounds to move, and only powder enough to partly drive it through the bore, when we start the bullet there must be a force of 8 pounds or more propelling it so far as it goes (if a little extra force is generated in the start momentum may carry it a trifle beyond), and as soon as the force falls below 8 pounds the bullet stops. Now, at the stopping of the bullet there must be at least 5 or 6 pounds of unspent force, which will be thrown back upon the breech less the friction: and also, if the bullet has moved quick enough to the point of arrest to pack the air somewhat, the recovery of the normal pressure of that air would aid the backward movement proportionately.

Gunpowder is not all instantly consumed in the breech of a gun, but is burned the entire length of the barrel with augmenting force as it proceeds. If the powder spent all its force suddenly at the breech the momentum of the missile would be greatly impaired by friction before it escaped. The missile rests firmly on the powder, and as soon as there is force or expansion enough generated in the powder the missile starts, slowly at first, comparatively, and increases, say, to approximate, for the first foot at the rate of one hundred feet the second; second foot, three hundred feet the second; third foot, nine hundred feet the second; but when relieved of the friction and compressed air it perhaps jumps away for the first few hundred feet at the rate of two thousand feet per second. Having, as we think, fairly, though briefly, reviewed the various theories of recoil that have been entertained from time to time, and shown their objections, we submit this as being *the only demonstrable theory.* STRAIGHT BORE.

POSITIVE ACTIONS vs. SNAP ACTIONS.

PITTSBURG, June 18, 1877.

EDITOR FOREST AND STREAM:

"Bonnie Blue Flag" says in his letter published in the FOREST AND STREAM, June 7: "I agree cordially with 'Recapper's' opinion of snap action guns—that, as a rule, they are an abomination." Here we have a wholesale denunciation of the most popular breech action in use to-day among sportsmen who use fine guns, and although "Recapper" has written much against snap actions, I have failed to notice any response from our gun manufacturers. Perhaps they would only be too glad to get orders for positive actions; I am sure *they* cost less than top snap-actions.

The writer is not interested in the sale or manufacture of any gun or action, and was only prompted to ask a small space in the columns of your valuable paper, fearing that sportsmen about to order fine guns might be influenced to discard that most convenient of all breech actions, the top-snap. Durability and convenience are the two essentials in a breech-action. The latter should of course, if necessary, be sacrificed to the former, but that action that most fully combines both durability and convenience is the best action. The most ardent advocate of positive actions must admit that the top-snap, as made by Messrs. Purdey, Scott & Greener, is more convenient than any positive-action in use to-day. Then the only question to decide is, "Are top-snap-actions durable?" Let us look at the evidence on this point. Mr. James Purdy, of London, while at the Centennial Exhibition, showed the writer a little 20 gauge snap-action breech loader that he had made for a prominent sportsman of Europe, with a letter from the owner, certifying that the gun had been fired over 20,000 times, and yet was as tight and free from "shake" as when it left the maker's hands. We have in our sportsmen's association at least fifty snap-action guns, and some of them, to my own knowledge, have had very hard usage; but I have yet to hear of a single fine gun that has become the least shaky. But perhaps the *strongest* evidence of the durability of the top-snap can be furnished by reference to Capt. Bogardus. He has used one of Scott's top-action guns for nearly five years, and during that time has exploded more cartridges in it than any amateur sportsman would use in a life time; and no one, I think, will deny that the Captain, on many occasions, uses heavier charges than most of us would care to shoulder. During his recent exhibition at Gilmore's Garden he fired more cartridges in a single evening than most sportsmen use in an entire year, and the Captain speaks in his book of having, on one occasion, fired so rapidly that the barrels were melted from the ribs; and, notwithstanding this unusual wear and tear, the "abominable snap-action" on his gun is as good to-day as when it left the maker's hands. Then, is it not *folly* to call such an action an abomination?

I agree fully with "Bonnie Blue Flag" that Recappers' articles are very readable; but, for that reason, his theories are the more dangerous. EQUITY.

WILL B. R. B. TRY HIS GUNS?

EDITOR FOREST AND STREAM:

I have perused with much interest the remarks of B. R. B., of Galveston, Texas, in your columns of May 17, 1877, on "Light Choke Bores vs. Heavy Guns," in which he says:

"After a season's duck shooting on the Texas coast, using an 8-lb., 12-gauge choked Box gun, with an old 6-bore muzzle-loader made by Westley Richards ten years ago, I used the 12-gauge and got better sport. In fact, most of the time the 6-bore was stopped at the nippies, and when it was used there were more ducks wounded than brought to bag. With the choke-bore the gun killed all that were hit, the ducks falling to the water like canon balls." * * *

Herein we see expressed a preference with a reflection. I have not the remotest interest in the case, beyond arriving at facts, nor do I care beyond this how the trial I am about to solicit will terminate. But I must confess this open condemnation of old No. 6 awakens my deepest sympathy. I believe he has been, if rightly marked, a faithful old friend who has done good service, and will yet do it well, provided he is given his equal share of ammunition. I strongly believe that B. R. B. did not give him his proportionate charge, and because he failed in killing dead that he has unjustly condemned him. Loads for large bores are very deceptive indeed, and I wish to impress it here. But two years ago myself, an old hunter, but always with a small bore, was just about condemning a No. 9 bore for not killing dead, when, on increasing my load to a proper and proportionate charge, it killed ducks habitually dead at almost every shot with Nos. 4, 5 and 6, and up to 64 measured yards. I therefore plead a full hearing for No. 6, presuming it will be B. R. B.'s pleasure to award it. If No. 6 should fail, after a fair trial, he could then go into an honorable retirement, and with these gracious words: "Retired, worn out in the service." As it is he stands a little disgraced, I think.

I wish to learn the penetration or death-dealing qualities of these two guns, when both are placed on the same equal footing by using proportionate charges—that is, charges which differ in size as the areas or surfaces of their bores. These are the only ones that will give a fair trial; and these will give a fair trial, for in each gun every pellet has the same amount of powder to back it, and the spaces in each gun in which the gas is generated is comparatively the same. Hence the equality is apparent. The proportionate charges for these guns, as found in the table prepared by me, and on record in FOREST AND STREAM of Feb. 15, 1877, and again, together with a table of proportionate targets, in ROD AND GUN of April 7, 1877, are: Charge for No. 6 gauge, 5½ drachms of good strong powder, and 1¾ ounce of shot; charge for No. 12 gauge, 3½ drachms of good strong powder, and 1⅛ ounce of shot. These charges can be increased or diminished, but only proportionally, for trial; still, no benefit would arise from it for the purposes of a trial for penetration.

Now will B. R. B. be pleased to furnish the public, through FOREST AND STREAM AND ROD AND GUN, with the results of an impartial trial of these guns, with ammunition from the same flasks and bags, the wads to be of equal thickness and quality and to fit equally firm, guns to be well cleaned, etc., the gun giving say ten pellets the best penetration to be the strongest shooter, two shots each with the muzzle and choke-bore, or one each as shall be ruled at pleasure? Please give also the targets; then we shall know why the choke-bore killed more deadly than the muzzle. It probably threw thicker and perhaps stronger. But I wish to see how these charges tell, and particularly in dissimilar made guns. Hoping I am not asking too much in our good cause of sporting, I am yours to command, MAJ. H. W. MERRILL.

UTICA, N. Y., June 19, 1877.

EDITOR FOREST AND STREAM:

Perhaps the readers of the "Game Bag and Gun" columns may find relief from the ordinary run of sporting notes in the following: At a recent session of court in one of our northern counties, a matter was brought up concerning the shooting of a dog. It was claimed by the plaintiff that the dog was a pointer, and a very valuable animal, and during the testimony a farmer was called to testify to the character of the animal. After a few preliminary remarks he said: "Why, anybody 'od 'a' know'd it was a p'inter; it 'nd jist set right down and p'int with its paw right to a bird." It has not fallen to my lot to ascertain the issue of the case.

And not long since, in a case concerning the trial of a violation of the statute relating to the shooting of song birds, a man was released because the jury did not know whether a red-winged blackbird could be considered a song bird or not! Surely this is an age of enlightenment. Perchance the next thing will be that a setter dog "sets," or that a hawk is a game bird, or something equally as startling. AVIS.

DEXTER PARK, L. I., June 23.—Grounds of the Long Island Shooting Club—Monthly contest for the champion cup of the club; shot for at seven birds each, 25 yards, 80 yards boundary. Long Island club rules.

Edwards	1 1 1 1 1 1—7	Atkins	1 1 0 0 w
Dr Wynne (27 yds.)	1 1 1 1 1 2—8	Brower	1 1 0 0 w
Gildersleeve	1 1 1 1 0 1—6	Brown	1 0 w
Williams	1 1 1 1 0 w	Hughes	0 1 0 0 w
Hedden	0 1 1 1 1 0—5	Pearsall	1 0 0 w
Wilmer	1 1 1 1 0 w	Robinson	1 0 0 w
E dy	1 1 0 1 1 0 w	Harris	1 0 0 w
Broadway	0 1 1 0 1 1 w	Henderson	0 0 w
Martin	0 1 1 0 1 0 0—3	Bowne	0 0 w

In the sweepstakes shooting which followed, Messrs. Broadway, Henderson and Gildersleeve led in the first match, and Wynne, Williams and Broadway in the second.

WISCONSIN, La Crosse, June 23.—It has been very quiet in the sporting line here this spring. We had plenty of pigeons here a while, and should have had lots of sport and plenty of birds all the season had they been allowed to remain, as they were nesting about twenty miles below here; but a lot of men and boys went in the night with torches, poles, guns, etc., and completely routed and drove them out. The ground for about four miles long and two wide was literally covered with egg shells, making the third time they have been broke up in this section, which I think is a good reason why you did not get plenty of birds and in season for your State shoot. We succeeded, however, in getting a few birds, and on June 21 a few of the boys had a little shoot which passed off very pleasantly, it being the first of the season for this place. All wild pigeons and strong flyers; twelve birds to a man; usual distance, boundary, etc. Here is score:

E A Hatch	9	H E West	9
Warren Howard	10	Jim Vincent	8
Gus Engel	9	Wm Hull	5
Joe Done	8	H Hatchet	7
Gen Crosby	9	Geo Kiene	5

MICHIGAN, *Detroit.*—Shoot at Hurlingham Park, June 20, 1877, for State medal; 11 birds each, English rules:

J E Long	9	O A Mack	9
H H Hawkins	6	Geo Avery	9
W T Hadcliff	7	E S Barbour	6
J V D Eldridge	9	E H Gilman	w

In shooting off ties of nine, at five birds each, Eldridge won with five birds.

Same day, sweepstakes, English rules.

Eldridge	5	Avery	5
Long	4	Mann	4
Barbour	4	Hawking	4

Ties on five.

Eldridge	1 1—2	Avery	1 0—1
Long	1 1—2		

Eldridge and Long divided.

MINNESOTA—Lake City, June 15th, 1877.—The Lake Pepin Sportsmen's Club are just alive, and on the shoot "red hot." The following contest was mainly for a beautiful silver badge presented to the club by S. B. Dilley, Esq., to be contested for in glass ball shooting alone. Two silver cups were offered as 2d and 3d prizes. James McCroden won the badge, making two first prizes won by him within a few weeks. The club has obtained several hundred pigeons, and several challenges are in for the gold club badge; lively times are anticipated. The following is the score of last contest:

10 balls, 18 yards rise.

N. Pelton	7	E. A. Patton	7
Jas. Mercadell	9	A. Gilnes	6
Chas. Wiesner	5	H. Bell	7
N. Wilson	8	J. B. Peterson	3
Chas. W. Smith	4	G. W. Lemley	5
W. J. Spotswood	3	C. H. Freeman	5
G. F. Bolsed	4	S. M. Simpson	7
D. S. Cutts	4	J. F. Dyer	6

Messrs. Wilson and Lemley shot twice at 5 balls, 21 yards rise, on ties of 8. Won by Lemley with 4 balls. On ties of 7 Maj. Van Vliet won with four balls. The prizes were silver cups presented by J. Raubert & Co., Jewelers.

—A correspondent who was shooting the last winter in Arkansas and Southeastern Missouri, says:

For trapping and shooting, the great swamp lands of the Big Black River surpasses any place I have ever before seen. The country is one unbroken, level timber region, with innumerable sloughs and bayous. Bears, deers, wolves, panthers, wild cats, and other large game are very abundant. Coons are so abundant as to seriously damage the corn crops, and minks are equally numerous. Is there not some one among your trapping friends who would like to join us next fall and winter?

New Publications.

ABROAD AGAIN. By Curtis Guild. Boston: Lee & Shepard. Price $2.

Mr. Guild is the popular and able editor of the Boston *Commercial Bulletin*, in which capacity his experience as a caterer to the public taste would of itself be a sufficient guarantee of his ability to give us an interesting book had not that ability been already demonstrated in his former work, "Over the Ocean." Those who read that book will recall the keen observations and descriptions of more than ordinary merit with which its pages abounded. In this "Fresh Foray in Foreign Lands," as the author characterizes it, none of those pleasant features which marked the previous work are wanting. Mr. Guild admirably sustains his reputation as a most agreeable and intelligent traveling companion. One noticeable merit of the book is the freshness of the material. The author delights in taking the reader aside from the old well beaten routes and showing him something novel and vastly more interesting than the stock subjects for the average sight-seer. There are here and there, too, many useful bits of advice which the amateur writer will do well to heed, and which even experienced tourists may find of value.

ILLUSTRATED GUIDE TO THE RICHARDSON AND RANGELEY LAKES. By C. A. J. Farrar. Boston: Lee & Shepard. Paper, 50 cents; cloth, $1.

The numerous changes in routes, time tables, hotels, etc., which have occurred since this little guide was first published, have called for a new edition. The book in its present form is intended to contain all the latest and most accurate information, and to serve as a complete guide to the Rangeley region. The form and size are convenient for carrying in the pocket, and the map which accompanies the book will prove of especial value. Those who are contemplating a trip to the Maine lakes should not fail to secure the book, and avail themselves of Mr. Farrar's labors.

THE CANADIAN CRICKETER'S GUIDE, with a Review of the Past Season. Ottawa: The Toronto News Company. Price 30 cents.

This manual will be found a perfect *vade mecum* for cricket players. It is compiled by Rev. T. D. Phillips and H. C. Campbell, both of whom are well-known throughout the Canadas as expert players and active champions of the game. The contents comprise a short sketch of the history of cricket, a biographical sketch of Mr. Phillips, some useful hints on the game, records of the clubs of Canada and the United States, the laws of the game with explanatory comments, and a variety of other interesting and useful matter.

—Judge Caton, so well known to all our readers for his studies on the deer of North America and Europe, contributes to the June *Naturalist* an extremely interesting and important article on The Wild Turkey and its Domestication. The question as to which variety of our bird, the eastern or southwestern, is the progenitor of the barnyard turkey has been eagerly discussed by naturalists, and some of our most eminent authorities have decided that the domestic turkey is descended from *Meleagris gallopavo* of Texas and New Mexico.

The observations of Judge Caton, however, lead him to exactly the opposite conclusion. He finds that after several generations of domestication the chestnut tips of the tail counts and quills become light colored like those of the domestic bird, and that before long the descendants of the eastern wild turkey resemble in all essentials the ordinary bronze turkey of the farmyard. No one has had better opportunities for judging in this matter than Judge Caton.

Mr. C. S. Minot in this number gives an interesting account of The Study of Zoology in Germany, W. J. Hoffman relates some of the peculiarities of the Distributions of Vegetation in Portions of Nevada and Arizona, R. E. C. Stearns tells us of Aboriginal Shell Money, and Mr. Edwin A. Barber recalls to our mind many a pleasant camp in Wyoming and Utah by his well drawn sketch on Gaming Among the Utah Indians.

The General Notes in this number are full and, as usual, interesting.

—The *Popular Science Monthly* began with the May number to issue supplements uniform in size and typography with the regular issue. These supplements are to appear each month, and are to contain selections from the best scientific periodicals abroad, the matter printed being what would appear in the *Monthly* were it not forced out by articles of more importance.

The second of these supplements, that for June, contains a very large amount of valuable reading, though perhaps it is not all of it strictly of a scientific character. This issue opens with Tennyson's sonnet on Montenegro, which is followed by a sketch of great interest just now on the same subject by Mr. Gladstone. This is succeeded by an article reprinted from the *Contemporary Review* on "The Germ Theory and Spontaneous Generation," giving the views of Pasteur and Tyndall on the one hand, and Bastrau on the other; another, shorter, but scarcely less interesting article on the same subject follows this. Another reprint from the *Contemporary Review* is the article by H. R. Hawris on Richard Wagner, who has recently been so eagerly listened to by our English cousins. "A Modern Symposium" purports to be a discussion on the subject, The Influence upon Morality of a Decline in Religious Belief, in which Dr. Ward, Prof. Huxley, Mr. R. H. Hutton and Sir James Stephens take part.

Other articles are: "Central Africa and the Brussels Geographica Congress," by Emile de Savorlege; "The Contest of Heathenism with Christianity as Reflected in Greek and Roman Literature"; "The Alkaline and Boracio Lakes of California," by J. Arthur Phillips; "Dr. Gray on Darwinism," etc—all valuable and interesting.

Appleton's Journal, for July, opens with an illustrated article on "The Prince of Wales in India," which contains some interesting descriptions of that royal sportsman's hunting adventures. "The Blackfeet Indians," by Mr. H. M. Robinson, is an entertaining description of that tribe, and of the manner of trading with them. The Faroe Islands, off the coast of England, are pleasingly discussed, and the Eastern question receives its share of attention in Mr. H. C. Jones' article, "An Englishman in Turkey." There are several capital stories, poems, humorous articles and shorter sketches, and under the head of "Collectenea," an amusing "Dynasty of Cooks" will claim the attention of the ladies. The magazine is unusually readable this month, and admirably sustains its position among our monthlies.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

VAN, Franklin, Ohio.—Better consult a first-class physician.

PENN.—Squirrel shooting in Penn. July 1st to Jan. 1st.

A. A. L.—For information in regard to Nutall Bulletin address H. A. Purdy, State House, Boston.

FRED.—In dying feathers for trout and salmon flies alum is used to set some colors. Some knowledge of chemistry is necessary to enable you to dye feathers.

G. G., New York.—Will you please inform me in your next issue when the close season ends for black bass fishing in Connecticut? Ans. June is the only month excepted.

EYSTONE, Phila.—Taxidermists in Phila. are: E. C. Axe, 4,133 Frank, ford St.; A. Galbraith, 209 N. 9th St.; J. Taylor, 1,916 Callowhill St.; C. D. Wood, 3,219 Market St., W. Phila.

RENGELEY.—Deer season in Maine, Oct. 1st to Jan. 1st. On Mt. Desert Island the season is during Nov. and Dec. Hunting with dogs is prohibited. Grouse season is, Sept. 1st to Dec. 1st for ruffed grouse, Sept. 1st to Jan. 1st. for pinnated.

J. E. C., Boston.—Taxidermists in Boston are: Brewster & Knowlton, 18 Arch St.; A. J. Colburn, 31 Boylston; P. M. Gidney, 32 Winter St.; Goodall & Co., 93 Sudbury St.; G. L. Whall, Beach St. H. S. Farrar's Rangeley Guide is 50 cents, paper.

J. M.—Please inform me, through your next, where I can get Bogardus' rules for shooting glass balls from traps, and price? Ans. Address Geo. E. Hart & Co., Newark, N. J.

W. P., Madison, N. J.—Will you kindly inform me where and at about what price I can procure a good second-hand four-oared shell, with sliding seats, etc.? Ans. Advertise for it.

TEP, South Bend, Ind.—What is the quickest and most humane method of killing a wounded bird without disfiguring it? Ans. Bite the bird's neck with your teeth; it will not break the skin.

F.T., Rockville, Conn.—Please inform me whether frogs in a pond are injurious to trout? I have heard it stated that they would eat the trout spawn. Ans. Frogs live on insects. They will not eat the spawn to any great extent.

T. H. M.—Will you kindly inform me if the month of July is a close month for snipe and bay birds on Long Island? Ans. If you can find any birds you are at liberty to shoot them. The law does not cover snipe and bay birds.

MO.—The recipe for rubber cement, given in our issue of 14th inst., was meant to fasten the prepared sole on to the boot, not to serve as a sole itself. You can procure the prepared sole of the rubber dealers advertised in our columns.

P. MINOR, Twin Lakes, Conn.—Please state if the law in Connecticut has been changed allowing woodcock to be shot in July. It has been said by a visitor that such is the fact. Ans. The new law just passed prohibits shooting woodcock prior to Oct. 1.

E. C. B., Huntingdon, Pa.—Could you tell me of any books that would give information about building boats? Ans. No book that gives full instructions. Hallock's "Sportsman's Gazetteer" is the most complete. We can furnish it; price $3, 850 pages.

L. G., Mansfield, Ohio.—Which of the two guns would you prefer for general shooting, a 12-bore, 30-inch barrel, 8 or 8¼ pounds weight; or 10-bore, 30-inch barrel, 9 pounds weight? Ans. The 12-bore gun; the 10-bore for wild fowl.

W. Van D., Middletown, Ct.—Can you inform me what the points in a dog (pointer) are which are considered in estimating the excellence of same, or can you direct me how I can ascertain? Ans. See answer to query in last issue. For full information on points, training, feeding and diseases of dogs see Hallock's Sportsman's Gazetteer, price $3; 850 pages. We can furnish it.

NORFOLK.—Please inform me how to remove warts in a dog's mouth? They have been there only a few weeks. The warts are far back on the roof of mouth and on lips. Ans. Touch warts with glacial acetic acid; apply with stick avoiding touching sound tissue. In case healthy parts receive any of the acid apply sweet oil.

W. H., Hornellsville, N. Y.—Is there any way to keep flies and mosquitoes from a person while fishing and hunting? Ans. Very many preparations. Try essence of pennyroyal and sweet oil, or 1 part oil of tar and 2 parts sweet oil. Hallock's "Sportsman's Gazetteer" is a complete Angler's Manual. We can furnish it; price $3, 850 pages.

BUFFALO.—Where, in Michigan, can I find good duck shooting? Is there good quail and rabbit shooting in the State? Ans. For ducks go to Bay City, Lansing, Jackson, Monroe, or the St. Clair flats near Detroit. Quail shooting at Flint, Jackson, Hanover, or Averill's Station. Rabbits and quail at Birmingham.

F. T. D., Newark, N. J.—The length of my gun stock from middle of trigger pin to end of stock is 14½ inches. I have been advised to have it shortened at least ¾ of an inch. What do you think would be the proper length for me? I am seventeen years of age. Ans. Three-fourths of an inch ought to be enough.

C. Y., Halifax, N. S.—Can you give me the name of any book on canoeing? Ans. We think there is an English work on canoeing. Probably the best is that containing the adventures of McGregor, in the Rob Roy; we forget the title. The Commodore of the New York Canoe Club wrote a book entitled "Canoeing." You may ascertain where a copy can be bought by addressing M. Roosevelt Schuyler, 96 Maiden Lane, this city.

W. H., Hornellsville, N. Y.—Where can I find good trout fishing in Pennsylvania, within fifty miles of this place, and what kind of bait shall I use? I have a pointer partly broke. Is there any game that I could use him on in Pa? When does the trout season stop in Penn? Ans. Potter Co. See last issue under Sea and River. Use worms. Break him on quail or woodcock. Trout, August 15.

H. E. W., Newark, N. J.—Will you tell me on what principle it is that a fourteen bore gun will throw shot further than a twelve bore will with the same load? Ans. We don't agree with you that the fourteen bore will throw shot further when the charges are the same in both guns. A fourteen bore will throw a small charge further because its diameter of bore is less. Increase the diameter to a foot and the charge would scarcely make a disturbance in the cylinder.

BEN. PRICE, Pittston.—My young setter has just recovered from the distemper. That is, the discharge from the nose and eyes has ceased, or did cease, for one eye has again commenced to run. There have also appeared under the jaw and on the under part of his neck two or three small red-looking sores. They are not deep and do not discharge, but I think they are getting larger. On the inside of the thighs he has broken out in small red blotches. He holds his head on one side and shakes it as though he had canker. Appetite middling good, but does not gain any flesh. Bowels rather loose. Have been feeding him on mush and milk principally, once in a while a little beef broth and a very little lean boiled beef. Ans. Feed wine of iron and beef. Give 1 to 2 drops "Donovan's Solution" three times a day. Wash thoroughly night and morning with Caswell & Hazard's Juniper Tar Soap.

M. G.—1. Can you inform me whether summer woodcocking is permissible under the present game laws of Pennsylvania? 2. Is Sharon, Penn., considered a good neighborhood for woodcock shooting, and how do you reach there? Ans. Woodcock shooting begins July 4th. Sharon is reached by the Erie and Pittsburg R. R. Trout Island in the Shenango River, six miles from Sharon, is a good ground for ducks, snipe and woodcock. It is owned by a club, but there is equally good sport all about.

INQUIRER.—I have a dog about 6 months old that, when 2 months old, a fleshy lump appeared in the inside corner of the eye and has remained ever since. There is no discharge from it, the eye is bright, but this red substance disfigures her looks very much. Can I do anything to remove it without injury to the eye? Ans. Best let it alone. Will probably disappear of itself in time. If it does not in the course of six weeks write us again.

X. Y. Z.—What can I do for distemper (as I call it) in pups about 8 weeks old? The symptoms are a running discharge from the eyes only, a gradual failing in strength, no appetite, a drawing up of stomach to backbone, and finally dies. What can I do for them? Ans. Give 1 drop Donovan's solution in water three times a day. Also ½ grain quinine, ½ grain septandium every 4 hours. Stimulating diet; beef essence or wine of iron and beef, etc.

H. G. S., Frederick, Md.—To preserve fish skins: skin your fish carefully, but do not be particular as to leaving a little meat on. Spread the skin in layers and sprinkle with salt and alum, or make a pickle in a small keg of a weak solution of carbolic acid. Any remaining flesh can be scraped off afterwards and the fish set up by a taxidermist. Many of the most delicate fishes with large scales will not stand the above treatment, to say nothing of mounting them afterward.—*From Hallock's Sportsman's Gazetteer.*

J. R. S., Bloomsburg, Pa.—I notice that a couple of the teats of my St. Bernard are badly caked; was all right last night, but to-day refuses food and can hardly swallow, as the ones swollen are between the hindlegs. She only whelped Decoration Day, and I am at a loss to understand it. Please advise me treatment to pursue. In the meantime I shall give dose of salts and bathe with warm vinegar. I can find nothing in my sporting works for such a case. Ans. Rub the teats with Palma Christi oil or goose grease. Another remedy is, rub in camphor dissolved in sweet almond oil, to which may be added one-fourth part of fluid extract of Belladonna. This will disperse the milk which seems to be the trouble.

T. W. S., Northampton, Mass.—Can you tell me through your paper, if I can make a waterproof blanket by soaking calico in sweet oil? Also when the same is wet or exposed to sun, will it come off? If this is the case, how can I remedy it? Ans. Of the many recipes for waterproofing we think the following is the best. We do not think the sweet oil will be of any service. One half pound sugar of lead, one half pound powdered alum. Dissolve in a bucket of rain water. Then pour off the fluid with the dissolved ingredients into another vessel. Steep your blanket thoroughly, letting it remain a considerable time. Hang it up to dry without wringing it.

F. F. BOCK, Battle Creek.—I have a setter pup that is seven months old who, three months ago, had the distemper, for which I gave him calomel and quinine as prescribed by Dr. Webb. I now find that his teeth are very much discolored, and gums inflamed so that it is difficult for him to eat. Please inform me what I can do for him and oblige. Ans. Give iod. potassium 1 grain, tincture quassia ½ dr. in tablespoonful of water 3 times a day; also drop a little of the following mouth powder upon his tongue morning and evening: Powd excissicated alum ½ dr., powd myrrh 1 dr., powd borax 1 dr., white sugar powd 2 dr. Mix.

STEADY REAKER.—I am desirous of passing my vacation in Aug. at some place where I can have first-class salt water fishing, where there will be *no doubt* of good sport every day. 1st. The place. How is the Southern coast of Mass., Buzzards Bay, for instance? Is there any better, if so, where? 2d. What would be the probable expense per day, also traveling expenses from N. Y.? 3d. Tackle. Would it be necessary to fit out here? Also what kind of tackle? Would you advise camping, or hotel or private house? Could board be obtained at a private house? If so, please state probable expense as compared with hotel? Ans. 1st. No better place. 2d. Steam propelier to New Bedford, 12 hours, $3. Can get board for $8 per week or less on shore; hotel $12. Your yacht would cost $2.50 per day at least. Better fit out at New Bedford. Tackle on board the yacht or the stores.

L. C., Montpelier, Vt.—I see that Long Island trout sell for $1 in market, while Canadian trout sell for only 50 cent. Can you tell what the difference is? Do the Long Island fish go out to salt water, and have they a better flavor, or are they fresher? Are any trout sent to New York alive. Ans. Long Island trout are always larger (and possibly fresher) than Canadian or other "wild" trout, and people pay double for them, although they are inferior in flavor. The Long Island fish do not go to salt water unless they get over the dams of the ponds, or the dams break away. All the outlets run directly into salt water. The fish that feed in salt water are much improved in flavor. Live trout are sent to New York in considerable numbers, especially in early spring.

T. C. D., Houston, Texas.—Will a 14-gauge breech-loader (perfect cylinder) shooting 1¼ oz. shot, shoot as close as a 10-gauge, moderately choked, shooting same quantity shot? 2. What is the relative penetration of each 14-gauge with 3 drs. powder and 10-gauge with 4 drs? Ans. 1. We infer from the question 4 drs. of powder is used in each gun. A trial of the guns would have to be made to settle this point. As presented, it is choke in the one against an excess (or disproportion) of shot in the other. No. 10 is entitled to 1 55-100 oz. shot if No. 14 is given 1 25-100 oz. Perhaps choking may make up for this difference in shot. 2. The penetration should be greatest in No. 10, for it has its *due* proportion of powder, with 31 per cent. less of shot proportionally to project. If both be loaded proportionally with shot and powder, then the best penetration would win. (See No. 2 FOREST AND STREAM, Feb. 15, 1877 on proportional charges.)

A. A. H., Boonville, Mo.—Is there a sportsman's paper published in Canada, and if so, what is the name, and where published? Ans. *Sporting Gazette*, Toronto. 2. Tatham & Bros. advertise extra fine dust shot, 8,000 and upwards to the ounce. What are such shot used for? Ans. Specimens for ornithologists. 3. What are the requisites of membership in the Hurlingham and London, Eng., Gun Clubs. I have seen it stated in some paper that these two clubs were monopolized entirely by first-class gunmakers. Is the membership confined exclusively to gunmakers, and if so, what is the object of the clubs? Ans. A first-class club, composed of best gentlemen. 4. I wish to know when, where and how to sow wild rice, and whether it will succeed in this latitude? Ans. We see no reason why wild rice should not thrive in your section. Chop a strip ten feet wide in the earth along the margin of the pond, and sow broadcast, a bushel to the acre, in spring and fall. The seed can be had from Richard Valentine, Janesville, Wis.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oil-cloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAY, SONS & CO., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him, or with any orders sent him. It is a good reliable house.

FOREST AND STREAM ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 5, 1877.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

☞ Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS, Business Manager. S. H. TURRILL, Chicago, Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Thursday, July 5.—Trotting: Lyons, N. Y.; Sharon, Pa.; Poughkeepsie, N. Y.; Macomb, Ill.; Detroit, Mich.; Woodbury, N. J.; West Meriden, Conn.; Albany, N. Y. Running meeting at Monmouth Park, Long Branch, N. J. Rod and Gun Club Shooting Tournament at Burlington, Ia. Prize Bench Show of Dogs and exhibition of birds at Toronto, Canada. Shooting at Blooming Grove Park, Pa. Base ball: Indianapolis vs Tecumseh, at Indianapolis; Keystone vs Delaware, at Port Jervis, N. Y.; Erie vs Philadelphia, at Buffalo; Auburn vs Indianapolis, at Auburn, N. Y.; Mutual of Janesville vs Milwaukee, at Milwaukee; Olympic vs Rutan, at Paterson, N. J.; Enterprise vs Volunteer, at Poughkeepsie; Rochester vs Star of Syracuse, at Rochester; Athletic vs Ring, at Cohoes, N. Y.

Friday, July 6.—Trotting: West Meriden, Conn.; Albany, N. Y. Running meeting as above. Dog show as above. Shooting matches as above. Meeting of the Athletic Association of American Colleges at Mott Haven. Base ball: Indianapolis vs Hartford, at Indianapolis Buckeye vs Forest City, at Columbus, O.; Clipper vs Sunnyside, at Sing Sing; Athletic vs Pittsfield, at Pittsfield, Mass.; Enterprise vs Delaware, at Port Jervis; Keystone vs Honesdale, at Honesdale, Pa.

Saturday, July 7.—Trotting at West Meriden, Conn. Running meeting at Monmouth Park, Long Branch, N. J. Base ball: Enterprise vs Delaware, at Port Jervis; Keystone vs Honesdale, at Honesdale, Pa.; Arlington vs Crystal, at Brooklyn; Buckeye vs Tecumseh, at Columbus; Clipper vs Active, at Wappinger Falls; Athletic vs Adams, at Adams, Mass.

Monday, July 9.—Running meeting at Monmouth Park, Long Branch, N. J. Base ball: Indianapolis vs Boston, at Indianapolis; Keystone vs Wilkesbarre, at Wilkesbarre.

Tuesday, July 10.—Trotting: Canandaigua, N. Y.; Sodus, N. Y.; Bay City, Mich.; Springfield, Mass.; Columbus, O. Running meeting at Monmouth Park, Long Branch, N. J.

Wednesday, July 11.—Trotting as above. Running meeting as above.

Thursday, July 12.—Trotting as above and at Monmouth, Ill. Running meeting as above. Regatta of the Arlington Boat Club, at Bayside, L. I.

—Sunday Night Line to Boston. The splendid Steamers of the Fall River Line are now making Sunday trips leaving New York at the same hour (5. P. M.) as on week days.

—A new route to Oak Bluffs, Martha's Vineyard, and Nantucket by the Fall River Line has been opened for the season. Passengers can leave this city daily, Sundays included, at 5 P. M., on the steamers Bristol or Providence, and after spending a whole day at Martha's Vineyard may return to New York the following day at 6:30 A. M.

CLOSING THOUGHTS ON EDUCATION.

IF we have made sufficiently clear the central idea underlying our argument, many minor objections to our theory will thereby be disposed of. For instance, it might be said that it is absurd to desiderate an early life in the country. Can city mothers send away their children to be reared under the conditions here required? Do we advocate the establishment of rural nurseries at State expense? Nothing of the kind. Let the city keep its own young if it must, and teach them its own lessons. There are here exhibitions, artistic, scientific and mechanical, workshops and factories, parks and collections of all kinds of treasures, every one of which can be turned to advantage as a school. We have all heard of bright and intelligent children in London who had never seen the country, and knew nothing of it beyond hearing of its trees, hedgerows and green fields. It may also be known that in the same vast wilderness of houses the chances of health and longevity are greater than in any of the large cities of America, small though the latter are in comparison. It may be deduced from these facts that city life is not inconsistent with physical development, and has advantages of its own in the other branches of education. We merely give the country the preference, and would not recall too vividly scenes which would crowd out argument, else we might revert to its freedom, joyousness in mere existence, healthy activity, the courage it infused, the hopes it fostered, and if any of its lessons failed to teach us then, they are bearing fruit in the memories it has left behind. Here is a picture which suits our purpose perfectly: "My home," says Hallock's *Fishing Tourist*, "was a tree-embowered shanty apart from the farm-house, and crowning a knoll, around whose base rolled and tumbled a most delectable trout brook. In time I came to know every woodchuck hole in the township, and almost every red squirrel and chipmunk by sight; every log where an old cock-partridge drummed; every crow's nest, and every hollow tree where a coon hid away. I heard Bob White whistle to his mate in June, and knew where to find his family when the young brood hatched out. I had pets of all kinds—tame squirrels and crows, hawks, owls and coons. All the live stock on the farm were my friends. I rode the cows from pasture, drove a cosset four-in-hand, jumped the donkey off the bridge, to the detriment of both our necks, and even trained a heifer so that I could fire my shot-gun at rest between her budding horns. I learned where to gather all the berries, roots, barks and 'yarbs' that grew in the woods; and so, unconsciously, became a naturalist and an earnest student of botany." The last is the great point—studying natural history and botany in Nature's own college.

So far, we have touched upon moral education only in an indirect way. One of the chief advantages of a child's exemption from attendance at school during the first decade or more of its life, is that a ground may be prepared for a healthy, sound and abiding moral education. As in the other case we took exception to abstractions, so in this, example is more powerful than principles. Precepts may burden the memory, example touches both the intelligence and the heart. Schools have rashly been condemned as hot-beds of vice, and denounced as institutions for the dissemination of immorality rather than of knowledge. There is generally a little reason in the most extreme view, and we find a good deal in this particular instance. Example, we repeat, is more powerful than principle, whether for good or ill. In every school are boys who exercise, in spite of the utmost vigilance, a most pernicious influence over their fellows. Bad examples soon multiply; and a child sent to school at too tender an age, before it has formed any opinions of right and wrong, or before it has absorbed into itself the more wholesome lessons of home, is exposed to a most serious danger, without any weapon of defense. The consequence has been that many a child, from its mere youthfulness and impressibility, has received a taint from which it was never in after life wholly freed. It may be observed here that moral education is a double process, including both the application of safeguards against the bad, and the infusion of the good; and, further, that besides many positive virtues, there is a negative condition in the freedom from vices which has no place in the nomenclature of the former. School education takes but little of this within the range of its operation, and pupils are, as a rule, freely exposed to the risks of association. Let us take, for example's sake, one branch of moral education to illustrate the defects of the usual system. Leaving aside the vices which are the opposites of the so-called *Christian* virtue, let us turn to such qualifications as perseverance, energy and industry. These virtues are either inculcated merely as bearing upon intellectual progress, or ignored altogether in the explanation of results. Hence it must frequently follow that the youth of greatest mental calibre will rest under the idea that he is the intellectual inferior of many of his mates, through his ignorance of his own capabilities, and his never having been referred to his moral failings to find a cause for his mediocrity. A defect thus exists for which no remedy is supplied, while the exercise of all such virtues should be regularly impressed upon him as a part of a grand total of moral duty. In perfectly logical sequence comes the result, that in sending a child to school at a very early age, the years are not only wasted to a great extent, so far as moral education is concerned, but it is unnecessarily exposed to trials, the danger of which would be materially lessened were a more rational system in force. As the child's parents are its first guardians and directors, so they should continue its moral guides until their teachings have not only taken root, but are bearing fruit. This is the general rule, to which there must necessarily be exceptions. Allusion has already been made to Byron's mother as a woman little calculated to advance a boy's moral education; but in the majority of cases the wholesome atmosphere of home is the best in which to live through the tender years preceding what has been specified as a sufficiently early departure to other influences and associations. Thus only can a child be fully equipped to meet and triumph over the tastes, trials and temptations of youth, and so issue, in the plenitude of the glorious strength of early man and womanhood, into the great battlefield of life. With bodies strong enough to resist the inroads of studious application upon the physique, and a moral sense sufficiently developed to withstand the attacks of temptation, the brain will be found to possess, in vigor and freshness, qualities which more than compensate for the training possessed by the victim of the early-forcing process. Culture is the object of all education, and as a concise and comprehensive definition of that much-abused word, we know none better than that by Mr. J. H. Long, B. A., of Canada: "The cultivation of all the endowments of man—the mental faculties, the moral attributes, the physical powers, the finer tastes and feelings."

EXHIBITION OF SHIP, YACHT AND BOAT MODELS.

EVERY one who visited the Government Building at the late Centennial Exhibition at Philadelphia, will recall the very interesting and complete display of models of all kinds of sailing craft, not only of America, but of other countries. It comprised ancient models as well as the newest, of men-of-war, merchant ships, steamers, hospital ships, yachts, fishing smacks, fishing boats, boats used by sportsmen, canoes and all manner of craft in use by civilized man and savage, from Greenland to Puget's Sound and the North Pacific Ocean, and included not only those in long use, but untried novelties of unique pattern. Without doubt it was the most creditable and comprehensive exhibition of the kind that has ever been shown. Its capacity for instruction by comparison of models was great, and the rate of progress and improvement in marine architecture could be readily studied and comprehended by those familiar with nautical matters. This exhibition remains in its entirety at Washington, if we are not mistaken, where it will be permanently available to the inquirer, navigator, yachtsman and student. Its utility as a school of instruction is obvious.

Inasmuch, however, as new improvements and inventions are constantly coming to light, and especially since the competition among yachtsmen is constantly stimulating the contrivance and construction of racing vessels of superior qualities of stiffness and speed, it would be well to encourage periodica exhibitions of models of this class of vessels in order that builders may profit by the knowledge thereby imparted. And not only models of yachts of every class and rig, but also of fishing smacks, bay boats, gunning skiffs, portable canoes and the appliances and apparatus pertaining to each. Already this has been done in England this summer (whether prompted by the Government Exhibition at Philadelphia, or by their own motion we cannot say), and a very creditable showing has just been concluded at the Fishmonger's Hall in London. The Lord Mayor opened the exhibition on the 28th of May with much ceremony and a luncheon. On that and each subsequent day the hall was so well attended that it is evident great interest obtained. Liberal prizes were offered and the entries were numerous. One model was that of the steamship Britannic, 5,008 gross tonnage. Many ship building companies were represented, both by sailing ships and steamers. There were twenty exhibits of schooner yachts, from 350 tons down. In the cutter class there were eleven exhibits. The fishing smacks are mentioned as resembling yachts more than anything else. There were several tugs and barges. The apparatus comprised boat-lowering gear, life-saving appliances, anchors, dress for sailors, etc. In every respect the show was a success, and many of the models have been sent to the Royal Aquarium to remain as permanent fixtures.

We repeat that it is important to cultivate such exhibitions in the United States for reasons obvious and supposable, and we shall hope to see such initiated next year. FOREST AND STREAM has always been foremost in suggesting means for promoting legitimate sports in this country, and we shall cheerfully lend our aid in this as in other enterprises when it may be needed. Besides sailing models we would urge the contribution of models for boats and canoes of which there are in use already full thirty different kinds. If some one more competent does not initiate this movement in due time we shall undertake it ourselves.

—Dr. Helmbold's opening of the "Parlor Pharmacy," cor. 17th street and Broadway, which took place on Saturday evening last (June 30), was an enjoyable affair. As a caterer to the appetites of those in health, the Doctor surpasses even his well known skill in prescribing for the afflicted.

SWISS VALLEY.—The Swiss Valley Pleasure Grounds, at Pelhamville, where a party of ladies and gentlemen were recently so pleasantly entertained by the proprietor, Mr. James Meyer, Jr., are now open to subscription. The membership is limited for the present to 100. The subscription fee giving admission to the grounds, for the year 1878, is $15 for the first fifty subscribers, $25 for those succeeding. The project embraces a great variety of out-of-door sports, and will doubtless meet with a deserved support from that class to whose tastes it caters. Those interested should send for a circular to James Meyer, Jr., 35 Broad street, P. O. Box 3,257.

GAME PROTECTION.

Under our customary head of "Game Protection," we present this week some very much asked for and important information, which all readers will do well to hang up for reference

Massachusetts.—*Abstract of Game Laws of* 1877.—Woodcock and partridge (ruffed grouse) may be killed between September 1 and January 1 following.

Quail may be killed between November 1 and January 1 following.

Trapping and snaring game birds prohibited entirely.

Upland plover may be killed between July 15 and January 1 following.

Wood-duck, black-duck, and teal may be killed between September 1 and April 15 following.

Penalty for illegal killing of woodcock, partridge, quail, upland plover, wood-duck, black-duck and teal, twenty-five dollars ($25) for each bird.

Penalty for killing any undomesticated bird not before mentioned (except birds of prey, crows, crow-blackbirds, herons, bittern, wild pigeons, jays, rail, Wilson's snipe, wild geese, plover, sandpiper and any of the so-called marsh, beach or shore birds), ten dollars ($10).

Penalty for destroying or disturbing the nests or eggs of any undomesticated bird (except birds of prey or crows), ten dollars ($10).

Hares, rabbits and gray squirrels may be killed between October 1 and March 1 following. Penalty for illegal taking or killing, ten dollars ($10).

No deer to be killed or taken (except one's own tame deer) until 1880. Penalty for illegal taking or killing, one hundred dollars ($100).

All forfeitures to be paid one-half to the informant or prosecutor, and one-half to the city or town where the offense is committed.

Trout and land-locked salmon may be taken by hook and line only, between April 1 and October 1 following. Penalty for illegal taking, ten dollars ($10).

Black bass may be taken with hook and line only, between June 1 and December 1 following. Penalty for illegal taking, twenty dollars ($20).

Possession *prima facia* evidence to convict.

Connecticut.—*Hartford, June* 20.—The Hartford Game Club held a large and enthusiastic meeting at the office of Messrs. P. Jewell & Sons last evening. Mr. L. B. Jewell was appointed chairman, and Mr. R. E. Beecher secretary. It was voted that the executive committee distribute circulars of the game law and publish them in papers throughout the State. The finances of the club being in excellent condition, it was voted to expend the money during the coming months in the prosecution of all offenders of the game law, and a reward of $10 is to be offered for information leading to conviction of violators of the same. It was generally conceded that the laws passed by the last legislature were as near perfect as could be desired.

No trout fishing will be permitted in this State after July 1, and the close season for all kinds of birds extends to October 1, which laws will be rigidly enforced. The law regulating the shooting of woodcock until Oct. 1st was thoroughly discussed, and contrary views were taken to an item (by some pot-hunter) which appeared in the Hartford *Times* last evening, which says:

"The law prohibiting the killing of woodcock in July, and later, is useless and improper. The woodcock is a migrating bird. They breed here and at the north of us, and pass along southerly as the young ones grow up. If not killed in Connecticut, they will be in New York, New Jersey, and Pennsylvania, and the number killed in Connecticut would never make any difference with the supply of the birds."

The fact of it is that the woodcock is not so much of a migratory bird as people suppose, and are to be found all through the months of October and November. The laws of the States around Connecticut prohibit the shooting of woodcock until September 1st, and some later, except in the case of Long Island, which for some reason extra provision has been made. During the month of July woodcock are not much larger than blue birds, and in August they are *moulting*, so that their flesh is not in good condition until Oct. 1st, which ought to be another consideration with sportsmen.

It was also voted to empower the executive committee to employ three detectives or more, to secure convictions for violation of the game laws. The resolutions from the Connecticut State Poultry society regarding the proposed dog show at the coming poultry exhibition in January at the rink, were referred to the executive committee.

It was the general sense of the meeting that the club should hold meetings monthly.

Dr. G. C. Jarvis, S. J. Bestor and H. T. Sperry were appointed a committee to report on the advisability of a city ordinance requiring the police registration of dogs, something like the New Haven system. In an informal talk about hydrophobia the opinion was expressed that thoroughbred animals rarely have the disease. It is mostly confined to miserable, mangy curs of low degree which are not cared for by anybody. The owner of a valuable dog will take good care of him. The street cars ought to be exterminated.

After the adjournment of the meeting a friendly discussion was had regarding the merits and demerits of the Forest and Stream & Rod and Gun, and it was the unanimous opinion that the elevation of field sports and the protection of fish and game could not be in better hands. T. S. S.

Connecticut.—The officers of the recently organized Middlesex County Game and Fish Protective Association are as follows:

President, Dr. Joseph W. Alsop; Vice-Presidents, O. V. Coffin, Middletown; Isaac Arnold, Haddam; W. G. Buell, East Hampton; Joseph Hall, Portland; Secretary, Major J. C. Broatch; Treasurer, Captain Charles W. Harris; Executive Committee, the president and vice-president, *ex officio*, and Samuel Russell and Augustus Putnam; Counsel, S. H. Robinson.

—The Hartford game club have caused notices to be posted conspicuously in the region round about, offering a reward of $10 for evidence which will lead to the conviction of violators of the game and trout laws. The hunting of woodcock, quail and partridge is prohibited except in October, November and December; and the taking of trout is confined to the time between April 15th and July 1st.

Canada.—Some three years ago some prominent public officials violated the game law of Kansas and were arrested therefor. We have not learned whether they were punished or not, but we *do* know, from the Toronto (Canada) *Globe*, that Lord Dunraven, who violated the game laws when in Canada last year, has remitted $100 to pay the fine imposed.

Buffalo in the British Northwest Territories.—A very important ordinance passed is that for the protection of the buffalo, the main purpose of which is, without depriving the Indians of their food supply or the market of robes, to stamp out the vicious practice of wantonly destroying the fast-diminishing herds. It provides that no calf of either sex under two years old may be killed by any one. No cows may be hunted or destroyed between the 15th of November in any year and the 15th of August following, except by the Indians, who are permitted to kill them for three months longer than other persons, that is to say up to the 15th of February.

Virginia.—The law provides:

1. That it shall not be lawful for any person to kill or capture, or offer for sale or buy, any partridge or quail between the first day of February and the first day of October of each year, within this State; nor shall it be lawful to capture partridges at any time by means of nets or traps of any kind.

7. Any person offending against the provisions of this act shall be guilty of a misdemeanor, and on conviction thereof in any court or before a justice of the peace, shall be fined twenty dollars for each offense, and shall be imprisoned till said fine is paid, but not exceeding thirty days. The possession of any bird or deer within the prohibited period mentioned in this act shall be held conclusive evidence of its violation, and subject the person in possession to its penalties.

Missouri.—The game law of Missouri prohibits killing or capturing or injuring game as follows:

Deer between January 15 and September 1. Wild turkey between March 1 and September 15. Prairie chicken between February 1 and August 16, or pheasant or quail from February 1 to October 15. Woodcock between January 10 and July 1. Turtle doves, meadow lark, or plover between February 1 and August 1.

The above are the kinds of game which it is unlawful to kill between the days given—and it is unlawful to kill any song bird or insect-eating bird at any time. Their killing is positively prohibited—except that the owner of premises may kill them in the act of destroying fruits, grapes or honey bees.

It is also unlawful to trap or net, or by pens or pits, to capture quail or prairie chickens, or to destroy, rob or injure their nests, or the nests of any wild bird whatever. Such are the general provisions of the law, and apply to all hunters of all kinds and descriptions.

Then come the exceptions to these general provisions, which are as follows:

A person may take the game birds when it is lawful to kill them—on his own premises for his own or the family use, and may net quail or prairie chicken or may trap them for that purpose, but only then and only on his own premises. The law does not apply to destroying the nest of hawk, owl, eagle or other bird of prey, nor to the person who kills a bird for the purpose of having its skin stuffed, or for the scientific purpose of studying its habits and history.

It shall be unlawful for any person to purchase or sell, or have in his possession any animal or bird forbidden, or any fresh pieces or parts of them, within the prohibited period. And if in the season allowed for killing, any person offers to sell or has in possession any quail or prairie chicken that has not gunshot marks on it it will be taken as *prima facie* evidence that it has been unlawfully killed—or in other words netted or trapped.

It is also unlawful for any railroad, steamboat, express company, or any corporation or individual to have game out of season in their possession or to transport it.

The penalty for violation is a fine not exceeding $20 for killing, robbing nests, having in possession—or any violation of the law, whatever. And prosecutions may be had before justices of the peace, police justice, recorder, or any officer, or court having jurisdiction in misdemeanors. One-half the fine goes to the school fund, and one-half to the informer. It is made the duty of all constables, marshals, market-masters and police officers to arrest all persons found violating the act and take them before an officer authorized to try them.

It is further unlawful for any person not a resident of Missouri to take or kill any deer, wild turkey, prairie chicken, pheasant, quail, woodcock, goose, brant, duck or snipe in any county of the State for marketing or removing from the State—under a penalty of not less than $10 nor more than $50.

And finally no person shall enter upon the inclosure of another person to catch or kill game of any kind without the owner's consent, under a penalty not to exceed $10.

Illinois Game Law.—Below is a synopsis of the new game law, which took effect July 1: Prairie chickens and woodcocks are protected between the 15th of January and the first day of September. Deer, turkeys and pheasants are protected between the 1st day of February and the 1st of October. Quail between the 1st day of February and the 1st day of November. It is made unlawful to net quail at any time. Wild geese, ducks, snipe, brant, or other water fowl are protected between the 1st day of May and the 15th day of August. It is made unlawful for a non-resident of the State to kill or trap in any manner any of the above named birds or animals in any county of this State, at any time, for the purpose of selling or marketing or removing the same outside the State.

Alabama.—Alabama has a game law prohibiting the killing of any kind of game between April 1st and October 1st.

Wisconsin.—A very wise act, preventing the destruction of birds, was passed last winter by the legislature. Any one killing a bluebird, robin, swallow, meadow lark, or any insect devouring bird, can be fined one dollar for the first offense and five dollars for the second.

The Louisiana Game Law.—The game law of Louisiana, which was approved April 13th provides as follows:

That it shall be unlawful in that State to catch, kill or pursue with such intent any wild buck, doe or fawn, or to have the same in possession after it has been caught or killed, between the first day of February and the first day of August of each year, under a penalty of $25 for each offense; any wild turkey, between the first day of April and the first day of September in each year, under a penalty of not less than $5 nor more than $25 for each offense; any quail, partridge or pheasant, between the first day of April and the fifteenth day of September in each year, under a penalty of not less than $5 nor more than $25 for each offense; any whippoorwill, sparrow, finch, oriole, bluebird, swallow, nighthawk or blackbird, except when the same shall be destructive to the fruit or grain crop, under a penalty of not less than $5 nor more than $25 for each offense.

That no person shall rob or destroy the nests or eggs of any wild bird whatsover, save only those of a predatory nature or destructive of game or insectivorous birds, under a penalty of not less than $5 nor more than $25 for each offense.

That no person shall entrap, net, kill or pursue with such intent, or have the same in possession at any time during the year, any song bird, especially the mocking bird, except domesticated birds, except the birds be entrapped or netted for the purpose of domestication, under a penalty of not less than $5 nor more than $25 for each offense, except when the same shall prove destructive to the fruit or grain crops.

That the possession of any animals or birds intended to be protected by this act, within the periods for which their killing or pursuit is prohibited, except such as are domesticated, shall be *prima facia* evidence that the said animal or bird was unlawfully caught or killed and the possession thereof unlawful.

That any person exposing for sale any of the animals or birds intended to be protected by this act within the period for which the taking and killing is hereby prohibited, shall for each animal or bird so exposed for sale, except such as are domesticated, be subject to the same penalty as provided for the unlawful killing or taking of such animal or bird.

That the unlawful killing, catching or possession of each and every one of the animals or birds intended to be protected by this act shall constitute a separate and distinct offense, and shall be punishable accordingly; and two or more offenses may be joined in the same warrant or indictment therefor, and the person so offending if convicted shall be fined for each offense.

That no person shall at any time during the period forbidden by this act, kill or take any of the animals or birds intended to be protected by this act by means of any trap, snares or other like device, under a penalty of not less than $5 nor more than $25 for each animal or bird so trapped, snared or taken; provided, nothing contained in this act shall apply to migratory birds or fowls.

That all transportation companies, steamboats, railroads or other public carriers, of whatsoever character, are hereby prohibited from transporting any game bird or animal mentioned in this act during the period provided for the protection of such game bird or animal, under a penalty of not less than $5 nor more than $25 for each offense.

That any person convicted of violation of the provisions of this act failing to pay the penalty or penalties prescribed herein, shall be imprisoned in the parish jail for a period of not less than ten nor more than thirty days.

That all acts and violations of this law denominated as offenses in the foregoing sections, shall be and are hereby declared to be crimes against the State of Louisiana, and it shall be the duty of all district-attorneys and district-attorneys *pro tempore* of the State to prosecute before any court of competent jurisdiction all offenders and persons committing misdemeanors under the provisions of this act.

This act took effect the first day of June, 1877.

The New Game Law for Florida.—The following law was passed February 27, 1877, and first published on May 4:

Section 1. That no person shall, at any time between the first day of April and the first day of September, hunt, kill, or capture any deer, buck, doe, or fawn, wild turkey, quail, or partridge, or mocking-bird, nor destroy the nests, eggs, or partridge, or mocking-bird; and any person so offending shall be deemed guilty of a misdemeanor, and, upon conviction, shall be fined not exceeding $20 for each offense, and in default of payment of said fine shall be confined in the county jail not exceeding ten days; provided, however, that nothing in this act shall be so constructed as to deprive any person of the right to hunt on his or her own lands, or to protect their crops from depredations made by said deer, buck, doe or fawn, or wild turkey; and it is further provided, that this law shall not take effect in any county in this State until the County Commissioners shall have published the same in such county where the law is to take effect.

California.—The San Francisco *Pacific Life* gives the latest revision of the game law in California, as follows:

The close season for salmon commenced August 1 and extends to November 1. Under the law passed at the last session of the Legislature it is made a misdemeanor to catch, transport or have in possession fresh salmon during this period. The penalty for a violation of the law is from $50 to $200, and this is divided between the informer, the prosecuting attorney and the school fund of the county.

Every person who, between the 1st day of January and the 1st day of September of each year, takes, kills or destroys any elk, deer, mountain sheep or antelope, is guilty of a misdemeanor; and every person who shall take, kill or destroy any of the animals herein mentioned, at any time, unless the carcass of such animal is used or preserved by the persons slaying it, or is sold for food, is guilty of a misdemeanor. Any person catching or having in his possession, or offering for sale, shad, at any time prior to the first Monday of Dec., A. D. 1877, is guilty of a misdemeanor. The following counties are excepted from the provisions of this section: Del Norte, Humboldt, Shasta and Mendocino.

Section 626 of the Penal Code was amended last winter to read as follow: Every person who, in the counties of San Bernardino or Los Angeles, between the first day of April of any year and the first day of August of the same year, or who in any other of the counties of this State, excepting the counties of Lassen, Plumas and Sierra, between the fifteenth day of March and the fifteenth day of September in each year, takes, kills or destroys quail, partridge, or grouse, mallard, wood, teal, spoonbill, or any kind of broadbill ducks, is guilty of a misdemeanor.

Sec. 631. Every person who, between the fifteenth day of October in each year and the first day of April in the following year, takes or catches any trout is guilty of a misdemeanor.

Sec. 633. Every person who, in the counties of Santa Clara, Alpine, Santa Cruz, Lake San Mateo, Monterey, Sonoma, Tuolumne, Alameda, Marin, Placer, Nevada, Pluma, Sierra, San Luis Obispo, Solano, Mariposa, Mendocino or Napa, at any time, takes or catches any trout except with hook and line is guilty of a misdemeanor.

Sec. 633. Every person who takes, catches or kills any trout by the use of nets, weirs, baskets, or traps is guilty of a misdemeanor.

The penalty for the violation of the law is as follows:

Except in cases where a different punishment is prescribed by the code, every offense declared to be a misdemeanor is punishable by imprisonment in a county jail not exceeding six months or by a fine not exceeding $500, or by both.

The Board of Supervisors of Santa Cruz County, at their meeting on the first Monday in August, changed the deer law so that hunters may kill deer from the 15th of August to the 1st of January, instead of (as heretofore) from the 1st of September to the 1st of January.

A new rule of the Sportsmen's Club prohibits one rod in a day's fishing taking more than twenty-four trout in Lake San Andreas, and fifty in Lake Pilaratos.

THE LAW IN TENNESSEE.—The Nashville *Rural Sun* says:

Of all monstrosities and absurdities the game law of Tennessee carries off the palm. In the first place it makes no provision for the enforcement of the law. It says that quail shall not be taken with trap or net, and then leaves it optional with the owner of the land to prosecute or not, and without his consent no one else can prosecute. This, of course, renders this part of the law almost a nullity, for the farmers as a general thing do not wish to rush into lawsuits by prosecuting parties who may violate this law. The law has been violated with impunity, for throughout the past season we could at any time buy live quail here in our city market. No at tempt was made, either, to hide the fact that they had been taken contrary to law. Even now, during the close season, we see live quail boldly offered on our streets for sale. This is simply an outrage, but there is no recourse under the law, unless the planter himself will do the prosecuting. Again, the close season for game birds is fixed from March 1st to September 15th, and snipe included under this head. Oh, shades of the immortal Frank Forester, wasn't the framer of the bill a wise man in his own conceit? Snipe is a migratory bird, and does not arrive in our State until after the first of March. Generally they are in our swamps from the 15th of March to the 15th of April. To say that they must not be shot after the first of March is equivalent to saying they must not be shot at all. This, too for a migratory bird that does not breed here but simply stops with us for a few weeks, in the spring, while on his march north to his breeding ground on the great lakes. We have yet to learn of but one prosecution under this law, and this was in the case of an old negro in Maury county, who shot a quail out of season. No law can be made effective unless some provision is made for its enforcement. We say to the farmers that it is now left with them to protect the game or not, just as they please, and unless they arouse themselves from this don't-care state, we will soon have no game in this State.

A VINDICATION.

PHILADELPHIA, June 9, 1877.

Mr. Charles Hallock:

DEAR SIR.—I have not been in the Adirondacks for ten years, but I have corresponded with an old friend there—Mitchell Sabattis—and do not like to see him accused in print of what I hardly think he would do, unless he has changed from what he was when I last wandered in the woods with him. As to his past record I know this, that when I used to visit Long Lake, what he told me I would have believed; and had I thought that I had seen him shoot a deer, and he denied it, I would have put that deer down as "killed by a special dispensation of Providence." Years ago, in '58, '59 and thereabouts, a certain Dr. Todd, of New England, used to go to that country to shoot and fish and recuperate health. Mitch. to'd me that the doctor used to kill a deer or two in a night, floating, or perhaps catch in a day a large mess of trout. That then, without any regard to what would become of the meat or fish, he would propose to change camp to some other spot where he thought he could most easily repeat the killing or catching, and so game was wasted. He told me one season that—I think the year before—Dr. Todd had employed him, Lon Weathersby and, I believe, Caleb Chase to go with him, and that before starting, all three told him that they would not go if he intended to kill deer and catch trout to waste. He disclaimed any such intention, and they carried a tub and salt water to take care of the trout in. The result was not what they had expected from the doctor's disclaimer, and they left him and declined to guide him any more. It was said that the doctor had given up coming there for that reason. No doubt the doctor would have denied this, just as his biographer in *Harper's Magazine* did; but it so happened that being, one August—the last week in the month—at Newcomb's settlement, and having nothing in particular to do, I proposed to my cousin, who was with me—Mr. A. A. Clay, whom you know—to walk over to the chain lakes and lie about for a few days. We took our guns and rods and went there, a boy named Henry Parker accompanying us. While there for a week it rained every day but one, and the lakes were so high that deer could not be floated. Dr. Todd and his party were camped on the lower pond, we on one of the extreme upper ones. The first day there we found a splendid deer lying in the water, skinned, but otherwise utterly untouched. It had been shot and not an ounce taken from it. A day or two afterwards I met one of Dr. Todd's party on the main lake, and he complained that the water was so high that they could get no venison. I expressed my astonishment at this, as deer seemed to be so plenty that people could kill them and let them lie. "We found a very fine one, whole, in the pond above." This cut short conversation, and we had no more visits from that party, but the incident amply confirmed what Mitchell had told me, and I have never had reason to doubt his word on any point before or since. The only deer I ever knew him to kill out of season was one killed in February, 1861. He, Bill Wood, Ransom Palmer, Henry Parker and I went after moose on snow shoes in the country south of Raquette Lake. The very day that we hoped, judging by the signs, that we would kill a moose, a tremendous thaw broke up the crust and compelled us to strike out for Raquette Lake. On our way we killed a three-year old buck, and that we were hungry enough to amply justify the killing, is, I think, testified by the fact that the five of us, with four dogs, ate the whole deer at dinner, saving only a piece as large as one's fist to carry home as evidence that we had—broken the law. I never thought that much worse than plucking the ears of grain on the Sabbath day.

The panther's head that graced your Hunter's Camp at the exhibition last year was from an animal killed by Mitchell Sabattis, and I have the hide of the same animal in a rug in my sitting room. I shall not be reminded by it of Mitchell as anything but a splendid hunter, a warm friend, and an honest man. I hope you will not class as controversy these reminiscences, which have only as their object to speak a word for one who might not have the chance to do so for himself.

Truly yours, CECIL CLAY.

DUCAIGNE READETH YE "TWO AMERICAS"--HE IS REMINDED OF A PREACHER'S ANECDOTE.

CINCINNATI, May 18, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Sir R. Price is a gallant sportsman, has at his command every appliance and luxury that wealth could command, has made a magnificent sporting tour, and recorded his sport in a book, which, considered from a literary standpoint, is *mediocre only*. I state the simple truth when I say that there are in our own country dozens and dozens of gentlemen sportsmen, who, given his opportunities, could and *would* have produced a volume abundantly more readable and valuable. The "grizzly," *e. g.*, he slurs most unmercifully, making it little more of an honor to slay a grizzly than to kill a calf. His exploits in taking salmon in Northern California were wonderful, and Sir Rose tries to feel mortally "hurt" because California sportsmen seemed to doubt his statements in that line. Salmon are not grizzlies, however, and, having but just returned from the region traversed by our author, I must say that his opinion of the ease and trifling character of the work of killing grizzlies is *not* the opinion, by a long shot, of the Western hunters whose experience on that subject is ten—*yes, fifty*—times as great as that of Sir R. Price. The hardy frontiersmen who have had the most to do with grizzlies, invariably speak of them with the greatest respect. I can show you in the counties of Sonoma, Lake and Mendocino (Cal.) at least six men who have suffered dreadful lacerations of body in interviewing *Ursus horribilis*, and I do not doubt that the actual number of hunters in northern California who have received injuries in like manner would reach *fifty*. Of hunters who have been killed outright I make no mention. It is, I say, a matter of regret that so good a sportsman as the author in question is, should elect to speak so flippantly and disparagingly of the grizzly. Green "gawks" who have yet to bring down their first buck, talk in exactly that way—old sportsmen seldom or never. There's Maj. Sylvester Scott, for instance, with whom I hunted last October, perhaps the best bear hunter in California, and who has killed more bear twice over than Sir Rose is years old—this is what *he'd* say: "Why, d— the Britisher, I'll bet he was never within a mile of a grizzly!"

The story in "The Two Americas" of the elk which jumped up, ran full tilt with the hunter's horse tied to his leg, and, when but a short way off, turned broadside on in order to be shot by his pursuer, is good. As I read I thought the speaker was Rev. Adirondack M——y, and this is what he was saying:

"I laid hold of his left hind leg, just above o fetlocks, and sprang to my feet. Did you ever seize a pig by the hind leg? If so, multiply that pig by ten; lash a big lantern to your head, fancy yourself standing alone on a swampy marsh in a dark, foggy night, with a rifle in your hand, and being twitched about, in and out of the muskrat holes until your whole system seems on the point of a separation which shall send you in a thousand infinitesimal parts in all directions, like fragments of an exploding buzz-wheel, and you have my feelings as I was jerked about amid the mire and marsh grass, as I clung to the leg of that deer. Now, when I fasten to anything, I always expect to hold on. * * * I shouted to Martin to get out of that boat, for I shouldn't hold on to him much longer. It took me about two minutes to deliver that sentence. It was literally jerked out of me. * * Now, every button was gone from my coat, the jack had been jerked from my head and lay a rod off in the marsh grass. * * I caught sight of Martin, paddle in hand and hunting-knife between his teeth, loping toward me through the tall, rank grass. * * My fingers one by one loosened their hold, and the deer, gathering all his strength, with a terrific elevation of his hind feet, sent me reeling backward, just as Martin, doubled up into a heap, was about to alight upon his back. He missed the back; but, as good luck would have it, even while the buck was in the air—*the deer going up as Martin came down*—the fingers of the guide closed with a full and desperate grip upon his *tail*. Quick as a flash! I replaced the jack, which had not been extinguished, upon my head, and stood an interested spectator. If the reader has ever seen a small boy hanging to the tail-board of a wagon, when the horse was at full speed, he can form a faint idea of Martin's appearance as the deer tore like a whirlwind through the tall grass. * * No applause could have got another inch of impulse upon the buck, or another inch of horizontal position out of Martin. Whenever, at long intervals, his feet did touch the ground, it was only to leave it for another higher and more aerial plunge. I laughed until tears ran down my cheeks. 'Martin!' I shouted, 'hang on; that's *your* deer. Hang on, I say. Save his tail, anyhow!' At last the knife was jerked from his teeth, and his mouth was at last opened. He averaged about one word to a jump. 'Jump—*still*—you—be-e—*damned*. I've-e—got—you! I'll—hold—on—till—your—ta-i-l—comes—off-f. Jump-p—be—*d-d-damned*—I've—got—you-u!' I saw a pair of widely separated legs swing widely upward, and the red face of Martin, head downward, and reversed by the somersault he was turning. * * * The deer jumped into the lake, Martin, the while, standing on his head at the foundation of said deer's now perpendicular tail. The guide not being at all out of breath by reason of these gymnastic performances, pleasantly and without effort, held on to the tail and, when in deep water, killed the deer."

With more of the same sort the parson ends his pretty tale. The decidedly accommodating elk referred to may have been an exceedingly distant relative of the preacher's quadruped. "The Two Americas" contains a number of breezy sketches, but his bow is usually not too "long" to handle. Upon the whole, and as between the two, I think Sir Rose's archery scarcely equals that exhibited by the veracious Adirondack chronicler. R. E. DUCAIGNE.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

P. O. BOX, 1,294.—*Adv.* ABBEY & IMBRIE, 48 Maiden Lane.

The Rifle.

SIR HENRY HALFORD'S LETTER.—It is to be hoped that the following letter from Sir Henry Halford will wind up the explanation and counter explanation preliminaries. It does really seem necessary, judging from past experience, that each and every match must be followed by ever so many yards of red tape, and a great display of circumlocutory correspondence. We have had enough this season, and now that each one seems to understand every other, let all get at work picking out the best men for the several teams, and let all outsiders understand, for short, that America and American riflemen and rifles stand ready at any time to "lick all creation" and the rest of mankind. Sir Henry says:

WISTOW, Leicester, June 17, 1877.

My Dear Sir—I was somewhat surprised yesterday morning, on reading the New York *Spirit of the Times*, to find that Capt. Mildmay's telegram—"National Rifle Association will send United Kingdom team to Creedmoor this year"—was considered ambiguous. It referred solely to the Centennial trophy, as I informed you yesterday by cable. We had not, indeed, heard that any other suggestion for a match (I allude to Gen. Dakin's proposal) had been made.

I should be sorry if anything should prevent the match this year, but our National Rifle Association cannot depart from the ground they took last year—that they represent the United Kingdom, and not England alone. Nor do I believe that a body of Englishmen, apart from Scotland and Ireland, will be found to take part in the Centennial match who could have any pretension to call themselves a representative team.

The National Rifle Association took action this year so soon as they were informed that neither Scotland nor Ireland intended to send separate teams. The matter now rests with your National Rifle Association, and I will ask you to cable their decision to me as to whether they will meet an United Kingdom team or not at as early a date as possible. I remain, yours truly, H. ST. J. HALFORD.

G. SCHERRHORN, JR., Esq.

In response to this, Hon. N. P. Stanton, Pres. N. R. A., telegraphed over: "You are correct. We will receive United Kingdom team for Centennial Trophy."

THE ENGLISH TEAM.—Sir Henry Halford, captain of the coming team, in a recent communication, speaking of the selection of his men, lays down what appears to be a simple and easy mode of determining the best shots of Great Britain. He says:

The team will consist of ten men besides the captain. The three eights from England, Scotland and Ireland which shoot for the Elcho Shield, July 19, will meet at Cambridge, July 23, to compete on that and the two following days. Should any one be unable to go to America his place will be filled by nominations by the respective captains. I have reserved to myself the right to nominate three men to compete in addition to the above twenty-four. The highest scores on two days out of the three will determine the first nine men. I reserve the tenth place for nomination by myself. The eight who shoot in the match will be chosen in America. From the promises of support which I have had I believe our team will be very strong.

CONLIN'S SHOOTING GALLERY.—The Amateur's Badges, which have been shot for at this gallery weekly for the last two months, have been finally won. The conditions under which the badges were shot for are as follows: Each competitor allowed to enter twice; 10 shots, rifle .23 cal., off-hand; range 100 feet, at 200-yards. Creedmoor target reduced for the distance. Creedmoor rules to govern. The badges to be won three times, not necessarily consecutively, before becoming the property of the winner. In the ninth competition, P. Fenning won the first badge, score 49; M. L. Riggs the second, 48; L. C. Bruce the third, 46, making Fenning and Riggs final winners of their badges, and leaving the third badge for further competition between its winners, who were: L. C. Bruce, M. B. Engel, Leon Backer, Sherman Smith. Of these competitors Mr. Engel proved victorious, making a score of 47, closely followed by Leon Backer's score of 46. The following is a summary of the winners of the badges and their scores:

First Badge.			
L C Bruce	45	Tie—Bruce and Riggs	47
M L Riggs	46	Fred Alder	47
P Fenning	45	P Fenning	49
M L Riggs	48	P Fenning	49
L C Bruce	45	Won.	
Second Badge.			
None.		Tie—Bruce and Riggs	47
B Zettler	45	Leon Backer	47
M L Riggs	48	M L Riggs	47
W M Farrow	47	M L Riggs	48
C H Jobe	45	Won.	
Third Badge.			
None.		Sherman Smith	47
Leon Backer	44	M B Engel	46
Leon Backer	47	L C Bruce	47
P Fenning	47	L C Bruce	46
M B Engel	44	M B Engel	47

ZETTLER'S GALLERY, 207 Bowery.—The second weekly competition for the gold medal occurred on Friday, June 29, and was won by P. Fenning. In the first competition it was won by M. P. Lennon. This badge goes to the best score of centres (40 points); to be won three times to become his property. This match is open to all every Friday evening.

THE N. Y. SCHUTZENFEST.—The festival of the N. Y. Schutzen Corps, at Union Hill, on Monday, Tuesday and Wednesday of last week, was a success all through. There were plenty of riflemen, fine weather, a liberal attendance of ladies, fat prize lists, and a general good time. The fourteen targets were kept in pretty active use, two of them being set apart for use according to Creedmoor rules. At the ring target, in a possible 75, the leading scores stood: P. Fenning, 68; J. W. Schneider, 68; A. Bergner, 68; W. Hayes, 67; B. Zettler, 67; M. Dorler, 67; A. Knopfe, 67; J. Tobler, 67; C. Horney, 67; J. Dutel, 66; F. Landolt, 66; L. Vogel, 66; P. Klein, 65; F. Crusius, 65; W. Klein, 65; John R. Grohman, 65; D. Miller, 64; W. Lewis, 64; W. Hand, 64; A. Hellig, 64; T. Kliesrath, 64; G. A. Kuhnhahl, 64; S. Zeller, 64; H. Fisher, 64; R. Faber, 63.

In the possible 50 at the "Union targets," the scores were: W. Klein, 45; W. Hayes, 44; R. Faber, 42; W. Hahn, 42; P. Klein, 40; J. Blumenburg, 40; S. Heintz, 40; F. Lanbeddt, 39; Capt. Rosebon, 39; F. Zeller, 39; Capt. A. Ermusch, 38; L. Vogel, 38; A. Zeigner, 37; A. Seibz, 37; M. Dorler, 36; C. Fenning, 36; J. R. Grohman, 36; H. Knubel, 35; M. Lewis, 35; J. W. Schneider, 35; W. Schoderman, 35;

J. Dutel, 34; T. Kleisrath, 34; M. Farron, 34; K. Lane, 33.

At the Creedmoor and bull's-eye targets, out of possible 25 and 50, respectively, the scores were: Creedmoor Target—P. Klein, 23; J. R. Grohman, 23; C. Mattman, 22; W. Hahn, 21; M. Farron, 21; W. Hayes, 21; F. Landolt, 21. Bull's-eye Target—W. Hayes, 141; P. Klein, 130; W. Hahn, 125; W. Scholerman, 124; T. Kleisrath, 121; M. Engel, 119; F. Landolt, 115; W. Klein, 110; R. Faber, 109; J. Heintz, 106.

Mr. John R. Grohman was the lucky man to bring down the double-headed eagle, the chief prize of the tournament, and his coronation, in a neat speech by Miss Christine Klein, a pretty Miss of ten years, was performed with great *éclat*, and honored in innumerable schooners of beer. With a grand hop, the amusements terminated late on Wednesday evening.

CREEDMOOR, *June* 30.—Fair weather and a good day for range practice. Early in the day the contest began for the Parker shot gun presented by Frank B. Van Siclen. It is at 1,000 yards, 30 shots, any rifle; open to all members N. R. A. In May it was taken by Capt. Anderson, with a score of 122 points in the possible 150. To-day, however, it went to the "old boy" Rathbone, with a total of 128. While this is good, it might be bettered, and should be ere the match is finally won. The full scores are given as follows:

R Rathbone, Rem Creed	128	Wallace Gunn, Sharps Creed	107
T S Dakin, Rem Creed	128	J P Waters, Rem Creed	101
Isaac L Allen, Rem Creed	122	A Anderson, Rem Creed	101
Homer Fisher, Fisher M L	120	G L Morse	91
Wm M Farrow, Ballard Creed	117	F A Dugro	91
C E Blydenburgh, Rem Creed	114	J A Hatry	80
Henry Williams, Fisher M L	113	F H Holton	67
F F Millen, Rem Creed	110		

The afternoon brought an old favorite once more to the front in the reappearance of the *Turf, Field and Farm* badge. The first of this series was the pioneer Creedmoor badge, and from that day to this the popularity of off-hand shoulder shooting has sustained them well. The conditions are simple, the requirements easy, and it only wants skill on the part of the marksmen. If the marksman is not solid on his pins his choice of rifle will avail him little. The new medal is a magnificent piece of work, valued at $150, made by Wm. Hayes, of New York, who attained the "highest possible" when he turned out this sample. Capt. Bruce deserves the thanks of his fellow riflemen for his energy and liberality in providing this useful gift. At this opening shoot there were 45 entrants, among them a number of officers and men from Willet's Point using the army Springfield rifle. Against them were the picked men of the National Guard, and ever so many fine bored arms in good hands too, but Capt. Livermore, U. S. A., was able to lead the field with the good score of 42 in the possible 50. The scores stood:

Capt W R Livermore, Springfield	4	4	4	5	4	4	4	4	5	4	42
R Way, Rem Sport	4	4	5	4	4	3	4	5	4	4	41
A Anderson, Rem Mil	4	4	4	5	4	4	4	3	5	4	41
W M Farrow, Ballard	4	4	4	4	5	4	5	4	3	4	41
W Young, Springfield	3	5	4	3	5	4	4	4	4	5	41
L C Bruce, Sharps Creed	5	4	4	4	3	4	4	4	4	4	40

—The Irish-American Rifle Club were out shooting for a trophy, presented by Col. Bethel Burton, at 200 and 500 yards; 7 shots each distance, with the small-bore rifles at 600 yards. The scores stood:

	200 yds.	500 yds.	Total.
Gen F F Millen, Rem Creed	24	29	53
Adjt W H Murphy, Rem Mil	26	27	53
Major E Duffy, Rem Mil	29	21	50
Sergt N D Ward, Rem Mil	25	19	44
J E Irwin, Sharps Creed	27	17	44
Sergt J F McHugh, Rem Mil	26	14	40
Capt J Kerr, Rem Mil	19	17	36
Col B Burton, Ward Burton	26	8	34
Lieut P Farrelly, Rem Mil	13	5	18

—The Seventh Regiment club men were out shooting for the Diamond Badge at 200 and 500 yards, seven shots at each distance, and for the shells at 500 yards, five shots. In both matches, Sergt. T. W. Linton was successful, with scores of 54 and 22 points, respectively.

THE BERDAN SHARPSHOOTERS.—A great deal of nonsense has been written with sensational head lines in the general press during the past week about a few ex-members of the corps organized in June, 1861, and known as the Berdan sharpshooters. During the civil war they did good service on the Union side, and after serving four years and a half were disbanded. Each man was armed with a heavy French rifle, furnished with the telescope sight. During the practice for admission into the corps, Ketch, California Joe, who was killed at the second battle of Bull Run, Henry Reddy and Jack Godine each made fifteen consecutive bull's-eyes at 800 yards. This was at Fort Lee in 1861. Nothing very extraordinary in that, considering that the same thing has been done with light-weight, heavy-pull open bead sight weapons at Creedmoor. The sensation makers then draw upon their imagination, and tell the following whopper: "Last season Ketch and two others went to Creedmoor with their own guns and swept all before them. The range inspector asked for their names, and Ketch answered, 'Put us down strangers.'" A telescope rifle has never yet been fired over the Creedmoor ranges, nor has any "Jack Ketch" been found hanging about there. The terms of their contract with the Russian Government was made during the stay of the Grand Duke in New York. Col. Berdan, who is now in the Russian service, will receive the men, and see that they are given an opportunity to put their skill to good use in the grand "Turkey shoot" in progress along the Danube. Among those who have gone aside from the leader Ketch, are Henry Reddy, of New York city; William Woods, of Boston; Jack Godine, of Wisconsin; Howell Robinson, of Pittsburg; Manny Wilson, of Lowell, Mass.; J. Carter Robinson, of Montreal; Wm. Dwyer, of Boston, and the brothers John and William Taylor, of Buffalo.

THE NEVADA BADGE.—Co. A, of the Forty-eighth Regiment, N. G. S. N. Y., who have twice taken the Nevada badge, have very properly sent in a formal protest to Col. Church, the trustee of the badge, against any relaxation or modification of the original terms.

ROSSMORE, S. I.—The Rossmore Rifle Association, of Staten Island, met for the third time this season at their range on Bennett's farm, Huguenot, June 26, at 200 yards. The scores were:

S E Ellis	4 4 4 5 5—22	H Mason, Jr	4 5 4 3 4—20
I R Le Roy	4 3 5 4 4—20	C C Ellis	4 4 4 3 3—18

RHODE ISLAND, *Providence, June* 29.—The Davison cash prize was shot for on the Blackstone Range by members of the R. I. A. Rifle Club, under the following conditions: No sighting shots or previous practice on day of match, and 15 shots on each range of 800, 900 and 1,000 yards. Owing to the great attractions in the city of the grand military display and review by the President of the United States, there were but few entries.

J H Crowell.

800	3	3	5	3	5	5	5	5	5	5	5	5	5	5	5	69

1,000	3	5	3	3	4	4	0	5	5	4	4	4	4	4	4	56	188

Mr. Crowell won first money, and Mr. Rabbeth second. The wind was very changeable from 5 o'clock to 7. Mr. Edwin A. Perry, of New York, was present during the entire match, and was seated at the large field glass.

JOHN HOWE, Sec.

NEW HAVEN.—On Thursday, the 28th inst., the Creedmoor shooting gallery at Savin Rock was opened with a successful inaugural shoot. The glass ball shooting was especially interesting. The best scores were as follows:

R B Penn.......... 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 0 1—17
C H Bradley.......... 0 0 1 0 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1—16
E H Bennett.......... 1 1 1 1 1 1 1 0 1 1 1— 9

The following gentlemen made the subjoined good score with the rifle at the 100-foot range: Layne, 22 out of a possible 25; Newton, 21 out of a possible 25; Flanigan, 20 out of a possible 25; Brown, 46 out of a possible 50.

PENNSYLVANIA, *Catasauqua, June* 30.—I inclose the results of a pigeon match at Bethlehem, Pa., between Mr. A. Rauch, of Lancaster, Pa., and Mr. A. T. Eberhart, of Catasauqua, Pa., on Thursday, June 28, each shooting at 15 birds, 21 yards rise and 80 yards boundary, under Rhode Island rules, for a purse of $30.

A Ranch.......... 0 1 0 1 1 1 0 1 1 1 1 1 1 0 1—11
A T Eberhart.......... 0 1 1 0 1 1 1 1 1 1 0 1 1 1 1—12

D. A. J.

FROGMOOR, New Orleans.—The fourth contest for places on the inter-State team, by members of the Crescent City Rifle Club, took place on the 24th, and some good scores were run up, Col. John Glynn, Jr., getting 207 with a miss, caused by a low shot during a sudden lull of the wind. It was a bright, hot day, with occasional cloud passages, the wind blowing from 5 to 7½ o'clock puffy and fluctuating. The full scores stood:

Colonel John Glynn, Jr., Rem Creed.

GUSSIE.

EXPLOSIVE BULLETS.—I notice in "Answers to Correspondents" that A. P. P., of Helena, Montana, desires to know about explosive bullets. Mr. F. J. Rabbeth, of this city, uses them on alligators in Florida, where he usually winters. Made by inserting in the front end of a .40 cal., 380 grain Martini bullet, a .22 cal. cartridge. He said those used last winter, made by himself, all worked well, always exploding inside the "'gator," and bringing him to bag. No doubt he would gladly answer any communication by mail.

Yours very truly, GEO. W. DAVISON, with. P. T. Co.

—The $5 breech-loading rifle advertised in this issue is a remarkable bargain, well worth four times the price asked. Messrs. Turner & Ross are well known and reliable dealers.—[*See adv.*

MASSACHUSETTS RIFLE ASSOCIATION.—The first spring meeting of the Massachusetts Rifle Association at the Walnut Hill range took place on the 18th and 19th instant, and was, we are happy to say, a success. The weather was fair, hot and windy, bad enough to give the unsuccessful marksmen an excuse for their ill luck, but good enough to give the experts a chance to run up good scores. The range was in excellent trim, and with flags and streamers flying, and the wind indicator in the centre of the field resembled somewhat our own Creedmoor on a big shooting day. The fringing of spectators was liberal, and it was gratifying to note that the ladies were out, and seemingly enjoyed the banging and the general powder-bursting festivities. Delegates were present from pretty much all of the rifle shooting New England towns. Gen. John L. Stevenson, as executive officer, pushed matters, and kept everything going on briskly, without in any way disturbing the actual marksmen. Practice shooting opened bright and early on the morning of the 18th, and at 10 o'clock the first match at short range was called and contested with the following results:

Conditions.—Open to all comers; position, standing; distance, 200 yards; prize, a long-range Creedmoor Sharps' rifle, to be won three times, valued at $125, a gold medal, $40; a life membership M. R. A. $25; a case of Falcon Powder, $20; a field glass, $15; a champion air pistol, $7; four prizes, cash, $12; total, $241; a ring of ten shots; 56 entries, possible score, 50.

The long-range all comers' match followed, and by that time the atmosphere had grown a little heavy and hot, and lent the deceptive appearance of a mirage to things at a distance. The wind became more variable and uncertain, and while the squads were shooting at the 1,000 yards targets the whole region grew hazy, and extremely difficult to gauge correctly. However, while it could not be pronounced the best kind of weather to shoot in, there was very little complaint indulged in. The members of the M. R. A. feel that the results indicate that there is "stuff" enough in the association to make it one of the first in the country.

John A. Lowell was the successful long-ranger, though his winding up shot at 900 yards does not look well for our friend. It's a bad place to have a miss, if one must be put in somewhere. The results of the match were:

Conditions—Open to all comers; position and rifle, any within the rules; distances, 800, 900 and 1,000 yards; rounds, seven at 800 yards, eight at 900 yard and ten at 1,000 yards. Prizes, respectively—A mid-range, Ballard rifle, to be won three times, valued at $75; a telescope, $35; a life membership, M. R. A., $25; a field glass, $18; a case of Dittmar's powder, $10; four cash prizes, $12; total, $175. Possible scores, respectively, 35, 40 and 50. Thirty-eight entries.

Farrow	93	Gerrish	78
Angell	92	Rabbeth	74
Gray	88	Lord	73
Crawford	87	Wesson	68
Chadborne	86	Kirkwood	63

These two matches, both won with Peabody-Martini rifles, occupied the first day, and all laid themselves off for the second day, when the mid ranges were to be tried. It was as before, a hot day, not such a one as a rifleman would have made for his own use. The work opened with the Directors match, and some really fine scores were made. Mr. Lowell, to the surprise of all, and himself more than anybody, taking last place. He is convinced that resting on ones record is not a safe plan. The record of this match stood as follows, the gentlemen being necessarily all directors or honorary directors of the association:

Distance, 200 yards; rounds, five; prize, gold badge, to be shot for annually, and held by the winner during the year.

Rockwell	22	Wemyss, Jr	18
Stevenson	21	Osborn	18
Jackson	20	Hebbard	18
Longfellow	16	Lowell	17

The mid-range marksmen's badge followed close and brought out more good top scores, the prize winners holding well up together. Mr. Crowell's perfect score at 500 yards deserves special mention. The winners were:

Mid-range match.—Open to all comers; distances, 200 to 500 yards, rounds, 10 at each distance; entries, 40; rifle and position, any within the rules; prizes, respectively, a Remington rifle, to be won three times, valued at $125; a silver cup, $50; life membership, M. R. A., $25; a box of cigars, $15; a keg of Hazard "F. G." powder, $10; four cash prizes, $12; best possible scores, 50 at each distance.

Jewell	44	45	89	Lowell	40	46	86
Angell	42	46	88	Farrow	42	44	86
Davison	40	48	87	Wemyss, Jr	38	47	85
Jackson	40	47	87	Washburne	38	47	85
Crowell	36	50	86				

The military matches on the programme were laid over, owing to the parade of the militia at the Bunker Hill ceremonies, and, with the Consolation Match, will be fought at a later day.

—The wonderful increase in the sale of Walter Baker & Co.'s Breakfast Cocoa is the fullest indorsement of its superior excellence as the best light drink known for feeble stomachs.—[*Adv.*

Boston, June 27.—The first of a series of races between the Faulkner-Regan and Davis-Landers crews was rowed on the Charles River this afternoon, it being a single scull race between Faulkner and Davis, distance three miles, for $500 a side. Twenty thousand persons saw the race. Both boats took the water well together, and had proceeded about an eighth of a mile when an excursion steamer crossed their course, which caused Davis to lose a little. Faulkner was slightly in advance, and held his position until the mile was reached. Then Davis put on a fine spurt and went to the front. Davis turned the mile and a half stake about two lengths ahead of Faulkner, and in the next half mile the latter lessened the gap to one length; but all his efforts to get to the front were in vain, as Davis gradually gained until the finish, coming in five lengths ahead. Time, 22:58½; Faulkner's time, 23:14.

DORCHESTER YACHT CLUB REGATTA.—The first annual regatta of this club took place off Nahant, June 18, over a 10½-mile course. At 1 P. M. there was wind enough to suit the most fastidious yachtsman afloat. The first and second class centre-boards were immediately started. The Sunbeam crossed the line and had her time taken on the flying start, closely followed by the Echo and Johnny Sands. The Johnny gave up the race, and thus only two keels were left.

Ten minutes afterward the third-class centre-boards were started. Their course was round Winthrop Head buoy and return, 7½ miles. As there was only one boat started—the Virginia, Capt. Plimpton—he was awarded the prize for his pluck.

In the first class centre-board, the Shadow, Capt. Bryant, was the first to round the buoy, off the Graves, followed by the Violet, Com. F. E. Peabody, Effie Mary, Capt. Hibbard, and Lillie, Com. Babb. The second class centre-boards were now making things lively for the first class boats in the rear, and the Sunbeam, first class keels, was astonishing every one in the second class centre-boards by her remarkable sailing to windward, it being a close thing round the bell buoy between her and the first boat in the second class centre-boards. The Rebie, Capt. Phinney, was the next boat round the buoy, followed by the Sunbeam, Capt. Nickerson, and the first class boat (centre-board) Oenone, Vice-Com. S. P. Freeman. The balloon jibs were now set, the breeze so'-east and freshening every moment, and we were bowling along, rail down. The Shadow had now got round the buoy off Winthrop Head, and was standing in to cross the line. Her weather rigging was drawn as tight as a fiddlestring. The Violet was second. We were quietly watching the Effie Mary which seemed to run with remarkable swiftness, when all of a sudden her topmast was seen to sway and fall, carrying the masthead, topsail and balloon jib. This accident threw Capt. Hibbard out of a chance for a prize.

From Winthrop buoy we gradually hauled on the Rebie, and walked out from under the Vice-Commodore's yacht. There was hardly daylight between us and the Oenone, and we had lapped the Rebie, crossing the line. Appended is the result in corrected time:

FIRST CLASS—C. B.

Name.	Owner.	H.	M.	S.
Shadow	J. Bryant	1	33	04
Violet	F. E. Peabody	1	38	20
Lillie	Com. Babb	1	41	58
Effie Mary	H. E Hibbard	1	51	16
Oenone	V. Com. Freeman	1	56	03

SECOND CLASS—C. B.

Rebie	J. P. Phinney	1	45	19
Nattie	W. H Nicholson	1	52	06
Niagara	A. Dean	1	52	36

THIRD CLASS—C. B.

Virginia	Plimpton	1	59	15

FIRST CLASS—KEELS.

Sunbeam	W. S. Nickerson	1	43	16
Echo	F. W. Preston	1	46	20

The Sunbeam beat the first boat in the second-class centre-boards 2 min. and 3 sec. corrected sailing over allowance, after starting 15 min. astern, and beat the rest of the class very badly. The 1st prizes in each class was awarded to the Shadow, first-class C. B.; Sunbeam, first-class keels; Rebie, second-class C. B.; Virginia, third-class C. B. The Violet taking 2d prize in first-class C. B., the only one given out that day. The Violet is sailing remarkably well this season.

REGATTA OF LYNN YACHT CLUB.—*Boston, June* 29.—The second regatta of this club, for this season, took place yesterday, June 28, off Nahant, and was very successful. The race was open to all boats, and there was but one class. The course was from off the judge's boat to buoy No. 5, off the Ocean House, leaving it on the port, to the buoy off Winthrop Head bar, leaving it on port, to the judge's boat. At 12:45 the first gun was fired, to get into line. At 1 P. M. the gun was fired to start. The sloop Magic was the first to get the advantage, and drew out from the fleet; but lost it by her topsail giving out. The boats all made a fine appearance, being in view during the whole race. Appended is a summary:

Name.	Owner.	Length. ft. in.	Corrected time H. M. S.
Addie Elmer	G. L. Babb	30 10	1 08 33
Magic	E. O. Neal	30 06	Not taken.
Louie	W. L. Neal	23 07	1 25 48
Nattie	Nicholson	22 06	Not taken.
Mule	Otis Pecker	21 02	1 10 56
Posy	H. McKee	21 03	1 08 56
Lizzie	G. Taylor	19 06	1 12 16
Nymph	W. A Estes	18 00	Not taken.
Water Lily	P. Grant	19 02	1 16 03
Georgie	Hooker	19 01	1 26 32
Wonder	S. Elwell	19 00	1 11 31

Yours, KEDGE.

MONTREAL YACHT CLUB.—A Yacht Club has been formed at Longeuil, called the "Montreal Yacht Club." It comprises a large fleet of both sloop and cat-rigged boats. The officers are: Commodore, Dr. Brewster, yacht Maud; vice do., A. J. McIntosh, yacht Iona; Secretary, W. Morkill; Treasurer, D. Sexton; Measurer, R. McGregor. Committee, Wm. Cameron, A. Grassford, C. O'Connor.

The long expected yacht race between the Maud and the Waterwitch, of Kingston, took place June 23, under the auspices of this club. The Montreal *Star* says:

The start was a flying one, the Maud passing the line first by one minute; not long, however, did she keep the lead, for in the first tack the Upper Canada boat forged ahead, increasing the lead to over a mile, when the Maud gave up the race. The manner in which the Waterwitch was handled, drew forth expressions of surprise and delight from the large number of spectators who witnessed the race. As the Maud is the champion of the Montreal Yacht Club and was considered the fastest boat here, Mr. Cunningham's victory is a signal one, and reflects great credit on him, both as a builder and a yachtsman.

VIATOR.—*Schoharie.*—The following gentlemen are at present officers of the New York Canoe Club: Commodore, Charles E. Norton; Vice Commodore, G. Livingston Morse; Secretary, W. L. Alden; Treasurer, S. Grosvenor Porter; Corresponding Secretary, Louis F. Zimmerman; Measurer, A. Cary Smith. The club is in a flourishing condition, and has quite a large fleet.

—Evan Morris, who recently defeated Scharff in the match for the United States championship, has been challenged by Pat. Luther to row for $1,000 a side and the championship.

—The Ross-Smith scull race on the Kennebecasis on the 24th of July is off, the Halifax men agreeing, if necessary, to pay the forfeit. Ross goes to Boston on Monday.

HARVARD vs. YALE.

HARVARD WINS BY A LENGTH AND THREE-QUARTERS.

After seven years of discouragement and defeat, Harvard again comes to the front. The crimson floats above the blue, and the joy of the Cambridge man knows no bounds. Harvard's last victory was in '69. In '70 Yale came in ahead of her, but lost the race through a foul. Since '69 the tide of victory has steadily set away from "fair Harvard." Her overwhelming defeat of last summer roused her at last, and she changed her entire boating system; she made, in fact, the same change that Cook inaugurated at Yale in '73, namely, the putting of solid men on the crew in place of the jolly good fellows who in former times represented their college in society matters, but decidedly misrepresented her at the oar and bat. Bancroft carefully selected such an eight and came into the field this year with as superb a crew as ever pulled oar through the water. Both crews were at their training ground at Springfield by the 22d of June. Thursday noon, the day before the race, the college men began to arrive in town. They came from all parts of the country; men direct from college, men in college, and men graduates of many years standing. They all recognized the fact that in the coming contest but two sets of interest were on stake, those of their own college and those of the only college they had ever cared to enter into a rivalry with. Yale men came to see Yale beat Harvard, Harvard men to see Harvard beat Yale. One of these two results must take place, and each set of men felt that the chances were all in favor of their own crew. For this reason, no doubt, there was collected in Springfield, by Friday noon, more college men, by actual count, than had ever before been in the city for any former race. The halls and corridors of the hotel were thronged with the wearers of the blue and the crimson, both parties eagerly discussing the chances of their respective crews in the approaching race. Heavy betting was the order of the day. Bancroft had sent in word that nothing but an accident could prevent his crew from winning. The Yale men were equally confident, so the students staked every thing they had with the recklessness so characteristic of college men.

Friday afternoon at half-past four was the time fixed upon for the race. Half-past four came, and the grand stand at the end of the course was thronged with spectators. It is estimated that fully seven thousand people were assembled on the eastern bank of the river that afternoon. A large crowd was collected on the other bank opposite the finish, where by far the best view of the crews could be obtained. Carriages lined the west bank all the way down the last two miles of the course. The bridges were crowded with the poorer class of humanity, who, from their high position, had a splendid view of the crews for the first two and a quarter miles of the race. Probably twelve thousand people were collected to see the race. But there was more that afternoon. It blew a gale of wind straight up the course, and a heavy sea was the result. The south wind is the only one that can make rough water on the Springfield course, and, as luck would have it, a south wind sprang up Friday morning and blew steadily all that day and the following. The people waited long and patiently for the race to come off, but their patience brought them no satisfactory result, and at seven o'clock they went back to the city in disgust. That evening the Springfield club gave a reception to the students of both colleges, and a very brilliant affair it was. Brown's band, of Boston, furnished the instrumental music, and a superbly organized glee club of Springfield gentlemen (the Orpheus Glee Club) sang half a dozen selections in fine style. The behavior of the students after the reception was in the highest degree exemplary, and no brawls or "tares" were reported next day. Early next morning people began to start out for the scene of the race. It was advertised to come off at a quarter past ten o'clock. There was a large crowd present to witness it, but by no means so large a one as that of the day previous. At half-past ten o'clock the referee determined that the race had better be rowed. The sea was high and the water utterly unfit for scull racing. Making the crews go out in such water was an unjust, ill-advised proceeding, and was alone sufficient to testify to the utter incapacity of Mr. Agassiz to fill his position. Both crews, particularly Yale's, had spent months of careful, conscientious work in getting into perfect shape. The boats they practiced in were shells, yet here they were compelled to take the water in a sea fitted only for the heaviest Whitehall boats. Beauty of stroke was at once lost to view. The contest became immediately one of weight and muscle; and in this contest Harvard's superior weight and development sent her to the front. The result might have been a different one had the race been rowed in smooth water. Tuesday night Harvard went over the course at racing speed, and did the four miles in 22:08. Yale went over immediately after and made it in 22:01. Shortly before ten o'clock the boats were in position. The press were on the River Belle which this time managed to keep within hailing distance of the referee's boat. At the word "Go," Yale caught the water first, and, pulling 36 strokes to the minute, took a slight lead. Harvard started off rowing 35. In a few moments they both came down to 34 to the minute. At the old foot bridge Harvard had the lead, and this she kept to the end of the race. As soon as the old bridge was passed both crews got into the rough water. Harvard's weight began to tell here at once, and she drew away till there was a gap of a length between her and the blue caps. She was still pulling 34, while Yale was rowing 34 and 35. Yale had the outside course, and in the rough water this was a terrible disadvantage, as Harvard could seek the shelter of the shore, while she had to take the rough water. As the crews approached the bend at the beginning of the third mile, Yale put on a spurt and drew nearly up to Harvard; but at the bend the gap widened out again, and the two boats went down the course with a length of clear water between them. Here was encountered the worst water of the course. The whole river below the turn was a sheet of white caps, and Yale's boat, through the absence of washboards, soon became full of water. Harvard, notwithstanding her washboards, also shipped water, but by no means so much as was in the Yale boat. The Harvard crew were pulling very steadily, putting all their weight on to the stroke, and not going above 34 to the minute. The Yales were working magnificently, but the water in their boat was troubling them, and at every stroke it rushed back, and striking against the water-tight compartment under the coxswain's seat, checked their headway. At the finish, Wood called out to "hit her up." The fellows promptly responded. The stroke rose to 40, and the most beautiful spurt I ever saw was made. The gap closed till the Yale bow nearly lapped the stern of the leading boat, But Bancroft called for a spurt, and his crew answered with a tremendous burst which landed their boat across the line a winner by seven seconds, by a length and three-quarters of clear water. From start to finish Harvard rowed superbly. She fairly and honestly won her victory. The Yale men were much exhausted by their terrible efforts. The whole last mile had been a series of spurts, and they had rowed with the water splashing about their feet and ankles. Never did a crew strive more gallantly for victory. The race throughout was the finest one ever rowed in American waters; but it should never have been rowed in such a seaway. The referee should have postponed it for a week if necessary. Men do not care to undergo months and months of self-denial and hard work to be forced to pull such a killing race. The work done by both crews the last half mile was absolutely painful. Smaller men would have succumbed entirely, but both crews drove their boats fiercely through the surges, and fought their way in the face of wind and water to the finish line. Nothing can be said against the course. It is almost always smooth, and above the bridges there are few days in the year when shells cannot go out. The upper course, that starting at Chicopee and finishing at Springfield, should have been the one selected. The time was remarkably good when the state of the water is taken into consideration. Harvard's time was 24:36; Yale's, 24:43. After the race, both crews went down to Hartford to see the ball match. The referee was Prof. Agassiz of Harvard College; official time keeper, Geo. Sheffield, Yale '63. Judges—for Harvard, G. F. Roberts, Harv. '71, and P. Tuckerman; for Yale, Wilbur Flagg, Yale '73 and Newell Martin, Yale '75.

The crews:

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.

Trout, *Salmo fontinalis.*
Salmon, *Salmo salar.*
Salmon Trout, *Salmo confinis.*
Land-locked Salmon, *Salmo gloveri.*
Black Bass, *Micropterus salmoides;* *M. nigricans*
Maskanonge, *Esox nobilior.*
Pike or Pickerel, *Esox lucius.*
Yellow Perch, *Perca flavescens.*

SALT WATER.

Sea Bass, *Centropristris atrarius.*
Sheepshead, *Archosargus probatocephalus.*
Striped Bass, *Roccus linnæatus.*
White Perch, *Morone americana.*
Weakfish, *Cynoscion regalis*
Bluefish, *Pomatomus saltatrix.*
Spanish Mackerel, *Cybium maculatum.*
Cero, *Cybium regale.*
Bonito, *Sarda pelamys.*
Kingfish, *Menticirrus nebulosus.*

For list of Trout Flies in season for July, see issue of June 28.

FISH IN MARKET.—On the 29th ult. E. G. Blackford received a salmon weighing 16 pounds, which was caught in the nets of Abram Vooreis, at Gravesend Bay. Quite a number have been taken in this vicinity, this season; one at Port Monmouth; one off Noank, Conn., and a number in the

Connecticut River, weighing from 10 to 18 pounds. The prospect is that the salmon season will close early in July. The catch has been a good one, both as regards quantity and quality, especially in the Restigouche. The Restigouche fish, first introduced in the New York market last summer, by Blackford, have maintained their supremacy as regards delicacy of flavor and perfect freshness, and have entirely supplanted the Kennebec and Penobscot fish, so that every fish dealer announces that he has "Restigouche" fish, even if he has nothing but the inferior Miramiche salmon.

Fish of all kinds are now very plenty, especially bluefish and Spanish mackerel.

Our quotations for the week are as follows:

Striped bass, 15 to 20 cents per pound; bluefish, 7 cents; salmon, green, 20 to 25 cents; mackerel, 10 to 18 cents each; shad, Connecticut River, 50 cents; white perch, 15 cents per pound; Spanish mackerel, 15 cents; green turtle, 15 cents; terrapin, $12 per dozen; halibut, 18 cents; haddock, 6 cents; king-fish, 25 cents; codfish, 8 cents; blackfish, 10 to 15 cents; herrings, 5 cents; flounders, 7 to 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 18 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $3 50 per 100; soft crabs, $2 per dozen; weakfish, 12 cents; frog legs, 40 cents per pound.

—Our correspondent "Pisco" has sent us a number of fractured gut lengths and hooks which he recently subjected to crucial tests during a leisure hour in the Adirondacks, and as a result of his experiments he has drawn the inference that, if a length of gut leader has been once broken by a strain, it is probably worthless throughout its entire length for any subsequent use. The strain that breaks it in one place, injures it all through; and one break in a leader condemns it for use, no matter how strong it seemed in the first place. We append a memorandum of results, as they may make our postulate plainer.

The tests are by dead weights:

No. 1. Forged Limerick hook, single gut, broke at 8 lbs., first pull; second pull, 3 lbs.; third pull, 2 lbs.

No. 2. Forged Limerick, single gut, broke at 9 lbs., first pull; 4½ lbs. second pull; 3 lbs., third pull.

No. 3. Kirby hook, double gut—one gut broke at hook, and both at loop, at 16lbs. strain; the remainder of the gut broke again at 8½ lbs., and at the third pull at 2½ lbs.

No. 4. Limerick salmon hook on gimp, 25 lbs., no injury.

No. 5. Fly hook broke at 3½ lbs.; second pull, gut broke at 6 lbs.

No. 6. Single gut trout leader, first pull, 6 lbs.; second pull, 2 lbs.; third pull, 1½ lbs.

No. 7. Another leader same size, first pull, 8½ lbs; second pull, 8 lbs.; third pull, 1½ lbs.

No. 8. Double gut leader not twisted, after landing a fine trout from it—first length, first pull, 8 lbs.; second pull, 3½ lbs. Second length, first pull, 7 lbs. Third length, first pull, 11 lbs.

No. 9. Double gut trout leader twisted, First length, 11 lbs.; second pull, 4 lbs; third pull, 2 lbs.

The above tests also show that good medium sized gut, such as is sold at the tackle shops, will generally sustain a pull of of about eight pounds, but a test of three pounds before using it will be quite sufficient, this being all that expert anglers demand of fine salmon tackle.

—Our friends in the northern part of New England and the State of New York, and in the eastern townships of Quebec, can obtain from Chas. F. Orvis, Esq., of Manchester, Vermont, just as good trout flies as they can by sending to New York or Boston. We have just received a half dozen patterns from this dexterous whipper of silk and combiner of feathers, and are delighted with his handiwork. Mr. Orvis says he has tied very many flies for the San Francisco market.

—The Toronto *Globe* says that immense numbers of white fish, pickerel, herring and sturgeons are being taken off Talbot creek. Farmers come a distance of twelve or fifteen miles every day to get a supply. White fish sell at 3½c. per pound, pickerel and herring at 75c. per bushel, and sturgeons at 25c. each.

CANADA.—*Matepechic, N. B., June* 29.—Salmon rising freely; fish very large this season. Mr. Bagster, of Montreal, was 2½ hours killing a 43 pounder. Mr. Brown, of Newburg, N. Y., killed one of 36 pounds, and fish of 25 and 30 pounds are common. Mr. Robinson, the actor, killed four large fish in one afternoon. There are several New York gentlemen stopping here. I killed my first salmon, a 25 pounder, in ten minutes. E. B. H.

—Mr. Charles F. Imbric, of the firm of Abbey & Imbrie, leaves New York, July 7, for the Grand River, Gaspe, Canada. He will join Senator Edmunds, of Vermont, and Mr. Andrew Clark, and together with them he will cast the fly for the lordly salmon. This is the same river he fished last season with so much success, and from all accounts he will find even better sport this year than last.

MASSACHUSETTS, *New Bedford, June* 27.—Trout fishing the present season cannot be called a success, although some fine fish have been caught. At present our Amateurs are having fine sea fishing of bass, bluefish, etc. A party chartered steamer Glide to No Man's Land. Mr. Lisson has returned with three bass, largest 46 pounds. The Pasque and Cuttyhunk Clubs are just opening their season, and will no doubt give a good record. Numerous parties from Boston, New York, etc., are daily passing through our city for the "Seagirt" islands for a few day's fishing. CONCHA.

MOVEMENTS OF THE FISHING FLEET.—The halibut receipts small, and prices favorable. Very few mackerel received, and stock on hand closed out. The number of arrivals for the week 72, including 2 from the Banks, 60 from Georges, 9 from mackereling trips, and 1 from Newfoundland. Receipts, 60,000 lbs. codfish, and 40,000 lbs. halibut from the Banks, 900,000 lbs. Georges codfish, 50,000 lbs. Georges halibut, 335 bbls. mackerel, and 600 bbls. herring.—*Cape Ann Advertiser, June* 20.

THE RAQUETTE AND VICINITY—*Greenwich, June* 16.—I have just returned to New York with a friend, from a two-months' stay in the Adirondack region, and especially upon Raquette Lake. We stopped on the way, in and out, at Holland's house at the head of Blue Mt. Lake, where we found comfortable quarters and good fare. Mr. Merwin's "Blue Mt. House" is one mile farther on up the side of the mountain, and commands a fine view of both mountain and lake, Jonas Ordway, of Glens Falls, has put up a large two and-a-half-story house on the next point on the south side below Holland's. We camped on Raquette, North Point, at the log house of Mr. James Ten Eyck, of Albany, with Lysander Hall and his son, Herbert Hall as guides. Messrs. Ten Eyck and Stickney, of Albany, had just preceded us with the same guides, and we met them at the head of Blue Mt. Lake, bearing out among their trophies one lake trout weighing nearly twenty pounds. While we were on Raquette one was taken of 18 pounds, one of 16¾ pounds, and we took one of 14½ pounds—all by trolling. On the outlet of Raquette I took one speckled trout of 2¾ lbs. on a white and ibis bass fly, and this gourmandizer had in his stomach a sucker seven inches in length, and sixteen minnows. Also, quite a number of 1½ pound each all going for this same white and ibis bass fly.

Deer had been feeding freely on the lily pads in Marion River. Mr. Alvah Dunning sent us a piece of venison from a deer that got into his otter trap and carried it off, but was captured by him with the aid of his dog after a protracted pursuit. I note the controversy about deer being killed by guides "on snow shoes and out of season." The men charged with this are good guides, one at least of whom has hunted with parties from this place to their satisfaction. Mr. Hall has been with me nearly ten years, and I have no doubt he believed this charge when he made it. But if these men should themselves deny his assertions I should think, until further proof, Mr. Hall must be mistaken. It would seem as if there was no call to mix up "Killing several deer last autumn" with "Killing twelve deer in two weeks on three feet of snow." Let us have the facts, gentlemen, stand or fall who may. If the charge be true, let it be substantiated; and if an error, squarely retracted, and as publicly as it was made. The guides, and everybody else in that region, should stand together in mutual friendship and self-interest, for the protection of game and fish from unseasonable and illegal slaughter. Division will not do it; unity of action and public sentiment can.

Yours very respectfully D. W. MANDELL.

THREE TROUT AT ONE CAST.

BENNETT BUILDING, New York, June 4, 1877.

EDITOR FOREST AND STREAM:

I cannot refrain from telling a little fish story. On Tuesday last, May 29, on the lake of the Willemernoe Club, up in Sullivan County, N. Y., I hooked at a single cast three trout measuring respectively sixteen, twelve and a quarter, and ten inches in length, and weighing certainly over two pounds and a half, and finally saved them all. This was done in the presence of Garrett Roach Esq., and George Van Wagenen, of this city. Mr. Roach says I "yelled like an Indian." Probably I did. The rod with which I caught these fish weighs, on a postage scales, *less than six ounces;* it was made to order for me last year by Mitchell, of Vandam street, N. Y.; it has a grip of a foot long, which fits the first joints of three rods, (six, seven and eight ounce rods); this grip weighs a little under one-quarter of a pound; the first joint of ash, and second joint and tip of lancewood, weight together two ounces. From the time I first threw a fly, over twenty years ago, I have constantly had increasing faith in lighter rods. The lighter the rod the harder it is for the fish to tear away. I do not bother with three flies at a cast, but the weather was hot, the water clear and smooth. I had on a black gnat and a cow dung and had cast a number of times without a rise at the spring hole at the head of the spawning race near the club house, so I thought to try a lighter fly, and put on a coachman, too lazy to take off one of the others. At the moment I cast it suddenly clouded over a little, there came a slight ripple, and I saw the three fish rise simultaneously. I don't know how long it took me to land them, I forgot to look at my watch. I did not sit down and coolly light a cigar; I don't know what became of the cigar I was smoking. The rod bent so at times as to lap the braided-silk line over my wrist, but everything held, and in my opinion, chiefly because the rod was so springy, but the leader and swells must have been good stuff too. At times the fish would run out twenty yards or so, but their fighting at cross purposes preventing their going far. The fellow at the bottom *would not* get tired; sometimes I thought I had him, and then I would give him up as gone; and at every suggestive opportunity after that the eye-witnesses before cited would mock me; for instance, at breakfast next morning as plate after plate of slap-jacks (with maple syrup) was emptied, they would cry, "They're all on!" "Only one left!" "The bottom one is off!" "Now I've got two!" Finally (not after breakfast next day, but after tiring those trout) I got the three fish in line under each other, and by a quick stroke of the landing net lifted all three into the boat. Unfortunately the fish were not weighed, but I measured them carefully. The sixteen inch trout was also very broad and thick. In all my fishing I never had three trout on so light a rod, nor on any rod, at one time, and I do not expect such good luck again. Yours, jubilantly.

GEO. W. VAN SICLEN.

National Pastimes.

THE LONG BOW AS A SPORTING WEAPON.

FERRISBURGH, Vt.

EDITOR FOREST AND STREAM:

In two of the leading magazines, *Harper's* and *Scribner's* for July, are published a paper in each, by the same author, in praise of the long bow as a sporting weapon. The articles are well written and quite interesting, but they contain heresies which ought not to pass unnoticed.

The writer, confessedly a pot-hunter, who goes shooting meadow larks "about the time the young have learned to fly" and "are fit for the table;" who finds "no finer sport than shooting wild turkeys when *one-third* or *half* grown," when "they are delicious for the table;" who shoots young squirrels in spring because "broiled squirrels * * * * when under *three months of age* * * * is to the epicure what opium is to the dreamer of the Orient—something to make him forget care and love life for the sake of eating"—this wielder of the weapon of the gods says: "The gunner is modern and realistic; *he* wants *meat*; *he* thinks of his *tooth*; he counts "how much his ammunition has cost him, and glances at the newspaper market reports to see what his birds are worth!"

This is what you are and what you do, you sons of guns, who deem it sport to cut down the full grown woodcock as he goes with bullet speed among the alder stems, or tumble the ruffed grouse headlong from his whirring flight in the gorgeous October woods—miserable pot-hunters and belly gods all, intent only on slaughter and food, no matter by what means!

And he, whose highest idea of game quality in beast or bird, after its toothsomeness, is that it should sit still and be shot at till hit, says, "No man ought to brag of knocking down two quail left and right under the ordinary circumstances of field shooting, with a double-barreled shotgun!" The men who *can* do this with any certainty, have, in my humble opinion, a *right* to brag, but they seldom do. They surely would not boast of killing a half grown turkey by a chance shot, nor of hitting a squirrel on a tree at the *tenth* trial. He says, furthermore, that "with a good shotgun, no man ought ever to miss a quail at thirty yards!" Yet better shots with the gun than he can ever hope to be with the bow, do so miss them. Were shooting with the gun the "dead sure" thing he claims it ought to be, there would indeed be little sport in it—it would be sheer slaughter. But the scores of crack shots will hardly average more than three hits in five shots at birds on the wing. A fairly good rifleman would knock the heads off our bowman's accommodating woodpeckers and tomtits at double his distances nine times out of ten, but we should hardly call it sport.

It is a pity he had not room to tell us why "hunting with the gun, as is the fashion now to follow it, cannot be recommended as either healthful or pleasant." Many deluded mortals who think it is both ought to be at once convinced that their favorite pastime brings them neither vigor nor recreation, but they will not be without proof or argument.

Does any one believe that *any* woodpecker sucks the sap of trees? I do not. But if any one really *knows* it to be a fact, I should be glad to hear from him. AWAHSOOSE.

MAHONINGTOWN, Pa., June 28, 1877.

In the July number of *Scribner's Monthly* is to be found a paper on "Bow Shooting," in which the author has made some assertions altogether at variance with his subject, which I am inclined to combat. In it he says, "Formerly table comforts of the most necessary sort had to be procured by the skill or luck of the huntsman [Mark the word luck in connection with pursuing game as a means of livelihood], "and as the game grew more wary and difficult of approach [he states elsewhere that bow shooting does not disturb the game], necessity invented firearms—that terrible source of slaughter which has at last reduced shooting to less than a sport." Permit me to ask, Did the necessity for game bring about the invention of firearms? And I would also inquire, Why it is that he, such a thoroughbred sportsman [N. B.—He shoots "everything from a tomtit to a hawk or an eagle," you know,] should still continue to shoot, when, by his own evidence, shooting has been reduced to less than a sport. Quoting further, he says: "No man ought to brag of knocking down two quails, left and right, under the ordinary circumstances of field shooting." Now I appeal to your common sense, don't you think it as much and more to brag of making a right and left er on quail than to make a "scratch" shot on a lot of turkeys, bunched together, giving one a margin for successful inaccuracy of about 9 square feet, with a bow and arrow? I'll warrant he can not make a "double" on quail once in three times. I have shot a good many quail, and shot *at* a great many more, and I am sure I cannot do it myself. Further on he says, "The shot-gun will soon exterminate game." Now I do not wish to make any rash assertions, but I ask my fellow knights of the trigger is not game plentier, or at least fully as plenty in England (where the shot gun is used the most, and the most effectually) to-day than it was when the fowling-piece was first introduced? and, which destroys the most quail, shot guns or traps—No. 9's or hard winters? Again he says in regard to "quail and pheasant shooting" [mark the vulgar name for ruffed grouse]: "These birds are so similar in their habits that to know one is to be pretty well acquainted with the other." Ruffed grouse and quail similar in their habits! Hear him! Let's close the subject, further comment is unnecessary.

As far as the subject matter is concerned it is well written and readable. But when he attempts to talk about gunning, it is evident to us all that he is either blinded by prejudice or incapacitated by inexperience. We gunners, as a body politic, have enough slurs cast upon us without permitting such a flagrantly unjust one as this to pass by unnoticed. AHRIMAN.

"He that doth public good for multitudes
Feels few are truly grateful,"

says the old dramatist Marston. Not so, however, with B. T. Babbitt, the great soap man, or why do the newspapers ring with the praises of his Toilet Soap? A conundrum easily answered, for its excellences command instant conviction.—[*Adv.*

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Publications.

READY JULY 7.

THE

Sportsman's Gazetteer

AND

GENERAL GUIDE.

WITH MAPS AND ILLUSTRATIONS,
850 pp., Price, $3.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM;" AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST and STREAM" PUBLISHING COMPANY.

1,000 Copies Sold in Advance of Publication.

The book is a complete manual for sportsmen:

It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)

It gives the scientific name and specific characteristics of each species it describes, with the *habitat* and breeding season of each—a most valuable contribution to science.

It describes 297 varieties of edible fish alone, that may be taken with the hook; 59 varieties of ducks, 59 varieties of snipe or waders, and the different methods of shooting each.

Its instructions for capturing large game are very minute, and the chapters on woodcraft, outfitting and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and the points for bench judgment fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.

Every scientific portion of the work has passed the inspection of an officer of the Smithsonian Institution.

It contains very useful recipes and remedies for wounds, bites, poisons, illness, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.

It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

ENDORSEMENTS.

"I can judge from your advanced sheets that your book will be a *rademecum*, invaluable to sportsmen."—*Dr. H. C. Yarrow, U. S. A. Smithsonian Institution.*

"Your forthcoming book will indeed be a treasure. The labor of preparation must have been immense."—*S. C. Clarke, Jamaica Plains, Mass.*

"Having examined the proof sheets of your forthcoming book, I predict an extraordinary sale."—*G. Bird Grinnell, Peabody Museum, Yale College.*

"That portion of your book relating to woodcraft, outfitting, camping, etc., is simply complete. I can scarcely add anything."—*H. M. Aitchell ("El Cazador"), Los Angeles, California.*

"Your book is much needed, and I have every confidence that you are capable of covering the whole ground. We need something more recent than Frank Forester."—*D. C. Estes, M. D., Lake City, Minnesota.*

BINDERS.

E. WALKER'S SONS, 14 Day street.

The Game Laws

The undersigned has in process of printing, and will have ready to issue on or before the tenth day of July, 1877, the GAME LAWS OF THE STATE OF NEW YORK, with all the amendments made thereto up to the close of the last session of the Legislature, in coherent and exact form. The recent amendments are of great importance, and it is essential to sportsmen's clubs, and to public officers, who are especially charged with the enforcement of the law, to have it before them in proper form so that they may readily apprehend its provisions and be qualified to perform their duties under it. The compilation has been made by competent hands, and will be found to be absolutely correct. The price of the pamphlet will be twenty-five cents per copy.

A liberal discount to sportsmen's clubs and to the book trade. A copious index will accompany the pamphlet.

Orders are solicited by

"The Bermudas."
NOW A FAVORITE AND DELIGHTFUL WINTER RESORT, is reached in seventy hours from New York, and being surrounded by the warm waters of the Gulf Stream enjoys an equable temperature of about 70 deg.

The elegant British Steamships "Bermuda," and "Camina," 1,000 tons, fitted expressly for the passenger travel, are dispatched from New York for Bermuda fortnightly, making connection at Bermuda with steamers for St. Thomas and West Indies. For full information apply to A. E. OUTERBRIDGE, Agent, 29 Broadway, N. Y. Dec 21 1y.

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
OF NORTHERN MICHIGAN, VIA
Grand Rapids and Indiana Railroad.
(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the Grand Traverse Region will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike and Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as **ice for packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

J. H. PAGE, G. P. & T. A., Grand Rapids, Mich.

FUR, FIN and FEATHER.

This is a publication that should be in the hands of every lover of shooting, fishing and trapping. It contains the

GAME AND GAME FISH LAWS

of every State in the Union and the Dominion Provinces, and also gives a description of all the best places for shooting and fishing in the United States and Canada, tells how to reach them, and what kind of accommodations you will find when you get there. It tells you what kind of tackle to use for the various kinds of fish, and where the best can be procured, and also where you can get the best of every description of shooting apparatus. It contains a number of interesting sketches of hunting and fishing adventures, and a vast fund of useful information on field sports and angling that renders the work indispensable to all who use either gun or rod. It is, in fact, a complete

Hunting and Fishing Directory

and no matter how much or how little recreation you take in the woods and along the streams, you will find *Fur, Fin and Feather* worth many times its price to you. It is a bi-monthly (every two months) publication of from 176 to 208 large octave pages, 50 cents a number, or $3 a year.

SEND FOR DESCRIPTIVE CIRCULAR.

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slighest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.

No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.

No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

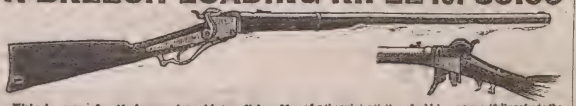
W. & C. SCOTT & SONS.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent-Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.



[Extract from FOREST AND STREAM, New York, December 26, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

A BREECH LOADING RIFLE for $5.00

This is a perfectly honest and bonafide offer, for the substantiation of which, we respectfully refer to the publishers of this paper, and to Messrs. William Read & Sons, of Boston, one of the largest and best known dealers in Firearms in the United States. The Rifle we offer is of the celebrated "Sharps" pattern, long range, CENTRAL FIRE, finely rifled swan barrel, drop action, movable sights for long range or target shooting, black walnut stock, blued steel mountings, uses either cartridges, which can be obtained everywhere, or Metallic Shells, which can be reloaded thousands of times *or time be used, if desired,* as a muzzle loader. We will send box of cartridges for 25 cents, or a box of metallic shells for 50 cents extra. We guarantee them rifled to be in every respect as represented. They cost to manufacture, $26.00 A PIECE, and it is owing only to the lines and the stringency of the money market, that we are able to offer them at this price. We bought this lot at assignee's sale, and the reason it is replaced at $20.00 apiece. You cannot afford to let this opportunity slip if you need a rifle, and as a chance for speculation it is worthy your attention. You can sell the rifle for a great deal more than you can for it at any time. This rifle is a great favorite on the plains on account of the ease and rapidity with which it can be loaded, and its superior shooting qualities. We have equipped three parties for the Black Hills with these guns at a much higher price than we now offer them. We will send the rifle, properly packed, immediately on receipt of price, **FIVE DOLLARS.** This is positively no swindle or humbug.

The Rifle will be shipped the day the order is received. We send duplicate express receipt by mail to guarantee delivery of Rifle in good order. **The Cuts are exact representations.** Send money by Registered Letter or Money Order.

G. W. TURNER & ROSS, 26 Central St., Boston, Mass. *Cut this advt. out as it will not appear again.*

Paper and Metallic Shells

FOR

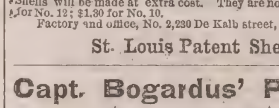
Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.



THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2⅝, 2¾, and 3 inches; No. 12—2½, 2⅝, and 2¾ inches. Longer Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.

MAKING THE HARBOR LIGHT.

THE snow falls thick so you may not see
The foresail gleam from the break of the poop;
The long-boat looms like a rock on the lee,
And the drift lies a foot on hatch and coop.

Long, glimmering lines of dark and light
Mingle in wavy dance up aloft,
And the topmast-head goes into the night,
Capped with a head-dress white and soft.

Phantom-like figures grow in the tops,
And the bunts of the furled-up sails are piled
With a heavy freight that suddenly drops
When the good ship bounds to a gust more wild.

And the clews of the courses, stiff as a board,
Catch up the flakes into bossy heaps,
Till a flap, and off whirrs the sparkling hoard,
Startling the tars in their standing sleeps.

Still stoutly onward we hold our course,
Hugging the wind with a bear-like grip,
Holding each inch we gain with a force,
And passing the credit to our good ship.

The helmsman's eye from under the rim
Of his slouched sou'wester beams aglow;
No matter how braggart the wind to him,
And little matters the fall of the snow.

Hand, eye and ear are serving his soul,
He feels the flap of the topsail leach,
And steadily over, watching the roll,
Whirls the wheel to an arm-long reach.

Grasping the weathermost mizzen shrouds,
As grimly as if it were gript in his hands
Our fifteen lives, and swathed in a cloud
Of sleet-stuff and snow, the master stands.

Into the darkness and whirling flakes,
Into the heart of the brooding bank,
A long, dim alley his calm eye makes,
And the world outside is all a blank.

No voice save his on the midnight stirs,
No sound save the flash and swish and swirl,
As under her bows one ceaselessly hears
The slush-covered water part and curl.

With the quiet flakes on his stiffened feet,
Searching his neck, and nipping his eyes,
On the rounded coils of the spanker-sheet
A youngster, half-dreaming, shapeless lies.

He knows that, true to his will, his hand
Would promptly answer the master's shout;
But his thoughts are far away on the land,
Nor heeds he of any perils without.

He dreams of a valley spread broad and fair,
With grand old mountains upon each side;
He dreams of a red lamp's cheerful glare,
Welcoming ships to the old wharf's side;

Of a little room with its walls ablaze,
On happy faces, all bright with joy;
And he hears the voices of olden days,
Before he went as a sailor boy.

Dear, kind, brown eyes, seem his to greet,
"God bless and guard her!" he prays, "'tis she!"
When a cry, "Ease off that spanker sheet,
Hard up the helm, and keep her free!"

One glare—one flare of a flashing light,
And the visions die with its sudden ray;
The lee-braces fly with a circling bight,
And the sheets spin out as she gathers way.

The water seethes at the bluff of the bow,
And the helm churns it to hissing wrath;
And the strain on the ship and the master's brow
Relax to welcome the well-known path.

With a surge and a bound the yards swing square,
And the night's alive with our cheery cries,
As before the snow-storm, free and fair,
Merrily homeward our good ship flies.

[I found the above poem quoted in "Sketches of Life in Newfoundland," by Col. R. B. McCrea, British Army, London, 1869, and attributed to Rev. Walter Mitchell, author of "Tacking Ship Off-Shore," published in the second volume of the *Atlantic Monthly*, and reprinted in your valuable journal of June 7, where it was erroneously credited to Mrs. Celia Thaxter. S. C. C.]

For Forest and Stream and Rod and Gun.

Scenes at a French Race Course.

"THEY do those things better in France" could very well be said of the manner in which order and the politest decorum, combined with the fullest possible liberty, are preserved at the leading race courses throughout France. Politically, the most excitable and troublesome people in Europe, socially, the French are excelled by none in quietude, good breeding and scrupulous attention to the comfort of strangers. In all public assemblies, except those of a political character, they carry out the mottoes of *Liberte, Egalite, Fraternite*, which they are so fond of displaying on their national buildings; and no person who has mingled much with them can say other than that they are the most orderly race in the world when they are not aroused by political or religious agitation. A dozen *sergeants de ville* can handle a crowd of several thousands with less trouble than a battalion of American or even English policemen can handle a mob of as many hundreds under the same circumstances.

This is readily seen at a race course, and the impression it produces upon a foreigner is highly complimentary to a people deemed so enthusiastic. There is no crowding, fussing, or any attempt to intrude on each other's rights; all is the acme of decorum and cheerful politeness. Having had an opportunity of witnessing the spring series of steeple-chases, held at Auteuil, a pretty little village just outside the northern fortifications of Paris, I was much impressed with the suave character of the people, and the efforts made by the managers of the course and the civil and military authorities to give them the fullest possible liberty for enjoying the sport, without granting any means for indulging in a license that might be opposed to the rights of even the tenderest child.

The course at Auteuil is the only one near Paris where hurdle and steeple-chases are run, and for its purpose it is well situated, being in the midst of a small, rolling plain, diversified enough in character to display all styles of leaping, while the jumping to be seen there is quite good, yet it bears no comparison to the "neck-breakers" to be witnessed at Punchestown, Ireland, or at the Grand National of Liverpool. There is no "in-and-out" leaping, and the only dangerous bit of a "take" is the water jump opposite the grand stand. The number of horses that compete is also, as a rule, quite small in comparison to similar races in the United Kingdom, so that the contests seem quite tame to those who have enjoyed the large fields, close running and appalling bounds so characteristic of English or Irish steeple chases. The races are also rendered somewhat uninteresting by the absence of foreign horses, for the prizes given being comparatively small—averaging only about fifteen hundred francs—few Englishmen care to go to the expense of sending their best stock over to compete for such petty sums. The name of a British competitor appears occasionally, but it is—or was last spring at least—a comparatively rare occurrence.

The scenes to be witnessed at the course make up, however, for the lack of excitement in the contests, and few who have any idea of the picturesque in nature, or take an interest in national peculiarities can return home without feeling that he has at least enjoyed a pleasant, though perhaps quiet, day's amusement. The French are nothing if not artistic, hence the track at Auteuil is surrounded by luxuriant shrubbery through which, in places, peer parterres of rich flowers. The result of this care to please the eye is that the people have something to attract their attention when a race is over, and they are prevented from manifesting that irritation which is so characteristic of English and American audiences when the contests do not follow each other in rapid succession. The *monde* is also allowed to roam at free will over the lawn surrounding the track, and to place themselves in any convenient position from which the race can be seen, provided they do not obstruct the path of the coursers. The way the people rush about would never be tolerated on American courses, for the simple reason that an American audience once under headway would be hard to control, but in France one quiet word from the police or military would check a rushing multitude in a moment—I mean, of course, the hurdle-loving multitude. The management of even the course shows the paternal character of the government, and the scrupulous attention paid to the prevention of any excitement.

When I stopped at a pretty little cabaret outside the course to enjoy a glass of wine, I was rather surprised to see a body or cuirassiers of the *Garde Republicaine* dash up the road, wheel promptly into line, then deploy by twos, and trot off to various points along the highway. The commander of the detachment, with his bugler, mounted on a snow-white steed, galloped up to the grand stand, and a minute later he was followed by half a dozen troopers, who took positions, without any apparent instructions, in different quarters of the course. A battalion of the infantry of the line next arrived and was marched along the track, and whenever an upright fence post was reached a soldier fell out and took up his position near it. In this manner a cordon of red-legged soldiers was placed around the course, and they were as close together as if they had been deployed as a skirmish line in actual warfare. They were only dummies, however, for as soon as the people commenced crowding in, the *sergeants de ville*, or police of Paris, placed themselves beside their co-laborers of the army and directed the movements of the surging throngs who ranged themselves along the fence near the winning post. The admission to the course being only one franc, the greater portion of the audience were content to keep to the common, so few indeed graced the stands, where an extra five or ten francs were demanded for a seat. These seemed to be occupied principally by betting men, and a few ladies and gentlemen. The former were, as a general rule, natives of Great Britain, and they carried the stamp of their profession so indelibly impressed on their countenance that no one could possibly mistake them. They had that air of shrewdness and boldness combined which specially mark the "horsey" character; but even if that were not sufficient to announce their nationality, the manner in which they defied the French laws of grammar and pronounciation most readily would. They seemed to know in advance what horses would and would not run, and to perdict in what position the competitors would reach the winning post. They looked a thoroughly "knowing" lot, but the French people not being addicted to the American or English systems of betting they did not find trade very brisk. As all the fun and excitement seemed to be confined to the multitude on the lawn or common, I moved down there, and found I had improved my position most advantageously, for wit and humor were flying about among all classes, and that good-natured badinage for which the French are famous was in full play. "You will pardon me, *Monsieur le militaire*," a portly dame would say to a mite of a soldier, "if I ask you to stoop a little more so that I can see over your head. You are small enough already, yet not sufficiently so to enable me to see over your shako. You are no doubt a giant in battle, though small in body, and will in all probability get to be a general; so I hope, *Monsieur le General*, you will grant me the small favor I ask." This bit of raillery elicited hearty laughter from the bystanders; but, highly sensitive as the French are to anything approaching ridicule, the soldier did not resent the familiarity, and touching his hat he moved to one side.

"Monsieur would oblige if he would move one side," an *ouvrier* would say to a policeman, as he was being pushed forward by the incoming multitude, but instead of clubbing him as a New York policeman would for his presumption in speaking so familiarly, the officer merely turned around and said that it would be impossible to do so without breaking the cordon. Facing the crowd he asked them if they would be kind enough to move back a little further in order to give the horses plenty of room. In all this swaying not a petulant word was uttered by any person, and when one happened by mistake to push another he immediately lifted his hat and begged pardon. None were more polite than the civil officers, and if they made a request it was always with *Messieurs et mudames sil vous plait.* They manifested none of the growing, small-apple self-importance of the so-called "finest police in the world," yet they handled thousands without the least trouble. The people were bubbling with cheerfulness and suavity, and though "chaff" reigned supreme it was devoid of all tincture of acrimony or the remotest ill-nature. The venders of racing programmes were the recipients of many humorous inquiries, which they answered in the same spirit. An individual who was selling *Vee-yawm turo* was told he had better study English before he yelled out the name of his paper, as no Frenchman would understand it, and no Englishman could. On purchasing a copy from him for, I believe, three sous, I found the badinage was somewhat appropriate,

as the programe was called "William's Turf," but of course no true Frank could pronounce such an outlandish name in the vernacular.

The first bell for the races to begin sounded at last, and another rush then commenced for good positions. At the third bell four horses appeared, and they had scarcely taken position on the track ere they dashed off. "Little fuss about races here," thought I as I rushed for a good place to see how French jockeys and how French horses took an "in-and-out." As the silks came around the turn in front of the fortifications I reached a wall, and there had a good opportunity of noticing the equestrianism of what I supposed to be French jockeys. The moment they took the leap, however, I saw that the "seat" was a most thoroughly English one, and wondered at it, for the Gallic cavaliers I had seen in the *Champs Elysee* and *Bois de Boulogne* differed radically in their horsemanship from their British kindred. As soon as the steeds disappeared amidst the shrubbery, I turned to a good-natured *sergeant de ville* and asked him if the riders were Frenchmen. "No," said he; "we have no French jockeys in steeple-chases or hurdle-races; they are all English and Irish." "How is that?" I asked; "can't you train Frenchmen to ride?" "Oh yes," was the answer; "but you see we can secure experienced talent from England at less expense than it would take to train men here; but besides that, it might be as well to say that the French are not by any means as good horsemen as the English. The latter are the finest cavaliers in the world," said he admiringly, "and we can never compete with them." Commenting on the comparatively easy character of the leaps, I asked him if they had no "in-and-outers?" He did not understand me at first, as I knew of no idiom in French that would express the phrase, but by making signs with my hands, and putting them through imaginary bounds I soon made him comprehend my idea. "*Ah! ia double banquette*," said he, with the air of a man who had just awoke from a dream, "we have none." "Why not?" said I, "they prove both the power of the horse and the cleverness of the rider." "No doubt," was the response, "but they proved so dangerous here to both men and horses that they are no longer used. They are known to us as the Irish leap; but as we are not Irishmen we don't care to risk our necks for nothing except a display of mere reckless courage." By the time this conversation was ended the horses were approaching the winning post, so I hastened in that direction with hundreds of others, but soon found myself buried amid carriages. I could neither advance nor retreat then without much inconvenience to myself and others. A lady seated in a carriage pointed out my dilemma to her husband, and he, as soon as he heard that I must be a foreigner, kindly invited me to a place in his landau in order that I might be able to witness the finish. I gladly accepted the invitation, and was fortunate enough to see a very pretty bit of running between three out of the four competitors. They ran neck-and-neck up the homestretch, and when the flag was dropped it was hard to tell which had won. A minute later, however, the board announced the number of the winner, and the comment went around "*C'est le cheval Anglais.*" If English horses won every race it would evidently be taken as a matter of course, judging by the great leaping powers accorded them by the critics. Although this race was closely run and gallantly won, the people displayed no excitement, and when it was finished they strolled over the lawn with as much indifference as if no exciting events were on the card for the day. Descending from my perch I followed the moving multitude, and soon learned that the races had vanished from their memory as if by magic, and that they were now bent on enjoying the magnificent landscape that stretched before them as far as the hills of St. Cloud, or the loveliness of the park in which they were loitering. This power to escape readily from one scene to another seems a strong characteristic of the people, and must be a source of much pleasure to them if it is true that "variety is the spice of life." The care taken to prevent persons from enjoying the sport without paying for it was well exemplified by the vigilance of the sentinels that paced up and down the *banquettes* of the fortifications. They would not permit anybody outside the walls of the course to mount the grassy slopes of the useless fortifications, for fear they might indulge in a pleasure for which they had not paid. The contrast between American and French institutions was illustrated by this incident. Just fancy a company of United States soldiers mounting guard on "free hill," at Jerome Park to keep the "deadheads" away, or a troop of cavalry posted along the course and avenues to prevent a breach of the peace or an indulgence in the pleasures of political assemblies.

Of the throng inside it might be well to state that though by no means belonging to the aristocratic classes, yet a better dressed, more cheerful or a politer body of people could not be found throughout the world. The number of carriages present was comparatively quite small, and among them I did not notice one bearing American or English occupants. This is due in a great measure to the fact that the races are run on Sunday, and John and Jonathan do not care to attend the meetings from conscientious motives.

The races that followed the first were so nearly of a character that a description of one suffices for all, except perhaps that one was more hotly contested than another. There were few accidents, and none of them were serious. The only place at which the horses fell was the water jump; but in no case did the jockey receive greater injury than an abrupt roll, while his steed merely kissed the ground rather suddenly. Both horse and rider were attended to immediately after a fall by the *sergeants de ville* on duty near the leap, so that the former scarcely stumbled ere he was seized by the reins, while the latter was lifted promptly by others. Every precaution seemed to have been taken to prevent either discomfort or inconvenience to the audience, or injury to man or horse, and to persons used to the slovenly and often penurious management of some American courses, this produced a pleasant impression.

After the races were over the horsemen who were prancing about the lawn all day took a dash over the course much to the amusement of the spectators; and as some of them came to grief they produced an immense amount of laughter among the English speaking portion. The audience after leaving the track did not rush madly about, as they do in New York, in order to get a seat in the train, but quietly strolled along or enjoyed their glass of wine outside the doors of the wine shops. Carriages with outriders in livery, pony phaetons with postillions in blue and white, mounted on the nigh wheelers, horsemen, cuirassiers, dragoons, *chasseurs a cheval*, artillerists, buxom *bonnes*, a few *grandes dames*, English sharps, jockeys and trainers, and a multitude of well-dressed people lined the road leading to the railway station or to Paris, and made a scene diversified enough in color and individuality to attract the dullest mind. As they moved onward without jostling, rudeness or undue haste, I thought that a little of their quietude would not be amiss in other lands to which my mind wandered.

I have devoted this letter to the scenes and incidents of a French course rather than to the races, for while the latter differ only in degree in the various countries, the former are entirely *sui generis* and can be witnessed nowhere out of France. There are to me, at least, more variety of incidents and pleasing accessories to be found at a Parisian course than at any other; for you have about you not only that which attracts the eye, but you are also free from the coarseness that characterizes a similar rendezvous in some other countries. If some of the American managers of race courses would take a lesson from those of France they would increase the comforts of the auditors and the weight of their own purse.

For Forest and Stream.

SURVEYING THE DEADWOOD ROUTE.

On the 4th inst. His Excellency Gov. Pennington did me the honor to appoint me one of three commissioners to accompany Lieut. Col. Fred D. Grant, A. D. C., to Gen. P. H. Sheridan (detailed for that purpose) upon an exploring expedition up the Missouri, having for its object an examination of the river bank at Fort George, at Fort Pierre and at Chantier Creek, with the routes from the two last named westward toward the Black Hills; and, also, to penetrate the country from Fort George as far west as practicable, that a suitable route might be found, if possible, and permanently located as a post road across the Indian reservation from the Missouri River to the Black Hills mining districts.

The party consisted of Lieut. Col. Grant, Gen. W. H. H. Beadle, Hon. M. W. Sheafe and the writer, Commissioners, M. N. Hoyt, Esq., general business manager, a guide (?), surveyor and teamster—eight persons in all—with a heavy wagon containing a ton or less of supplies, tent, etc., and a light two-seat wagon for the "tender feet."

Wednesday morning, June 6, found us all on board the steamer Durfee, urging our way against the strong current of the "Big Muddy;" and a look at our surroundings discovered we were in the midst of a motley crowd—army officers and their families, Indian traders and agents, priests, deacons and doctors, mayors of cities, gamblers and greenhorns, and last, but not least, a Chicago speculator, who conversed about operations involving millions as coolly as if it were an every-day matter with him to make or lose a million or two before dinner. The blue of the army contrasted in a striking manner with the corduroy of the Black Hiller, and rank or station had very little to do with places at the table. An ex-Surveyor General had, as a room-mate, a pilot; a judge found the upper berth of his room occupied by a faro dealer, while the worthy mayor of one of our most enterprising Western cities spread his blanket on the floor, and successfully wooed the drowsy goddess, in spite of the surroundings.

Our destination was Fort Pierre, situated on the south or west bank of the Missouri River, some 300 miles (by water) above Yankton, and the scenery, as we ascended, was full of interest.

The bluffs follow the general course of the river on both sides, at some points rising abruptly from the edge of the water sometimes to the height of two, or even three hundred feet; their sides, bare and ragged, worn by the deluging rains of centuries into the most fantastic forms, exposing the varied colors of chalk, clay, lime, slate, oxide of iron, etc., again receding from the river leaving a bottom covered with luxuriant grass or the more thrifty willow; ravines and gulches penetrating the bluffs, lined with the cotton wood and other timber native to the region, presented to the writer an ever varying, changing kaleidoscopic panorama, colored with the heaven-given tints of the various grasses and flowers—the whole alternately flashing in the sun's rays or softened by the cloudy shadows that swept over the scene. Our interest in the peculiar geological formation of the cliffs was much heightened by the lucid explanations as to cause, etc., by our "military friend," ably seconded by the "philosopher" both enthusiasts in geology and mineralogy.

About eighteen miles above Yankton we pass the beautiful farm of a Russian colony, or community, known as "Hutterisches Gemeine," or Hutter Brothers, or Home, or House, as variously translated. They are communistic in their ideas and practices, and, pecuniarily at least, successful. I can give your readers but a faint idea of the various tribes of Indians whose reservations border the Missouri, but must express my surprise at the evidences of civilization that everywhere exhibit themselves—fine fields of wheat and corn, large herds of cattle, wood cut and corded, and, most conclusive of all, the fact that the "tepee" is being rapidly exchanged for small but comfortable log or board huts.

It might be premature to say that the Indian policy of the government pursued for the last few years, has been a success; but, certain it is, that more has been accomplished toward pacification of the great mass, and christianization of those within reach of such influences, than during the previous fifty years. To such gentlemen as Bishop Hare, Maj. Gassman, Dr. Livingston and others, must be ascribed all praise for the results everywhere apparent on the reservations visited by us.

Fort Pierre we reached on the fifth day, having been delayed by high winds and want of fuel. This place, formerly a trading post, is now occupied by a few persons who supply the freighters and others who convey the great stores of grain, flour and general merchandise shipped via this route to the Black Hills towns of Deadwood, Crook City, Rapid City, Sheridan, etc.

The place very much resembled an army depot of supplies: the ware-house, where we landed, and the adjacent lots covered with wagons, grain, agricultural implements, steam engines and boilers, furniture, etc.; tents and booths made of bushes, camp fires, wagon trains, mules and oxen, drivers with their "bull-dozers," returned Black Hillers (blacker than the hills themselves); houses and stores of logs; palaces and hotels of boards (four stories high, *all on the ground floor*); signs reading "Meals at all Hours," "Potoes, Grain & Mele," "Bakry," "Grand Central Hotel," "St. Elmo," etc.; *all and everything* seemingly in inextricable confusion. At this place our "Nimrod" joined us, bringing a heart overflowing with kindliness and a fund of wit and good humor that added very much to the pleasure of the trip. We remained on board during the unloading of the Durfee, which then dropped down the river to the point known as Fort George, on Monday morning, where we disembarked, and, after a hasty breakfast, struck nearly due west through or over an almost *terra incognita*.

In fact, the foot of white man has seldom, if ever before, trod the route over which we passed. Our route lay between Bad River, on the north, and White Earth River south. The *maps* show *no streams* running into the Bad River from the south. We found not less than ten, large and small.

Our first day's march was devoid of incident, except our coming suddenly upon two beautiful antelope and seeing them escape safely our hurried shots, or a coyote sneaking away under cover of a ravine; but the beautiful prairie, covered with rich buffalo, gamma and other grasses, flowers of every hue, the bright sunshine and cool breeze, as we tramped along, made every eye sparkle and the rich warm blood tingle in our veins as we caught sight of Antelope Creek, which was to be our first camping place. We estimated our day's march at twenty-two miles, and felt like saying, "For what we are about to receive," etc., "make us duly thankful," as we drank our hot coffee in the cool of the evening. We named our first camping place Camp Grant, in honor of the gallant young officer, whose practical knowledge and thorough acquaintance with frontier life, and the necessities of a great overland route through such a country, caused his selection by Gen. Sheridan for this responsible duty. The Colonel's 190 pounds did good service on more than one occasion when crossing a ravine or gulch, and the safety(?) of the entire party was no doubt in the hands of himself and Nimrod the first night they did duty together as sentinels around camp.

The country became rather more broken as we journeyed westward, and while we did not *expect* an attack from the hostiles, yet we felt that the best way to avoid danger was to be fully prepared to meet it, and therefore each man took his regular tour of duty. I had the pleasure, on our third day out, of seeing for the first time the young mallard duckling.

About 12 M. we camped on top of a high ridge and found spread out at our feet the bed of a lake, of several acres in area, covered with ducks. We had no shot gun, but taking my rifle, thought I might get some meat (which we needed). Approaching the lake closely I found the rushes and grass filled with little ducklings swimming around and trying their wings. Some could rise from the water a short distance; others had seemingly just hatched. It was a most interesting sight, even the old ducks being very tame. I presume they had never been shot at.

I do not think that region of country very good for game, except it be wild fowl, although we saw quite a number of antelope and a few deer. Saw some prairie chickens, and large numbers of plover and curlew; but the Indians have depleted that whole region of all the larger animals. The country is very beautiful, well watered, abounding in luxuriant grass, bottoms of the creeks filled with cottonwood and willow, and is splendidly adapted for stock raising and herding, the rolling nature of its surface affording natural drainage. After traveling some eighty miles westward from the river, finding ourselves too near Bad River, with its bad lands and gulches, we bore south some ten miles toward the White River, finding once more the same beautiful rolling prairie that was the distinguishing feature of the first part of our route, and on the fifth day set our faces toward the Missouri River, and Saturday night pitched our tent near Camp Grant once more.

Sunday morning found us early astir, and while preparing breakfast, four ponies and a mule, with saddle and bridle on, came into camp. We caught the mule and one of the ponies; the others evaded our utmost efforts to make them captive. We debated long the propriety of retaining the estrays, thinking they might belong to some hovering band of redskins, who if they followed up the trail and found them in our possession might assume that we had stolen them, and, knowing Mr. Lo was not susceptible to reason or argument, felt uncertain as to what was best in the premises; but finally it was concluded to retain the captured, and drive the others into Pierre. We crossed Antelope Creek, soon struck an old travies trail leading over the bluffs and alkali lands, reached Bad River, which we forded, and got to Ft. Pierre early in the afternoon, thoroughly tired out with a week's steady tramp, and soon found owners for our ponies. We camped that night near the bluffs, but found sleep nearly out of the question, because of the clouds of mousquitoes that arose from the grass as the sun descended. We broke camp very early Monday morning, exchanged our heavy wagon for a light one, got rid of all superfluous baggage, and struck out over the bottom lands of the Missouri River for Chantier Creek, which we reached after a rapid drive about noon. Some ten miles from Pierre, Nimrod sprang from the wagon and dashed like a madman after some object running in the grass. The cry was raised "A prairie dog." The driver, our military friend and the writer all joined in the chase, finally securing the frightened little fellow under a hunting cap (after much ground and lofty tumbling) uninjured.

Chantier (as we named her) was soon securely cooped up in a cracker-box, and, in imagination, already the pet of a little lady in Yankton. But, alas for human expectations! that night she cut her way out of her prison, preferring, evidently, old associations to new.

Chantier Creek possessed anything but agreeable recollections to our worthy Nimrod, as a few weeks previous to our visit, a gentleman in his employ, while guarding some goods landed from a passing steamer, was shot and instantly killed by the Indians within twenty feet of the spot where we ate our dinners, and the very rascals who did it, as we firmly believe, were camped within plain sight of our camp fire as we ate.

I think we all experienced a feeling of relief when we once more stood on top of the bluffs out of reach of the murdering devils.

That night we camped on Willow Creek, on the Black Hills road, returning to Pierre next day.

The ride from Ft. Pierre to Yankton on our return, a distance of over two hundred and fifty miles, while devoid of special incident, was one never to be forgotten. Most of the way through Indian reservations, stopping at ranches, some good, others bad, still others execrable. Noting the marked difference between the condition of the late hostiles at Yankton Agency and elsewhere, and those long since gathered together at Fort Thompson under the care of Dr. Livingston, and at Yankton, White Swan, etc., under Major Gassman; contrasting the painted, blanketed, and much decorated "big Indian" with a naked sabre in his hand, stalking around with an air of supreme contempt for the whole white race, and the Christian Indians gathered at the chapel at Yankton Agency, clothed in garments like unto ours, we began to realize the fact that the Indian problem was being rapidly worked out, and the solution of the whole question in the near future.

We arrived in Yankton Tuesday about noon after a ride (exclusive of that by steamer) of over five hundred miles, sunburned to the color of Indians, but hardy and healthy, and ready to take up again the everyday cares of life.

Readers of the FOREST AND STREAM weary of the dreary round of duties and business troubles, come out here early in autumn and I promise to show you a country, within a few hours' ride of this city, abounding in game. *Nature* has done everything for the comfort of man. Our rivers and lakes abound in fish. The prairies teem with chickens, plover and curlew, and the autumnal flight of wild fowl annually fills the air with the cry of the wild goose, brant and duck, affording splendid sport to lovers of the rod and gun.

Yankton, Dacotah Ter., June 28, 1877. I. E. W.

TROUT STREAMS OF THE AROOSTOOK.

BOSTON, July 4, 1877.

EDITOR FOREST AND STREAM:

I left Presque Isle, Maine, May 18, by stage to Ashland, twenty-four miles, fare $1.50; hotel kept by Mrs. Smith, and the last public house on the route north. Good table, expense $1 per day. Next morning by stage to Portage Lake, ten miles, fare 75 cents. This was my objective point, and a more clear and beautiful body of water never nestled in the wilderness. That afternoon found me on its pebbly beach to test the largess of my luck, but not a nibble did I get till the sun hung low in the horizon. Then, at once, the fun came fast and furious, and nine trout, weighing thirteen pounds, were landed in a few minutes, and—must I tell it—baited with a piece of salt pork! That, or a piece of chub, is the only lure till the water becomes warm; until then the trout lie around the shores. Later, when they assemble at the mouths of the cool brooks and in the thoroughfares, they take the fly greedily, any and all colors. So little known is this region that very few come here to fish; so few, that there is no professional guide nor even a boat at all times, and but four families living in sight of the lake. Thomas West, living on the west shore about a mile from the foot of the lake, a farmer and hunter, has two grown-up sons who are familiar with the whole region, and if not pressed by farm work could be hired at a low price; but they have no boat, except a small dug-out. For a party of two or more, a batteau should be engaged at Ashland, where ordinary supplies can be had at the store of J. T. Mooers, whom I would recommend to parties to correspond with. Portage Lake is five miles long and connects with thoroughfares and several other lakes with St. John's River, some 50 miles; all a wilderness, not even a single farm, but here and there log houses used in winter by lumbermen, the woods full of caribou, moose and bears; and I can conceive of no greater enjoyment than to be one of a party to leisurely make the tour after the flies are subdued, say the first or middle of August. My informant, who has several times been over the route, says at that season the thoroughfares are literally swarming with trout at the mouths of the brooks. He relates that a small party from an Eastern city came style in there a few years since, and commenced seining them and putting them up in cans for a business. A few backwoodsmen made them a visit, broke up the business in its infancy and confiscated their effects, trout and all. Owing to illness, my tarry was brief; but the taking of fifty-nine trout, weighing near seventy pounds—the boss scaling 4 lbs. 2 ozs.—was some compensation. These trout are more slender in form and lighter-colored externally than our mountain fish, but the meat is very sweet, rich-colored, though a little dry; and on the rod they are as gamy as the best.

After reaching Ashland, which I should state is on the beautiful Aroostook, my route lay inland on the old Mattawankeag Road. At Masardis, ten miles from Ashland, we again strike the Aroostook at its junction with the St. Croix. Thirty miles from here up the Aroostook is a chain of four lakes, called Munshungan, all wilderness, and seldom visited except by lumbermen. Here, too, the waters are alive with trout, and the woods with bear, moose and caribou. This I learned from the stage driver, C. B. Canney, an old lumberman, and familiar with the whole region between Mattawankeag and Fort Kent, 95 miles. Charles G. Quincy, landlord of hotel, would answer correspondents, and a batteau could generally be found there. To reach there, go up by stage from Mattawankeag, two days ride, 72 miles, fare $5.50. The next day I reached Patten, going through the town of Rockybeny, the road passing within two miles of the lake of that name, mentioned in my first letter. This lake is, by all odds, the place to visit if one has but little time and does not care to go very far. To reach it, leave cars at Mattawaukeag on European and North American railroad, thence thirty-eight miles by daily stage; fare $2.50. Stop at Patten House, kept by that capital fellow, C. L. Hackett, whose livery team will take you over the fourteen miles to lake in quick time over a fine road, through as beautiful a country as lies outdoors. Not many visit the lake, and fishing is as good as can be found farther off (vide the string of 11, weighing 42 lbs., run by me at Houlton on my way up). Parties contemplating this trip should write in advance to Hackett; fare from Bangor to Mattawaukeag, $2.60. CORP. LOT WARFIELD.

Fish Culture.

ABSTRACT OF THE REPORT OF THE FISH COMMISSIONERS OF NEW HAMPSHIRE, JUNE SESSION, 1877.

WE are indebted to Mr. Samuel Webber for a copy of this interesting report. The labors of past commissioners in restocking the waters of the State have been attended with such success that the present board would recommend a continuance of the work, exercising at the same time due caution that fish be not introduced into waters where they will destroy more valuable varieties. And, in order that the restocking may be prosecuted more intelligently, the board have prepared a list of the lakes and ponds of the State, with their characteristics, as a basis for operations, and propose, so far as is in their power, to stock them with the most suitable varieties of valuable fish in due season. The shad and salmon, once abundant in all the rivers flowing from the State to the seaboard, have been of late years debarred from returning to these waters by the impassable dams which have been built in Maine and Massachusetts. One very important branch of the duties of the commissioners, therefore, has been the effort to induce the Commissioners of Massachusetts to have suitable fishways built at Lowell and Lawrence on the Merrimack, and at Holyoke and Montague on the Connecticut, by which those valuable fish might be able to return to their former spawning-grounds.

The Commissioners of Massachusetts have shown the utmost zeal in the matter, and have, during the past season, rebuilt the fishway at Lawrence in a manner which seemed to be satisfactory; and, in accordance with their wishes, notice has been given to the owners of mill-dams at Nashua to construct suitable ways by which the salmon could return to the Nashua River, a large portion of the head waters of which are in Massachusetts.

Recognizing the fact that salmon and other fish will return to spawn to their own breeding grounds, the Commissioners for Massachusetts have placed 40,000 young salmon in the head waters of the Nashua River, and have assisted in restocking the Pemigewasset with eminent success, if we can judge from the letters and other accounts received of the abundance of salmon "*parr*" in the higher waters of the latter river. They have also hatched the last season, without charge, 100,000 young California salmon, which Mr. Powers, of the board, has placed in the Pemigewasset and Baker's rivers.

One of the board met the Commissioners for Massachusetts and Connecticut in Boston in January, and the Massachusetts Commissioners gave him assurance that a proper fishway would be completed this season at Montague on the Connecticut; and it was decided, if the U. S. Commissioners succeeded in providing the commission with California spawn this year, that 100,000 young fish would be placed in the head waters of the Connecticut next winter.

There have been procured from Mr. C. G. Atkins, of Maine, through Prof. Baird, U. S. Commissioner, five thousand eggs of the land-locked salmon, which Mr. Brackett, of the Massachusetts Commission, has hatched at the Massachusetts hatching-house, at Winchester, and which have been distributed in suitable waters in the counties of Cheshire, Sullivan, Grafton, Strafford and Carroll, selecting for the purpose natural trout ponds.

Dr. Fletcher, of Concord, State Commissioner, introduced this species into Newfound Lake, in Bristol, in 1866, and about the same time placed some in Sunapee Lake. Some were caught last season in Newfound Lake, according to the description given of them by the fishermen, who did not know what they were; but of the 45 put into Sunapee, 43 are said to have been *speared* the next autumn on their spawning beds, in one of the brooks flowing into the lake.

The introduction of black bass seems to have been a success. Sunapee, and some of the lakes on the eastern border of the State, are well stocked, and there is a fair supply in Lake Massabesic; but the habit of the fish is essentially migratory, and their fondness for swift water has caused them to escape from Sunapee and Massabesic in great numbers, so that they are fast becoming common in the Merrimack and Connecticut rivers.

It is proposed to introduce, at the proper seasons, the blue-backed trout of the Rangeley lakes, the pike, perch, the Michigan grayling, the white perch of Maine and Massachusetts, and the whitefish of the Western lakes.

The commission recommends a revision of the laws relating to inland fisheries, and their condensation into a simple and intelligible form; and with that view have prepared an abstract of the laws as they now stand, as accurately as they could compile them. They also advise the passage of an act prohibiting the catching, or having in possession, young salmon, known as "*parr*" or "*smolts*," at any time, and also of black bass less than nine (9) inches in length, and of brook trout less than five (5) inches long.

SHAD CULTURE.—*This Season's Work on the Hudson.*—Mr. Monroe A. Green with his corps of assistants has been engaged in shad culture since May 17th. The total number of shad hatched this year was 4,676,000, of which 3,676,000 were hatched back of Shad Island, ten miles below Albany, and 1,000,000 near Catskill. This is an increase of 2,859,000 over the hatching of last year. Of the above number all were turned into the Hudson with the exception of 80,000 which were deposited in Black River, a tributary to Lake Ontario. The force have had excellent success this year in obtaining melters, or male shad, which are often very difficult to obtain. The fish are all taken at night between dusk and 1 o'clock in the morning, on the spawning beds on the rocks and gravel, near the shore. A somewhat singular fact is that during ten years operations a "ripe" fish has never been taken after 1 o'clock, nor have but two ever been taken during the day time.

Mr. G. reports very heavy catches this season on the Hudson by the fishermen, the fish also averaging larger than usual. A great many of the progeny of the cross between the female shad and the male herring have been taken, which, although not equal to the shad, are far superior to the herring, and prove an excellent market fish. Last year about 20,000 salmon trout were put in the Hudson, of which a few have been caught by the fishermen this year.

The fishermen continue to take fish in and out of season unmolested, so that there is practically no close season. The wonder is that the force of the State Hatchery can ever get the amount of spawners they do after their running the fishermen's gauntlet as they are obliged to do.

The price of shad at Albany ranged this year from $8 to $10 a hundred. When Mr. Green began hatching shad the fishmongers laughed at him, and vowed to eat all the shad he could hatch. The other day, in going through the market, one of them called out, "Green, stop this hatching; the fish are too plenty; it don't pay." On being reminded of the vow the man said the fishmen "gave it up; they were beat."—*Rochester Express.*

—The State of Pennsylvania has purchased Seth Weeks' fish-hatchery at Corry, with its appurtenances—dwelling-houses, hatching-house, stock of fish (280,800 salmon and trout), nine and a half acres of land, and inexhaustible springs of pure water—for $2,000.

OUR BARNEGAT CORRESPONDENT writes: "J. R. Shotwell, of the New Jersey Fish Commission, accompanied by Gen. John A. Hall (Gov. Beadle's private secretary) and three members of the New York Legislature, have been spending a few days on our waters investigating the fishing grounds, listening to those most conversant with the importance of fish protection, etc. Your correspondent meeting them at the Ashley House, Barnegat Inlet, found the Commissioner a very pleasant gentlemen, and one entirely devoted to his duties. His suggestions in regard to more effective laws benefiting the fishing interest, find general favor with our inhabitants—for instance: in winter, parties living at the head of our bay, in hauling seines under the ice, leave wagon loads of unmarketable fish—perch and bass—on the shore to perish. Commissioner Shotwell advises a law regulating the size of mesh in order to avoid this wholesale slaughter; also advises legal enactments prohibiting the use of seines during the months of May and June, when large weakfish are running in the bay to spawn. Attention was called to the violation of the present laws, which is to be remedied at once. It now remains with our citizens to assist the Commission. Parties sent to look after the fishing interest looked out more for votes than fish. We received but one benefit from the laws passed two years ago, that of stopping the use of pound nets. Now let us petition for the suggestions of the Commissioner, and go still further, to prohibit the hauling of all seines in our bay during the summer months, which, benefiting only some dozen people, gluts the market, destroys the laboring man's hand fishing, and the pleasure of hundreds of visitors, whose moneys are annually scattered through our villages. Something must be done at once, or the far-famed fishing grounds of Barnegat will meet with the same fate as other bays, which ranked equally as high years ago.

BEEF LIVER FOR FISH FOOD.—Messrs. Fenn & Clark, Pequonock, Conn, have met with quite a loss in their fish works. Some time since they ran short of beef's liver for feeding, and the butcher who supplied them sent to Springfield to procure some. Soon after feeding the liver obtained there, the fish began to die. They saved but a few thousand out of some eighty thousand hatched, and these, it seemed, had not from some cause eaten much of the new food. They put all but one thousand in the brook that supplies the trout works with water, as an experiment, and it is thought that they are doing well, caring for themselves. They will probably save five or six thousand of them. Though they are somewhat discouraged, they intend to try again.

Natural History.

THE SPARROWS AGAIN.

WE are under obligations to our numerous observers for notes upon the European sparrow, which have assumed such proportions that we are forced to summarize the information at the risk of offending the writers. A gentlemen in Philadelphia writes:

The disappearance of our native birds is easily accounted for, as they seek other quarters to rear their young, because the food they have been accustomed to gather has been consumed by the sparrows; and, being migratory, formerly had a full supply during their short stay in our cities. I know such birds are more numerous in the country adjacent to Philadelphia.

The same writer corroborates others as to the improvement in the appearance of the shade trees since the advent of the little Saxon. W. Wellicott, of this city, remarks:

It is not so many years but that I distinctly remember when the Mayor recommended the cutting down of all shade trees, the ailanthus alone excepted, for the purpose of getting rid of the worms. At this time it seemed as if this vigorous treatment was the only means by which the ravages of the spinning caterpillar could be stopped. Farmers' clubs and agricultural associations had given the subject their most profound thought and solemn consideration. They suggested various "cure-alls," but all proved impotent; but to-day the trees which shade our avenues are clothed with their full summer foliage, filling the eye with their grace and beauty. For this we are indebted to the English sparrows. Formerly, to walk our streets was a perilous feat; to-day it is a "joy and gladness." That the sparrows are so belligerent as to suffer no other bird to dwell in the neighborhood is mere assertion. I know the contrary from actual experience.

Per contra, a correspondent at Jamaica Plains, Mass., asserts that having dissected some thirty or forty birds in all, no signs of worms or insects injurious to vegetation were found in any case; only grain and refuse. He says:

There never was a more marked exhibition of their utter inability to rid us of our dreaded canker-worm than hereabouts—elms full of bird houses and birds,-but leaves all eaten and gone. The sparrows are less musical and more quarrelsome than other birds, and we pray that they may at least be limited.

Dr. Coues, in the *Field and Forest* for May, remarks that:

Passer domesticus, the nuisance, was introduced some years after our list appeared, and now these rowdy little *gamins* squeak and fight all through the city to our great disgust. The introduction of these exotics clutters up ornithology in a way that a student of geographical distribution may deplore, and interferes decidedly with the "balance of power" among the native species. Whatever may be said to the contrary notwithstanding, these sparrows *do* molest, harass, drive off, and otherwise maltreat and forcibly eject and attempt to destroy various kinds of native birds, which are thereby deprived of certain inalienable rights to life, liberty and the pursuit of happiness after their own fashion.

We understand that in Boston, where the sparrows are extremely numerous, the butcher birds (*Collurio borealis*) lately appeared in force and feasted upon the birds, until the legislators, or whoever had authority in the matter, ordered them to be systematically destroyed, thus thwarting, with characteristic human short-sightedness, the first efforts Nature made to readjust the disturbed balance of her forces.

We cannot but think our correspondents lose sight of the main points of the case in their zeal to uphold their own side of the argument. There are few birds which are not more or less destructive to fruits and cereals, yet all, or nearly all, are of incalculable benefit in destroying noxious insects. We give below an extract from a letter published in the New York *Times*, which presents views somewhat different from those heretofore published:

"Let me confess that from the first I have made the sparrows a study, and it really reflects upon my common sense when I think how often I have glorified them in the papers, prettily described their winning ways, their little lives and loves, and in winter time have pathetically implored the public to remember the poor birds and scatter crumbs for them in the streets and squares. I've done with 'em from this day. Now, don't think I am coming down on 'em with the stale story about their driving away all the beautiful birds and all the song-birds that used to make our lawns and woods, our squares and parks, so bright and musical. That is a matter to be settled between the sparrows and the "other birds" that have been so summarily "counted out." I'm particularly down on the sparrows because they are infernal little frauds. The original and only reason why they were imported at all was to rid us of the terrible worm-pest that destroyed the foliage of our trees and persisted in dropping down on us, without warning, like so many country cousins. The sparrows were to stop all this. As worm-destroyers they were asserted to be ahead of any patent medicine that children ever cried for. But alas! Do you remember the ancient anecdote about the introduction of bees in the West Indies? The bees went to work and thriftily laid in their winter store of honey. But when they found out there was no winter to provide for, and that flowers bloomed the year round, they spent their leisure days in and about the sugar houses, and amused themselves by stinging "niggers." So with our sparrows. They very soon discovered that they could get their "grub" without taking the trouble to pick up common worms. I have passed a good part of the last five fair Sundays in Central Park, and have noticed more particularly this year than before how very common are the caterpillars and how comparatively scarce are the sparrows. In the most rural and secluded spots, like the Ramble, just where you would suppose a bird "as is

a bird" would particularly delight to dwell, there is scarcely a sparrow to be seen. In the whole Park there is not more than a regiment or two, merely detailed to drive away other more delightful and in every way more desirable birds. Those that *are* there stick close to the lunch baskets of the daily picknickers, hang around Stetson's, the casino, the dairy, the children's play-house, and other localities where there are choice crumb and sugar candy pickings. Down town, in Madison and Union squares, where nurses and children most do congregate, and in up-town streets, where the tramps beg at the area doors and immediately and indignantly sling the bestowed bread and butter into the gutter—these are the chosen spots for the sparrows, and they fairly haunt the school houses at lunch time. The lazy little louts! Catch them in the way of any work, such as worm destroying, when they can stuff themselves with cake crumbs, fragments of French rolls, and like luxuries! And then they do "increase and multiply" so preposterously beyond even the most liberal construction of the Scriptural injunction, and make such a confounded twittering under the bedroom windows at early morning hours—such a noise, indeed, as almost to drown the Comanche yell of the milkman and the fierce notes of the fish, horn. Oh! it is getting to be too "intolerable, and not to be endured." I don't suggest a summary and indiscriminate squelching of the sparrow nuisance, but some plan for their rapid reduction in respect of numbers would be desirable."

Mr. Brewer believes the sparrow to have been of incalculable benefit to the parks and gardens of his city. He deprecates the agitation of the starling question, begging to substitute that bird for the sparrow. He says:

Just now in Europe, where they ought to know better, in many places the starling is an outlaw quite as much as the sparrow. You surely have not forgotten when the latter were introduced how grateful the residents of our cities were when the measuring worm disappeared as if before a magician's wand. A few years have flown, and now all our gratitude has flown! Forgetful that what has been once will be again without the sparrow; that the seeds of the same nuisance lurk all around us to surely reappear if they have but a ghost of a chance to reproduce, and ungrateful for what we owe the sparrow, like my *experienced* townsman, Mr. Minot, they tell us these birds "are practically useless and are no longer needed." Such will be the fate of the starling with the unthinking, the ungrateful and the short-sighted; and such is at present its hard lot in Southern Germany, in Austria, in Italy, and even in some parts of intelligent Switzerland, that it is hunted down as a destroyer of grain.

Living as I do on the edge of Boston Common, with abundant opportunity daily to see and judge for myself, I prefer to trust my own eyes and ears than the *ipse dixit*, the inference, deductions or opinions of any other man. So, when I am told that a sparrow has been seen to attack a blue bird, I may be pardoned for remembering that in all my experience, and in various instances, the blue bird has ever been the aggressor. There are more native birds, especially robins and blue birds, and more kinds on Boston Common this year (June, 1877), than I have ever seen before.

Mr. B. also cites several incidents, well known in Boston, of the blue birds taking forcible possession of the nests of sparrows and ejecting the young, which are verified by the parties on whose premises the actions took place. He also calls our attention to the fact that when this subject was opened we asked for *evidence;* while much that has been written is but mere assertion or opinion, neither of which throw any light upon the question at issue, but rather tends to obscure and puts to one side the goal which is so desirable to reach.

Mr. John Galvin, superintendent of public parks and squares of Boston, corroborates Mr. Brewer as to both starling and sparrow. Of the latter he says that it has accomplished "all and even more than we had any right to expect from it. We are not at all sure that the new comers, the starlings, even if they succeed in maintaining a foothold in this country, which is very doubtful, will not be put under the ban like all of our own most useful native birds."

THE FAUNA OF MICHIGAN.

BY ARCHER.

(Continued).

ORDER NATORES.

FAMILY ANATIDÆ.

GENUS CYGNUS.

Cygnus americanus. Sharp. American Swan.

Cygnus buccinator. Rich. Trumpeter Swan. Specimens are met with occasionally on St. Clair Flats.

GENUS ANSER.

Anser hyperboreus. Pall. Snow Goose.

Anser gambeli. Hart. White-fronted or Laughing Goose.

(?) *Anser frontalis.* Bd. If this be a species, as Baird supposes, it is common.

GENUS BERNICLA.

Bernicla canadensis. Boie. Canada Goose.

Bernicla hutchinsii. Bonap. Hutchins Goose.

Bernicla brenta. Steph. Brant. Notwithstanding all that has been said to prove that the brant does not frequent the great lakes and rivers, I must give evidence to the contrary, having seen several specimens. One shot in Samia Bay, two from St. Clair Flats, two from Torch Lake, and myself captured a wounded one near Iowa Point, Kan., in the Missouri, April 23, 1876.

SUB-FAMILY ANATINÆ.

GENUS ANAS.

Anas boschas. Linn. Mallard.

Anas obscura, Gm. Dusky Duck.

GENUS DAFILA.

Dafila acuta. Jenyns. Pintail.

GENUS NETTION.

Nettion carolinensis. Bd. Green-Winged Teal.

GENUS QUERQUEDULA.

Querquedula discors. Steph. Blue-Winged Teal.

GENUS SPATULA.

Spatula clypeata. Boie. Spoonbill; Shoveller.

GENUS CHAULELASMUS.

Chaulelasmus streperus. Gray. Gray Duck; Gadwall.

GENUS MARECA.

Mareca americana. Steph. Baldpate; Widgeon.

GENUS AIX.

? *sponsa.* Boie. Summer Duck; Wood Duck.

SUB-FAMILY FULIGULINÆ.

GENUS FULIX.

Fulix marila. Bd. Scaup Duck.

Fulix collaris. Bd. Ring-Necked Duck.

Fulix affinis. Bd. Little Blackhead; Bluebill.

GENUS AYTHYA.

Aythya americana. Bon. Red-Head Duck.

Aythya vallisneria. Bon. Canvas-back Duck.

GENUS BUCEPHALA.

Bucephala islandica. Bd. Barrow's Golden Eye. Common on St. Clair Flats and Sarnia Bay in winter.

Bucephala albeola. Bd. Butter Ball; Dipper; Buffle Head.

Bucephala americana. Bd. Golden Eye; Whistle Wing.

GENUS HARELDA.

Harelda glacialis. Leach. Old Wife; Long-tailed Duck.

GENUS OIDEMIA.

Oidemia bimaculata. Bd. Lake Huron Scoter.

GENUS CAMPTOLÆMUS.

Camptolæmus labradorius. Bd. Labrador Duck. Probably an accidental visitor, as one or two specimens have been seen in Georgian Bay; hence I add it to the list.

GENUS ERISMATURA.

Erismatura rubida. Bonap. Ruddy Duck.

GENUS MERGUS.

Mergus americanus Cass. Sheldrake, Goosander. Fish Duck.

Mergus serrator. Linn. Red-breasted Merganser.

GENUS LOPHODYTES.

Lophodytes cucullatus. Reich. Hooded Merganser.

FAMILY LARIDÆ.

GENUS LARUS.

Larus glaucus. Brunn. Glaucous Gull. Burgomaster.

Larus argentatus. Brunn. Herring Gull.

Larus delawarensis. Ord. Ring-billed Gull.

GENUS CHROICOCEPHALUS.

Croicocephalus atricilla. Linn. Laughing Gull.

Croicocephalus franklinii. Franklin's Rosy Gull. Common in Northern Wisconsin and adjoining parts of Michigan at certain seasons. Seems to be migratory.

Croicocephalus philadelphia. Law. Bonapart's Gull.

GENUS RISSA.

Rissa tridactylus. Bonap. Kittiwake Gull. Frequent in winter on Lake Huron, common around the Straits of Mackinac.

GENUS STERNA.

Sterna wilsoni. Bonap. Wilson's Tern.

Sterna frenata. Gamb. Least Tern.

Sterna fosteri. Nutt. Forster's Tern. On authority of late Dr. G. B. Wilson, F. S. S.

GENUS HYDROCHELIDON.

Hydrochelidon plumbea. Law. Black or Short-tailed Tern. Very abundant in marshes around Saginaw Bay, where it breeds.

FAMILY PELECANIDÆ.

GENUS PELECANUS.

Pelecanus erythrorhynchus. Gmel. Rough-billed Pelican. A specimen was killed a few years since in Sarnia Bay. The only one known. Is now in museum of the University, I believe.

FAMILY COLYMBIDÆ.

GENUS COLYMBUS.

Colymbus torquatus. Brnen. Loon. Great Northern Diver.

Colymbus arcticus. Linn. Black-throated Diver. Not uncommon throughout the State. Have seen it in Eaton, Calhoun, Antrim, Sanilac, Lapeer and St. Clair Counties.

Colymbus septentrionalis. Linn. Red-throated Diver.

FAMILY PODICIPIDÆ.

GENUS PODICEPS.

Podiceps grisegena. Gray. Red-necked Grebe.

Podiceps cristatus. Lath. Crested Grebe.

Podiceps cornutus. Lath. Horned Grebe.

GENUS PODILYMBUS.

Podilymbus podiceps. Law. Pied-bill Grebe.

(To be continued.)

EEL SPAWN HYBRIDS, ETC.

NEW HAVEN, Conn., July 2, 1877.

EDITOR FOREST AND STREAM:

In the Natural History Department of FOREST AND STREAM, of June 21, "R. C. B." and "Jones" each speak of having found spawn in eels. Are they certain that the spawn was not found in the stomach? I have had two eels sent to me with the spawn of *other fish* in their stomachs, which had been cut through while the eels were being dressed, and the fishermen, knowing little about the anatomy of eels, had supposed this spawn to belong to them. "R. C. B." will please note that lampreys are oviparous, but that they are not eels at all, agreeing with that family in only one respect, *i. e.*, in having a long body.

If Geo. W. Chase's cat brought forth hybrids, resulting from the union of the cat and the raccoon, it is certainly a most wonderful event, and the greatest pains should be taken to preserve the hybrids, dead or alive. On the whole it is highly improbable that the hybrids are from the raccoon, but they may possibly result from the union of the cat and the wild cat (*Lynx rufus*). It is very rarely that ever two *species* can produce a hybrid, but if these two *families* have given one, consider the effect upon Mr. Darwin should he hear of it. We have in the classification of animals:

1. *Remote species,* in which hybrids are never produced.

2. *Allied species,* which produce an unfertile offspring.

3. *Proximate species,* which produce with each other a fertile offspring.

The "wet weather" birds of R. G. Carter (in the same number of FOREST AND STREAM) are undoubtedly terns, but of what species it is difficult to say from his description. R. T. M.

[In rearing dogs, breeders often find that different varieties will assimilate in features and characteristics by being left or kept in close contact with each other, although having no absolute intercourse, and it is possible that the young of the cat referred to (which was kept in the same house with the raccoon) acquired some of the features of their mother's companion.—ED.]

THE TAURUP OR GREAT TURTLE.—Bad as are his habits (the pickerel), however, he is not the only nor the worst enemy of the poor, pestered trout. The great turtle, the taurup or torper of the aborigines, the snapping turtle of more refined dialects, is a deadlier foe, for he takes the mature fish, not the mere fingerlings, which satisfy the pickerel.

The taurup is a horrible creature, one of the antediluvians, cruelty in its eye, strength in its muscle, imperviousness in its shell, and neither mercy nor gentleness in its heart or bowels. With equal independence it lives on land or in water; with equal courage it defends itself from man or beast. One of forty, fifty or even sixty pounds, to which weight they often attain, is no mean antagonist; when captured and drawn into the boat, or cornered, it turns, and rising on its black and wrinkled legs, not crawling prone like an ordinary turtle, but with head extended, little yellow eyes glittering, and sharp beak ready for the contest, it advances defiant of all created things. Then it is no pleasant object, nor agreeable contest within the narrow limits of an ordinary boat, and the captor at such a moment wishes he had done something else, and been a good way off instead of being just in that particular spot at that moment of time. I remember one I captured, of quite sixty pounds weight—dragging him ashore by the tail, and then chopping his head half off with an ax—which cleared the kitchen quicker than the "Ole folks, young folks," when we undertook to put him into the wash-boiler of boiling water, with a view to turtle soup; and another which moved its legs twenty-four hours after it was not only decapitated, but disemboweled. What an appealing spectacle for the Society for the Prevention of Cruelty to Animals, and the other weak sentimentalists in general! These fellows are dangerous to deal with, and must be approached with care; their bite is terrible, their jaws never relaxing till the piece seized upon comes out, and they are possessed of a quickness of motion which no one would expect from their heavy, awkward shape. They lay their eggs in the sand during the warm days of early June, depositing about thirty or forty, and scratching out a hole about half the depth of their bodies for the purpose. The eggs are round, nearly an inch in diameter, and of a delicate orange color, the shell being exceedingly thin like transparent paper, and they are left to hatch of themselves under the heat of the summer's sun. Snapping turtles destroy and devour some of our finest trout, approaching them for that purpose from below, rising slowly from the bottom, and looking more like some black, rough-barked log than a living creature, till they are near enough to dart out their long neck and big head. The trout sometimes escapes, but carries with him thereafter the clear imprint of the two horny jaws on either side of his abdomen.—*Robert B. Roosevelt, in Appleton's Journal for June.*

RATS IN POSSESSION.—The county of Saline, Mo., and a part of Lafayette may almost be said to be in possession of the rats, so numerous and destructive have they become. They not only eat or waste the corn by hundreds of bushels, but they also prey upon small animals, such as pigs, ducks, chickens, etc. Young pigs are literally gobbled up. The loose, deep, calcarious soil, peculiar to the region, affords a good harbor for them. The local paper says: "It looks as if all the rats of the great Mississippi Valley had congregated here, and as this is the third year of their sojourn among us we begin to fear that they have brought along their kith and kindred, and intend to stay. They are here unquestionably by the millions."

PUGILISTIC BEAVERS.—In Arkansas the beavers show fight when they are captured. The Butler *Herald* says:

Mr. R. Monifort told us yesterday of a strange fight. On the 30th of April last, Mr. Jackson Kirksey, who keeps Mr. W. H. Ficklin's mill, in this county, was standing in the door of the mill-house when he saw a large beaver on the bank of the Patsalaga creek. He seized a pole and ran between the creek and the beaver, expecting the beaver to make for the water. To his astonishment the animal turned fiercely on him, when a regular fight for life ensued. Mr. Kirksey broke his pole into three pieces during the fight, but finally killed the beaver, which was a very large one, weighing fifty pounds.

THE SINGING SEA SHELL.—When the sea shell is held up to the ear there is a peculiar vibratory noise which children assure each other is the roar of the sea, however distant they may be from it. Philosophically investigated the peculiar sound thus recognized is a phenomenon that has puzzled scholars for a long time. The experiment is easily made by simply pressing a spiral over the cerebra of either ear. If a large shell, the sound is very much like that of a far-off cataract. Now, what causes it? Every muscle in the body is in a state of tension. Some are more on the stretch than others, and particularly those of the finger. It is conceded that the vibration of the fibers of those in the fingers being communicated to the shell, it propagates and intensifies them as the hollow body of a violin does the vibration of its strings, and thus the accoustic nerve receives the sonorous expressions. Muscles of the leg below the knee are said to vibrate in the same way, and if conducted to the car produce the same result.—*Boston Watchman.*

ARRIVALS AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JUNE 30, 1877: Two leopards (*Felis leopardus*) bred in the menagerie; two fawns (*Cariacus virginianus*), bred in the menagerie; two crested ground parrakeets (*Calopsitta novehollandiæ*), presented by Mr. Elie Charlier, New York City; one mottled owl (*Scops asio*), presented by Mr. H. A. Wheeler, New Brighton, S. I.; one bald eagle (*Haliætus leucocephalus*), presented by Hon. August Belmont, New York City; one fox-colored sparrow (*Passerella iliaca*).

W. A. CONKLIN, Director.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING TUESDAY, JULY 3.—One woodchuck, *Arctomys monax*, presented; one raccoon, *Procyon lotor*, presented; one barn owl, *Strix flammea* var. *americana*, presented; three alligators, *Alligator mississippiensis*, presented; two great-horned owls, *Bubo virginianus*, presented; one red-tailed hawk, *Buteo borealis*, presented.

Very truly, ARTHUR E. BROWN, Gen. Supt.

NEW YORK AQUARIUM.—List of animals and fishes received at the Aquarium for the past week: German acidians, two-horned cow, fishes from Bermuda, spotted bird, Georgia red snappers, 15 sharks, 12 seals, 2 sea lions, king fisher, 20 German salamanders, balloon fishes, 40 blow fishes, 6 hell benders; and at the Seaside Aquarium, a large collection of tropical fishes, among which are angel, triangular, cow fishes, file fishes, and the various kinds natives of those waters, together with a number of European animals and birds.

"Experience wounded is the school
Where man learns piercing wisdom out of smart,"

writes an old poet, Lord Brook. This is true in cases where people realize the essential impurity of most of the scented toilet soaps. Let them buy B. T. Babbitt's Toilet Soap, and there will be no possibility of mistake. It is balm and delight alike for babes and grown people.—Adv.

To DISINFECT ROOMS.—The disinfection of a room is not complete unless the walls have been thoroughly cleansed. If they are papered, the paper must be removed and the surface beneath carefully scraped and washed. If the walls are painted, they should be washed with caustic soda. The ceiling should also be subjected to a similar treatment.

Woodland, Farm and Garden.

A Small Hardy Fernery.—There are few country seats or small gardens, where the lover of the graceful and beautiful in nature cannot find a nook or spare corner for making a picturesque, hardy fernery. Often, if there is no better place, a space behind the bushes, and between them and the boundary fence will suffice, or if the location can be had, a shady dell, in a retired part of the grounds, will be found the most romantic, as well as best fitted for the purpose. The main point is, that in this tiny vale, a good effect may be produced without resorting to the masses of stones and rock work generally thought necessary to the cultivation of ferns. Steep banks of impossible rock are by no means necessary, on the contrary, they do not thrive so well on such structures, as in such a place as is here mentioned. They are indeed perfectly at home on lowish banks, if the soil be suitable, and there are enough rocks and stones used to keep the soil moist when needful. A more picturesque effect is secured by a few well-chosen, half-buried stones, than by the quantities of ill-chosen or ugly ones that are so frequently used. Indeed, if the choice lies between the common style of rocky fernery manufactured to order, and the level ground, it is much better to choose the latter. Judicious planting will conceal many defects, and a few boulders cropping out, with here and there an old tree-root or stump will give the tasteful planter all the variety needful. Those of larger growth, as osmundas, struthiopteris and aspidiums, will form the back ground, crown the knolls, or form the prominent plants at the corners, while the more modest growers will find their proper location, here shaded by one of larger growth, or these more exposed to the light and air, as their characteristics require. In the hardy fernery it is too much the fashion to plant ferns alone, as if they only enjoyed such a position. There are many of our lovely native plants that are wood-haunters and shade-lovers as well as ferns, and by planting these among them a much more interesting result and a much higher beauty are produced than if ferns alone are planted. Such noble plants as cypripedium spectabile, pubescens and trillium grandiflorum thrive better in the moist free soil and the partial shade suited for ferns than in open borders. Smilacina racemosa, Solomon's seal, all our native violets, saxifrages, and anemones, lily of the valley, the lovely pyrolas, and partridge berry, "the bluets" (Houstonia), orchis spectabile, and many others of the same family, the beautiful spring beauty (Claytonia) and in fact any of our chaste and lovely spring flowers will associate beautifully with ferns and lend a high degree of interest at all seasons to this miniature garden.

Rhyncospermum Jasminoides.—The profuse flowering habit of this plant, the handsome foliage and pretty white flowers, render it still one of the best of greenhouse climbers, though it be grown in bush form with the assistance of a few stakes or a wire frame to support it. It is one of those plants from which quantities of flowers may be cut, and their appearance is wonderfully chaste and elegant in any arrangement of cut flowers. They are borne in trusses, are pure white, and agreeably perfumed—something like the lilac. It is easily propagated, and when rooted grows freely, flowering immediately. It is best planted out when employed as a climber, and soon covers a large space, but being subject to thrip, the hose or syringe must never be neglected during the summer months. Peat and loam in equal proportions mixed with some well rotted manure and sand, make a good compost for it, and, whether planted out or grown in pots, it must have good drainage.

Soot as a Manure.—To strong growing greenhouse plants, such as pelargoniums, fuchsias, roses, carnations, crysanthemums, azaleas, solanums, and many others, soot is a valuable and easily obtained stimulant. A handful of it tied in a bag and stirred in a three gallon can of water, has a marvelous effect on all the plants just named, and on many others beside. It induces vigorous growth, and adds freshness and substance to both leaf and flower. It is better to use it in small quantities and often, rather than charge the compost with more carbon than the plants can readily assimilate. For the more robust growers, especially if grown in small pots, mixture with fresh manure from the cow-shed is desirable, but this mixture should be allowed to settle before using, otherwise the grassy particles will remain on the surface of the pots, and white giving them an unsightly appearance, exclude that free aeration which all healthy roots require.

Lice on Cattle.—How am I to rid my herd—of thirty-five cows and young cattle—of lice, the lice having been introduced by purchasing stock a year ago this winter? The cattle that are in the best flesh seem to have few or none, but those that are thin lick or rub themselves, so that the hair comes off in patches. My father never had a lousy animal; either raising his own stock or purchasing where he knew them free from lice. This is a cheese factory region, and dairies are made up mostly from Western and Canada cows, and among my neighbor's cattle, I find lice the rule rather than the exception. Would feeding oil meal through the winter have a tendency to rid them of lice, or is warm weather the best time to make an outward application? B. [Washing in tobacco water or arsenic water two or three times will destroy the parasites. A thorough oiling of every animal all over, wherever the hair grows, will also destroy the lice. Any oil will do; fish oil being the cheapest is usually used. An animal covered with oil suffers if exposed to cold winds. The oil kills the eggs as well as the lice.]

VALUE OF GRASS.

Fern Bank, June 27, 1877.

Editor Forest and Stream:

In company the other day with a shrewd, practical farmer, a tenant here on Mr. Short's beautiful manor of Fern Bank, the conversation turned upon the comparative profit of growing grass for pasture and hay, and the cultivation of grain, corn and other crops requiring more labor in their production. Old Wyate, the farmer alluded to, mentioned that on one occasion he lost, by the villainous act of an incendiary, a large barn in which he had stored his winter supply of hay, and that to carry his stock through until spring he was compelled to purchase hay at $40 per ton! Such a price for hay, in the fertile and exuberant West, somewhat startled me, and on my return to the house I consulted some old files of the *American Farmer* and the *Journal of Agriculture*, and there found that good, prime timothy hay had averaged twenty dollars per ton for the last forty years! I have been both a cotton and a tobacco planter, and I am satisfied that, with the present scarcity or high price of labor, hay as a staple crop on land yielding two tons to the acre, is more profitable than any other cultivation. A timothy sward, properly managed, that is, held sacred from the hoofs of grazing animals, mowed before the formation of the seed, and annually top-dressed on the weaker spots, becomes almost perennial, and will last in full productiveness for many years; and with the aid of the mower, the tedder, the horse-rake and the hoister, the cost of hay making is reduced to a minimum.

But there are other methods of using grass, which in certain sections of the country, and more particularly in the South, will be found more profitable than any species of cultivation, and that is for grazing or pasture. The Southern people are beginning to recognize that the revolution which has swept over them has been agricultural as well as political, and the more enlightened of them are anxious to adapt themselves to the change by selling off a portion of their lands to enable themselves to cultivate the remainder; but for lack of purchasers they are compelled to bear the burden of vast estates, which, though unproductive to the owner, are yet under tribute to the tax gatherer. Under such circumstances, what is best to be done? Wool growing and sulphate of lime (plaster) I fancy will solve the problem, for I have faith in the Spanish proverb that "The foot of the sheep turns the land to gold;" and I know that away from the influences of the sea air, plaster of Paris (gypsum) liberally applied will cover almost any soil with verdure.

There are millions of acres in a half-exhausted condition, extending from the Potomac to Georgia, which may be renovated and restored to productiveness simply by grazing them with sheep, and the annual application of a bushel of gypsum to the acre. There is no known process of agriculture which will so cheaply and so thoroughly cleanse a worn-out sedgy and briary old field as the teeth of a flock of sheep, and there is no top-dressing so cheap and portable, and of such easy application as gypsum at the rate of a bushel to the acre.

Sheep are browsers, and will eat the young shoots of briars and other growths inimical to pasture lands which cattle would disdain. When not feeding, sheep will lie upon the knolls and higher points of the field where the soil is thinnest, and, unlike cattle, sheep scatter their droppings evenly over the land, and finally, should a sheep die, his pelt will remunerate the owner for his keep. There is truth in the proverb that, "A sheep never dies in debt to his owner."

It may be objected that dogs and vagrant negroes will render wool growing in the Southern States an impossibility. This may be true, if sheep are turned loose to shift for themselves, as has been the custom in those States from time immemorial; but why should sheep not be looked after as vigilantly as any other stock? Mr. Bradford, of Culpepper Co., Virginia, has been growing merino wool for upward of thirty years; and, what is more, by folding his sheep at night on the fields intended for wheat, he makes the best crops of that grain in his county; he never loses any of his, either by four or two legged rogues, because, unlike old Nat Macon of North Carolina, who stated in Congress that he would go out of his way at any time to kill a sheep, Mr. Bradford holds the sheep to be one of the most valuable of our domesticated animals, and takes care of him accordingly. The multitude of curs is certainly the greatest impediment to sheep grazing in the South. The poorer a man is (certainly where I have lived on the Blue Ridge in Virginia), the greater his retinue of curs; but all these mongrels might be taxed out of existence, if we could send to the Legislature men who would care more for the commonwealth than for votes. But while vagrant curs are destructive, sheepdogs are also their guardians and protectors, both from man and beast. We have seen flocks of thousands on the Pyrenean Mountains in Spain effectually guarded from the depredations of the large gray wolves and the bears, which are quite common in that region; and even a man who would approach one of these flocks, unaccompanied by the shepherd would be in danger of his life.

In New Mexico, abounding in coyotes, wolves and other destructive *carnivora*, large flocks are thoroughly protected by the dogs, even when the shepherd is absent for several days, as he frequently is, in search of supplies.

Parties proposing to rear sheep in the South should have recourse to the Mexican method; if they cannot procure the shepherd dog from that country, get a young puppy of any powerful and courageous breed, and before he is nine days old give him a ewe for a wet nurse. By confining her the pressure upon the udder will soon compel her to adopt the little stranger and the pair will soon become attached to each other. The dog should grow up with the sheep and know no other kindred or associates. Feed him well every night at the place where you wish the sheep to be, and he will be sure to bring them there. This training has made the Mexican shepherd dog what he is, and I don't see why it should not succeed with any other breed. F. G. S.

[We are glad that Col. Skinner has taken up this subject of wool growing at the south. Under a well conducted combination of capitalists, the mountains of the Blue Ridge might be made far more remunerative to the inhabitants than illicit distillation of whisky, which is almost the sole industry there.—Ed.]

The Vanilla Chocolates of Walter Baker & Co., Boston, are considered "par excellence." Their goods have been a century before the world, and have won the highest position over all competitors in the exhibitions of London, Paris, Vienna, etc. Sold by grocers everywhere.—Adv.

POISON IVY.

Jersey City Heights, July 5, 1877.

Editor Forest and Stream:

I was much pleased with the letter in your issue of the 28th ult. from J. B. Ames. He gives a valuable receipt for poison ivy; we want more of just such articles on woodcraft from our practical sportsmen. Now I would ask through your columns for a similar receipt for the poison of a certain alder, commonly called the *Black Alder*. I have been considerable of a ranger in the woods in different sections for thirty-five years, five of which as a surveyor and trapper, principally in the northern wilds of Wisconsin, and have never been affected by these villainous shrubs or vines; but I have a boy who is fast showing himself to be a chip of the old block in his love for nature and "nature's wood-notes wild." But his epidermis is far differently constituted from that of his sire, for he can hardly go within smelling distance of this Black Alder without coming home with his face the color of a boiled lobster and his head like a locomotive reflector. It drives the poor boy well nigh crazy, and his sufferings are excruciating. By the prompt and repeated application of carbolic acid wash the pain is alleviated after forty-eight hours—*i. e.*, two nights—of agony. Is there not some antidote known among our sportsmen more potent—that will act more effectually, that is, kill the poison sooner? If there is, in the name of humanity and the pleadings of a sportsman's sleepless wife, let us have it. Mr. Ames says he uses the wash of "Black Spotted Alder" as an antidote to the ivy. Is that the abominable alder I have reference to I wonder? and is it on the principle of the homœpathic system, "*Similia similibus curanter?*" Will a decoction of the aforesaid ivy prove beneficial to the victim of the alder? Who knows?

Jacobstaff.

[We trust the above may bring forth some suggestions from our readers. It is unlikely that poison ivy is an antidote to Black Alder, as the *vice versa* rule is seldom applicable in such cases. The great trouble is, that those who are susceptible to the ill effects of these poisons usually possess other idiosyncrasies which allow a remedy to act only in individual cases. A lotion made with wine of opium and sugar of lead—one-half ounce of the former and one drachm of the latter to pint of water—often affords speedy relief. Another excellent formula is an ointment composed of equal parts, by weight, of camphor, gum, spermaceti, salad oil, and white wax. A third is made by adding fifteen grains of dry powdered white lead, ten grains of powdered willow charcoal, one scruple of mercurial chalk, and 2 drachms of solid extract of conium to an ounce and a half of lard, making an ointment. Again, a chloroform and borax lotion is effectual.—Ed.]

The Exportation of Beef.—Who first conceived the idea of shipping beef to Europe? The business is now large and profitable. A valued correspondent, Edward C. Dawson, of New Glasgow, Nova Scotia, writes to us to say:

"Fourteen years ago when the cattle plague was bad in England, and when the Great Eastern failed in her scheme for the Paris Exhibition, I wrote to her captain, now Sir James Anderson, suggesting carrying cattle from America. As she was then just going again to try to lay the telegraph cable, he wrote, "should she fail the directors will consider your plan." As she succeeded, my cattle scheme lay dormant twelve years, but still I claim I was the first to ever think such a project would ever be carried out. The Great Eastern is, I believe, fitting out for this trade now."

Our Forests and Streams.—J. I. P., writing from Twin Lakes, Conn., remarks: "That the streams are very low, and unless something is done to hold back the snows of winter and rains of spring, not only fish but factories will be 'played out.' Instead of draining our swamps, as we are now doing, in our greed for dry land—of which we have too much—let them be flooded as reservoirs, as in the beaver-dam days, thus drowning out acres of hardhack and swamp grass, and give us once more full streams, and fish food as in the early days. Old Norfolk has begun the good work in Litchfield County by flooding Wood Creek—a swamp of hundreds of acres—and is rewarded by unlimited pickerel along the Blackberry that grow fat in its placid waters, and along whose shores shoals of small fry find food and shelter in the rich black mud.

Now let Stockbridge do the same by its great Agawan pond swamp, which sends malarious vapors on every wind that blows, and thus secure what she so much needs, a beautiful lake, an immense water power for all the lower Housatonic region, and a place where trout may breed, yachts sail, and old "Monument Mountain" see himself as others see him, in water colors as no mortal can paint him.

A Goose Fight With a Bull.—A heavy-throated bull near this village, noted for his fierceness, accidentally stepped on one of a brood of goslings recently which a stately gander was holding watch and guard over with great solicitude. Straightway the gander attacked the bull, and seizing him by the tail with his beak, his wings lashed the animal's flanks with the greatest fury. In vain the bull wheeled about to reach his antagonist; the gander wheeled with him, all the while retaining his hold upon the bull's tail, and showering blows with his powerful wings with telling effect upon the bull's legs, until he fairly roared with pain and terror. At last the gander, apparently thinking that his adversary had sufficient punishment, let go his hold, and the bull took to his heels with the liveliest speed, only stopping when he reached the farther corner of the field.—*Middletown (N. Y.) Argus.*

—A wood cutter near Frederickton Junction, Canada, was recently devoured by a bear; the only traces found of the unfortunate man were his boots with parts of the legs and a portion of hishead.

Cambridgeport, Mass., July 2, 1877.

Please stop my advertisement until I can get a junk man to carry off some of the letters I have received in answer to it. Will have it put in again if I do not dispose of the gun to some of them; but most of them want a gun for a cent. Yours truly, Wm. S. A.

The Kennel.

PROPHYLAXIS OF HYDROPHOBIA.

IN view of the unfavorable prognosis in hydrophobia, and the complete inefficiency of all the therapeutic agents when the disease is once established, it naturally follows that in all rational efforts to control the malady prophylactic measures must always prove our chief weapons of offense.

Of chief importance in this connection are the general prophylactic measures to be enforced by the State against hydrophobia in animals, and we will endeavor to indicate what sanitary regulations are best adapted to confine the spread of this malady within the narrowest possible limits.

The first important point to be insisted upon is, the reduction of the number of dogs. The comparative danger to be apprehended from hydrophobia diminishes as the total number of dogs becomes reduced, and the most effective method of reducing the number of dogs consists in laying the highest possible tax upon them. This tax should be the same for all dogs, without regard to sex, and any remission of the same should be strictly limited to such dogs as are absolutely necessary for the performance of certain kind of work.

The aggregate number of dogs is very large. In Central Europe there is found on the average one dog for every sixteen human beings. The total number of dogs in all Europe amounts to about twelve millions. Delafonde estimated the number of dogs in France in 1846 at between three and four millions. In Bavaria, according to recent computations, there are 300,000 dogs to four and eight-tenths millions of human beings. The disproportion between the sexes is shown by the fact that while the male constitutes 85 per cent. of the total number of dogs, there are found on the average but 15 per cent. females. It may be stated, furthermore, in favor of the taxation of dogs, of which about 80 per cent. are kept as a matter of luxury, that these animals, from the very fact that they form the vehicles for the communication of various parasites, and also serve as a nest for the propagation of these parasites, exercise a deleterious influence upon the breeding of cattle.

The State should also provide for a general registration of all dogs. Every dog should be supplied with some distinguishing mark; the unrestrained roaming about of dogs should be prevented. All stray dogs should be pursued by the police and destroyed (*Principen einer rationellen hundeordnung*).

When cases of hydrophobia occur, directions should be issued for all dogs to be muzzled for a considerable length of time; they should either be led by means of a cord, or else kept penned up. The failure to notify the authorities of the existence of a case of hydrophobia, should be made a punishable offense. The regulations just mentioned ought always to be made applicable to as large a district as possible.

Rabid dogs should be destroyed, and likewise dogs that have been bitten by them, although no human being may have been bitten. If human beings have been bitten by rabid or suspected dogs, they should be destroyed, as soon as the existence of rabies in them has been determined.

Dogs suspected of being rabid, and also the dogs bitten by them, should be carefully confined at the owner's expense, and, in consideration of the long period of incubation, they should be kept secured for at least six months. The ordinary term of confinement, from six weeks to three months, is manifestly too short.

"The obligatory muzzling of dogs at times when hydrophobia prevails as an epizootic, has always, in all localities, been attended by favorable results. On the other hand, it is pretended by some, especially those who favor the theory of the spontaneous origin of hydrophobia, that the wearing of muzzles favors the development of the disease, an assertion which is unsupported by proof, and which is also completely refuted by what is known respecting the mode of origin of rabies, and by various observations. In Berlin, dogs were required, for a period of nine years, to wear muzzles, during which time no instance of hydrophobia occurred. It is, moreover, fallaciously urged by the opponents of the muzzle, that, in localities where dogs roam about in large numbers perfectly unrestrained and subject to no inspection, hydrophobia is an unknown evil. How unfounded this notion is may be perceived from the fact that in Constantinople, Egypt, Algeria, Cochin China, Greenland, etc., etc., hydrophobia *does* occur. It may be mentioned, as a matter of curiosity, that the blunting of the front teeth has been recommended by some as a prophylactic measure against the malady, and it has even been suggested that small, flattened metallic caps be fastened by a screw to the corner teeth, for the purpose of rendering the bite innocuous."

The excessive prevalence of hydrophobia in many years is mainly attributed to the absence of any sanitary organization charged with the supervision of veterinary matters; to the want of statutory or police regulations, or to their inefficient administration, simple points regarding which medical authorities are of one opinion. By appropriate and energetic sanitary measures, the hydrophobia of dogs, like the greater number of infectious animal diseases, may be easily confined within a small area, even if the malady be not suppressed at the very outset. The hypothesis of the spontaneous development of hydrophobia, forms a powerful obstacle to the enforcement of all sanitary measures of this sort, and furnishes here, as in other epizootics, a convenient loop-hole, which leads to endless mischief.

The only efficient means of eradicating the disease, in the case of wild animals (foxes, wolves), is to destroy them indiscriminately in the infected localities; this step is also important, for the reason that the prevalence of the malady among these animals forms a continuous source of danger to human beings and dogs.

All attempts as yet made to subject dogs to preventive treatment, by means of internal remedies, have proved ineffectual.

Finally, the circulation among dog owners of popular information concerning the nature and most important symptoms of hydrophobia, as it occurs in dogs, is extremely desirable, and at the same time an opportunity will thus be afforded of correcting the numerous erroneous ideas which are prevalent with regard to this disease, as it exists in man and in animals.

A PITTSBURGH KENNEL.—On June 25, desiring a little rest from the cares of my profession and a sniff of the country air, I started in company with two well-known fellow-sportsmen for a drive of about nine miles over the hills that skirt the beautiful Ohio River, to spend an hour or two looking over the kennel of setters in charge of Mr. B. The place, handsomely situated on a bluff overhanging the river, contains about ten acres, everything about being in good order, and scrupulously neat and clean.

The kennels are neatly whitewashed, and so situated that the dogs can enjoy the cool retreat of deep shade at any time they may be so inclined. But the object of this writing is to tell of the pair of grand setters I saw there—Belton, sired by Syke's Dash, out of Daisy, and bred by Mr. Thos. Slatter, of Manchester, England, and Macdona's Magnet, sired by English Rock, out of Lily White, who, by the way, is now in whelp to her splendid kennel mate. Believing Mr. Macdona well knows what a fine and thoroughly good dog ought to be, since he not only owns but ran the great dog Ranger in the late field trials in England, and knowing that one of the get of this pair is to be shipped back to him in England. (He remarked to several gentlemen of my acquaintance that Magnet was the best bitch of her age he ever owned), I was most anxious to see her action in the field. Belton I know all about, having seen his magnificent carriage, style and great speed, exhibited on the prairies in the hottest and longest days in August, and I believe to-day he has no superior either in blood or as a stock-getter, or in the field, so far as America is concerned. With such a sire and dam, the get of this pair ought to be as good as breeding and training can make them. Of course there was nothing to hunt, but Mr. B. kindly took them to a large pasture field and cast them off. It was a splendid sight and aggravating, too, for just as we entered the field two fine cock quails flushed within fifty yards and disappeared in a rye field, where we could not go. Still we saw style enough for one day; heads in the air, right and left they worked to the motion of the hand. We were all delighted, and when we saw Magnet charge at the raising of the hand, a hundred yards or more away, I felt sure that if Mr. Macdona's opinion of her great powers of scent and wonderful staying qualities carry out (and I believe they will), I am safe in saying that the litter now promised will make their mark wherever they go. It is a great pleasure to know that Western Pennsylvania sportsmen have the enterprise and ambition to own as fine dogs as can be had for money; and, further, it is a gratification to know that these superb dogs are owned by experienced gentlemen sportsmen, who will develope the best field work they are capable of under their own guns. I predict for Magnet an illustrious career in America. Belton has long since established himself by his excellent field qualities to the admiration of many whose privilege it has been to shoot over him, one of whom is your humble servant, SOUTH FORK.

DESTRUCTION OF DOGS.—On Thursday last, July 5, nearly one thousand dogs were drowned in the East River, at the pound, foot of Sixteenth street. Of all the number captured but thirty were deemed worthy of preservation.

The expressions of emotion depicted upon the countenances of the numerous canines as they were thrown into the iron cage, or as that vehicle of execution rolled by the kennel, were pitiful in the extreme, especially when accompanied by moans of distress, human-like in sound. No one who witnessed the scene would again declare that our canines are devoid of intelligence or reason.

AMPUTATION IN ANIMALS.—The *Live Stock* and *Veterinary* journals are discussing the propriety of capital operations upon animals. We see no reason why valuable stock who have fractured or diseased limbs, may not be preserved for breeding purposes by amputations. The risks to be taken are much less than in the human subject, and dogs, particularly, recover from the shock of such operations with surprising facility.

A PLUCKY DOG.—The Georgetown *Comet* is responsible for the statement that a bulldog fought an alligator upward of five feet in length, in the water of Sampit River, killing and bringing his opponent to land.

DOGS AS PROPERTY.—The *Nashville Rural Sun* will devote a column henceforth to "Dog, Gun and Game." In the issue of June 14th we find the following:

PIQUA, Ohio, May 27, 1877.

Several months ago I wrote to the *Chicago Field* a full account of the trial of Eastham vs. Swinger for the malicious killing of the famous Gordon setter dog Kent. Kent is out of Dougan's (Richmond, Ind.) Flora, by E. F. Stodard's (Dayton, O.) celebrated imported dog Marr. Mr. Eastham obtained a judgment for $100 through the Common Pleas Court, Judge Meeker presiding, and it was generally understood at the time that the matter was finally settled. But to the surprise of many Mr. Swinger carried the suit up to the district court, and the testimony was gone over and the argument of the attorneys was patiently listened to on the 7th inst. by Judges Barlow, Eliott and Burges, and as might have been expected, the judgment of the Lower Court was confirmed. Mr. Swinger's expense will now foot up to near $500, and he now threatens to take it to the Supreme Court. All right; the matter might as well be definitely settled by Eastham and Swinger as by any one else. As I said in my former letter on this subject, Mr. Eastham said: "I have just $1,000 laid by to prosecute this suit with, for I am anxious to know whether the sportsmen of Ohio have any right of property in dogs after they have been returned to the assessor for taxation." So far as this trial has gone we think they have, and I am inclined to think that Mr. Swinger is of the same opinion. If he is not yet satisfied, another trial before the Supreme Court, another confirmation of judgment, another hundred or two added to the bill, and he will be a convert to our side of the question. Mr. Swinger has wealth, and it is a good thing he has and can stand it, for five hundred dollar dogs are expensive.

The above, from the *Chicago Field*, is a test case as to whether dogs are property and that the owner can be protected therein, or whether they are simply nothing, and to be killed by every fool who comes along. It is simply preposterous to suppose for a moment that a dog, in which may be invested a thousand dollars in clean cash, is not property. If they are not property, then what constitutes property? If a man is not to be protected by the law in this, then why protect him in his race-horse, his fine sheep, or his cattle? Good dogs are worth money, and are very much thought of by their owners, who resolve to see them protected.

It is to be hoped that this matter will be carried to the highest courts, not only for the pecuniary punishment of the offender, but that a legal precedence may be established from which there can be no appeal.

THE DOG FAITHFUL.—*Jersey City, July 5.*—You make mention in the last copy of your valuable paper of that dog in Washington who, in his protection of a helpless man bit a policeman whom the dog thought, and perhaps with reason, was interfering with no good purpose. It seems the idiots shot the dog afterward for fear the "cop" might die with hydrophobia. It fairly makes my blood boil when I think of such an outrage. To slaughter that kind, intelligent animal (I'll wager he had more brains than the fools that made away with him) for fear the bite might prove serious to the officer. Pshaw! Would the killing of the noble creature make any difference with the after effect of the dentals in the man's system.

To come nearer home: On the dock here, an Irishman, last week, prowling around at an unseasonable hour, was bitten (unfortunately but slightly) by the Company's watch-dog, and now nothing will persuade the son of Erin that he is not booked for convulsions and a hydrophobic taking off unless the dog is killed—that the end of the dog by violent means will prevent any tragic result to him. Is there anything more ridiculous? As the company are not idiots, Flora lives, and will stand guard for a while longer, and prove a source of inconvenience to the horde of night prowlers that infest our city throughout its length and breadth. JACOBSTAFF.

DOG POISONERS.—Von G., of West Meriden, Conn., writes The account published on page 322, of FOREST AND STREAM, of a dog poisoner being brought to court and fined for his crime, reminds me of an affair which was tried at Baden, Germany, a short time since. A Scotchman living near Offenborg, and a member of the hunting club of that district, was for some reason expelled from the club. He swore he would have revenge, which was carried out in a most cowardly manner by poisoning a number of dogs belonging to the members of the club. His threats had previously aroused suspicion, and accordingly he was arrested and brought to trial, where the evidence—though circumstantial—was so strong that he confessed having committed the crime, expecting, of course, that as he was a man of means his punishment would be merely a fine. In this he was sadly mistaken, for the Judge (a very Daniel) sentenced the accused to pay the full value of the dogs, ranging from two to seven hundred dollars each, as indemnity to the owner, and in addition, as penalty for the crime committed, that he be confined for one year in the penitentiary. I sincerely wish that the above case might be viewed as a precedent by all judges before whom dog poisoners may be tried, and that the clogging barnacles of justice, who look upon a $10 horse as property, but not recognizing a $500 dog, may be brought to a realizing sense of their incapacity, and endeavor, in an humble manner, to follow the bright examples set by the bench in the case mentioned in FOREST AND STREAM, and also that of Baden.

DEATH OF JULE.—Mr. Chas. A. Miles, of Brooklyn, has been unfortunate with his dogs, losing Fred, aged 17 mos., (out of Jule by J. K. Milner's Jack) three weeks since. On Friday, June 28, Jule, 7 years old, died in accouchment. Of five pups by Robinson's Duke but two are living, being under the care of a foster mother.

Jule's performances in the field are too well known to need comment; she was also winner of second prize in native Irish setter class at the N. Y. Bench Show, 1877. She was the only bitch ever raised from Rodman's Emma, by Rodman's Dash. In three years she gave birth to forty-one puppies, all of which that are now living being noted dogs.

HUMILIATION.—A dog in Meriden, Conn., was so disgusted with his muzzle that he pawed it off and then buried it in the ground.

—Boston is developing some extraordinary examples of canine sagacity. The *Traveller* tells a story which is *strictly true:* A mastiff in that city, unmuzzled by his master, resolved to comply with the law on his own account. He knew that to preserve his life he must have a muzzle. Early one morning he stole twenty newspapers from doorsteps, stood on a corner and sold them, went with the money to a store where muzzles were sold, made a clerk understand that he wished to buy one, and before noon went home muzzled according to law.

VILLAINY.—At the late dog convention in Syracuse it will be remembered that Snipe, owned by R. M. Linsley, of Scranton, Pa., took the first prize in pointer class. Sunday night, July 1, some evil disposed person poisoned Snipe, by giving him "doctored meat." Sportsmen will regret the death of this really fine animal, and it is to be hoped the miscreant will be brought to book.

—J. H. Caniff, of Windsor, Ont., has lost his Maud, Carlowitz whelps.

NAME CLAIMED.—I claim the name "Brandy" for my setter pup, whelped March 16, out of Selleck's Nellie II, by Dowdney's Major. Full pedigree in ROD AND GUN of March 29, 1877. JOHN S. KELSO, JR., *Stamford, July 2.*

I claim the name of "Red Rufus" for my Red Irish Gordon pup, whelped April 20, color, deep red; no white; out of Geo. E. Poyneer's red Irish Gordon Fan, by Arnold Burges' red Irish setter Rufus. J. F. CONDON, *McGregor, Iowa.*

CLINTON, Iowa, July 2, 1877.

I claim the name of Red Kit for my Irish Gordon bitch, out of Geo. E. Paynee'r's red Irish Gordon setter Fan; she out of imported black-and-tan Gordon Die, by imported red Irish Gordon Mar; sire, Arnold Burges' champion red Irish setter Rufus.

Yours, etc. GEO. W. VAN VORST.

UTICA, July 4, 1877.

I see by my last paper that you have made an error in regard to my pointer dog Frank, Class 81, as I received a V. H. C., and not an H. C. white badge. As he is for sale, by making correction, you will oblige an old subscriber. Very truly, C. H. WEED,

ORIGIN OF FIELD TRIALS.—It is conceded by all that this journal was the first newspaper in the United States to call the attention of the sportsmen of this country to the splendid and intelligent sport of dog field trials.

The letter that will be found below, headed "Honor to whom honor is due," is all very proper as far as it goes. We do not wish for a moment to take away from that clever sportsman, Capt. Lightburne, of Memphis, any of his hard-earned honors, in carrying out in a practical manner the instructions laid down by this journal as regards field trials, and that we have given him repeated credit for the same, the former issues of this paper will thoroughly testify. Pardon us, but Capt. Lightburne did not *propose* field trials in the State of Tennessee. He carried out the data given to him in the most exemplary and sportsman-like manner, but the *proposition* came from this paper (see "F. & S.," page 136), which is further proved by a letter in our hands from Capt. Lightburne, asking for detailed advice, information and papers as to how field trials were worked and organized, which numerous documents we willingly sent him.

It is also an error to suppose that Mr. Horsfall "revised and remodeled" the English rules, as they were altered in this office; and the State Sportsman's Association and other private matches ran all the dogs under the "F. & S." rules. It is due to Mr. Horsfall to say that, with his kind co-operation and masterly activity, a great deal of the practical work was put to sound use in the field. It is again a mistake to state that the kennel editor of the then Chicago *Field* (1874) had very much to do with field trials, as he published editorial after editorial in direct opposition to setters retrieving, which editorials called forth letters from Capt. Lightburne and other gentlemen, stating that they did not indorse the editor's views.

It was in October, 1873, that we first published an account of a dog field trial. Since that time column after column of this journal has been devoted to agitating and bringing about this sport, and giving all information we possessed to our readers, so as to demonstrate, if possible, the fact which is the better, pointers or setters of a club, State or United States. At that time we did not spare labor, trouble or expense in carrying out this interesting sport; but, in order to familiarize the public with these novel narrations, we lithographed and photographed 1,000 pairs of the champion pointer Bello—also printed the points, laws, etc.—which portraits and papers were cased and sent free to every newspaper in the United States and Canada having a circulation of over 5,000 copies. For all of the above facts see the records in FOREST AND STREAM: Vol. I, pages 166, 296, 312, 317, 344, 360, 377, 392, 394, 410; Vol. II, 6, 25, 41, 43, 55, 71, 134, 136, 154, 197, 214, 233.

We here repeat that it was through the influence of Capt. John M. Taylor that dog field sports were originated, first brought about, or "initated" in this country; therefore, we think that we were not in error in claiming for this journal the honor of having introduced them to the public.

"HONOR TO WHOM HONOR IS DUE."

DEAR FOREST—While I acknowledge, and the world accepts, your *facile princeps* in sporting news, yet you, like many others, sometimes get astray. Thusly, I notice in your issue of June 21 that you have done several of our Memphis gentlemen quite an injustice, in assuming something that does not rightfully belong to you. I refer to your notice of a paragraph-clip from the *Rural Sun*, Nashville, relative to Tennessee Field Trials. In your notice you say, "through the influence of Capt. Jno. M. Taylor, then the Kennel Editor of this paper, the Tennessee Field Trials were initiated." In this assertion you are greatly in error, as Capt. R. W. Lightburne was the party that first proposed a bench show and field trials, and through his indomitable will, indefatigable energy, and the assistance of one or two friends, T. M. Horsfall and J. W. Alley, he initiated and carried through successfully the first bench show of dogs ever held in Tennessee, and the first field trial of dog ever held in America under an organized body. "The Tennessee State Sportsman Association" and even this association were framed and formed by him. He does not claim that the State Association or bench show was original with him. The idea struck him of forming such association and having bench shows, etc., after Illinois had so successfully introduced them; and to Mr. Shinn, then editor of the *Chicago Field*, he probably owes more to for assistance and influence than any other person, not excepting T. M. Horsfall, who revised and remodeled the English result so kindly sent to Mr. Lightburne by Capt. Jno. M. Taylor. Capt. Lightburne knew of Capt. Taylor having the English rules, and wrote him asking the loan of them for a short while, also, at the same time, giving Capt. Taylor full information as to what was going on and what was to be done in this section in October, 1874. Capt. Taylor very promptly sent them, promising at the same time, his hearty support in the matter, which promise was made good.

The *Rural Sun* commits an error by claiming that the Tennessee field trials were introduced in this State five years ago. The first trial occurred in October, 1874, and the prize for best setter or pointer was won by Mr. Pritchard's dog Knight. Your subscriber had a good one entered, and was defeated. A VICTIM, 1874.

Memphis, Tenn.

TORONTO DOG AND BIRD SHOW.—We are in possession of very full notes of this exhibition, but the late hour of their arrival precludes giving other than a mere synopsis. The opening on July 4th was a decided success, though the second day was the best. The Secretary of the Association says:

"Our success has been beyond all our expectations, and I have no hesitation in saying that it was mainly due to the valuable assistance of Mr. Chas. Lincoln. He has labored most assiduously from the day he arrived in our city, and we are quite unable to express our gratitude to him. Our Exhibition building was perfect in every particular, and from what Mr. Lincoln tells us will more than favorably compare with most buildings used for the same purpose in many large American cities.

"I fear that the promoters will have to pay somewhat dearly for the imitation, but that is trifling in comparison with the great good it is sure to do. Already gentlemen are discussing the propriety of at once starting an association, and it success should follow the endeavor you may look for a grand international show before long. As a lover of sport and sporting dogs I sincerely hope my expectations may be gratified.

The results of Wednesday's judging are as follows:

English Setters—1st, T W Jackson, Chatham; 2d, J C Lauder Yorkville; highly commended, H Vincent Meredith, London.

English Setter Puppies—1st, E H Gillman, Detroit.

Judges—Stephen Howard, Christopher Robinson, Q C; Edward C. Jones, Clarkson Jones, Toronto; Charles Lincoln, Detroit.

Irish Setters—1st, Capt Prince, Toronto; 2d, Robert Sewell, Toronto; highly commended, John Bowe, Jos Brent, Toronto; very highly commended, Stephen Howard, Toronto; Bertram Spencer, Guelph; James Kennedy, Toronto.

Irish Setter Puppies—1st, D C Plumb, Toronto; highly commended, E Langdon Wilks, Galt; Stephen Howard, Toronto.

Judges—Christopher Robinson, Q C; Edward C Jones, Clarkson Jones, Charles Lincoln.

Gordon Setters—1st, J D Thompson, Toronto; 2d, Clarkson Jones, Toronto.

Gordon Setter Puppies—1st, Clarkson Jones, Toronto.

Judges—Christopher Robinson, Q C, Stephen Howard, Charles Lincoln.

Pointers—1st, George Hare, Toronto; 2d, James Chandler, Toronto; highly commended, J McCowey, Toronto.

Pointer Puppies—1st, W C Beddome, Toronto; highly commended, W F Rose, Toronto.

Judges—Stephen Heward, Christopher Robinson, Q C, Edward C Jones, Clarkson Jones, Charles Lincoln.

Cheapeake Bay Dogs—1st, E H Gillman, Detroit.

Same judges.

Tuesday morning the judging and awarding of prizes was completed.

Water Spaniels—1st, Bridget, Big Point Kennel Club, Chatham; 2d, Dash, James Underwood, Toronto; highly commended, Rowdy, D Walker, Toronto; Nell, James Kennedy, Toronto.

Judges—Messrs. Stephen Heward, E C Jones, Clarkson Jones and Charles Lincoln.

Cocker Spaniels—1st, Adelina Patti, E K Gilliman, Detroit; 2d, Rose, L H Robertson, Toronto; highly commended, Jeff. J Richmond, Queen's Hotel; Twoponny, W A Phipps, Toronto; Bob, A W Smith, Toronto. Mr Lattimer, of Toronto, entered Rover, a beautiful cocker spaniel, in the wrong class, the mistake being discovered too late to be rectified.

Field Spaniel—(Clumbers, Sussex, etc)—1st, Duke, R de Manin, Weston.

Judges—Same as last.

Fox Hounds—1st, Jewel, A Purse, Toronto; 2d, Major, J S Meredith, Galt; highly commended—Ringwood, A Purse, Toronto. Same judges.

Fox Terriers—1st, Vic, Jas M Forsyth, Kingston; 2d, Tip, Gamble Geddes, Toronto; very highly commended—Sting, John Hallhgan, Toronto; Beauty, W R Mingays, Kingston; Vic, John Marshall, Markham; no name, Capt. Grant, Government House, Toronto. Same judges.

Greyhounds—1st, Chimo, W B Butler, Toronto; 2d, Jeff Davis, Miss M J McNabb, Toronto; highly commended—Little Nell, H Piper, Toronto; Phantom, E C Kerr, Hamilton. Judges same.

Scotch Deerhounds—1st, Lyall, R F Palmer, Consolidated Bank, Toronto. Judges same.

NON-SPORTING CLASSES.

Mastiffs—1st, Lion, J Timms, Toronto.

St. Bernards—1st, Major G E Cooper, Toronto.

Newfoundland—1st, Lion, John W West, Toronto; 2d, Fanny, Cool Burgess, Toronto.

Dalmatian, or Coach Dogs—1st, Spot, J A Donaldson, Toronto; 2d, Major W P Hubbard, Toronto; highly commended, Gipsy, W P Hubbard.

Collie, or Shepherd Dogs—1st, Driver, C G Harston, Davisville; 2d, equal, Gipsy, John Millroy, Brantford; highly commended, Rose, T McGaw, Queen's Hotel, Toronto; Jeff, W C Brown, Toronto; Lad, J McNeill, Toronto; Masco, W A Baldwin, Masquotch.

Bull Dogs—1st, no name, W Kerr, Toronto; 2d, Bull, A McLean Howard, Toronto; highly commended, Nellie, James Beer, Toronto.

Bull Terriers—(large size)—1st, Jack, John Collins, Toronto; 2d, Ben, James Bromley, Toronto.

Bull Terriers—(small size)—1st, Matt, J S Meredith, Galt; 2d, Billy, George Mull, Toronto; highly commended in both classes, no name, W J Lovering, Toronto; Fay, Robert Lauder, Toronto; Soda, J M Mitchell, Toronto; Julia, T J Harris, Government House; Boney, W Reid, Toronto.

Pugs—1st, Pauch, Miss Macdonald, Government House, Toronto.

Black and Tan Terriers—1st, no name, John Boyle, Toronto; 2d, Daisy, Fred Gaudin, Toronto; highly commended, Lady, John Marshall, Markham; Bob, James Kenedy, Toronto.

Skye Terriers—1st, Rowdy, Miss C L Wilkes, Crookstone Park, Galt; 2d, Gyp, Alex Deans, Toronto; highly commended, Donald, John Conroy, Toronto.

Scotch Terriers—1st, Jerry, R A Booth, Toronto; 2d, no name, W Kerr, Toronto; highly commended, Nellie, Miss Polly Newhall, Toronto; Snap, A P Milne, B N A, Toronto; Tidy, J G Evans, Toronto; Pip, J J Evans, Toronto; Jacque, Charles Borland, Toronto.

Toy Terriers—1st, Josie R A Wood, Toronto; 2d, Francis R Wilkie, Toronto.

Pomeranian, or Spitz Dogs—1st, Bruno, D Hayes, Toronto; 2d, Dufferin, H Piper, Toronto; highly commended, Flos, J Goodfellow, Toronto.

Poodles—1st, no name, John Bailey, Toronto; 2d, Byron, J Coyle, Toronto; highly commended, John Bailey, Toronto, three specimens; Topsy, Mrs R Wilson, Toronto.

Japanese Poodles (Special Prizes)—W H Rowland, Toronto.

Italian Greyhounds—1st, Beauty, H G Gibbs, Oshawa.

Mexicans—1st, Jack, J D Irwin, Toronto.

Cross between Russian Terrier and Mastiff—No name, James Spence, Toronto.

Judges in above Classes—Messrs Stephen Heward, D C Plumb, and Charles Lincoln (Detroit).

The Association officers were: Committee—Mayor Morrison, Alderman Ball, Alderman Close, Alderman Dill, Alderman Small, Alderman Piper, J. Maughan, Jr., W. C. Beddome, M. A Thomas, Dr. Valentine, J. H. Marsh, J. Spooner, F. Eccles, W. H. S. Coan, D. Walker, T. McGaw; W. C. Beddome, Secretary; H. Piper, Treasurer; Charles Lincoln, Superintendent.

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
—*Lady*, Manufacturers, 65 Fulton Street, N. Y.

Game Bag and Gun.

GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States. In New York shooting is prohibited until August 1.

PIGEON SHOOTING VS. CRUELTY TO ANIMALS.—In the case of Capt. Bogardus, who a year since gave an exhibition of his skill in trap shooting upon the Abbey Race Track in Ohio, and for which he was arrested and prosecuted in the Court of Criminal Correction by R. S. McDonald, President of the Society for Prevention of Cruelty to Animals, and fined $50, Judge Hayden has given the following decision, sitting upon the bench of the Court of Appeals:

State vs. A. H. Bogardus—The complainant in this case charges that the defendant "did unnecessarily kill certain living creatures by shooting them with a shot-gun, for the purpose of displaying his skill as a marksman, to wit: twenty-five pigeons, contrary to the form of the statute," etc. The defendant was arrested and held to bail on the charge, tried, convicted, and fined $50, and has appealed to this Court.

The question in the case involves the construction of the act to be found in the session acts of 1874, p. 112, entitled, "An act for the prevention of cruelty to animals." It is claimed that an offense was committed under that part of Section 1 which provides that "if any person shall needlessly kill any living creature, every such offender shall," etc. The evidence tended to show that at the Abbey Race Track a man threw up pigeons two at a time, and that the defendant, in the presence of a number of persons, shot the pigeons in the air with a gun to show his skill; that the birds dropped dead when shot; that they were furnished by the owners to be shot; that pigeons like these are eaten as food and bought and sold for that purpose; that these were so eaten when shot.

The object of the act is to prevent unnecessary suffering to animals. Human beings are not included under this expression, but with this exception, the act, in its terms, is broad enough to cover all creatures. It is not so material, however, to inquire how low in the order of creation the subjects of this act extend, as it is to ask what is needless mutillation or killing within the meaning of the act. All needs are comparative. The flesh of animals is not necessary for the subsistence of man, at least in this country, and by some people it is not so used. Yet it would not be denied that the killing of oxen for food is lawful. Fish are not necessary to any one, nor are various wild animals which are killed and sold in market; yet their capture and killing are regulated by law. The words "needlessly" and "unnecessarily" must have a reasonable, not an absolute and literal meaning attached to them. As it would not be claimed that the angler, who catches fish for pastime, and neither sells nor eats them when caught, is within the prohibition of the law, so the marksman who, as an exercise of skill, or as a diversion to himself or to others, shoots pigeons, either from a trap or as they fly wild in the woods, does not violate the essential objects of the act. When the prevention of cruelty and suffering is concerned, there is plainly a difference between instantaneous and lingering death. The former is generally, if not always, painless. Yet in favor of those sports which are considered healthful recreations and exercises tending to promote strength, bodily agility and courage, the pain which comes with a lingering death in the lower animals is often disregarded in the customs and laws of humane and highly civilized peoples. In England an act of Parliament has been passed to restrict vivisection, a practice which has high scientific ends. Yet fox hunting, which is a cruel pastime, would no doubt be upheld by the common law. It is certainly the policy of every government to encourage those recreations which serve as manly exercises, and yet do not necessarily or generally lead to protracted pain in the lower animals. The efficiency of the services which the citizen is called upon to render to the State in exigencies may largely depend on the qualities acquired in manly sports; and from some of the most attractive of these a certain amount of injury to dumb animals seems inseparable.

In the present case there was no mutillation, or anything approaching to it. The birds were killed in a more humane way than by wringing their necks, which is an ordinary method of destroying life in pigeons, when they are killed merely with a view to their being eaten. Though we think that the first section of the act cannot properly receive the construction placed upon it by the appellant, by which its operation would be confined to beasts of burden and animals *ejusdem generis*, we are of opinion that, in the present case, there was no violation of the act, and that the appellant's instruction to the effect that the evidence was insufficient to sustain the charge should have been given. Accordingly, the judgment will be reversed and the complaint dismissed. All the Judges concur."

The above furnishes a law precedent which is undoubtedly satisfactory to the devotees of trap shooting.

For Forest and Stream and Rod and Gun.

GUN IMPLEMENTS.

THE invention of the breech-loader was not only the introduction of new gun mechanism of the most beautiful and varied devices, but also of implements as various and beautiful. Probably no one pattern of action or grip for the gun itself would obtain general use, though demonstrably the best of all. Men like variety; things different from their neighbors. No one form of action has its excellence without compensative loss, and men will prefer one or the other as the peculiar excellence or the compensation weighs with them. The snap-action has its quickness and automatic quality, while the grip action claims more entire solidity and durability. Just as one or the other of these are made the ruling quality, will be the choice of action.

The entire displacement of the muzzle-loader by the breech loader was shown by the English guns of all actions displayed at the Centennial. All the exquisite finish and costly mechanism that has characterized their guns for a century, have been boldly transferred to the breech-loader, as if no risk were incurred, as, indeed, there is none. Of all Centennial cases, like "Recapper," I was struck by none so much as the Tolley case; and, of all the multifarious articles of the Great Exposition, I have to admit that what I left behind, with most reluctance, was a $175, 10-gauge, 33-inch Tolley. I never felt the pressure of the *res angustæ domi*—the lack of dimes—more than in letting that gun go back to New York or England. By the bye, friend "Recapper," that is not the only thing "Boone" agrees with you in your writings. He feels more

settled in many opinions of his on gunning matters because he sees them confirmed by you. The truth is, the elaborate workmanship of those English guns was enough to drive a poor gun man mad; and that one Tolley, 11 lb. gun, will haunt me for years. With my Parker, 8-lb. for all common shooting, and that Tolley for geese and brant alone, the world would have nothing more for me to desire in the way of shot-guns.

But I started out to write on implements. These, in pattern and finish, are as various as the actions of the guns themselves. It cannot be said that the mere process of loading with the muzzle-loader was a pleasure. With the breech-loader it is. The shells are so perfect, the implements are so happily adapted, and the cartridge, loaded and in your hand, is such a finished thing, that the whole process is an actual pleasure. Then, it can be taken up on rainy days or at idle hours at home, and the whole outfit for a week's shooting can be put in your satchel, and in the field you have nothing to do but insert and fire.

The tools for the different points in loading have always had a special interest for me; some for their finish, some for their ingenuity. There is the wooden reversible plug for de-capping and reloading; the Parks, Optimus, Creaser, Green's, and others for re-capping also; the Barclay for loading, the Remington for capping and de-capping, and the Hawkesley for crimping; and these are but a few of all. If one can have an implement for each part in the process of loading, he can have a better thing, generally, than the same in combination; but this entails a number of tools and a larger expense. For these separate purposes I have found the Remington capper and de-capper, the Barclay loader, and the Hawkesley crimper simply perfect; nor do I see how they could be improved.

A great deal of ingenuity has been shown in inventions to combine these operations even into one tool; some of them suggestive of elevators and grist-mills, and utterly unfit for the field. But Mr. Stoddard, of Washington, has hit the mark for a *field tool* more nearly than any inventor whose work I have seen. The cut in his advertisement gives a good general idea, but the implement itself is the thing to judge by, after all. The creasing, cutting and re-capping parts of this implement are perfect; no single tool for each purpose could do better. The de-capper and loader are quite serviceable, and the crimper, with practice, will fully answer its end. The great point, a tool for the field for all operations, is most happily attained. Those who already have single and expensive implements for home use will probably still use them with a Stoddard for the field; those who have their implements yet to buy will find this beautiful invention sufficient for all the operations of loading.

P. S.—As an old writer, at times, for the ROD AND GUN, let me wish the new paper all the success it wishes and deserves. We will read the new with a zest and well-wishing not at all lessened by the pleasant memories of the old.

By the bye, dear Mr. Hallock, if there be no business ends subserved by your joint title, which certainly is a clumsy one, or when these business ends shall be met, why not give us of the prairie a part in your title: "Forest, Stream and Prairie?" From the Wabash to the Rocky Mountains lies a region containing more than one half of all the game in our nation, and a large part of your readers and contributors. Why not give the prairie a place in your title? That would make it distinctively American. All lands have streams and woods, *ours, only, the prairie*. Think of it, and then come out to the prairies and shoot with us. BOONE.

FERN BANK, near Cincinnati, July 6, 1877.

EDITOR FOREST AND STREAM:

Thanks to an invitation from its President, Mr. George B. Ellard, your correspondent, was enabled to celebrate the national holiday of the Fourth in a most enjoyable manner with the members of the Cincinnati Shooting and Fishing Club, at the Schutzen Park, near Carthage, where the club has established a capital rifle range and grounds for trap shooting. On this occasion the annual trap shoot for the handsome club badge was shot for and won for the third time by Mr. Wm. Caldwell, who thus becomes its permanent owner. Without taking up your valuable space with the score in detail, suffice it to say that the average of the shooting was very good, and was fully up to that of similar organizations throughout the country. At two o'clock the members of the club and invited guests sat down to an excellent dinner, the chief charm of which was a native wine made of the Ives seedling grape, which, being without that foxey flavor peculiar to most native wines, will compare favorably with the ordinary run of foreign clarets.

Though the supply of birds was not exhausted, I was glad to see the afternoon devoted to ball shooting from a trap new to me, which propels the balls with greater force, and gives them a more erratic flight than the Bogardus invention. This shooting is much more difficult than that at birds, and is not open to the charge of cruelty attending the slaughter of the latter. I hope to see the day when ball shooting will entirely supersede that of harmless doves. For the information of your readers who do their fall shooting in Ohio, I will state that though quail are now quite abundant here, the close season for this game has been extended to another year, a fact not generally known even here. "Gloan," the vigilant guardian of game in this State, is my authority for this statement.

As early as the fourth of the month every copy of your last issue sent to Cincinnati had been sold. I visited all the newsdealers and the office of the American News Company in search of a copy, but they had all sold out. The fact may be flattering to you, but it was a great disappointment to your correspondent, F. G. S.

Rocky Hill, N. J., June 22, 1877.—I have been interested in the articles on Small vs. Large Bore Guns. I have shot a No. 16 for the past seven years, and have found it large enough for all game from quail to deer. Of course in flock shooting a howitzer would do more execution, but that has never seemed to me much of an object to the sportsman. Among my sporting friends my gun—that Captain Bill Chadwick said "was a handy little thing to kill rats with"—has an enviable reputation for long shots and hard hitting. The advantages in a small bore are, less weight, less charges of ammunition, increased penetration with consequent increased range, and, best of all, they demand a true aim. In my judgment the quintessence of pot-hunting is the throwing a handful of shot from a No. 10 gun at a quail! SMALLER BORE.

DUCK SHOOTING ON GALVESTON ISLAND.—Our esteemed correspondent, B. B. B., sends us note of a little sport enjoyed by him in company with five others on Galveston Island last March, fifteen miles from town. The shoot resulted also in a ndly trial, in which all participated, resulting in a signal defeat of the only muzzle loader in the party. Camping over night, they secured upward of three hundred mallards and gray ducks during the morning flight, along with a few willet and snipe. Of the former one hundred and fifty fell by the redoubtable aim of our correspondent. He thinks the frosts of the Northern States and Canada a great draw back to duck shooting, especially as equally good bags are made in Texas, and advises every body to come to Texas for their shooting, which we can assure our friends is hard to equal.

KILLING BIRDS HUMANELY.—Psyche, of Boston, writes: "You say the quickest and most humane way of killing a wounded bird without disfiguring it is to bite the bird's neck with the teeth. A better way, I think, and one taught me by that veteran sportsman, O. A. Taft, of Point Shirley, is, to take the bird (if not too large, in one hand) and make firm pressure over the heart with the thumb, thus arresting the circulation at once."

[Both methods are good, but we give preference to the former, as none but the smallest birds can be killed in this manner. Again, the biting of the neck causes instantaneous paralysis, while the pressure of the thumb gives a few seconds of torture.—ED.]

COLLAPSED SHELLS.—"On the Wing" remarks:

A correspondent in your paper recently inquired, Why some of his paper shells collapsed when fired? My opinion is that the cause will be found mainly in the fact that some of the cartridges are not equal on all sides in thickness. Consequently the thin or softer parts are drawn in by the vacuum created by the explosion of the charge.

—Our Pennsylvania correspondent says: "A young man of Flint Hill, Ohio, desiring to cripple, but not kill a small red bird, loaded his gun, using *wet powder* in the place of shot. The gun burst, mangling his head in a terrible manner.

THE TRAVELERS' OFFICIAL RAILWAY GUIDE.—The best book of reference for travelers to obtain information in relation to the times of the running of trains is the "THE TRAVELERS' OFFICIAL RAILWAY GUIDE," published by the National Railway Publication Co. of Philadelphia. The information published in this book is all furnished directly by the various railway companies themselves, hence its *official* title. It contains also much other valuable information, one special feature being a list of some twelve hundred names by which various railways of the country have been known in former years, with their present title or the name of the operating road. Price $4.00 per annum, 50 cents per copy.

THE DITTMAR POWDER.

Please direct all letters for the above powder to Neponset, Mass Capt. Bogardus and Ira Paine, are using my powder. CARL DITTMAR —*Adv.*

RECOIL.

300 BROADWAY, NEW YORK, July 5, 1877.

EDITOR FOREST AND STREAM:

Please convey to "Straight-Bore" my thanks for the best article on the subject of "Recoil" which has ever, to my knowledge, appeared in print.

I have, during my leisure time, for the last two years, been engaged in the preparation of a work on rifle shooting, in which I have advanced the same ideas on the subject of recoil that have been so ably set forth by "Straight-Bore." The language in which his article was written is, however, so much more clear and forcible than that in which my ideas were clothed, that I wish you would ask him to give me the privilege of reprinting his article in my book.

Yours very truly, HENRY FULTON.

SHELL LOADERS ASKED FOR.—Is there not a great chance for improvement in the making of our shell-loaders? Thus far I have tried many, and seen as many more advertised for sale, yet there is not one of the lot that will load more than one shell at a time, and some will only work on the brass ones at that. Hence, if a man wishes to load three or four hundred for a two or three days' hunt, he must necessarily preface his days of sport by nearly a day of hard work over the shells—unless he buys them ready loaded, which is not easy to do in most localities. Now, if with proper appliances all this work could be done within half an hour, or an hour at the most, what a happy state of affairs it would be! And it seems to me strange that some ingenious sportsman has not long before this invented something that would fill the bill exactly—that is to say, a machine that would charge and load half a dozen shells at a time, brass or paper, equally well. If such a loader could be manufactured and sold at a price that would come within reach of most of the sporting men throughout the country, what a saving of hard labor and valuable time it would be, and, I should think, pay well the manufacturer. Of course I do not claim to be posted on all the loaders made, and there may be such in existence and I failed to hear of it, and would be glad to know from you the facts.

Yours for improvement, LOADER.

NEW YORK—*Poughkeepsie, July* 9, 1877.—Many sportsmen in this section are disappointed because they were prohibited from spending the fourth in shooting woodcock; but now that the law is enacted they intend to see it enforced.

Reports from different parts of this county say that quail are quite plentiful. Quite a number were turned loose near here this spring. Sedgwicks, at their foundery and machine works, are actively engaged in manufacturing Dudley's new loading tool, for which orders are pouring in rapidly, both from local and distant sportsmen, faster than they have been ready to fill them.

Parties from here who have visited the New Hamburgh reef have made very good catches of white perch. The late New York dog show has imparted quite an interest here in sporting dogs, and several parties purchased dogs there.

Good Ground, L. I., July 10.—Yesterday was the "grand opening day" of the shooting season here, the snipe coming in large flocks. The "captain" and three boys secured over sixty nice, large birds, and all the gunners from other houses secured good bags. CAPT.

—Snipe shooting has already begun in Shinnecock Bay, one party killing about forty large snipe on the 9th inst. The shooting promises to be very good. Gentlemen with their families can find at the Halsey House rooms and attendance that will be satisfactory.—*Adv.*

NEW JERSEY—*Red Bank, July* 7.—I send you report of a few small scores of woodcock shooting for this week, commencing July 4: H. C. White, Taber Parker, 2 hours, July 4th, 5 birds; Taber Parker, J. R. Bergen, G. H. Wild, July 5th, 16 birds; Taber Parker, G. H. Wild, July 7th, 3 hours, 7 birds. The birds are full grown, and the finest we have had for some years. WILD.

MICHIGAN, *Detroit.*—Chas. Robbins, of Windsor, Ont., bagged twelve woodcock on the 2d of July. Albert Holland and friend were out on the 6th and killed eighteen. ROVER.

MASSACHUSETTS, *Northampton, July* 6.—Nonotuck Club; glass balls, three traps, 18 yards rise.

Capt Rust	3	Capt Metcalf	3
Damon	4	Dewey	12
Foster	10	Maynard	13
Pomeroy	10	Williams	10
Total	27	Total	38

—A club is being formed at Easthampton, and thus far about a dozen fine fellows and good shots have enrolled their names.

Spencer.—The Spencer Sportsmen's Club held a chowder party on the shores of Whittemore Lake, July 4. The day was an enjoyable one, being enlivened by the presence of numerous lady guests. After the repast the gentlemen tried their skill at trap shooting, using Bogardus' glass balls, string of ten, 18 yards rise, with the following result:

John Boyden	6	L M French	3
Jas Holmes	6	P Webber	2
W Barr	3	D C Luther	0
H Brewer	5	A W Curtis	1
F W Prouty	2	F T Prouty	5
D G Snow	4	C A Chapman	1
H Newton	8	E M Bliss	5
J G Avery	8	E Draper	3

The ladies of the club also contested for a prize, which was won by Mrs. L. M. French, Mrs. James Holmes second.

Shrewsbury.—The Sportsmen's Club was out in full force July 4, and made a day of it with their friends on their grounds at the farm of Curtis Jenkins. The morning hours and a portion of the afternoon were devoted to rifle practice. Mr. H. L. Wesson made the best record of the day. During the afternoon several strings of glass balls were shot by members, Mr. A. B. Plympton scoring 9 out of 10, and Messrs. D. E. Ball and Ward Osborn 8 out of 10.

—A new sportsman's club has been formed at Fitchburg, Mass., with the following officers: "President, John C. Howard; Vice-Presidents, Charles E. Sheldon and Elliot N. Choate; Secretary, Henry F. Piper; Treasurer, Frank T. Noble. The club held its first public shooting tournament at the Fair Grounds on July 4, glass balls, ten birds, with the following result:

S W Putnam	7	S D Sheldon	7
G W Cann	6	H C Newell	6
Chas E Sheldon	5	D S Woodworth	4
John C Howard	5	F T Noble	5

There were ten other entries with smaller scores.

BAY RIDGE, L. I., July 4.—A glass ball match was shot on July 4 at Bay Ridge, L. I., which was won by Mr. Heinigke, of the Owl's Head Rifle Club, who succeeded in breaking ten straight balls, and in taking home the prize, a set of pearl shirt studs. The following is the full score:

Otto Heinigke	1 1 1 1 1 1 1 1 1 1	=	10
P Monfort	1 1 1 1 0 1 1 1 0 —	=	8
Jerry Bott	1 1 1 1 0 1 1 0 1 —	=	8
Geo H Hope	7		
J Dodsworth	3		
F S Bogart	7		
E Kent, Jr	2		
W E Hope	7		
Dr O Meyers	2		
F W Kent	5		
W Townsend	1		

FOUNTAIN CLUB, July 4.—Pigeon match at Brooklyn Driving Park, L. I., for the club championship match; fourteen competitors, seven birds each, 21 yards rise, 80 yards boundary.

Williams	1 1 1 1 1 1 0 1	=	8
H Miller	1 1 1 1 1 1 0 0	=	7
Josephs	0 1 1 1 1 1 —	=	6
White	1 1 1 1 0 1 —	=	6
Goodwin	1 1 1 1 1 0	=	6
McLoughlin	1 1 1 0 1 1	=	6

NEW JERSEY, *Washington, July* 2.—Inclosed find the result of a shoot of the Forest and Stream Shooting Club, of Washington, N. J., Saturday, June 30, at Hornbaker's Trotting Park, four members shooting at twenty-five glass balls each, eighteen yards rise, to be broken in the air. Bogardus' balls.

Jno. Hornbaker	16	J. Trimmer	15
A. R. Strader	22	R. Hornbaker	24

CHICAGO, *Maywood, July* 4.—Glass ball shooting, 18 yards rise, 1¼ oz. shot, sweepstakes, $1 entrance.

Broddle	4	Ballou	4
Moore	1	Mayberry	2

Purse divided.

Second sweep—same conditions.

Broddle	3	Moore	1
Ballou	5	Mayberry	4

Third sweep—same conditions.

Ballou	3	Moore	2
Broddle	3	Mayberry	3

Fourth sweep—same conditions.

Porter	4	Odell	4
Ballou	3	McKailer	3
Moore	4	Baldwin	0
Broddle	3	Mayberry	4

Ties of four at three balls, won by Moore. Ties on three, won by Ballou.

Fifth sweep—same conditions—31 yards rise.

Ballou	5	Moore	5
Porter	5	Broddle	4

Ties on five divided.

Sixth sweep—same conditions as last.

Porter	5	Broddle	4
Ballou	5	Moore	4

Match at eighteen yards.

C. N. W. Railway	3	Graham	0

Sweepstakes at pigeons, 21 yards rise, 80 yards boundary, 1¼ oz. shot, $1 entrance.

Ballou	2	Mayberry	2
Moore	3	Baldwin	3
Odell	2	Porter	3
Broddle	2		

Ties at 31 yards, won by Baldwin.

IOWA, *Mason City, June* 30.—If nothing happens to our birds from this on, we will have fine shooting this season. There is a nice lot of pinnated grouse now hatched, and are doing well.

MINNESOTA, June 27.—In the class shooting of the Sportsman's Club there were three ties on 10, viz.: H. Pochler, H. Hart and S. Judd. The tie was won by S. Judd by the following score:

Poehler	1 1 0 0 1—3	Judd	1 1 0 1 1—4
Hart	1 1 0 0 0—2		

The number of ties on 9 was 12. The tie was won by Mike Hoy, who scored five birds, 26 yards rise, Baldwin, Lagrave and Seabury scoring four each.

The number of ties on 8 was 17. The tie was shot off on five single rises, 26 yards, and resulted in a tie on five between V. Paul, Lieut. Hammer and C. D. O'Brien, which was won by V. Paul.

The number of ties on 7 was 9, and when shot off at 5 single rises, 26 yards, resulted in another tie of four birds between N. G. Sisson, C. A. Russell, D. C. Shepard and H. Simmonds, which was won by N. G. Sisson.

There were six ties on 6, which also resulted in a new tie, Messrs. R. Slater, W. Golcher, J. N. Castle and J. Wilde each scoring four out of five single rises, 26 yards.

This second tie was won by Mr. W. Golcher, scoring three in three single rises at the same distance.

The prizes were: First, $100; second, $50; third, $30; fourth, $20; fifth, a sole leather gun case, presented by Kennedy Bros.

Henderson, July 4.—Sweepstakes five birds each, 26 yards rise, tame birds.

T M Paine	5	Leo Frankenfeld	5
Henry Poehler	4	R Dell	5
W H Sigler	4		

Ties on five, same distance, miss and out.

Paine	1 1 1 1 0—4	Frankenfeld	1 1 1 0—3
Dell	1 1 1 1 0—5		

Ties on four then shot off, same conditions.

Poehler	1 1 1 1 1—5	Sigler	1 1 1 1 0—4

Birds gave out, and a glass balls match was arranged, 10 balls each, 18 yards rise, for two purses, first and second.

Poehler	10	Hermann	6
Sigler	8	Paine	9
Dell	7		

KANSAS CITY, Mo., Exposition Grounds, July 4, 1877.—Purse No. 1; 10 single rises, tame birds, use of both barrels, $100; $50 to first, $25 to second, $15 to third, $10 to fourth; 26 yards.

Bain	7	Caven	10
McGee	6	Miles	9
Underwood	10	C A Bast	7
Merrill	9	Fredericks	7
Beach	8	Brooks	9
Dando	7	Jarrett	5
Stark	5		

Caven and Underwood divided first money, Brooks won second, Beach won third, Frederick won fourth.

Purse No. 2; 10 single rises, 21 yards, $10; $100 to first, $50 to second.

Beach	7	Fredericks	9
Dando	6	Underwood	7
Bain	10	Miles	8
McGee	9	Caven	10
Brooks	9	Bast	8
Hall	6		
Stark			

McGee and Caven divided first money, Brooks and Fredericks divided second, Miles and Bast divided third.

A number of sweepstakes were shot after the regular match.

CALIFORNIA, *Auburn*, June 18.—Three matches at glass balls were shot at this place on the 16th, between a team of six from Sacramento and a team of six at this place. The distance was 21 yards rise. The first was fifty glass balls, with the following score:

Auburn Team.		Sacramento Team.	
Brown	47	Todd	46
Crisman	50	Vermilyea	41
Tuttle	46	Aukeny	43
Ritinger	48	Corbin	44
Craig	5	Maulden	44
Fulweiler	41	Kuhl	43
Total	274	Total	265

Ten double balls were then shot at with the following score:

Sacramento Team.		Auburn Team.	
Todd	12	Brown	19
Vermilyea	15	Crisman	20
Aukeny	14	Tuttle	18
Corbin	13	Ritinger	14
Maulden	15	Craig	16
Kuhl	14	Fulweiler	16
Total	83	Total	103

Ten single balls were then shot at with the following score:

Auburn Team.		Sacramento Team.	
Brown	8	Todd	9
Crisman	9	Vermilyea	7
Tuttle	9	Aukeny	8
Ritinger	9	Corbin	10
Fulweiler	10	Maulden	9
Craig	8	Kuhl	6
Total	53	Total	49

The single ball missed by Crisman was his last shot, so that he broke seventy-nine consecutive balls.

C. A. TUTTLE.

TEXAS, Waxahachie, June 28.—Young prairie chickens are in season, and fishing splendid. If any of the New York boys will come out next fall I will show them how to kill buffalo. I killed thirty old buffalo last winter.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

C. A. F., Newark.—Your question is answered elsewhere in this column.

IZZARD, Baltimore.—Capt. John Simpson, 344 South Carolina street, is one of the best row-boat builders in your city.

H. W. M., Allegheny City, Pa.—Your trouble doubtless arises from the exposure in the water. Go to a physician. You need not fear hydrophobia.

REMINGTON, Pittsburgh, Pa.—Pattern and penetration compare favorably with other guns; few, if any, would accomplish more.

J. W. A., Lake Mahopac.—Is there any law prohibiting the netting of wild pigeons in this State? Ans. It is forbidden.

CHARGE, Richmond, Va.—What are the conditions upon which Capt. Bogardus holds the champion badge of the world? Ans. He holds it as his own property, having earned it. It cannot be won from him, unless he chooses to put it up against an equivalent.

C. K. S., Milton, Pa.—Can small game, such as ducks, prairie chickens, quail, woodcock, be carried so they will not spoil during the warm season? Ans. Yes, in the same way as other meats.

C. P. R., Newark, N. J.—Where can I get the rules of the National Association of Amateur Oarsmen, and what is the price? Ans. The rules are given in the American Rowing Almanac, published by Fred J. Englehardt, 37 Park Row, New York; price about 50 cents.

W. C. H., Winslow, N. J.—Please give treatment for mange? Ans. For an adult dog 4 drops Donovan's Solution three times a day in water. Use twice a day Caswell, Hazard & Co.'s Juniper Tar Soap.

F. S. P., Albany, N. Y.—Please give me the name of some breeder of English mastiffs? Ans. H. D. Kingdom, Esq., Wilhayne, Colvton, Devon, England.

E.—Is there any difference in shooting qualities between a ten-bore gun of 28-inch barrels and one of 30-inch barrels? Ans. Not any necessarily. Barrels are generally shortened to save weight.

G. H. R., Gainesville, Tex.—Is the copying of the excelsior copy book permanent? Give me the address of the *Ibis*? Ans. 1. We cannot say. 2. London, England.

H. W. J., Newark.—A good book on birds is Baird, Brewer and Ridgeway's "Birds of North America;" or get Samuels' "Birds of New England."

GEO. J. ELLIOTT, Philadelphia.—Will you be kind enough to furnish me with the pedigree of the Gilbertsleeve bitch Judy, and oblige? Ans. We cannot.

S. J. H., New York.—There is no woodcock shooting in New York during July, except on Long Island. In New Jersey you will find good shooting at Tenafly, Tuckahoe, Red Bank and Hanover.

G. B., JR.—1. What game will I find in Clarion Co., Pa., on the Clarion Creek, in month of October? 2. Which bore would you recommend for that shooting? Ans. 1. Ducks, geese, partridges and quail, with bass fishing? 2. Use a 12-bore gun.

J. G. S., Oswego.—Please give a remedy for piles in dog four years old. Ans. Give three grains powdered cubebs and two grains leptemdrin three times a day. Ask your chemist for iodoform suppositories, and insert one in rectum each day.

F. H., Boston.—Can you inform me if there is any fishing near or at Fort Edward, N. Y., and if so, what kind? Also, if there is any good hotel where I could pass the night? Ans. Fort Edward is an important railway station from which good trout and bass fishing can be reached very easily; good hotel.

W. H. S., Philadelphia, Pa.—My setter dog seems to be troubled with piles. What can I do for him? Ans. Use injections of black wash every morning, and at night introduce an iodoform suppository. Give one grain of septandrin and two grains of powered cubebs three times a day.

J. G. S., Oswego, N. Y.—For piles in a young dog use injections of common black wash to every half pint of which one drachm of laudanum should be added. Give also, three times a day, a pill composed of septandrin, ½ grain; cubebs, 1 grain; quinine, ½ grain; castile soap ½ grain.

E. D. H. Eaton, of Peotone, Ill., informs E. P., of Philadelphia, that he can furnish him with all necessary feathers for dressing flies, leaders and recipes for dying patterns. If he had advertised this in our paper everybody would have known it. Why don't you do it now? Mr. Eaton is informed that the *Bulletin* of the Essex Institute is published monthly at Salem, Mass., price $1 50 per year, we believe.

A. J. J., New York.—1. Can any person enter into the rifle matches at Creedmoor when they are open to all comers? 2. Do they have to belong to a club? 3. Can they use any rifle they choose? Ans. 1. Yes. 2. No. 3. In any-rifle matches, rifles not over 10 lbs. weight, not under 3 lbs. trigger pull and without magnifying sights may be used.

W. M. F., New York.—Would you be kind enough to inform me where Oswego bass can be caught most plentifully, and as to bait and best mode of capture? Also what good fishing can be had in the neighborhood of Geneva, N. Y. State? Ans. Oswego bass are abundant in Lake Ontario. Trolling with spoon or minnow, casting with fly or minnow, or still-fishing with a just variety of baits. Perch and bass fishing.

INQUIRER, Haverhill, Mass.—My hound, aged two and a half years has been sick a week. The first few days he would eat nothing and consequently lost flesh. Nose dry but a part of the time, seems to wish to lie down most of the time, is not cross, merely weak, eyes bloodshot, skin and hair natural, no cough and is better now as appetite is returning. Please prescribe. Ans. Quinine and leptandrin two grains each three times a day. Keep in cool, air and dry locality.

J. F. BONTECOU, New York.—1. Where can "Dead Shot" powder be obtained? 2. Is there any mark on a "Brazier" lock by which it can be distinguished from any other fine lock? 3. What would be the probable cost of boring a shot-gun from a No. 14 gauge to No. 12 or 13? 4. Who is the present owner of the stud dog Milo, by Knowle's Dan out of Venus? Ans. 1. American Powder Co., Boston. 2. Not that we know of. 3. Don't know. 4. Address Mr. Raymond.

F. T. D., New York.—The best way to shorten your gun stock is to cut off a slice from the butt as thick as will permit the stock to fit the shoulder easily when dressed in thick winter clothing. Thirteen inches is an average length, measuring straight from the trigger. Fit two hardwood pegs firmly into the slice, bore corresponding holes in the stock into which the pegs will fit firmly. Remove the slice at will. A metal cap can be used for the shortened stock as a finish, to be removed of course when the slice is put on.

H. O. T., Springfield, Mass.—Where can a party of three or four find a good camping and fishing spot on the coast of Connecticut, or Rhode Island? Also please tell me the nearest good out-fitting place? Ans. Go to C. F. Hotchkiss, Branford, Ct., near New Haven. You can camp out luxuriously among the Trimble Islands. Every facility and plenty of sea bass, black fish and cunners. Other good places are found most anywhere on the line of the Old Colony railroad.

CASE.—Will you please let me know if there is any law on robins in Connecticut, and if so, what time it closes? Can you tell me what fishing can be had near old Saybrook and Clinton, Conn.? Can bluefish be caught near there? Are weakfish biting at Princess Bay? Ans. No robins shot between 1st February and 1st September. 2. Bluefish, weakfish and various other kinds of fish at Saybrook; also at Princess Bay.

G. C., Jacksonville, Fla.—My pointer, nine months old, has sore ears which he scratches, keeping them continually raw. Can you give me a remedy? He does not eat heartily, refusing his food, frequently for two meals at a time. Ans. Give two grains of iodide of potassium three times a day, dissolved in a tablespoonful of water, and apply the following ointment daily: Camphor, spermaceti, white wax, olive oil, of each equal parts by weight.

POINTER.—You write anonymously. In the ancient days of the sibyl the responses of the oracle acquired additional authority from the mysterious darkness of the cavern whence they were uttered. In these latter times you would reverse this plan by enveloping inquiries in the same mystery. It is needless to repeat what we have often said: the oracle will not respond.

J. A. S., Mexico, N. Y.—Where can I get a work on sailing, and the care and construction of sail-boats, either in book or pamphlet form, at a cost of not more than $1? Does the American woodcock breed in this State? What is the charge of powder for a double Remington breech-loader, 8 pounds weight, 10 bore, 30-inch barrels? Is the hammock advertised in your paper a reliable one, and will it actually sustain 1,300 pounds, as claimed? Ans. No American work on yachting. You can buy Vanderdecken's Yachtsman from the importers of English books. We think it costs fifteen shillings. The woodcock breeds in portions of New York State. Charge for the gun mentioned, 3¼ drs powder, 1¼ ozs. shot. The hammock is reliable. It will sustain any one weighing less than 1,300 pounds.

HUNTER.—Will you be kind enough to say when the dog Bismark died, of what strain he was, what his color and where owned, and if his get have any value? I have a white and red bitch two years of age sent from Philadelphia, said to be by him. She has every appearance of good breeding, but is only partially broken. Could she be by him? Ans. You will find complete answers to your queries in the FOREST AND STREAM, Aug. 3, 1876.

S. J. QUINN, Pittsburgh.—I have a pointer bitch suffering from a skin disease; have tried most of the mange remedies without accomplishing a cure. As soon as one part is healed the disease breaks out in another. At present she has two sores on her hip, which first appeared as a red spot, followed by falling off of the hair, leaving a sore that looks like proud flesh. 2. Where can I find good woodcock shooting within fifty miles of Pittsburgh? Ans. 1. Use prescriptions given in answer to A. Leibring, Tobyhanna Mills, in this column. 2. Do not know; some Pittsburgh sportsman would be better informed.

SUBSCRIBER, Tuskaloosa.—In your last answer to correspondents, under date of the 21st inst., you say: "The best shot we ever saw shot from the hip." Do you mean by this that the gun was not brought to the shoulder? Have you a personal knowledge of any respectable sportsman, or rather accurate shot, who habitually discharged his gun from the hip instead of the shoulder? We have all heard of such cases, but have never seen them. Ans. You have the idea exactly. We do know such persons, and in one case in particular the party is an excellent shot, though never lifting the gun to the shoulder.

G. F. Torresdale, Pa.—Will you please answer these questions: In putting the shot is the regulation weight 16 pounds? What distance are you allowed to run before throwing, and whether it is a fair throw if the impetus of the run should carry you beyond the line after the ball had left your hand? 2. What is the longest throw of a base ball? Ans. There is no regulation weight in putting the shot. The distance you are allowed to run before throwing, or whether you are allowed to run at all, depends upon the regulations for the special trial in which you are engaged. With a running start it is not fair to pass the delivery line. 2. Made by John Hatfield—153 yards, 1 foot, 7½ inches, at Brooklyn, L. I., Oct. 15, 1872.

READER, Philadelphia.—I have a setter pup apparently suffering with distemper (age six months); symptoms: no appetite, got very poor, stools very thin and green, occasionally mixed with blood, shakes his head, discharging thick matter from the eyes; have administered sulphur and aloes, afterward sulphate quinine, sulphate iron and extract dandelion. I have prolonged life about three weeks, but no cure effected. Ans. One drop of Donovan's solution three times a day in water. Every four hours three grains of the following powder: Rhubarb, powd., 18 grains; white castile soap, powd., 6 grains; leptandrin, 6 grains; cubebs, powd., 3 grains; quinine, 9 grains. Feed wine of iron and beef, or Bokaiit's wine of pepsin—one-half teaspoonful doses.

J. M. C., Clyde.—My setter bitch had pups the 14th of February. Five days ago, at the Syracuse show, I first noticed that she was coming in heat again, and to-day a cur lined her. I didn't think it near time for her to get in heat, and not time to take a dog. Isn't it unusual to come in heat so soon? Will she have pups? If I should line her to a setter on receipt of your answer would part of the pups come setters, and would they be as good as though the cur had not lined her? Ans. 1. No. 2. Probably. 3. Some might show distinctive marks of setters, but the animals would be valueless, as they would probably partake more or less of the traits and peculiarities of the cur. See Hallock's "Gazetteer," now ready.

J. G. S., Oswego.—The symptoms you give are those of chronic piles. To cure, apply an ointment prepared as follows: Camphor, 2 drs.; strong mercurial ointment, 1 dr.; elder ointment, 1 dr.. Smear this over the exterior of and insert up the rectum thrice daily. If much stench is present, moisten fundament with a very dilute solution of chloride of zinc, and a small quantity may be administered as an injection after the grease has been introduced. Relief will probably come third day, but treatment should be continued some days after the dog appears well. A day's feed of liver once or twice a week is also recommended. If this does not have the desired purgative effect, a little olive oil may be given, but nothing stronger.

C. E. VAN V., Brooklyn.—I have a setter bitch four years old, and a great pet with all the family. For the last four weeks she has spells of stomach sickness, and throws up her food. I have been very careful about her food, in order to not let her get too fat, but she continues as before to be sick. Her coat looks harsh, and sheds a great deal of hair, and has been shedding for three months, still, to all appearances, she is as well as any dog, full of play as a kitten, always ready to eat, and I am puzzled to know what to do for her, if anything. Please prescribe for her. Ans. Feed less. Give rhubarb, 6 grains; leptandrin, 1 grain; powdered castile soap (white), 2 grains; powdered cubebs, 1 grain, three times a day, occasionally a dose of Rochelle salts at night.

A. SEBRING, Tobyhanna Mills.—I have a fine hound about three years old. He had the distemper some eight months ago; ever since he appears to have some trouble in his head. After lying idle for a short time he will, when called out of his kennel, shake his head, at the same time sneeze and snuff, acting as though he had some disease in the head. He has the mange. Will you please inform me what I shall do for his complaint in the head, also a remedy for the mange? Ans. Hydrargesa Bin Iod., 4 grs.; Iod. potasium, 2 drs.; Comp. Spirits Lavender, 2½ drs.; Syrup, 1 oz.; water to make 4 oz. Dose, ½ teaspoonful three times a day, taking care to give on empty stomach. 2. Wash dog thoroughly at least once a day with tepid water and Caswell, Hazard & Co's Juniper Tar Soap; dry thoroughly and apply the following "Black Wash:" Calomel, 2½drs.; powd. Gum Arabic, 10 grs.; glycerine, 2 drs.; Fluid Extract Conium (Squibbs) 2½ drs.; mix in mortar, and when thoroughly incorporated, add slowly, still stirring, lime water, q. s. to make 8 oz. *Shake well* before using.

J. H. P., Augusta, Me.—1. Salmon are taken from the Kennebec at this place with nets, but some of our fly-fishermen have tried them with flies, but never got a rise. Can you explain why they will not take a fly here as well as elsewhere? The water is quick and below a large dam. What kind of flies would be the most tempting in such a case? 2. Do shad rise well to a fly? If so, at what time best, and what are the most killing flies for them? 3. Is there such a thing made as a "harness" for holding a live minnow? If so, by whom made? 4. Who are to publish the new guide-book and map of Moosehead Lake and region? Will it be any improvement upon the one published by Bradford & Anthony two or three years ago? 5. What is the most tempting fly for black bass when they appear to be sluggish and sleepy in the middle of the day? 6. Is greenheart as good a wood for durability as lancewood? Ans. 1. Salmon are capricious. They will probably take the fly farther up stream. 2. In June they will take flies of gray, brown and red combinations. 3. Cannot answer. 4. C. J. Farrar's guide-book is for sale by Lee & Shepard, Boston. 5 You can only tell by experiment. 6. Yes; your questions are answered at great length in Hallock's "Sportsman's Gazetteer."

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oilcloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAY, SONS & CO., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him or with any orders sent him. It is a good, reliable house.—[Adv.

FOREST AND STREAM ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 12, 1877.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

☞ Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, July 13.—Trotting: Bay City, Mich.; Springfield, Mass.; Columbus, Mass.; Monmouth, Ill. Running meeting at Long Branch. Base ball: Boston vs. St. Louis, at St. Louis; Hartford vs. Chicago, at Chicago; Manchester vs. Allegheny, at Pittsburg, Pa.; Buckeye vs. Standard at Columbus; Chelsea vs. Rochester, at Rochester; Star of Syracuse vs. Cincinnati, at Cincinnati.

Saturday, July 14.—Trotting at Monmouth, Ill. Running meeting at Long Branch. Base ball: Boston vs. St. Louis, at St. Louis; Hartford vs. Chicago, at Chicago; Chelsea vs. Rochester, at Rochester; Star of Syracuse vs. Cincinnati, at Cincinnati; Orange vs. Alaska, at Orange, N. J.; Indianapolis vs. Louisville, at Louisville; Quickstep vs. Harlem, at Melrose; Manchester vs. Standard, at Wheeling, W. Va. Regattas: Nahasset Club, at Cohasset, Mass.; Quincy Club, off Mear's Hotel, Quincy Point, Mass.; Dorchester Club, off City Point, Mass.; scull race between Courtney and Riley, at Greenwood Lake, N. J.

Monday, July 16.—Running meeting at Long Branch. Base ball: Chelsea vs. Erie, at Buffalo, N. Y.; Quickstep vs. Witoka, at Melrose; Buckeye vs. Manchester, at Columbus; Star of Syracuse vs. Indianapolis, at Indianapolis; Red Caps vs. Racine, at St. Paul, Minn. Regatta of South Boston Yacht Club.

Tuesday July 17.—Trotting: Newark, N. Y.; Dexter Park, Chicago; East Saginaw, Mich.; Beacon Park, Boston. Running meetings at Long Branch and Pittsburg. Base ball: Boston vs. Chicago, at Chicago; Hartford vs. St. Louis, at St. Louis; Buckeye vs. Manchester, as above Star of Syracuse vs. Indianapolis, as above; Orange vs. Crystal, at Orange; Chelsea vs. Erie, at Erie, Pa.; Alaska vs. Volunteer, at Poughkeepsie.

Wednesday, July 18.—Running meetings as above. Base ball: Boston vs. Chicago, at Chicago; Hartford vs. St. Louis, at St. Louis; Red Caps vs. Racine, as above; Orange vs. Crystal, at Orange; Chelsea vs. Erie, at Erie, Pa.; Alaska vs. Volunteer, at Poughkeepsie.

Thursday, July 19.—Running meeting at Pittsburg. Base ball: Indianapolis vs. Manchester, at Indianapolis; Champion City vs. Boston, at Springfield, O.; Star of Syracuse vs. Chicago, at Chicago; Red Caps vs. Evansville, at St. Paul.

—The Principal of Leesburg Academy, Virginia, writes:

"My advertisement in your paper is the only one ever responded to in my experience with a good many papers. I mean to insert it again before September next." T. W.

—We have received a copy of the *Maine Farmer*, conducted by S. L. Boardman. It is one of the best Agricultural papers it has been our lot to peruse, and a credit to New England.

GAME BIRDS AND SOME OF THE AGENTS OF THEIR DESTRUCTION.

A TRITE topic, and one that has been thoroughly and ably canvassed, but which is still of absorbing interest to the naturalist and gentleman sportsman. We shall discuss the subject only as exemplified in the eastern bird-game, the pursuit of the large game of the far West being governed by widely different laws. There are many who assert that game is being "all shot off," and that its extermination, through the agency of the sportsman, is only a question of time. That some of our finest game birds become suddenly much less abundant in localities previously well stocked, we do not pretend to deny; but the encroachments of civilization do far more than the shot gun to clear the covers of their denizens. Good sportsmen are not very numerous, and banging a gun at partridges, quail or woodcock does not accomplish their destruction. He is a sportsman of no little skill who can secure one quail of every two flushed, be it in bush or open.

Croakers love to talk of the halcyon days of former gameplenty, and mourn the lack of it at present; but the so-called paradise of game exists in the imagination only, and good bags are never made without work. Were it not so, half the pleasure of the day's sport would be taken away. The sections where game formerly abounded are, many of them, now populous districts, the birds have removed to places as secluded as their former haunts before these had been colonized by man. Thus frequently birds disappear, but are not killed. The most important agents of destruction against which our game birds have to contend are snares (most contemptible engines of mischief), vermin and severe winters. We all know how terribly the quail (*Ortyx virginianus*) suffer in hard winters. During the extremely rigorous weather which we so often experience, when the surface of the country is covered with a thick mantle of snow and ice, and all but the most hardy of our birds have migrated to more congenial climes, subsistence for the quail is with difficulty obtained; many perish at such times on account of the severity of the weather and lack of food. Often, too, when caught during the night under a heavy snow, they are unable to free themselves, and so perish by wholesale. The few survivors are finally forced to resort to the friendly shelter of the farmyard and stable, there to eke out a scanty living by picking up what kernels of grain they may find. At such times the cat forsakes its lawful and normal food, the rat, and varies its diet with the palatable quail; and the dumpy, half-frozen little creatures are carried off one by one, till at spring time the piping of little Bob White is all that is needed to make the hey-day of the year what it should be, perfection perfect. It may be mentioned in this connection that we have not for years found quail so abundant as during the past season, and, taking into consideration the mildness of the previous winter, it is a significant fact, and the inference is obvious.

The ruffed grouse (*Bonasa umbellus*) is, of all our game birds, the most difficult to kill, least domestic in its habits and most particular as to the haunts it frequents. But the "partridge" is easily taken by snares, and of this fact the ubiquitous pot-hunter takes every advantage. We may now walk for hours through the most attractive covers, where partridges or pheasants were once numerous, and see nothing, hear nothing of the noble bird—the familiar drumming, the sudden whirr and the flash of wings as he passes swiftly before us and is lost in the leafy mazes of the glade, all gone; nothing remains to tell that this splendid game was once a denizen of the forest, save the broken brush fence with its deceptive openings. One to whom forest nature is dear cannot but be indescribably affected by such scenes. It should be made a felony to capture with snares any of our birds. Grouse suffer during hard winters, but not to such an extent as the quail; for, besides being more hardy, by reason of the places they inhabit, food is more easily obtained, and from their habits they ordinarily escape the perils from snow, to which the quail are exposed.

The woodcock (*Philohela minor*), unlike the quail and partridge, is migratory, and the chief fault that we have to find with the pursuit of this bird is that it is shot at *all* seasons. To kill one bird in March or April is to lessen the number of fall birds by four or five. This should be remembered. We also sincerely deprecate the summer shooting. Birds shot in July are just from the West; they fly easily and the sport does not compare with the fall shooting. We have, in many instances, seen cock shot in July with the down still clinging to the few feathers they possessed. Were the summer shooting entirely abolished, more sport would be furnished in October, and that of a better quality.

The case of the Wilson's snipe (*Gallinago wilsoni*) is exceptional, as the only time at which they are with us is during their migrations northward in early spring and south in fall. This is true also of the countless myriads of ducks that in winter throng our bays from Cod to Hatteras.

Of other of our game birds we need not speak in particular. We believe, however, that fears of the extinction of species are without foundation, though birds may become scarce or plenty in alternate years. We are an earnest advocate of most stringent game laws; they should be properly framed and sternly enforced throughout the length and breadth of the land. Game protective associations should be formed in all sections where they do not now exist, and each member should strive to do his part in checking all unseasonable and indiscriminate destruction of game, and all violations of the laws regarding it.

THE GUIDE QUESTION AGAIN.—This seems to be a question of personal veracity. We cannot give space to a review of this matter, to which we have made reference already. We can but think the matter is becoming too personal. Knowing all of these men either directly or indirectly they have all borne good reputations hitherto.

The guide Hall—whom Plumly has accused of using a net upon the spawning beds of the trout—sends a sworn affidavit, which declares that he (Plumly) "never told any person that he saw Lysander Hall fishing with a gill net in Racquet Lake or any other lake." The guide Bennett says: "John Plumly did not *see* Hall fishing with a net, but he pulled it up off the spawning bed. No other man in the town owns such, and Hall admitted it to be his, though he declared the net was set for frost fish. John says he will swear the net was on a spawning bed."

Hall, it will be remembered, charged John Plumly, the two Sabbattes, Alba Cole, Justin Lamos and others, with killing deer out of season, and running them down in the deep snows. In his letter he states that these men do not deny the fact, and moreover he cites the names of witnesses who are cognizant of the fact; and also of several residents and officials of the town of Long Lake who will vouch for his personal veracity. He, moreover, declares that he published the names of these men in the hopes of deterring them from similar acts rather than cause their arrest and its penalties, which, being poor men, they would be unable to meet.

With the present condition of our game laws, and the constant refusal of district attorneys to prosecute, nothing can be done. If the charges are true, it seems strange that guides should wantonly do that which will eventually take (so to speak) the bread and butter from their mouths. The decrease of game only hastens the day when the North Woods will no longer be sought by those who now open their pocketbooks freely in order to enjoy a few days' or weeks' recreation. We cannot but believe there is an error somewhere—a misunderstanding—which may be settled by the parties themselves without further breeding of bad blood. This question is now assuming a personal quarrel; and, while our columns are ever open to all that pertains to game protection, we cannot allow them to be made a medium for strife.

COL. SKINNER VS. W. H. DUTTON.—W. H. Dutton, of Phila., writes, July 9, 1877:

I have just returned from an eight weeks' fishing trip to Big Moose Lake, Brown's Tract, and notice a letter in FOREST AND STREAM, of June 21, from Col. Skinner, who writes that some other persons have requested him to call your attention to what is (to him) a shocking fact—"that one W. S. Dutton, in one week, slaughtered eight deer on Moose Lake during the month of May last." I suppose I am the individual referred to, and, in reply, I have to say that I have never shot eight deer on Moose Lake or neighborhood, either in one week in the month of May or in any month, or altogether during the whole twenty years of all seasons in which I have camped there; and that the statement is the malicious falsehood of an interested guide, as is well known in the woods, whose ill-will I have probably incurred from my successful effort to effect a reduction of wages during this year of general economy. Doubtless Col. Skinner means well, but the story is untrue, and he and his friends have been imposed upon.

[We take pleasure in exculpating Mr. Dutton; and with this we must again call attention to the fact that these reports of violation of the game laws seem unreliable, or are being used for personal ends.—ED.]

THE SPIRIT OF OUR YACHTSMEN.—Capt. Coffin, the redoubtable yachting editor of the *World*, is deploring the decline of yachting in editorial comment; but we do not accept the apparent apathy of the current season as any criterion for so deciding. The season throughout has been "cloudy with rain areas," as the Weather Indications have daily informed us; the wind has been capricious and fitful; some of the leading yachtsmen are abroad, some are surfeited with a long series of annual regattas or competitions, and are possibly temporarily tired of the brine and salt sea air. Let them flee like a bird to the mountains, and air their sky scrapers in the upper empyrean, and when they have enjoyed the change they will enter upon the following season with increased interest and multiplied gusto. We do not believe that the spirit of yachting has died out in this country any more than the "spirit of '76." It is only a lull, which presages a change of weather.

—The Williams College Scientific Expedition started yesterday, July 11th, on their Rocky Mountains tour. They go to Sherman, the Laramie Plains, Lake Como, the Green River, Salt Lake, the Jordan River, the canyons and mining regions of the Wascoth range, Middle Park and Pike's Peak.

—The Danville *Advertiser* tells a singular story of two horses which were struck by lightning, when one was found "standing erect with one foot lifted a little way from the earth, and the other was kneeling with his nose in the earth, and both were stone dead, and retained their erect positions until they were pushed over."

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

P. O. Box, 1,294.—*Adv.* ABBEY & IMBRIE, 48 Maiden Lane.

GAME PROTECTION.

OBITUARY.—We regret to hear of the sudden death of Henry Ruble, of North Mc.Gregor, Iowa, who was ever active in the advancement of Fish and Game Protection.

MINNESOTA STATE SPORTSMEN'S CONVENTION.—The first annual meeting of this Association was held at St. Paul, on June 27th, one hundred and fifty delegates being present. The President, Mr. C. J. Butler, delivered the annual address. Speeches were made by Dr. David Day, Judge Paige and many others, and there was a very general and strong expression of the opinion that the game of the State, not merely as an object of sport, but as a food resort, should receive protection during the period of breeding. In the course of his remarks the President said:

Most of us can call to mind, and within but few years, when our prairies abounded with grouse, when our ponds and sloughs were tenanted by myriads of water fowl in their season, when our forests were filled with deer, and our whole State was a sportsman's paradise. How is it now? Save in the more remote districts grouse are no longer to be found in numbers; the water fowl have been persecuted away to safer lines of flight in their migrations in the farther West, and deer are fast following the fate of all wild creatures, no matter how useful or how beautiful, than can be made to contribute to the greed of the unscrupulous dealer who plies his nefarious trade out of season, assisted by his ally the destructive and insatiable pot-hunter. These are the enemies we must meet and overcome if the game of the State is to be saved from absolute extirpation.

The result of the effort made in securing better protection for game, during the last session of the Legislature, gave gratifying evidence of the influence we can exert when the members of the clubs of the State bestir themselves to action.

Insectiverous birds and the songsters of our groves merit and undoubtedly will receive their full share of our protective attention, and the wild pigeon, so useful as a food resource and otherwise so desirable to be preserved, should also receive a protection sufficient to enable it to pass through its breeding season undisturbed.

It affords me pleasure on this public occasion to acknowledge the obligations which we as sportsmen are under to farmers. For myself, I will say that I enter no field in pursuit of game without feeling that I am there by the courtesy of the owner, and that it is incumbent upon me to exercise the greatest care that I do no injury, and when I leave it is with a sense of obligation for a favor enjoyed.

The following gentlemen are elected officers for the ensuing year: President, C. J. Butler; first Vice-President, L. S. Van Vliet; second Vice-President, F. Morse.

—Again we have to chronicle a game protective organization which has honored us by adopting the title of Forest and Stream Association. This time it is in Wilmington, Clinton Co., Ohio, and has the following officers:

President, Dr. L. B. Welch; Vice President, Wm. B. Telfair; Secretary, Melville Hayes; Treasurer, L. D. Sayers.

IOWA.—The Lansing Shooting Club was organized June 28th, with H. Breisch as President; C. A. Gardener, Vice; G. Keisel, Secretary, and E. A. Blum, Treas. J. O. Lyttle, Theo. Mahoney and B. E. Brockhausen, constitute a board of Directors.

A REPUTABLE GAME CLUB.—We have received the following letter from Detroit, under the date of June 30, which is but one of many similar complaints regarding the clubs of that city. We sincerely hope this is an error, or if not, that it may be corrected by the "strong arm of the law:"

The latest improvement on the old game of "Presto change" is successfully played since the advent of glass-ball shooting, as follows:

A half dozen glass balls and a miniature Bogardus trap are placed in the pocket, the gun thrown over the shoulder, the "blue bloods" whistled up, and a start made for a good glass ball locality. The locality means any, for this sport is very peculiar, and can only be found on Bell Isle, River Rouge, Pontiac, or Gratiot roads. When the proper ground is reached, they hide their traps, load their guns, and taking a glass ball in the hand start for a scout. When all is ready the ball is thrown in the air, fired at and broken, and the "presto change" comes in, for as it is retrieved it turns out to be a plump woodcock. From one to twenty glass balls are broken in this manner each day. The game is most successfully played by the members of the Detroit Gun Club and by some of the Solons who frame our laws.

If our glass-ball shooters do not let up on this "little game" I shall be compelled to give their names, and likewise the number of "balls" (?) broken. PRESTO.

IS THE USE OF SET-LINES ANGLING?—"Amateur" writes us that a couple of Trojans while fishing in the Mohawk a few weeks since demolished a set-line, and being caught in the act were threatened with prosecution. On consulting a "limb of the law," the zealous protectors received little comfort, being informed that this fishing came under the head of angling. Though the questions *may* be thus construed, we cannot but consider set-lines as violation of the act, *de facto* if not *de jure*. The Trojans, however, should not have meddled with the line, but informed the game constable, who would, undoubtly, have destroyed the line and arrested the owner.

—The new law in Florida for the protection of game, includes also song birds during the breeding season. Deer, turkey and partridges are protected from the 1st of April to the 1st of September. The destroying of nests or young birds is made a punishable offense. This, with the law passed last season for the protection of sea birds and birds of plume, places Florida in the front rank, so far as game protection is concerned. The penalty for violation of the law is $20.

C. E. D. Jr.

NEW YORK, *June* 1877.—Is there no one in Bergen county, N. J., true sportsman enough to see that the game law is not violated with impunity as it has been during the present month? In a little swamp that had about a dozen woodcock, all that was left was one wounded bird. Henry Engle, Jr., who lives between Fairview and Bulls Ferry, boasts of having killed them, and justifies himself, first, that he had permission of the occupant of the land; and, secondly, that all the other poachers in the neighborhood are doing the same thing.

SPORTSMAN.

NOTES FROM OUR SPECIAL COMMISSIONER.

FERN BANK, CINCINNATI, Ohio, June 22, 1877.
EDITOR FOREST AND STREAM:

Though past three-score, I will confess that it was with the jocund spirit of a school-boy going home for his vacation that I left your pleasant, but just now rather warm, sanctum in Fulton street for a run through the West in pursuit of health for myself and subscribers for your paper.

The ride over the Pennsylvania Central from New York to Cincinnati was most delightful, for the road is in such superb condition that the cars glide upon it with the smoothness of a boat upon the placid bosom of a quiet lake.

I left Philadelphia by the night express and daylight dawned upon us just in time to give us a view of the famous Horseshoe Bend—that great triumph of engineering skill which affords one of the grandest and most striking views to be seen anywhere on the continent. As we gradually descended the western slope of the mountains and reached the cultivated lands we were greeted on every side by great fields of waving grain just ripening for the harvest. The wheat crop everywhere on the route is truly magnificent; of corn there is a good stand, but continuous rains have stopped the plow and the cultivator, and it is somewhat in the grass. But of all the rural sights the most grateful to the eye of so staunch a desciple of Gambrinus and John Barleycorn as myself, was the barley fields, already reaped, covered with shocks of grain standing in thick serried ranks resembling mounds of pale gold glittering in the sunlight.

For the time being I have made Fern Bank, a most charming place on the Belle River twelve miles below Cincinnati, my headquarters; going into town in the morning and returning in the evening. But with my arrival the "heated term" commenced and I have done little more, so far, than to secure you a dozen or so of subscribers. The fact is it is too hot to work, and for the last few days Tophet itself might be thought a cool, pleasant place compared with Fourth street in the Queen City, and I doubt not that old Chabert, the fire king, and those incombustible youths, Shadrach, Meshach and Abednego would rather throw up the sponge than canvass the town even for so clever a paper as yours. By the way I am congratulated on all sides at the fusion of the FOREST AND STREAM with the *Rod and Gun*. Your readers here are of the opinion that you cannot fail with such a combination to achieve an immense success and to become *the* sportsman's paper of the country.

I had a most cordial reception from my friend and your correspondent "Gloan." He has just returned from a most successful fishing excursion to Kelley's Island where the back bass are more numerous this season than for many years past.

GAME PROSPECTS.

Common report confirms my own observation that quail are more abundant in Ohio this season than for many years. At Fern Bank, where I am sojourning with my daughter, the cheery whistle of Bob White is heard from morning till night in every direction, and the birds, as if conscious of immunity for another season, have become so familiar as to mix with the poultry about the out-houses. The great number of quail about Fern Bank may, in a measure, be attributed to Mr. Short, the Lord of the Manor and the founder of this charming and picturesque village. He turned down two hundred brace this spring, but I learn that quail are equally abundant throughout the whole State, and for this gratifying fact we must, in justice, give credit to the wise legislation inspired by that most efficient organization of gentlemen and true sportsmen, the Cuvier Club, of which model institution I propose to give you an account in a future letter.

I have recently had a letter from my friend "Pious Jeems." He has a paper in the hands of Scribner on the wild turkey which, if I am not greatly mistaken, will make a sensation among both naturalists and sportsmen. He proves a fact which, strange as it may appear, has escaped the attention of such close observers as Nutall, Wilson, Audubon, and indeed of all our ornithologists; it is that we have in this country two distinct varietics of the wild turkey. To sportsmen the paper will prove of the deepest interest, not only because of the eminence of its author as a leading sporting writer, but because it treats of turkey hunting, that most thorough of all tests of woodcraft.

To stalk an antlered buck, or kill a black bear, is easy work compared with the circumvention of an old bearded gobbler. This letter is a day late because I wished to report the dog show, but I might just as well have let it alone, for it was as complete a *fiasco* as I ever witnessed. It was organized and run by Bob Niles, that genial and popular *empressario* of the opera house and manager of theatres and hippodromes, but on this occasion Bob's ambition led him to wade beyond his depth; he did not know that the inopportune time for a dog show is when he dog, star reigns. No owner of valuable dogs would risk the canicular heat; the consequence was, that there is beneath the canvas at Highland Lena House a beggarly show of empty boxes. Then again, Bob was not in luck: Jupiter Pluvius and Jupiter Tonans and Eolus and all the minor gods ruling the elements were down upon him, and yesterday his majestic tent was blown down and the whole locality was in a few minutes reduced to a quagmire. But to day the potent hand of the experienced manager has reduced chaos to order, and everything as regards the locality is in the most satisfactory condition. But alas! there are no dogs on the benches; the storm created a panic and "*Sauve qui peut!*" was the cry among the owners of the most valuable canines. Still there were some few fine animals which weathered the storm. The show of Newfoundlands was better than you had in New York Jessie: an Irish bitch imported by Edward Greenwood, and belonging to Mr. Wm. S. Hudson, is a beauty, and can hold her own in any company, and so can Grouse, an orange colored pointer, belonging to Mr. Hudson and a white and liver pointer, Joe by name, exhibited by A. H. Claussen, Esq. There was but one black and tan Gordon on the benches, and he has as perfect a head as I ever saw upon a dog. He was entered as an *Irish* Gordon, bred by H. B. Northcott, Marysville, Ky.; he would have been hard to beat even at the Westminster show. Mr. R. L. Carry's fox terriers are worthy of mention as the truest type of their breed of varmint breeds which I have seen out of England. *Au revoir.*

F. G. S.

EASTERN R. R.—Those intending to visit the White Mountains will find this line particularly convenient. It passes directly through the "Notch," no change being made between Boston and St. Johnsbury, Vt.

—CRUELTY TO ANIMALS.—ENGLAND VS. AMERICA.—In a late copy of a London paper (*Telgraph*, we think), a writer who signs himself "Cornishman" inveighs against the "Barbarity of American trap shooting," and "Cruelty inflicted upon the birds as packed and shipped by the fowler." We find in the *Sporting Gazette*, of June 23, 1877, that a favorite sport of the miner, is to fasten lighted crackers to the tails of his pigeons, which are then tossed in the air "who roars with laughter at the agony of the birds when the crackers explode, burning their feathers and scorching the flesh of the hapless birds." Do our transatlantic friends need a missionary? We have a few we can spare.

—Any of our subscribers having live deer for sale might address H. Norcross, Box 773, N. Y.

SUMMER RESORTS.—The attention of our readers is called to the column advertisements, where will be found numerous summer resorts, and how to reach them. The variety presented allows a choice for the most fastidious of those that desire to escape the discomfort of the city during the heated term. We know how it is ourselves.

THE NEW BRANDY.—We believe we are right in saying that the brandy of Boutilleau *fils* is the most recent addition to the brands commanding a sale in the American market. It has for forty years been known to European consumers, and was very favorably received on its introduction to this country. Of fine flavor and exceptional purity, it will be found well worthy of a trial. There are, no doubt, people who believe that brandy of any kind is an evil, yet it finds its way into the pedestrian's knapsack, the fisherman's and sportsman's outfit, the yachtsman's locker, and even (under a *nom de plume*, or in a disguised form) into the medicine chest. This may be all very wrong, but it is a fact; and if we grant—which we carefully refrain from doing—that the brandy bottle is a necessary evil, then in selecting from two or three evils it is always desirable to choose the least. The Boutilleau *fils* Cognac, of the vintages of '35, '58, '65 and '70, is put up in cases containing either one or two dozen pints, or four dozen half-pint flasks, suitable for hunting or excursion parties.

Let it be understood that we would hurt no man's prejudices; but since there are instances when the use of brandy is beneficial, and when it alone has been and will continue to be used, we discharge a duty by calling attention to a brand which so justly deserves the high rank it has attained.—[*Adv.*

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristris atrarius.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo oufinis.*	Land-locked Salmon, *Salmo gloveri.*
Striped Bass, *Roccus linneatus.*	Black Bass, *Micropterus salmoides;*
White Perch, *Morone americana.*	*M. nigricans*
Weakfish, *Cynoscion regalis.*	Maskanonge, *Esox nobilior.*
Bluefish, *Pomatomus saltatrix.*	Pike or Pickerel, *Esox lucius.*
Spanish Mackerel, *Cybium maculatum.*	Yellow Perch, *Perca flavescens.*
Cero, *Cybium regale.*	
Bonito, *Sarda pelamys.*	
Kingfish, *Menticirrus nebulosus.*	

For list of Trout Flies in season for July, see issue of June 28.

FISH IN MARKET.—Fish of all kinds are very plenty this week. Our quotations for the week are as follows:

Striped bass, 10 to 20 cents per pound; bluefish, 6 to 8 cents; salmon, green, 20 cents; mackerel, 12 to 25 cents each; shad, Connecticut River, 50 cents; white perch, 15 cents per pound; Spanish mackerel, 18 cents; green turtle, 15 cents; terrapin, $12 per dozen; halibut, 18 cents; haddock, 6 cents; king-fish, 25 cents; codfish, 8 cents; blackfish, 15 cents; herrings, 6 cents; flounders, 8 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 15 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $3 50 per 100; soft crabs, $1 50 to $2 50 per dozen; weakfish, 12 cents; frog legs, 35 cents per pound.

CONEY ISLAND CREEK.—The comforts and attractions of Coney Island have been vastly increased during the past two years, and the facilities of reaching the island measurably extended. All over the beach there is now glitter of gaslight

flutter of bunting, exhilaration of music, tumble of surf and tinsel of side show sufficient to amuse the mass of the public; but if one wishes to withdraw from the concourse and confusion of crowds, and be translated in a twinkling from Babel to Arcadia, let him walk a few hundred yards back from the beach to the Oceanic Hotel or the ancient hostelry of mine host Van Sickles. The former is a delightful summer resort—a charming oasis of trees, lawn, garden shrubbery and flowers, in a desert of sand, where those who love quiet and rest can lounge the summer days through in the shade of the broad piazza. But all things here are modern, and the host changes as often as the guests do. The sportsman who looks only at nature from his own æsthetic standpoint as a professional gunner or angler, will search for some *ultima thule* to satisfy the conditions he requires, and if he will only allow himself to wander whithersoever his bent inclines, or where the clumps of foliage and bending willows invite his footsteps, he will find himself following the self-same path which worthy anglers and snipe-shooters trod full thirty years ago; and following this path through a turnstile and orchard up to the open door of an antiquated shambling mansion, he will be welcomed by the veteran host Van Sickles, who years ago shook with hospitable warmth the hands of worthies now passed into the shade; but not more warmly than the remnant who still periodically visit his place to partake of his bounty and fish in the adjoining creek for bass. Delightfully embowered is the old homestead, located at the verge of a high bluff at whose base the ripples of the rising tide make melody. Boats are moored there ready for hire, and attendants who know the old habitues, will also considerately treat the new comers who are to the manor born and who know the tides, the baits, and the seasons when the fishes congregate and bite. Right over the water are platforms where one can sit in the cool of the evening over his ices or cobblers, and let the breeze fan him gently as it draws up the winding creek. And as for eating and comestibles, what one cannot find in the refectory he can find in the hostelry across the way. Van Sicklen has a set of customers that he is proud to cater for, and he would not lose their favor and approbation for all the patronage of the great caravansaries on the beach. He does not know how to beat a man out of a cent, and he has had a long life-time in which to study and learn the experiment. Ask him to give you a supper and he will superintend its preparation himself. Leave the matter wholly to him, and when by and by, after a sufficent interval, he approaches your party and smiles benignantly, you may know that the feast is ready and waiting. Van Sicklen never rubs his hands. That peculiar pantomime belongs to landlords who inwardly congratulate their pockets, while they attempt to infuse in their guests the substantial pleasures of anticipation that may end in disappointment. As soon as the festive board is reached and the spread surveyed, you begin to feel *glad that you came.* There are only four of your party, but there are chickens, beefsteaks, eels, bluefish, bass, soft crabs, vegetables, coffee and bread and butter enough for ten. When you have done all that appetite, determination and capacity can do, you begin to look at the waste of viands and pity the multitude down at the beach who pay three prices for hastily prepared chops and half-cooked clams and nearly starve in the rush. We don't know how our old friend can afford so great bounty at such trifling charges as he makes; that may be none of our business, but we feel certain that should the crow and the buzzard ever be seen loafing around his dining room, his full-fed friends would muster in force to repel the ill-omened invasion. They will ever pray that prosperity *may* attend his footsteps, and bounty crown his board, and that whenever and wherever the harvest is ripe, he may always have *Von Sickle in*—"das ist."

The bass are now running up the Creek—*little* ones in large numbers, and the fishermen are jerking them out—more shame to them. Next month they will run large, and the best advice we can give to our numerous city friends who ask us for a day's fishing, is to take the evening cars for Van Sicklen's; remain over night; sleep well; spend the next day; eat a hearty dinner; and return happy. They will be surprised to discover how much pleasure is to be found at Coney Island creek.

CAMPING OUT.—The Wisconsin Central R. R. is now completed, cars running through to Ashland, Lake Superior, from Milwaukee. As this line passes through the wildest and most unsettled regions of Wisconsin, crossing the headwaters of numerous streams as yet guiltless of the sportsman's hook, and places within easy reach, the dense forests and hunting grounds of the State, we predict it will become a favorite route for sportsmen. Bass, pike, pickerel and brook trout are abundant; while no less than three species of grouse, as well as deer, elk and bear furnish sport for the gun.

The opening of this railroad is a great event to the people of the northern section of the country. Two pages of the Ashland *Press* (a fine large sheet), is occupied with details of its construction and opening ceremonials. Many anglers have penetrated for the first time to its virgin wilderness streams, and several columns of the *Press* are occupied with letters and paragraphs referring to the size and numbers of the trout taken. W. H. Lippincott, of Philadelphia, one of our frequent contributors, has just returned and reports the accounts truthful and the fish abundant. Besides trout, there are maskelonge in the lakes that weigh upwards of twenty pounds.

FLY FISHING FOR BLACK BASS IN TEXAS.—This in *un fait accompli.* Geo. H. Ragsdale, Esq., of Gainesville, County Surveyor of Cooke County, is the man who has gone and done it. Some weeks ago we sent him several patterns of flies, and this is the report he sends of his first trial with them:

GAINESVILLE, *June* 1.—The first chance I got I caught a 12-inch bass with the flies you sent. I suspect this is the first fish taken with a fly in this county. A second trial proved a complete failure, however.

We are glad to hear of the success of flies in southwestern waters. In Florida, where they were scarcely known a few years ago, they are now used with much success. Of course bass are capricious, like other fish, and will not take the same lure at all times. For complete instructions in bass fishing with fly, spoon, minnow and other bait, see Hallock's new "Sportsman's Gazetteer."

POOR FINGERLINGS.—A gentleman sends a postal card which tells of the *numbers* of trout taken in the Sinnamahoning River, Potter County, Pennsylvania, about the middle of last month, by the Judge of Schuylkill County, and several prominent coal operators and lawyers. They caught "742 on Monday; 620 on Tuesday; 590 on Wednesday, and 480 on Thursday." Possibly by the following Thursday, according to the foregoing progression, they might have emptied the stream, and then what a halo of glory would have surrounded the achievement!

TO SPORTSMEN AND HEALTH SEEKERS.—Bayfield, Lake Superior, is one of the pleasantest health resorts in America, furnishing excellent boating, fishing, etc. To the sufferer from hay fever it presents attractions unsurpassed.—[*See adv.*]

CANADA—*St. John, N. B., June*, 30.—Good sport is reported from the Matepediac and vicinity. I intend on my way home to stop there and go for the *salmon.* This once fine city now looks desolate, the business portion of it is a mere heap of rubbish. The inhabitants are however full of pluck, and are actively making preparations for rebuilding.
N. P. L.

Fishing Parties coming to Canada will find in Montreal all the necessary tackle at Ostell & Co.'s (late Henry Ostell), 414 St. Paul St, importers of fishing tackle. Rods, reels, hooks, lines, flies of all descriptions always on hand. P. O. Box 754.—[*Adv.*

TROUT FISHING.—Kilburn Lake, near the 56 mile post, 12 miles beyond McAdam Junction, on the Canada and New Brunswick R. R., furnishes superior attractions for the trout fisherman.

CONNECTICUT—*Twin Lakes, July* 4.—Now that the bass season is open (closed during June) I may be permitted to whisper to the readers of the FOREST AND STREAM that the catch promises to be better than ever before—the fish larger and more numerous, thanks to the law that has put a stop to the spearsmen and spawn bed fishing. Many fine bass have been inadvertently caught during the close season by fishers for cat, perch and pickerel, and put back. The fish were never better than just now. Mr. Harrison Hall, of Boston, is booked for the season at "Brook Trout Farm." Picnic parties are quite common on the shores, and on the Island campers-out are having a good time, and the owner, Mr. Edward Rogers, of Philadelphia, only asks that they do no damage by fire or ax. Trout fishing is done up in this State for the season. Sage's Ravine, Schnopp and Bartholomew brooks have yielded some pretty strings, and the Squable Hole, Haystack and More brooks have paid handsome tribute to the expert fly-fisher the last few weeks.
DAVID O. SALISBURY.

STRIPED BASS FISHING—*Niantic, July* 3.—Can you inform me what is the matter with the striped bass this season? We fish carefully and patient-y as usual, but with no success whatever. There have been but two taken at the Bridge with rod and reel, two pounds and three pounds each. We see no signs of them, and have sorrowfully unjointed our rods and put them away, fondly hoping that better times may come. In the ponds and lakes good pickerel and perch fishing can be had, and at Konomac black bass are frequently taken. The natives have not yet gotten over taking game and fish when out of season. Last month the law was on bass, but I have heard of several parties that not only caught them, but seemed proud of the deed, speaking of their good fortune (?) openly. Now that the close season for trout has commenced I suppose the poachers will pursue them with nets, catching them in their hands, etc., in the same manner practiced last summer. Can you not try to convert these demoralized beings? Two of them read your valuable paper, therefore a word or so therein might save them from further disgrace. SCALES.

[The movements of striped bass are very capricious, and their sudden appearance or disappearance puzzles many fishermen. After heavy rains the bass take to deep salt water, but they return again invariably to the shoal or brackish water when settled fair and hot weather returns.—ED.]

MOVEMENTS OF THE FISHING FLEET.—The early mackerel spurt seems to be over, and for the past fortnight but few have been taken. The vessels arriving from the Magdalens and the Nova Scotia coast report that there are no mackerel there, and the prospect for Bay fishing is no more promising than the off-shore fishery. The Georges fleet continue to meet with moderate success. The prohibition of the river fishery has tended to prevent the seining of menhaden in quantities at Newburyport, and the restriction is felt by vessels seeking bait as well as by the porgie fishermen themselves. It is to be hoped that some arrangement will be made to allow the fishery to go on, as it has heretofore since the law, which has been enforced this season for the first time, was enacted. The receipts of Bank codfish and halibut continue light, and good prices are realized. The Bank fishermen are troubled to procure bait in refitting. From May 21 to June 15, 468 fishing schooners visited St. John's, N. F., for supplies and bait.

The number of fishing arrivals reported at this port the past week has been 127, viz.: 8 from the Banks, 41 from Georges, 77 from makereling trips, and 1 from the Magdalen Islands.

The receipts for the week have been about 275,000 lbs. of codfish and 200,000 lbs. of fresh and 175,000 lbs. fletched halibut from the Banks, 700,000 lbs. Georges codfish, 20,000 lbs. Georges halibut, 700 bbls. mackerel, and 600 bbls. herring.—*Cape Ann Advertiser, July* 6.

ALMOST AS BAD AS PIKE CO., PENN.—Mr. William H. Bridgman rusticated this year in the White Mountains. He is ardently devoted to fishing, and *Salmo fontinalis* is to him what horses, dogs and base-ball are to some people. His usual good luck (in point of numbers) attended him this year, thirty-three trout having found their way into his creel in eight hours. Their weight, however, was not considerable, the thirty-three tipping the beam at three-quarters of a pound. A piscatorial grand jury, who think it a shame to waste good angle worms on such fry, think of indicting Mr. Bridgman for infanticide.—*World, Sunday, July* 8.

NORTH LABRADOR FISHING GROUNDS.—Newfoundland had a fleet of four hundred fishing crafts, from eighteen to ninety tons burthen, which resorted to these grounds last year, passing north of Cape Harrison, in lat. 54.54. But the Newfoundlanders fish inshore, from small boats, with "jiggers" and without bait, and leave unexplored outlying Banks, off-shore, which are the great feeding and spawning grounds of immense schools of codfish. The fact that successful voyages have been made under these circumstances, gives promise of profitable results under better management of the business. To insure success the fishermen should reach the grounds from the first to the middle of June, and the fishing may be continued until October. The fishing area extends from Conception Bay northerly for a distance of seven hundred miles, the cod arriving inshore at Conception Bay about June 1st, and approaching the shore one week later for every degree North. During forty days the cod-fishing goes on simultaneously during August and September, through the length of a coast-line extending from lat. 47 deg. to lat. 58 deg. 30 min., in one continuous line, or more than 700 statute miles, and it is probable that later fishing could be found upon the outlying Banks. For an experimental trip the chart of Commander Maxwell, of the English Navy, published in London last year, would be a good guide as far north as the Missionary Station at Nain, lat. 56.30, which is as far North as there would be any necessity to penetrate on a fishing voyage; and for inshore operations an esquimaux pilot could be obtained at Hopedale, lat. 55.27. The experiment may be tried at once, but we expect to live to see Labrador cod upon the Gloucester flakes.—*Cape Ann Advertiser.*

MICHIGAN—*Detroit, July* 7.—E. W. Reynolds, Albert Hill and Will Christian were down the river in the yacht Sweepstakes for a couple of days, and had fine sport, bringing home 170 pike, 1 maskelonge and 54 black bass.

L. P. Knight and George Webb took a small boat and went up to Belle Isle to troll, where they caught a maskelonge that weighed over twenty pounds.

Goff Stenten and J. V. D. Eldridge took a trip to St. Clair flats last week and made a string of over four hundred pounds of pickerel. One day this week they caught 7 fine pickerel that weighed from four pounds to twelve pounds each.
ROVER.

The Rifle.

A TEXAN'S IDEA OF LONG RANGE RIFLES.

GALVESTON, Texas, June, 1877.

You are often asked the question, "Who makes the best long range rifle for target practice?" All makers have improved their rifles. The best can only be obtained by a thorough trial, both as regards mode of filling as well as breech action. It is my opinion the breech block is yet to be invented that holds the shell tight to its place at the moment of discharge. I do not recommend the muzzle-loaders, but whoever succeeds in perfecting the breech so as to hold the charge without flinching, riflemen will soon find it out, and we shall soon know who makes the best repeated trials. England has found out that a quick twist in rifling is undoubtedly the best, and their muzzle-loaders are perfection; but to American riflemen, I say stand by the breech-loader, it will gain the day. At your leisure you can prepare your shell more perfectly, then you can load at the range. The bolt used in our shells patched with paper might be improved on. A bolt, turned by our automatic turning lathes, would be more suitable if made out of metal and lead in proper proportion in preserving its shape. Is your rifle a reliable piece for 1,000 yards? Its bore is .44; it has to be held at a high elevation to reach 1,000 yards. Suppose it was .50 or even .60 bore, made in equal proportion, and heavy enough to stand the increased charge to suit the bore, would it not hold out better with less unaccountables than your .44? I say it would, and having a breech block working after the Berdan plan that pushes the shell home and holds it to its place, you can then dispense with your patched bolts, and your piece will hold out against wind, and throw its bolt, when held, every time 1,000 yards. E. B. K.

NEPONSET, Mass, July 6, 1877.

EDITOR FOREST AND STREAM:

Dear Sir—Seeing in your last issue that you mention the Peabody Martini rifle as being victorious in two matches at the spring meeting of the Massachusetts Rifle Association, I think it is not out of the way to inform the public that my powder also did good work too, bringing one first, one third and one fifth place. Several prizes have been won on former occasions, and as Captain Bogardus and Ira Payne are using it in shot-guns, and many other great sportsmen in both rifles and shot-guns, I think that I have got it to some state of perfection. Before this I challenged the black powder men to shoot against my powder without wiping, but now I will show the same accuracy as the best black powder, even if this is wiped out every time, while I will not wipe out, no matter how large the charge of powder.

The whole secret for making my powder perform well is confinement. In rifles I use it so that it almost shakes in the shell and it does work first rate when only using about one-third part in weight of black powder. In perfect rifles—where the shell does not expand from shooting—and when using tight-fitting bullets, there is no need of loading it differently from black powder, only I do not ram the powder down with the bullet, as this would impair the accuracy. If the bullet fits loose or in expanded shells I use either the new Massey crimping tool, or a wad one-eighth of one inch thick of the material used by the Delaware cartridges. The wad must fit tight, but in using it absolute accuracy is obtained. In shot-guns I use one "Fibre" wad on top of powder, followed by a pink edge Eley wad and a thin card board on shot. This "Fibre" wad confines my powder well and is just the thing for it. In using it the greatest penetration and best pattern are obtained with less powder.

Since first of May I have no connection with S. T. Sanborn & Co., former agents for the powder, 175 Dash St., Boston, Mass. Those of your readers who have written to them without getting an answer will do me a great favor in re-writing me. CARL DITTMAN.

ONTARIO, Canada.—The annual shooting matches of the Victoria Rifle Club were held at their rifle ranges at Hamilton, Ontario, on July 3. The principal contests were for the Dominion Association medal for Snider shooting, at 200, 500 and 600 yards, and for the Ontario Rifle Association badge at the long ranges.

200 yards—7 shots each, Snider rifle range, J. M. Gibson, 31; J. Hartly, 30; J. Adams, 29; G. Margets, 29; Bell, of Toronto, 28; J. J. Mason, 27.

500—7 shots each, J. M. Gibson, 31; J. Adams, 30; Joseph Mason, 26; George Murison, 26; McGregor, 25; D. Hancock, 24.

600 yards—George Discher, 31; Geo. Bell, 30; Geo. Margets, 26; A. Paine, 25; A. Osmand, 24; Hancock, 24.

General average—J. M. Gibson, 82; Bell, Toronto, 81; J. Adams, 81; Geo. Discher, 79; Geo. Margets, 77; A. Paine, 72.

800 yards—Small-bore, any kind of rifle, 7 shots, Geo. Discher, 73; F. Schwarz, 34; George Murison, 33; J. M. Gibson, 32; J. Mason, 31; J. Adams, 31.

900 yards—W. N. Cooper, 33; J. M. Gibson, 33; J. J. Mason, 33; J. Adams, 31; Bell, Toronto, 31; Margets, 30.

1,000 yards—J. M. Gibson, 33; J. Adams, 33; G. Margets, 32; G. Murison, 31; F. Schwarz, 25; A. Paine, 25.

Aggregate Small-bore—J. M. Gibson, 98; J. Adams, 95; G. Margets, 93; G. Murison, 92; A. Bell, 92; F. Schwarz, 84.

AUSTRALIAN RIFLE NEWS.—The following letter has been received at the office of the N. R. A. from the New South Wales Rifle Association. Accompanying it was a note conveying a vote of thanks passed by the Sydney riflemen for courtesies extended to their representatives during their stay in the United States. These were the riflemen, it will be remembered, who came overland from San Francisco. From the closing paragraph of the letter it would seem to be the impression of the letter-writer that the trophy is to remain indefinitely in America. On this point, we doubt not, their friends in England hold other opinions. It is not unlikely that the Australian team may have their next dig at the big prize on English soil. The letter reads:

NEW SOUTH WALES RIFLE ASSOCIATION,
SYDNEY, May, 24, 1877.

GEO. S. SCHERMERHORN, JR.:

Sir—At the last ordinary monthly meeting of this Association copies of correspondence between yourself and Mr. Augustus Morris, captain of the Australian team in the late International match at Creedmoor, relative to the regulations under which future contests for the Centennial trophy should be conducted, were read, and it was resolved that the views of the Council of the New South Wales Rifle Association should be conveyed to you, and I have now the honor to submit the following suggestions emanating from that body:

First, That the ranges should be 900, 1,000 and 1,100 yards, as these ranges are a better test of skill than those at which the late match was fired.

Second, That the match should not be fired on any ground on which members of any of the competing teams have frequent opportunities of practice, as it is most desirable that all teams should meet in the match on equal terms.

Third, That no member of any of the competing teams should be allowed to fire on the range on which the match is to be fired, for at least one week prior to the match; any infringement of this rule to debar the person offending from competing.

Fourth, That the match should be shot every third year as making an annual or biennial match of it must tend to debar distant countries taking part in many of the matches. For instance, there is very little probability that Australia would be able to send a team to America either this or next year, but it could possibly be done in 1879. I have the honor to be yours,

THOS. J. JAQUES,
WM. FOSKETT, Sec. Major Second Reg. Vol. Rifles, Chairman.

CREEDMOOR, July 7.—The minor clubs had a day of it at Creedmoor on Saturday. There was individual practice at he long ranges, while down the field three clubs were busy at work competing for various prizes. The Stock Exchange Rifle Clubmen were holding their first regular match for the Norris Hoffer medal, presented by a gentleman of the Exchange. The medal is a unique affair. On either side of a target in enamel stand a bull and bear rampant. On the side toward the bull is a target with a number of very high outers, and on the bear side a target with a number of very low ditto. About the whole is a scroll giving the name of the medal, with the monogram of the club and an eagle, with the legend, "Excelsior." The cost complete, with pin-bar, etc., was over $250. The conditions require ten contestants, each to fire ten shots at 200 yards, off-hand, any rifle.

C Dewing	42	Wm Blish	34
D Chauncey, Jr	40	R J Kimball	33
F L Eames	39	N P Stanton	39
W G Dominick	39	W Philpard	27
J M Amory	36	Wm Weeber	25
R W Day	24	C Gregory	6

The Irish-American Rifle Club shot a second time for the Burton trophy, but a general fit of poorness had seized the members of the club, and some very mediocre scores were run up, General Millen getting the least wretched, and again taking the bauble. The leading shots were:

	200 yards.	600 yards.	Tl.
F F Millen, Rem Creed	20	28	48
E Burns, Sharps Creed	22	26	48
E Duffy, Rem Mil	24	22	46
P Farrelly, Rem Mil	26	20	46
W G Burton, Ward Burton	28	15	43
N D Ward, Rem Mil	21	15	36

The Seventh Regiment Rifle Club also fired at 200 and 600 yards for a special military rifle, presented the club, Mr. E. W. Price taking it with 43 in a possible 50.

A RUNNING MAN AT CREEDMOOR.—The running deer match died in the most natural way. It afforded very good sport to such as were able to fit themselves for it, but this class were a mere drop in the bucket of the number visiting Creedmoor. Now the question is how to make the running-deer apparatus of service to the association and its patrons. Our suggestion would be that in addition to the deer figure now in position, a running man be placed on the track, shots to be made with military rifles, which would be of service as soldier drill, and would be sufficiently easy to encourage the poorer average shots. Let the deer remain for use against hunting rifles, magazine weapons, or anything the contestants chose to use; but supplement it with the running man as the proper rounding out of the course of military ball practice now carried out on the range.

THE WYLIE BADGE.—General Daniel D. Wylie, ex-Commandant of the Washington Grey Troop, and now Chief of Ordnance of the State of New York, has determined upon the presentation of a badge, the first competition to come off next month. The new trophy is to be a stand-up all round. Big scores must not be looked for, since at 300 and 500 yards, standing, it is pretty fair marksmanship to avoid getting misses. The medal, which is to be something gorgeous, has been accepted by the Executive Committee N. R. A., and a vote of thanks carried to the General. The conditions read: "Competition monthly at Creedmoor, open to members N. R. A. and N. G. S. N. Y.; weapon, any military rifle; 300 and 500 yards; position, standing at each distance; rounds, seven at each distance without sighting shots; cleaning of rifles allowed only between distances. Entrance fee 50c. To be won three times (not necessarily consecutively) before becoming personal property of the winner. One-fourth of the entrance money to be awarded to the competitor making the second highest aggregate score."

WAVERLEY, N. Y.—*Waverley Rifle Team, July* 4, shooting at the 800 and 1,000 yards ranges for a rifle presented by E. Remington & Sons. The Hildebrand Bros., by using the same rifle, stepped to the front. The leading scores stood at fifteen shots each distance, and two sighting shots.

	800 yards.	1000 yards.	Tl.
A Hildebrand	55	67	122
D D Knapp	66	52	118
W Hildebrand	58	57	115
T J Kane	55	56	111
E S Well	60	49	94
W B Campbell	49	50	99
G W Fish	56	38	94

The day was beautiful, but some changes of wind from one side of the range to the other. After the contest Hon. J. T. Sawyer delivered an address in presenting the gun, and was listened to by a large gathering of ladies and gentlemen.

MARTINI-HENRY BULLETS.—The metal, which is composed of mixed lead and tin, after leaving the furnace, is squirted forth in the shape of an endless rod, as thick as the intended bullets—these being not globular balls, but of an elongated conical form. The rod of soft metal passes very swiftly through a machine which cuts it up into short pieces, compresses one end of each piece into a cone, hollows out the other end, and so produces the completed bullets with amazing rapidity.

RUTLAND, Vt.—Mr. E. H. Sanford, of Stamford and Creedmoor, has been up in Vermont showing the boys there how best to do it. At a meeting of the Rutland Rifle Club at their range at Centre Rutland, June 23, while firing at long range, before a large attendance of spectators, Mr. Sanford rolled up a score of 70 in the possible 75. His style of shooting was carefully watched, and he very generously employed his time in giving points. The scores stood:

E. H. Sanford	4	5	4	4	5	5	4	5	4	5	5	5	5	5	5—70
Chas. Bimes	5	5	5	3	5	4	4	5	5	5	5	3	5	5	5—69
Dr. A. Kilburn	4	5	4	4	4	4	5	4	5	5	5	4	3	5	4—65
N. S. Marshall	5	5	3	5	5	4	4	5	4	5	4	5	5	4	5—65
Jas. Beattie	3	4	5	5	4	3	5	5	5	5	5	5	5	4	5—66
John Hunt	3	5	5	4	4	5	5	5	4	4	5	5	5	3	4	2—63

—Charms for watch chains, as advertised in another column, are very handsome and significant emblems for riflemen.

HARTFORD, Conn., July 7.—Franklin Club regular monthly shoot. To Joe R. Hawley—"Gen. Joe Hawley" sounds better and more familiar—must be given a liberal share of praise for the brilliant record he made. There were twenty-two entries, and the shooting was the best recorded in the books of the club since its organization in January, 1868. The regular score in competition is five shots, standing, off-hand, at a bull's eye eight inches in diameter, 500 feet distant. The distance from the centre of the bull's-eye to the centre of the bullet hole is measured with a vernier scale. The shortest aggregate distance of five shots wins. Any rifle may be used, but no telescope sights. General J. R. Hawley had the shortest string made since the club organized—nine and eight-tenth inches. He also made two of the best three single shots—two-tenths of an inch and five-tenths. The best scores previously made since 1868 were James Latta, 12.5 inches and E. H. Williams 12.5 inches (twice) and 12.6 inches. On Saturday, E. H. Williams made a score of 18.6 inches, best shot 1.6; E. P. Whitney, 21.8; John Carroll, 22.4, best shot 0.5; O. A. Brower, 24.8 best shot 1 inch. Hawley, Carroll and F. H. Williams (six-tenths) took the three half dollars for single shots.

NEW HAVEN, July 7.—*Whitney Range.*—Foot Guardsmen and other shooters. A few of the leading scores stood:

	200 yards.	500 yards.	Tl.
A Allen	28	21	49
J Bradneck	17	19	36
A M Johnson	27	26	53
E S Nichols	22	16	38

PROVIDENCE, R. I., July 9.—Some of the members of the R. I. A. Rifle Club celebrated the Fourth by target practice at the Blackston range. The following scores were made out of a possible 225:

	800 yards.	900 yards.	1000 yards.	Tl.
J H Crowell	67	61	67	195
G W Davison	66	60	65	191
F J Rabbett	65	61	52	178

At the recent meeting of the Society of the Army of the Potomac, at Providence, R. I., Gen. McMahon and Col. Church stood head in a rifle match fired there, and this, too, immediately after a clam bake.

PENNSYLVANIA—*Blooming Grove Park, Pike Co., July* 9.—The following named ladies and gentlemen, members and their guests, were at the Club House at Blooming Grove Park on the 4th of July, viz.: T. W. B. Hughes, H. Wolfe, Louis Iken, Doctor and Mrs. Geo. H. Glenny, nurse and children; Mr. and Mrs. John Avery, John Avery, Jr.; Commodore Van Brunt, Miss R. L. Baxter, T. C. Clarke, Philadelphia; Mr. and Mrs. Edward Bradley, M. D.; A. H. Wellington, Mr. and Mrs. John Gibb, Brooklyn; H. Elmer Gibb, Walter Gibb, T. M. Gibb, Joseph Atkinson Hawley, H. Kleinhaus, Moses Westbrook and Herman Frank, of Blooming Grove; Col. Smith W. Anderson, of High Bridge. The amusements were prize shooting, black bass and trout fishing.

July 4.—Off-hand, any rifle, 200 yards, five shots; prize, belt revolver, plated.

Glenney	16	Avery	18
Bradley	16	Vucasovich	14
Clarke	15	Van Brunt	11
Wellington	10	Kleinhaus	14

Won by J. Avery.

200 yards, off-hand; prize, Association badge.

Bradley	8	Wellington	4
Clarke	10	Avery	6
Glenney	12	Van Brunt	10
Vucassovich	15	Hughes	6

The shot off by Glenney and Vucassovich, was won by Vucassovich.

July 5.—Pistol match, 20 yards; prize, Magazine pistol, six shots each.

Van Brunt	15	Avery	18
Bradley	2	Vucasovich	4
Clarke	21	Hughes	7
Glenney	18		

Won by T. C. Clarke.

Rifle match, 100 yards, open sights; prize, Magazine Remington pistol.

Glenney	18	Avery	14
Bradley	15	Van Brunt	13
Wellington	6	Atkinson	16
Clarke	16	Frank	4

Won by Glenney.

Glass ball trap, ten shots each; prize, pearl-handled pistol.

Glenney	9	Van Brunt	5
Clarke	3	Bradley	6

Won by Glenney.

Rifle match, 400 yards, off-hand, with Sharps military rifle; prize, Association badge.

Avery	11	Frank	8
Bradley	11	Atkinson	14
Clarke	12	Van Brunt	retired
Glenney	8		

Won by Atkinson.

The largest black bass was taken by A. H. Wellington, and weighed 3½ lbs. The table is constantly supplied with bass, trout and other game in season.

MILWAUKEE, July 6.—The Milwaukee riflemen, at their regular Friday afternoon shoot on the 6th inst., put in some fair scores at the 1,000 yards range. The practice was delayed so late that the closing shots were fired in a rapidly falling light. The scores stood:

Johnson, Rem	3	3	3	4	5	5	5	3	4	4	3	3	4	3	3—55
Hill, Rem	5	0	5	4	5	5	0	4	3	4	5	5	5	4	5—57
Drake, Rem	4	3	4	3	4	2	5	5	4	3	5	3	5	0	0—50
Yale, Rem	5	5	3	5	3	0	5	5	2	4	3	5	3	2	3—53
Meuller, Ballard	5	5	5	5	5	4	5	3	5	5	5	4	4	3	5	5—69
Bangs, Rem	5	5	4	4	4	3	3	3	3	4	5	5	4	3	4	4—59

The Executive Committee N. R. A. have fixed the dates of the fall meeting at Creedmoor from Sept. 10 to 13 inclusive. The match for the Centennial trophy between the British and American teams to occupy the 14th and 15th September.

In response to an invitation of the National Rifle Association to compete for places in the American team of '77, the Milwaukee Rifle Club, while acknowledging the courtesy, are obliged to decline, as a majority of the members who have attained the necessary skill are American citizens by choice, and not by birth, and are therefore debarred. The others are unable to devote the time requisite for the preliminary contests.

FROGMOOR, *New Orleans*, July 2, 1877.—The fifth competition for plates on the Inter-State team took place on July 1, on the grounds of the Crescent City Rifle Club. A twelve-pound keg of Hazard powder, presented by the agent, Messrs. C. T. Birdecker & Co., was also shot for, and won by Mr. Selph. The following is the score, no sighting shots allowed:

Capt. Dudley Selph, Rem Creed.

800	5	4	5	5	5	5	4	5	5	5	5	5	5	5	5—72
900	5	4	5	5	4	4	5	4	5	5	5	5	5	4	4	5—69
1,000	5	4	4	5	5	5	5	5	3	5	5	5	4	4	5	5—69—211

R G Eyrich, Rem Creed.

800	5	5	3	4	5	5	5	5	5	4	5	5	3	3	4—64

A. D. Babbitt	63	59	48	170
Jules Piffant, Rem Creed	49	53	32	134

The average of the first five in the five competitions now stand:

R G Eyrich	193 2-5	John Glynn	190 1-5
Dudley Selph	192 3-5	Jno K Renaud	186 1-5
Wm Arms	191 3-5		GUSSIE.

NEW JOURNAL.—A new monthly, to be known as the "National Guardsman," will soon be issued. It is to be the American prototype of the "Volunteer Service Gazette."

National Pastimes.

ATHLETICS.

HUDSON CALEDONIAN GAMES, *Schutzen Park, Union Hill, N. J., July* 4.—Summary:

Heavy Stone—First, W. Robertson, 36 ft.; second, D. C. Ross, 35 ft.
Putting the Light Stone—First, W. Robertson, 44 ft. 9 in.; second, D. C. Ross, 44 ft. 7 in.
Standing Jump—First, E. W. Johnson, 10 ft. 3 in.; second W. Robertson, 9 ft. 8 in.
Heavy Hammer—D. C. Ross, 85 ft.; R. Innes, 84 ft.
Light Hammer—D. C. Ross, 102 ft. 9 in.; R. Innes, 99 ft. 9 in.
Standing High Jump—E. W. Weston, 5 ft.; A. Tasker, 4 ft. 9 in.
Tossing Caber—E. W. Johnson, 35 ft.; R. Innes, 32 ft.
Running High Leap—A. C. Reed, 5 ft. 8 in.
Short Race (one lap), 125 yards—First, A. C. Reed; second, E. W. Johnson.
Running Jump—A. C. Reed, 20 ft.; E. W. Johnson, 19 ft.
Hurdle Race—First, A. C. Reed; second, E. W. Johnson.
One Mile Walking Race—First, J. Henderson; second, W. Hume.
Tug of War (two teams of eight men each a side, between the Caledonian clubs of Hudson county, N. J., and New York). Won by the former.
One Mile Race—First, R. Irving; second, W. Hume.
Highland Fling—First, James Aitchison; second, W. Robertson.
Hitch and Kick—First, A. C. Reed; second, E. A. Johnson.
Vaulting with the Pole—W. Robertson, 9 ft. 6 in; Robert Innes, 8 ft. 8 in.
Broadsword Dance—First James Atchison; second, W. Robertson
Three-legged Race—First, A. C. Reed and W. Robertson.
Hop, Step and Jump—E. W. Johnson, 42 ft. 6 in.; W. Robertson, 39 ft. 10 in.
Boys' Race—First, Alfred McAdam; second, James Stewart
Sack Race—First, W. Robertson; second, A. Bennett.

NEW YORK ATHLETIC CLUB, *Mott Haven, July* 4.—Summary:

One Hundred Yard Dash—First heat; Sam Tiers, Paterson, N. J., 1; W H Adsetts, Philadelphia, Pa., 2. Tiers finished two feet ahead of Adsetts. Time, 11 s. Second heat—John T. Crossley, Frankford, Pa., 1; James Frost, Portchester, N. Y., 2. Crossly won by a yard. Time, 11 2-5 s. Final heat—John T. Crossley, 1; Sam Tiers, 2; W H Adsetts, 3; James Frost, 0. Won easily. Time, 10 3-5 s. First prize, $25; second, $10; third, $5.

One Mile Race—D A Woods, Galt, Ontario, 1; Edward Wilson, West Meriden Farms, Conn., 2. Time, 4 m 49 s.

440 yards (handicap)—John E Manning, Boston, Mass., won in three heats.

Two Mile Walk (letter carriers only)—Jas Foster, Station F, 1; C M Hammond, Morrisania, 2; Jas Archbold, station F, 3.

Half-mile Race—John E Manning, Boston, 1; Edward Wilson, West Meriden Farms, Conn., 2. Won by twenty yards. Manning, 2 m. 6 s.; Wilson, 2 m. 10½ s.

Three Mile Walk—The entries were Edward Wiggell, Albion Society, N Y; Edrd Mullen, N Y; Lester C Dole, New Haven, Conn; John Goulding, N Y. Of these Wiggell and Dole only came out. Both of the men were ruled off for alleged running. These men will come together on some other occasion.

Three Mile Race—Edward Wilson, West Meriden Farms, Conn, 1; Cornelius Sullivan, N Y, 2. Time, 18 m. 32½ s.

SCOTTISH AMERICAN ATHLETIC CLUB.—This club met at Washington Park, July 4. The first event was a foot race, two hundred and twenty yards, five heats, won as follows:

1, H B Wilson, 11½ s.; 2, W H Griffin, 11 s.; 3, McNichol, 10⅘ s.; 4, R Gregg, 11 s.; 5, F G Higgins, 11½ s. The final heat was won by McNichol; time, 10⅘ s.

Putting the Shot—Won by H Burmeyer, 34 ft. 11 in., but one inch short of the best on record.

Four Hundred and Fifty Yard Run—First heat won by C Fabregon in 59½ s.; second heat, O'Brien, 53⅘ s.; third, W F Banham, 1 m. 2½ s.; fourth, Wm Irvine, 69½ s. In the final heat O'Brien distanced all competitors, winning by five yards; Hamer second.

Throwing the Hammer—The greatest distance was 82 ft. 11 in., won by G D Parmly, the heaviest throw on record; white T A McEwen was the victor in the one mile walk, making the fastest time on record for an amateur in this country; time, 6 m. 55 s.

The running high jump results as follows: H E Ticken, 5 ft. 3 in.; A H Oaks second by one inch. G M Hammond had an easy victory in the half-mile run, winning in 2 m. 8 s.

G McNichol's pole-vaulting record has rarely if ever been exceeded in the United States, the clearing is ft. 9 in.

The One Mile Walking, handicap, had a large field of starters, which resulted in a victory for W J Rowland by a lead of ten yards; time, 6 m. 23½ s.

The Running Long Jump was the most interesting event of the day, which resulted in a victory for W H Livingston; distance, 18 ft. 1¼ in.

In the One Mile Run, W J Duffy ran a splendid waiting race, winning in 4 m. 58⅗ s. by a yard and a half.

The grand finale was the five mile walk, in which McEwen led off at a terrific speed, making his first mile in 7 m. 8 s.; second in 15 m. 8 s.; third, 23 m. 8 s.; fourth, 31 m.; fifth, 38 m. 43½ s. He came in far ahead of Conner and Armstrong, who had a severe struggle for second position, the former leading up to the end of the third mile when Armstrong went to the front, walking right away from Connor; in the fourth mile leading by fifty or sixty yards. Connors, with a splendid rush, closed the daylight, but was unable to lead. Time, 31 m. 40 s. and 39 m. 4 s. respectively. McEwen's performances in both his races were superb, and in the latter was but 31⅗ s. short of best record.

INTERCOLLEGIATE ATHLETIC ASSOCIATION.—The second annual field meeting of the Athletic Association of American Colleges was held on the grounds of the New York Athletic Club, at Mott Haven, Friday afternoon, July 6th. The attendance, both of contestants and spectators, presented a noticeable contrast to the meetings of former years. Of the fifteen colleges belonging to the association, but six were represented: Columbia, Harvard, Lehigh Univ., College of the City of New York, Univ. of Pennsylvania, and Princeton; Amherst, Bowdoin, Brown, Cornell, Rutgers, Trinity, Wesleyan, Williams and Yale were absent. The experience of last Friday would seem to show that these games alone cannot claim the public attention that attaches to the boat races. That they should be made a success is, however, in every way desirable. Though not possessing the interest of the boat races, they are vastly more beneficial to collegians, since they are participated in by greater numbers and are, therefore, of more general value.

Notwithstanding the small attendance at the games last Friday, several of the events were of special notice as will be seen from the summary:

One Mile Walk—Chas Eldredge, class '79, Columbia; time, 7 m 30 s.

Running High Jump—H L Geyelin, class '77, University of Pennsylvania; 4 ft 11 in.

Half Mile Run—G M Hammond, class '78, Columbia; time, 2 m 20½ s.

Pole Vaulting—James Pryor, class '78, Columbia; height, 7 ft 9 in

Hundred Yards Dash—Horace H Lee, class '79, University of Pennsylvania; time, 10 1-5 s.

Putting the Shot (16 lb.)—F Larkin, class '79, Princeton; distance, 33 ft.

Running Broad Jump—Horace H Lee, class '79, University of Pennsylvania; distance, 19 ft 7 in.

Quarter Mile Run—G M Hammond, class '78, Columbia; time, 54 s.

Two Hundred and Twenty Yards Dash—Horace H Lee, class '79, University of Pennsylvania; time, 23⅘ s.

Throwing the Hammer (16 lb.)—G Parmly, class '79, Princeton; distance, 75 ft 10 in.

One Mile Run—W Bearns, class '78, Columbia; time, 5 m 33 s.

Hurdle Race—H Stevenson, class '78, Princeton; time, 18⅗s.

Two Mile Walk—Charles Eldredge, class '78, Columbia; time 16 m 24 s.

Hundred Yards Dash (Graduates)—J F Dunfield, class '76, Princeton; time, first heat, 12 s; second heat, 10⅘ s.

One Mile Walk—H Beach, class '74, Princeton; time, 8 m 50 s.

BROOKLYN CALEDONIAN CLUB.—The eleventh annual games were held at Schutzen Park, July 4th, with the following results:

Putting the Heavy Stone—First prize $5, won by James Melrose, who threw 34 ft; second, 30 ft 8 in, James Laird, $4.

Standing Jump—William Laird won the silver medal, clearing 8 ft 9 in. The second prize, $3, was awarded to Jas. Kennedy, 7 ft 5 in.

Throwing Heavy (16 lbs.) Hammer—Among those received the silver medal, throwing 84 ft 3 in. William Laird, second prize, $3; distance 68 ft.

At Tossing the Caber, 16 feet long, prizes $5 and $3, James Melrose was first, 57 ft 8½ in. W. Laird second, 36 ft 7 in.

Running Long Jump—First prize $5, James Melrose, 17¼ ft; second, John West, 16 ft.

Putting Light Stone (14 lbs.)—The first prize, $5, was taken by William Laird, distance 40 ft. and the second by A. M. Talmie ($4) 33 ft.

Hitch and Kick—Prize, silver medal and $3. The former was won by John West, kicking 9 ft 3 in high. James Melrose second, 8½ ft

Broadsword dance for silver medal and $3. The first prize was awarded to James Kennedy and the second to William Summers.

The Shot race around the ring for $5 and $3 was won by Andrew Rennie. John West was second, and William Dunsmore, third. Time 17½ sec.

For throwing light hammer (12 lbs) 89½ ft, Wm. Laird received the first prize, a silver medal, and James Kennedy the second, $3, throwing 84⅗ ft. Mr. Melrose threw 99 ft, but could not compete for the prize, not being a member of the club.

For running high leap, John West received the medal, and James Melrose $3. Distance 4 ft 9, and 4 ft 7 in respectively.

The mile race, eleven times around the ring, open to all comers on payment of entrance fee of $1, was won in six minutes by Thos. Feeny; prize $10. George Devilen received the second prize, $5, being beaten by about thirty rods.

Reel Dancing—Wm. Hunter silver medal; James Kennedy, $3.

Boys' Race Around the Ring—Charlie Summers, silver medal, William Foulis $2, William Summers $2.

Vaulting with Pole—John West, 8 ft. 8 in., $5; James Melrose, 8 ft 3 in, $3.

The test of strength between ten members of the club and ten of the Young Men's Acrobatic Association of Williamsburgh for a prize of $10, resulted in a victory for the former, who pulled their opponents over the line twice. The Caledonians were the victors in a similar contest last year.

Highland Fling—Prizes $5 and $3, won by Kennedy and Summers.

Three legged race, $5 and $3; first, Dunsmore and Russiend; second, Laird and Robertson.

In the race three times around the ring to be contested by the Young Men's Acrobatic Association of Williamsburgh, for $5 and $3, Jacob Benner and Charles Scharff tied, Chas. Meyer being third. In running off the tie, Mr. Scharff won.

Hurdle Race Once Around the Ring—John West, $5, Mr. Melrose, $3.

Running Hop, Skip and Jump—Addison 38 ft 1 in, silver medal; West 36 ft, $3.

Sack race over hurdles 18 in high, Mr. Dunsmore, $5; James Kennedy, $3.

* The blind wheelbarrow across the ring was the last event on the programme, and proved a very comical affair. Mr. Dunsmore winning, gaining the $5 prize, with Mr. West second, $3. This ended the programme, but it was supplemented by a "consolation race" for unsuccessful competitors, prizes, $5 and $3, which was won by Ernest Gentz, first, and Chas. Meyer second.

ROGER WILLIAM'S PARK, R. I.—*July 4.*—The amusements were most successfully carried out. The first contest was a walking match of one mile, won by Brown; time, 7:55. In the sack race and hitch and kick, Thomas Payton took first money, as did Michael Lindskey in vaulting, reaching 7 feet, 4 inches

James Malony took first prize for highest running leap, reaching 4 ft. 11 in. John Ryan won first money in boy's race—one quarter of a mile—in 28½ sec. John Mosely and George Lewis won the three legged race, and the Collins' boys were first and second in the tub race.

The committee added a boat race to the programme, in which No. 9 was the victor, Schofield ta king first money.

STATEN ISLAND.—At Staten Island a very enjoyable game was had between the married and single members of the club, in which the bachelors rather got the best of the Benedicts, as the appended score shows:

MARRIED.		SINGLE.	
Outerbridge, c Lilly, b Donald.	6	Donald, b Brewster	3

Belleville wins in one inning.

CRICKET AT DETROIT.—On July 4th a match was played between the Peninsulars and the St. Louis, Mo., Clubs on the ground of the former, resulting in a victory for Detroit. Detroit scored 100 in the first and 84 in the second innings. St. Louis—1st, 13; 2d. 66.

CRICKET AT HOBOKEN.—The Pennsylvania University eleven played their first Match with the St. George's, of N. Y., resulting in victory for the latter. The university men scored 82 and 42 in their two innings, and the St. George's 29 and 122. Time, seven hours and a half.

—Daniel O'Leary, starting at 12:05 A. M. July 2d, finished his six days' walk Saturday, July 7, at midnight, having made 471½ miles. The proposed attempt to excel his London performance of 520 miles in the same time was therefore a failure.

LADIES' GAMES.—The ladies of Brooklyn have formed an Archery Club, and will play at Prospect Park. No gentleman allowed to join except with a lady.

—On July 4th the Ladies' Club of Staten Island Cricket Association engaged in games, which consisted in archery, lawn tennis and croquet, and the day was greatly enjoyed by both sexes. The ladies should be encouraged.

THE TALLY-HO.—Col. Kane has changed his route, the Tally-ho leaving Hotel Brunswick for Yonkers, instead of New Rochelle. This departure was inaugurated Monday, July 9th, leaving Hotel B. at 4:30 P. M; and returning, the Getty House, Yonkers, at 8 A. M.

BASE BALL.

Sixty-six games of base ball were played at Prospect Park, Brooklyn, on July 4th, between the hours of 4 A. M. and 7:30 P. M. The ball tossers all over the country made it a gala day. The professional match at St. Louis on the Fourth resulted in a very closely contested game, in which the St. Louis nine won by one run only after an eleven innings' game, as the score below shows:

	1	2	3	4	5	6	7	8	9	10	11	
Brooklyn	5	0	0	0	0	0	1	0	0	0	0	0—6
St. Louis	0	0	3	0	0	0	3	0	0	0	1	1—7

ROCKAWAY YACHT CLUB.—The opening regatta of the Rockaway Yacht Club took place on the fourth of July. There were two classes, one for sloops and another for cat-rigged boats. There was a prize for each class, and the boat making the fastest time, with time allowance, would win the Lumius Challenge Cup, lately surrendered by the yacht Spinaway on retiring from the club.

The entries were:

FIRST CLASS—JIB AND MAINSAIL.

Name.	Owner.	Dimensions.
		ft. in.
Cygnet	Lumius Brothers	24 09
Fannie D	C. Donnelly	23 08

SECOND CLASS.

Mignon	C. & I. Cheever	22 00
Lucilia	A. Aiker	22 00
Gariota	D. Lord	20 00

The wind was from the northwest, and blew only in puffs. The Mignon was one of the last to cross the line. She was admirably handled, and walked through the fleet like a racehorse.

The Mignon won the prize in her class, and the challenge cup. The Fanuie took the prize in her class.

The greatest event of the day was the match race between the well known Spinaway and the Madeleine, a new yacht built by the same man that built the Spinaway (Dick Wallin). The match was a ten-mile race, working rig sail, for a cup valued at $150. The start took place at nearly half past two, the Madeleine having 25 seconds time allowance. The Spinaway was little slow in getting off; but in a second she was after the Madeleine. The wind was very puffy, and on a beam, which did not suit the Spinaway at all. They kept in the same position for seven miles, neither gaining nor losing; finally the Spinaway drew up on the Madeleine, and would have been on even terms with her had it not been for a puff that struck her and shot her a length ahead of the Spinaway, the Madeleine winning by eighteen seconds only.

There is much talk of a match between the Idle Wild and the SPINAWAY.

YACHTING AT OSWEGO, JULY 4.—The following are the winners in the several classes:

First-class yachts.—Resolute, of Belleville, $50; Mariah, of Oswego, $25; Fascination, of Oswego, $15.

Second-class yachts.—Fiona, of Whitby, $30; Magic, of Oswego, $20; Silver Cloud, of Oswego, $10.

Sail boat race.—West Wind, of Port Ontario, $15; Flora, of Oswego, $10.

First-class row boats.—Bennie, Henley and Son, $10; Doll, Howe and Gokey, $5.

Second-class row boats.—Doll, D. Hourigan and Murry, $9; Alert, Poucher and Fitzgerald, $4.

KINGSTON, *Canada, July* 1.—In the yacht race at Kingston on Dominion Day, between the yachts Kathleen, of Belleville, Zitella, of Kingston, and Katy Gray, of Belleville. The Kathleen was first by 1¼ minutes, and the Zitella second.

PORT HOPE, *Canada, July*, 2.—In the yacht race to-day the Oriole won in the first-class race, and the Mocking Bird in the second-class.

HALIFAX, *June* 30.—The first race of the season of the Nova Scotia yacht squadron came off in the harbor to-day. Five boats competed for the Mayor's prize, which was won by Mr. O'Brien's Psyche.

FOURTH OF JULY REGATTA AT BOSTON.—The 4th of July Regatta turned out a perfect fizzle, with the exception of the fourth-class boats. The wind died out after the yachts started. Many of them did not get in until the next morning. Five hours was the time allotted to sail the race in, and as none of the first, second or third-class yachts got across the line

in that time no prizes were awarded. The Ionia, Capt. Pettengill, of the fourth-class, got 1st prize for centre boards, $25, and the Helen the 2d, $15. The Syzygy got 1st prize, $25, for keels in same class. The other races will probably be sailed over. KEDGE.

THE SEAWANHAKA YACHT CLUB.—The regatta of this club, which was named for July 4th at Oyster Bay, L. I., failed for lack of wind, and has been postponed until September.

ROCHESTER YACHT CLUB.—The yacht Club of Rochester, N. Y., which was organized less than three months ago, now has over 100 members, and is one of the strongest clubs, numerically and financially, in the country. Its club house, recently completed at Summerville, on the beach of Lake Ontario, is a model of comfort and convenience. The building is 25x83 feet, two stories high, with a flat water-proof roof, overlaid with flooring, over which a variegated colored cloth tent roof is stretched adding to the whole exterior a picturesque appearance. A veranda eight feet wide extends on three sides of the building, which in addition to the smoking and promenade floor under the tented roof, affords ample room for two or three hundred people, who may command, from almost any part of the edifice, an uninterrupted and expansive view of lake Ontario. The style of the architecture is rustic, and, being painted inside and out with a variety of colors, the appearance of the building from the offing on the lake, is most exquisite. It is provided with a dining hall, kitchen and lofts in the rear, with bunks for the repose of twenty or more persons. Among the yachts that comprise the fleet are the Belle, owned by Everest and Clifton; the Ida, owned by Messrs. Jones and Stace; the Gem, Frank E. Woodworth; the Ripple, E. M. Moore, Jr., and E. U. Willard; the Rambler, George N. Newell; the Dana, C. N. Allen; the Annette, Frank Dodd; the Minerva, Leafless, Genevieve, Waterwitch and Seth Green's new yacht, the Rochester, whose name, by the way, should be changed to Alosa. The officers of the club are W. Lincoln Sage, president; Frank J. Upton, vice president; J. C. Tone, treasurer; E. U. Willard, secretary; E. Clifton, commodore; Frank E. Woodworth, vice-commodore.

YACHT RACE.—The annual regatta of the New Jersey Yacht Club took place at Hoboken on June 28. The course was from an imaginary line opposite Twelfth street to a stake-boat anchored off the Columbia Club House foot of Fifty-eighth street, the boats to go over the course three times. The start was a flying one on a flood tide. The following boats were first-class: Estella, Letitia, Charm, Jessie, Maud. Second class: Freddie, Arcola, Fay. The Estella, of the first class, and the Fay, of the second class, were declared the winners. The prizes were a marine glass for the leading boat in each class and a set of colors. The Dolly, one of the boats presented for entry, but not admitted, while sailing round the course was run down by a schooner and nearly cut in two. Captain Borlton, the commandant of the Dolly, narrowly escaped being drowned, and only saved himself by clinging to the shrouds of the bowsprit of the schooner.

LAKE CHAMPLAIN REGATTA, *June* 30.—The third annual regatta of the Lake Champlain Regatta Association came off Friday under most discouraging circumstances, during a severe thunder-storm and with variable winds. Commodore Foote's yacht Phantom, of Port Henry, took the prize in the first class, her competitor, the No Name, of Willsboro, being obliged to withdraw on account of losing her bowsprit shrouds in passing the second stakeboat. The decision as to the second-class yachts is understood to be as follows: The Victor, of Whitehall, R. E. Bascom captain, wins by about one minute. Subjoined is the schedule of the race:

Yachts.	Start	Home Stake.	Time.	Corrected time.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Sandy	12 04 36	4 19 18	4 14 42	4 14 42
Anna	12 02 14	4 14 10	4 11 46	4 10 53
Hoopjah	12 02 34	4 15 24	4 12 52	4 06 32
Victor	12 02 32	4 15 01	4 12 29	3 07 27

The third prize was awarded to the Sheldon, of Crown Point.

About 1:15 P. M, a severe squall from the West struck the third-class yachts, capsizing the Gracie, of Port Henry. The Lena, of Crown Point, on going to her assistance was also capsized.

JAMAICA POND REGATTA, *July* 4.—The programme included seven races.

First Race.—Single sculls; distance, 1½ miles; won by I. H. Houghton in 11 m. 50 s.

Second Race.—Single scull lapstreak, three-quarters of a mile, won by Frank Seabury, 6 m. 6 s.

Third Race.—Double sculls; the Newtons, I. H. Houghton and W. H. Barns, rowed over the course alone in 11:24, receiving first prize. For the pair-oared working boats only two boats started, Lincoln and Hastings winning with ease in 7 m. 25 s.. Distance, three-fourths of a mile.

Fourth Race.—Four-oared race brought into contest the Newton and Jamaica clubs, and a crew from the Union Club, of Boston. After they got under way the Unions were obliged to abandon the race, having broken their rudder. The Newtons proved the victors, coming in four lengths ahead, having pulled 1½ miles in 10 m. 48 s, the best time ever made on the pond. The sport terminated with a canoe race, which was won by the Newtons, who had it all their own way from the start, winning easily in 8 m. 18 s.—¾ of a mile.

CHARLES RIVER REGATTA, *July* 4th.—The races were six in number, and the total amount of prizes $1,000, as follows:

First Race.—For four-oared working boats, open, and rowed on the gunwale; distance, four miles (two miles and repeat). First prize, $200; second prize, $100; third prize, $25.

Second Race.—For pair-oared boats; distance, three miles. First prize, $150; second prize, $50; third prize, $25.

Third Race.—For Whitehall boats; distance, two miles. First prize, $50; second prize, $25.

Fourth Race.—For single scull wherries; distance, two miles. First prize, $150; second prize, $50; third prize, $25.

Fifth Race.—For double scull boats; distance, three miles. First prize, $100; second prize, $50.

Sixth Race.—For four-oared boats (lapstreaks or shells), with outriggers; distance, four miles (two miles and repeat). First prize, $400; second prize, $150; third prize, $50.

The number of entries was very large, much larger than at any previous regatta, and included all of the first-class oarsmen in the United States and Canada.

SAUGERTIES REGATTA, July 4.—In the single scull race between the Wolvenhooks, of Albany, and the Saugerties, Tomkins, of the Wolvenhooks, beat Pidgeon. Time, 7m. 23s. A double scull race between the Ulysses, of Troy, and the Wolvenhooks—won by the latter. Time, 6m. 27s. In the six-oared gig race the Mutuals, of Albany, were the entry. They rowed over the course in 6m. 22s. The fourth, a race for four-oared shells, the Saugerties, Mutuals, and Wolvenhooks were the contestants. Won by the latter. Time, 5m. 52s.

NEWARK REGATTA, July 4.—A large crowd attended the Newark regatta on the Fourth, the results of the different races were as follows: Six-oared gigs—the Eurekas won in 8m. 53s.; the single scull was won by Mills in 9m.; the pair-oared shell race was won by the Nautilus in 9m. 43½s.; the pair-oared gig race was taken by the Mystics in 9m. 41s.; the four-oared shell race was won by the Eurekas in 8m. 14½s.

THE ARGONAUTA BOAT CLUB REGATTA held on the Fourth at Bergen Point resulted in the following way: The singles was won by Mr. W. T. Taylor, the pair-oared shells by Messrs. Smith and Man against W. T. Taylor and R. E. Dunbar. The four-oared shell race was won by Messrs. J. McNider, C. B. Greene, R. V. R. Schuyler, and G. E. Man. Their opponents were Messrs. W. E. Caldwell, J. M. Duane, William Gwynne, and A. Gallup.

LANDERS VS. REAGAN.—In the Charles River three mile race with a turn, on July 4, between Landers and Reagan for $2,000 a side, Landers held the lead for nearly half a mile, but Reagan spurted and quickly went to the front, and kept there, leading by three boat lengths at a mile. He kept on increasing his lead all the way to the stake-boat, where he led by four lengths. Landers made a wretched turn, and when he got his boat straight Reagan had fully ten lengths the best of the race, an advantage he kept to the finish, winning with the greatest ease by a dozen lengths. Time, 22m. 50s.

AQUATICS IN THE SOUTH.—The great two mile race between the Tobacco City Club of Lynchburgh and the Rives Club of the University of Virginia took place on the evening of the 30th ult. The course was two miles in length. The manning of the two four-oared boats was as follows: Tobacco City Club—W. H. Cudly (bow), J. S. Marshall, W. O. Owen, J. R. Hill (stroke), W. C. Langhorne (cox). The Rives Club used a cedar boat forty-one feet long and thirty inches wide, and the crew were: W. W. L'Engle (bow), Charles Steele, J. M. Macfarland, De Courcey W. Thom, Willoughby Waeke (cox). From the start (which was a very even one) all the way up to the turning point the race was most keenly contested; but in attempting to round the turning point the Rives boat had the misfortune to break a thwart, and this extinguished their chances of winning, for before they got righted their rivals were well on their way home, crossing the score in 14m. 4s. Their opponents were just one minute behind them.

NEREUS BOAT CLUB, Flushing, July 4.—Course one and a quarter miles across Flushing Bay. The first contest, between the Nereus and the Nassau six-oared gigs, was won easily by the former in 7m. 35s.

POTOMAC BOAT CLUB, July 3.—Race at Georgetown for the Potomac championship and a handsome prize. Course, one and a half miles and return. The crew in the shell Saratoga was composed of Wheatley, stroke; Doyle 3, Barton 2 and Beston bow. The Sue Shepherd crew was Wheeler, stroke; Schaeffer 3, Cox 2 and Gibson bow. They got away well together, maintaining their respective positions until after turning the stake, when the Sue Shepherd crew passed ahead, coming in one and a half lengths ahead in 15m. 25s. This time, which is the fastest on record, takes the place of that made by the famous Northwestern crew at Saratoga Lake last year.

NEWPORT, R. I., July 4.—In the late boat race down the harbor the Dart was the winner in the first class against three competitors; distance twenty-two miles. In the second class, distance sixteen miles, the Minnie was first, and the Schoolboy second. The Dart's running time was 5h. 30m. 27s.

LYNN.—A rowing regatta was held at Flax Pond on July 4. The first race was for four-oared working boats, the course being three miles, and the prizes $50 and $25 respectively. In this race there were three entries, consisting entirely of crews from the Lynn Rowing Association. The first prize was won by crew No. 2, and the second by crew No. 1. The second contest was a dory race by ladies over a course of one mile, the prizes being $10 and $5. The race was one of great interest, and the spirited efforts of the fair contestants were received at all points by enthusiastic and merited applause. The race was won by Miss Tarbox, who was awarded the first prize, while the second prize was awarded to Miss Jones. The third race was for single sculls, which was won by Messrs. Buckly and Crowley, $20 and $10 respectively. The last and closing feature of the regatta was a tub race, all tubs to be propelled by plates. Mr. Lewis Hollis took the $10 prize, being first; Mr. J. Southwick second, $5.

—The Palisade Boat Club of Yonkers made great preparations for an interesting morning's entertainment on the Fourth, but were prevented from carrying out their programme by the weather. The handicap race for single shells, and the four oared shell race had to be given up.

BOSTON ROWING REGATTA, *July* 4.—The annual Fourth of July regatta was attended by 50,000 people. The first race, for four-oared working boats, four miles, was won by the Lakeman crew, No. 1 of Boston; time 28:25. The pair-oared boats race, three miles, was won by Biglin and Englehardt; time, 22:23. The third race, for Whitehall boats, two miles, was won by Scott and Dailey, of Boston, in 16:17½. The single scull race, two miles, was won by Plaisted in 14:24½; Johnson second, Teneyck third. Haulon was seventh. The double scull race, three miles, was won by Faulkner and Regau; time, 22:24; Biglin and Englehardt second. The four-oared shell race, four miles, was won by the Shawmut crew, beating Faulkner, Biglin, Regan and Englehardt, who consolidated.

THE LAUNCH OF THE NEW STEAM YACHT WAUKEEGAN.—We have to-day to record the launch of a handsome iron steam yacht, built by the order of Hon. Chapin Hall, by Baird & Haston, Phila. This new addition to the country's pleasure fleet is intended to run on Chatauqua Lake, N. Y., and is guaranteed by the builders to make 16 miles per hour, but from 18 to 20 miles per hour is set down as her maximum speed. The yacht is 60 ft. long, 8 ft. beam, and 4 ft. deep, and is supplied with a pair of high speed engines 8 inches diam. of cylinders, and 10 inches stroke of piston, designed to make 400 turns per minute. The engines are an unqualified piece of workman ship and reflect the highest credit upon the builders. Her main shaft and crank shaft are steel, the cranks solid with counter balances, and perfectly balanced. The housings are all polished, and all working parts are steel highly finished. The crosshead and slipper guides are solid forgings finished, and the whole of the machinery is of steel and wrought iron finished and specially designed for lightness, strength, and the durability so essential where high speed and high steam is indulged. Ordinary cheap cast iron engines have been tried in steam yachts long enough, and it is pleasing to record that there are builders with sufficient enterprise to cast all their old patterns away and strike out in a new path. There are novelties in connection with the machinery of this iron steam yacht never before introduced in a vessel of the kind, and from 15 to 20 per cent more turns per minute are expected of her, than can be obtained from any other similar sized engines, but after her trial trip we anticipate presenting our readers with an interesting account of her performances. The yacht slid into the water at 9 o'clock, A. M., and received the name "Waukeegan", and we believe she will make it celebrated.

—The Courtenay and Riley match for the Greenwood Lake Club prize will take place at Greenwood Lake on Saturday, the 14th instant. Riley is at the Lake Side House, and Courtenay at the Windermere. Both are having a good time training. Riley's arm is now about like a turkey's drumstick, Courtenay's resembles a bunch of whalebones. The sympathies are with Riley, because Courtenay has won fourteen races without being beaten, but the impression is that Courtenay is too many whalebones for him.

BLACK BASS AT CLAYTON.—Numerous are the inquiries made of us as to where as many readers shall pass their summer vacation and amuse themselves with luring the gamey black bass from his rocky retreat. Taking it all together, there are but few places of which we can speak so confidently as that stretch of the St. Lawrence River extending from Lake Ontario to Alexandria Bay. At the commencement of the charming Thousand Islands, on the American shore, lies the picturesque village of Clayton. Of less prominence, perhaps, as a summer resort than Alexandria Bay, from which it is distant about twelve miles, it is yet a fact well known to anglers that the best fishing grounds, whether it is for fly or still fishing for black bass, or trolling for pickerel or lordly maskelonge, is in the vicinity of Clayton. During the recent convention of the State Sportsmen's Association at Syracuse, we took a couple of days from pigeon popping and ran up to Clayton. Our route was by the Rome, Watertown & Ogdensburgh Railway, via Watertown to Cape Vincent, where we took the new steamer Island Belle, and accomplished the remaining fifteen miles of our journey in a little over an hour. Black bass fishing at Clayton has been remarkably fine this summer. And there is no reason why it should ever be otherwise. Nets are unknown, and the rocky islets with which the river is completely studded, and the cold, unvarying current form a combination of circumstances most admirably adapted for the propagation of these fish. And then the fishing itself; how charming the surroundings and how perfect the accessories! Surely there are no boats in the world equal to the Clayton boats. And then the luxurious arm-chair in which one fishes, the careful and capable boatmen and, above all, the abundance of fish. Nor is the place an extravagant one. At the Walton House, kept most excellently by Mr. S. D. Johnston, and located directly on the river, board is but $2.50 per day, and the boatmen's charges are scarcely half of what they are at fishing or fashionable resorts generally.

Directly opposite Clayton is a small island, from which a bold bluff looks up the river and into the broad waters of the lake. This island has been purchased by our late Lieut. Governor Alvord, and here he has built himself a most picturesque house, somewhat after the style of an East Indian bungalow, with every convenience in the way of boats and boat-houses. The governor is a most enthusiastic fisherman, and his average catches are something remarkable. As the steamer carried us away from the wharf on our return to Cape Vincent, the gun on "Governor's Island" thundered a salute, and the colors fluttered from the tall flag staff. For the wearied in mind and body, a sweet repose for both can be found at lovely Clayton. If the sojourner is an angler, or even if otherwise, let him make the Walton his home, and Weber his guide and boatman. He will be happy. W. M. T.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. THE

Sportsman's Gazetteer

AND

GENERAL GUIDE.

WITH MAPS AND ILLUSTRATIONS, 850 pp., Price, $3.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM;" AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST and STREAM" PUBLISHING COMPANY.

1,000 Copies Sold in Advance of Publication.

The book is a complete manual for sportsmen:

It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude)

It gives the scientific name and specific characteristics of each species it describes, with the *habitat* and breeding season of each—a most valuable contribution to science.

It describes 297 varieties of edible fish alone, that may be taken with the hook; 50 varieties of ducks, 50 varieties of snipe or waders, and the different methods of shooting each.

Its instructions for capturing large game are very minute, and the chapters on woodcraft, outfitting and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and his points for bench judgments fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.

Every scientific portion of the work has passed the inspection of an officer of the Smithsonian Institution.

It contains very useful recipes and remedies for wounds, bites, poisons, illness, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in regard to sportsmen, and a directory where to buy outfitting goods.

If instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

ENDORSEMENTS.

"I can judge from your advanced sheets that your book will be a *vade mecum*, invaluable to sportsmen."—*Dr. H. C. Yarrow, U. S. A. Smithsonian Institution.*

"Your forthcoming book will indeed be a treasure. The labor of preparation must have been immense."—*S. C. Clarke, Jamaica Plains, Mass.*

"Having examined the proof sheets of your forthcoming book, I predict an extraordinary sale."—*G. Bird Grinnell, Peabody Museum, Yale College.*

"That portion of your book relating to woodcraft, outfitting, camping, etc., is simply complete. I can scarcely add anything."—*H. M. Mitchell ("El Cazador"), Los Angeles, California.*

"Your book is much needed, and I have every confidence that you are capable of covering the whole ground. We need something more recent than Frank Forester."—*D. C. Estes, M. D., Lake City, Minnesota.*

"THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUSIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornithologists, is now in its third volume. It is replete with all that is new or recent in Ornithology and Oology, and publishes important papers on the rarer of our birds and eggs. It is just the periodical for those making collections of birds and eggs for scientific examination, as its columns are constantly furnishing descriptions of the eggs of new and rare species.

Bay Shooting of all Varieties.

SHINNECOCK BAY THE BEST SHOOTING GROUND IN THE VICINITY OF NEW YORK.

Wm. N. Lane respectfully informs his many friends that, having largely added to the Springville House or Sportsmen's Retreat, he is prepared to entertain and take care of his guests in ample manner. Moderate prices and satisfactory attention guaranteed. The young bay birds are now coming in, and everything bids fair for an excellent season. Address WM. N. LANE, Good Ground Station, L. I. Live wild geese stools for spring and fall shooting. jy12 3m

Hotels and Resorts for Sportsmen.

Island House,
BELLOWS FALLS, VERMONT.

Broad piazzas, large airy halls, charming walks and drives, delightful scenery, pure mountain air and cool breezes. Send for circular.
je14 3m CHARLES TOWNS, Proprietor.

THE
Thousand Island House,
Situated on the
RIVER ST. LAWRENCE,
AT
ALEXANDRIA BAY, JEFFERSON CO., N. Y.,
and in the immediate vicinity of the far-famed Thousand Islands, will be opened for the reception of guests June 1st, 1877. This house was erected in '73, and contains all the modern improvements. Rooms single or *en suite*, with bath-rooms and closets attached. Travellers will find this place as healthful as it is beautiful, with no mosquitoes or chills and fever; cures hay fever and catarrh; while to the finest scenery in the world are added the attractions of Boating, Fishing, Hunting and Bathing, as well as Billiards, Bowling Alley, Croquet Grounds, &c. Cuisine second to none. Accomodations for 700 guests. Parties taking rooms for the season will find liberal deductions from regular rates. Send for pamphlet, with terms, &c.

O. G. Staples,
Manager,
Alexandria Bay, N. Y.

THE BARNEGAT HOUSE, on BARNEGAT BAY, one half mile from Forked River Station, on the New Jersey Southern Railroad; within easy access of New York or Philadelphia. The only first-class house near the celebrated gunning and fishing grounds on the bay. Superior accommodation for families or transient guests. Terms reasonable. Address W. S. PARKER, Proprietor, Forked River, N. J.; or, CHARLES SMITH, 44 West Broadway, N. Y. je21 5t

may17-tf E. RICKCORDS.

MOUNT KINEO HOUSE,
MOOSEHEAD LAKE, ME.

A delightful resort for the sportsman, summer tourist or invalid. Trout fishing good now. For circulars, address O. A. DENDEN, Superintendent, as above, or W. L. CHENERY, 196 State street, Boston Mass. je14 6t

JORDAN ALUM SPRINGS,
ROCKBRIDGE COUNTY, VA.,
Eight miles from Goshen Depot C. and O. RR.

JNO. W. CAMERON, Prop'r.

To old patrons it is only necessary to say that the management will be strictly first-class, with reduced terms to meet the hard times.

The hotel appointments are unequalled by any summer resort in Virginia, comprising all modern appliances which characterize first-class city establishments—hot and cold water on each floor, gas and electric bells, with hair mattresses in each room.

Mr. JOSEPH N. WOODWARD, so well and favorably known at both Rawley and Orkney Springs, will be in charge as manager, where he will be happy to see his patrons.

For pamphlets or particulars address
JOHN W. CAMERON, Prop'r.
je21 1m Jordan Alum Springs, Va.

THE METROPOLITAN
is midway between the Capitol and the White House, and the most convenient location in the city. It has been re-fitted and re-furnished throughout. The *cuisine* is perfect; the service regular, and charges moderate.

R. B. COLEMAN & CO.

CROSSMON HOUSE.

ALEXANDRIA BAY, JEFFERSON CO., N. Y.
C. CROSSMON & SON, Proprietors

THIS HOUSE, RECENTLY REBUILT AND elegantly furnished, is now open for visitors. It is located in one of the most delightful places in the Thousand Islands region, commanding an extensive view of the St. Lawrence and the Islands, and offers every facility for the comfort and enjoyment of guests. Outfits for boating, hunting and fishing parties. Steamers for the bay connect at Clayton with the Utica and Black River Railroad, and at Cape Vincent with the Rome, Watertown and Ogdensburg Railroad. apl2-6m

TROUT FISHING!

The Wisconsin Central Railroad
THROUGH TO
LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland and return for $20 are sold at 63 Clark street, on the C. M. and St. Paul, Madison Street Depot, Chicago; also at low rates for Milwaukee. Dogs, guns and camp equipage taken free.

The points of attraction to sportsmen on this "Forest and Stream" route are Menasha (Doty Island) for bass fishing; Butternut Creek and Lake for muskellonge. The many branches and lak-s of the Flambeau and Chippewa which teem with bass, pike and pickerel, never till this season fished by sportsmen. Between Silver Creek and Ashland all are trout streams, and many others can be easily reached along the shore from Ashland or Bayfield, while rock fishing and trolling in the Bay affords excellent sport.

The new hotel at Ashland, the "Chequamegon," will be opened in July. Meantime there is accommodation at the smaller houses.

Steamers from Ashland to all Lake Ports.

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
OF NORTHERN MICHIGAN, VIA
Grand Rapids and Indiana Railroad.
(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein The fish named above, as also **Muscolonge, Pike** and **Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as **ice for packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

Fishing Tackle.

W. Holberton's Fly Rods

FOR TROUT AND BLACK BASS.

Brass mounted	$8 00
German silver mounted	10 00
German silver and capped ferrules	12 00
Same as above, extra middle joint, 4 tips	17 50

In answer to numerous inquiries as to quality and strength of rod, from those who state that they do not believe good rods can be made for the price, I am happy to say that of all the rods sold during the past year, I have not heard a single complaint. Mr. A. E. Hume, of Alexandria Bay, killed, on one of the 88 rods, after a two hours' struggle, a muskelonge weighing 27 pounds. Every rod warranted.

W. HOLBERTON, 102 Nassau St., N. Y.

Agencies in the principal cities in the United States.

Laflin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.,
Sole Proprietors and Manufacturers of
Orange Lightning Powder.

No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers especially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6¼ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order.
Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

THE
HAZARD POWDER CO.
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle orbreech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT,* OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office,

88 *WALL STREET, NEW YORK.*

SEND FOR DESCRIPTIVE CIRCULAR.

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

All goods sent, charges paid, to any address on receipt of price. Address

SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the **Judges** in their **Report**, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.'S** exhibit **as the best instruments** at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS RANK.**

This Medal and Award was granted after the most severe competition of the best makers, before one of the **most competent juries** ever assembled.

New styles and prices just issued, which are in accordance with our rule, the **BEST ORGANS** for the least money.

We are prepared to appoint a few new Agents.

TRIPLEX.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent-Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.

[Extract from FOREST AND STREAM, New York, December 26, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

Paper and Metallic Shells

FOR

Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2⅝, 2¾, and 3 inches; No. 12—2½, 2¾, and 2⅝ inches. Longer Shells will be made at extra cost. They are not malliable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.

Factory and office, No. 2,239 De Kalb street, St. Louis, Mo.

For Forest and Stream and Rod and Gun.

Hunting the Bighorn.

BY JOHN MORTIMER MURPHY.

THE only species of the ovidæ found wild in the United States is the so-called bighorn or mountain sheep (*Ovis montana*), and that is confined geographically to the region lying between the Rocky Mountains and the Cascade Range, which runs north and south through the States and territories bordering the Pacific Ocean, at an average distance from the sea of, perhaps, one hundred and twenty miles. This vast area is traversed in every direction by mountain chains varying from four to ten thousand feet in altitude; and it is amid their many-shaped peaks that the American chamois loves to dwell, for not only is it there comparatively safe from all foes, except the red and white hunter, but it also finds there the daintiest of feasts in the alpine and subalpine vegetation. Owing to the incessant warfare waged upon it in the Rocky Mountains, it is getting quite scarce in that range, except in isolated localities; but in the Cascades it is nearly as abundant as ever, as its pale-faced enemies are comparatively few, and the red men can procure food in an easier manner than by pursuing it amid the snow-enshrouded haunts which it selects as a home. The amateur hunter who would bag a large number must therefore leave the regions in Wyoming and Colorado, in which it is usually sought, and go further West to the man-silent mountains that traverse Idaho, Oregon and Washington Territory, and there he will find no cause to complain of ill-luck. No animal in the world is perhaps more difficult of approach than the bighorn, as it is exceedingly keen of scent, unusually vigilant, and so cautious that it carefully reconnoitres a country from an elevated standpoint ere it presumes to advance toward it. The Nimrod who would therefore place the heads of many among his trophies of the chase must be not only of a vigorous form, to bear the climbing and rarified atmosphere, but he must possess above all the qualities of patience, perseverance and hardihood. The best time for hunting it is the early morning or late in the evening, as it is then out browsing, but in the middle of the day it is generally concealed among the crags, or deep in

THE BIGHORN.

HUNTING THE BIGHORN.

sunless precipices. During the feeding hours, when a flock is together, one—generally a sturdy, vigilant male—mounts guard on an elevated knoll or rock which gives him an extended view of his surroundings, and as soon as he detects the presence of a foe, or any unusual object, he sounds an alarm and all scamper off to the highest summits at their best pace. They bound from crag to crag, and vault chasms with the greatest ease, and, if pressed, do not hesitate to plunge headforemost into a gloomy precipice, deep enough, apparently, to shatter them into fragments. As they always escape unharmed, one is apt to believe the tales of the Indians—that they can leap on a crag a hundred or two feet below, and, striking it on their horns, rebound to their feet none the worse for the concussion. Having never seen them perform this feat I am unable to vouch for its accuracy; but I can say that I have seen them make some terrific plunges and escape injury. When the scamper occurs, the lord of the flock leads it, and the young males form the rear guard. The lambkins and their dams are marshalled in the centre. During a stampede it is often quite difficult to tell the male from the female, both having horns alike, the main difference being that the appendages of a full grown ewe do not exceed in size those of a two-year-old ram. In selecting subjects for the dining table, one must, therefore, have some experience if he would not slay a tough old mother instead of a succulent young male. The young, which usually number from one to two at a birth, are brought forth late in April or early in May among the lower foothills; but as soon as they are able to move about briskly they are led to the higher pinnacles where the vegetation is more tender and there is less danger from hungry wolves, bears and panthers. While the dam is quite timid in the presence of man, and always flees at the detection of his presence, she will not for a moment hesitate to defend her young against wolf or fox, and in such contests she is often victorious, as her powerful horns are such effective battering rams that a few blows from them are frequently sufficient to cause the most pertinacious of the canidæ to retreat with a severe pain in its ribs or ventral regions. The bighorn is an almost perfect fac-simile of the Asiatic wild sheep (*Caprovis argali*), the difference between them being merely technical. It is almost totally distinct from its domestic congener, except in the ovine appearance of the face and the taste of the flesh. It is, in the first place, much taller, longer and more spirited in action than the farmyard variety; the neck is thicker, and it has scarcely any tail. The heavy, recurved horns which adorn the sexes also make a marked distinction between both species; and instead of soft, snowy wool it is covered with coarse tubular hair of a yellowish, brown color which changes to a dull white at the flanks and on the posterior side of the fore and hind legs. The horns are quite close together where they arise from the skull, and so heavy as to give the head a stunted appearance by contrast with their massiveness. The face is narrow and thoroughly ovine in form and expression; the eyes are large and full; and the legs, which are long and tapering, yet sinewy, are evidently intended for leaping. The body, when in good condition, is sound and quite broad in the back, and this gives the animal a graceful yet vigorous outline.

The height of a full grown male averages about thirty-four inches; length, forty-four inches; horns, a long curve, twenty-nine inches; face, from base of horns to tip of nose, ten inches; length of caudal vertebra, about three inches. When a ram of this dimension is seen perched on a towering rock among the mountain pinnacles, vigilantly surveying the landscape, he is a noble-looking fellow, and one which any hunter might be proud to place among his trophies of the chase. My first introduction to the bighorn was in the War Eagle Mountains, a rugged, snow-capped chain that bisects the territory of Idaho. Being full of small circular valleys that teem with graminaceous verdure, and watered by numerous streams, is affords an ideal residence for the lordly bighorn; and that its advantages are appreciated is evident from the large numbert that frequent it at all seasons. The party which I accompanied on the introductory hunt consisted of three sturdy miners, a sporting merchant and a captain in the American cavalry. The miners were experienced "tramps" and veteran nimrods, having often been compelled to depend on their rifles for food while out on "prospecting" tours; so we left the provisioning of the detachment and the selection of the route entirely to them.

Starting out from a mining hamlet early in the morning, the evening of the same day found us encamped at the base of the mountains; and, as we had to be astir before dawn, we retired to our hard couch on the ground quite early in the evening. Long before the sun began to appear above the eastern mountain peaks the next morning we were laboriously clambering up steep ascents or picking our way through cavernous precipices, whose gloomy walls recalled most forcibly the Plutonic regions. By 5 o'clock we had reached an altitude of four thousand feet, according to the aneroid; and there the principal guide informed us we were to remain while he went in search of "signs." He returned in about half an hour and stated that he had discovered a flock of a dozen or more a furlong above us, and that we should be compelled to make a wide detour to get to their lee, in order to approach them undetected. Our hearts beat wildly at this piece of good news, at least mine did; so we examined our rifles carefully, saw that they were perfectly clean and properly loaded. I was armed with a Winchester rifle, which carried fourteen bullets in the magazine, and I was resolved to shoot them all at one animal rather than permit it to escape. At the command we moved forward, and after an hour's severe struggling approached the flock to within three hundred yards, under shelter of some gigantic bowlders of basalt, without being detected. To shoot from that distance would be risking too much, yet we could get no closer without revealing ourselves to the sentinels, which lifted their heads every few moments to survey the landscape. As they were feeding toward us we therefore concluded to wait their nearer approach; but the minutes dragged heavily, and each moment seemed a torture. After waiting patiently for half an hour, though it seemed treble that time, four sheep and three rams advanced about a hundred yards further, and as our patience was becoming unbearable, the guide gave us permission to fire. This was a joyous moment, and we resolved to profit by it. Each selected his quarry, and at a signal all fired simultaneously. When the smoke cleared away great was our joy to behold the males and one ewe stretched upon the ground, and two sheep leaping wildly about as if badly wounded. Rushing from our place of concealment we delivered several shots in rapid succession at the now thoroughly alarmed flock, which were making for the rocky summit at a break-neck pace; but the excitement having somewhat unstrung our nerves, the fusillade brought us only one yearling, which seemed too dazed to break away with the others. We followed the retreating flock up the steep mountain side, but we found in a short time that the old proverb of a stern chase being a long one was especially true in this case. We relinquished it in about half an hour. Knowing that two sheep were severely wounded by the manner in which they acted, and having failed to discover them among those that escaped, we deployed and commenced searching in every direction for some trails of blood. It being a characteristic of this species to head for the mountains under all possible circumstances, we moved toward the summit, but after searching for an hour we could find no trace of them. We then returned to our slain quarries, and cutting them open made a *cache* in a small fir tree and placed them upon it, to prevent their being unceremoniously appropriated by some prowling bear or panther. This important duty finished, we resumed our exploration for the wounded animals, and in less than a minute came upon a trail that plainly indicated the severity of their injury, as the blood in some places formed a narrow lane. Following that for half a mile, we came to a deep, broad chasm, and down this we clambered, or rather stumbled, for we were sliding more frequently than walking. Reaching the bottom, we found one of the sheep had followed its course upward and another down, so a party went in each direction. I was with the latter, and was fortunate enough to get a shot at a panther that was quietly preparing to make a meal off one of the wounded animals, which it had captured and slain. I don't know whether I hit him or not, but I am thoroughly sure I scared him a little, from the way in which he dashed through the canyon. He certainly acted as if he had forgotten something lower down, and was in the greatest possible hurry to get it. The sheep on which he was preparing to feast was little injured, he having had only time to cut its throat before he had orders to leave. Making a litter of two fallen boughs, we placed the slain animal upon it, and in this way managed to get it to the upper world. The other party were unsuccessful in their search, but as we could claim one animal for each member of the expedition we did not repine much at their ill luck. Leaving this spot, we moved obliquely to the left and upward in quest of more game, and after traveling two or three miles, came suddenly upon a flock of twenty or thirty, but before we could recover from our surprise they were dashing away. We fired at random, little expecting any result from it; but we were fortunate enough to get a splendid male, which was hit right on the skull, and one ewe. This piece of good fortune we attributed more to the numbers of the flock rather than to any markmanship, so we felt little pride in our achievement, for no one could tell who killed the animals. Our experience of the morning having taught us the folly of a direct pursuit, we stored the game and moved on along the original line of route. We had not proceeded more than a mile before we met another flock; but as they were on the opposite side of a precipice we could not approach them undetected. They were at least five hundred yards away, and knowing we could have little chance of killing any at that distance, we concluded to test the range and accuracy of our rifles upon them. Selecting a huge crag for a shelter, one of the miners fired, but his bullet passed over them. Another tried it and he planted the ball directly in their midst. This seemed to arouse them, as they all jumped from the ground at the unusual apparition, then stared wildly about. Several more were then sent among them, but instead of attempting to run away they only began to stare and jump as the balls whistled over, or tore up the ground beside them. One, at length, got struck somewhere near the flank, and that caused it to think the locality disagreeable if not dangerous, so it gave a startled jump, a sharp cry, and dashed away, closely followed by the others. As they were moving off we saw a sturdy ram hastily run up the precipice and bound after them. We could not understand why the flock waited to be shot at several times, but the unexpected presence of this veteran soon gave the proper explanation. It was his privilege, apparently, to lead all movements, and being absent in the canyon, perhaps for the purpose of allaying his thirst, his charge did not know what to do without him; but, like all sheep, when one moved, the remainder followed without thinking of the ceremony of waiting for the commands of the chief. If we did not reap much profit from this bit of shooting we enjoyed a good share of quiet amusement, for it was quite ludicrous to see the heavy-horned creatures give a startled jump, and then gaze stupidly about in search of the cause of their annoyance. Having been more successful than the most sanguine could have expected, we concluded to return to camp with our spoils, as the hot August sun was becoming disagreeably intense, and it was so late in the morning that we could scarcely hope to meet any more sheep until the cool breeze of the evening appeared.

On reaching our *caches* we made a drag of the heaviest fir and pine boughs we could break off by our united weight, and placing the game on this we hauled it down the mountain without any very laborious efforts.

Arrived at camp, those unused to the heavy climbing of the day were soon so stiff as to be scarcely able to move; but the rugged miners seemed to consider it a mere nothing, and laughed heartily at the "drawing-room hunters." The success of the expedition had been so great, however, that they condescended to say that the "drawing-room hunters" were excellent shots, and they did not want any better companions for a day among the bighorns. I have been out among them often since then, but never did I see such good luck attend a party the first day. That evening while discussing the merits of wild mutton cutlets and the contents of a couple of bottles of "Chateau Lafitte," the principal guide related an adventure which befel him on the first occasion that he had hunted bighorns on the scene of our morning's exploits. He and a companion, who were "chums," in prospecting for gold, being out of meat concluded to kill some mountain sheep, not having any other means of procuring it, as there were no settlers in that section of the country at the time, except a few miners. The Indians, who had been very troublesome in other quarters of the territory, had let them alone, and from this they supposed there that were none anywhere near them. In an hour after starting they came upon a flock and killed two fine ewes, and while engaged in preparing them, another flock suddenly appeared on the opposite side of a chasm near which they were standing, and were preparing to cross it when they were arrested by the foe in front. As they stood still for a few moments the hunters threw themselves on the ground and fired; but simultaneously with the reports of their own rifles came others directly behind them, and several bullets passed over their heads. Alarmed by this unexpected fusillade, they jumped to their feet and leaped behind a crag just in time to escape a shower of arrows. Looking up, they saw a short distance above them a party of Indians in all the hideousness of war paint preparing to fire at them a second time. Without waiting to see any more, they discharged their rifles at the group and fled at their utmost speed down the mountain side. The Indians followed in hot pursuit, yelling like panthers and firing either a rifle or arrow whenever a good opportunity presented itself. The fugitives rarely gave them the opportunity, however, as they dodged among the crags, and bowed low when they scurried through or past any sheltering bushes. The chase lasted for a distance of four miles, when they fortunately struck a canyon, and into this they plunged with a suddenness that nearly carried them to the bottom at one bound. Along this they ran with renewed energy, and in fifteen minutes after entering it were delighted to find that the Indians had lost their trail or had been outrun. They reached their cabin late in the evening, but instead of resting they mounted their mustangs and went around among the miners, arousing them to the danger that threatened them. Being always prepared for warfare, those daring fellows were soon armed and assembled at a common rendezvous under the command of our guide. They advanced against their foes the next morning, and meeting them at the base of the mountain dispersed them after a few volleys, which placed one-fourth of their number *hors de combat*, without any loss to themselves. This summary defeat kept the treacherous red men away from that region ever after. Thanking the *raconteur* for his story, we retired to our pallet of clay, and early the next morning returned to the mining hamlet where we were received with many congratulations on our good fortune. I have had many a day's sport among the bighorns since then, but none which equaled in pleasurable excitement my first introduction to them.

For Forest and Stream and Rod and Gun.

SUMMER WOODCOCK SHOOTING.

I PITY the man who does not know Major Scolopax. I pity still more the earthly wretch in whom he produces only a gastronomic thrill. Often does memory fondly linger over the happy hours I have enjoyed in his society, and gives birth to deep regret that the Pacific Slope, so rich in other game, has nothing to supply his place.

"What is it that makes him so attractive—his fine flavor?" do you ask.

Not a bit of it! I would not go a quarter of a mile out of my way to pick up a bunch in the street. But drop those books or that pen; shut up your desk and skip out of the broiling city for a few days with me. We will pay the Major a visit, and you will soon see why his friends are so numerous and devoted. By the time it is light enough to see well we are on the ground. Morning and evening are the best times of day to call on him. The air is cooler and more moist, and the scent is stronger and lies longer. The keen edge of the dog's nose will not be blunted by his getting heated up as in the middle of the day. Moreover, the birds will still be on their feeding grounds, or very close by them, instead of being stowed away for their daily siesta on higher or drier ground, where the number of acres to a bird is uncomfortably large. Our ground is a piece of swampy timber land, intersected with little spring-runs, but with plenty of tolerably dry land, and some low underbrush. We don't want to go where it is too wet, as the Major doesn't like ground that is too moist for worms.

How delightful is the change from the dusty hubbub of the heated city! The cool, soft morning air is redolent with that strange perfume we often find in the woods, even when no flowers are in sight, and musical with the hum of the bees, already on the wing, the twitter of a hundred songsters, the bark, or crashing spring of the squirrel, the almost human whistle of the upland plover, the drumming of the ruffed grouse, and the rich, mellow "Bob White", that at regular intervals floats in from the neighboring meadows. What a contrast to the steaming heat of the city, the ascending fragrance of the garbage cart, the tooth distracting hand-organ, and the nasal melody of the soap fat man.

But, see! The dogs are already at work, each on a slow trot, slackening to a walk as they approach suspicious places. They travel at less than half the speed they do when after a bevy of quail or covey of grouse. They know their business as well as we do, they know they are after a bird, whose scent is not very powerful, and one that is easily flushed. But look at Don! He scents one already; see how warily he sneaks around that little patch of skunk cabbage; how he stops, sniffs delicately the fragrance that our dull sense knows nothing of, moves cautiously for a pace or two with the stealthy step of the midnight thief, then suddenly stops again. How beautiful he looks; his head thrown to one side, one foot upraised as if in act to spring; his eyes fixed in a wild stare of expectant hope upon a little clump of skunk cabbage; he almost holds his breath; his whole body is rigid as marble, with every nerve strung to its utmost tension, while his tail, stiffened like an icicle, quivers at the tip with excitement. Ah! ye sculptors, exhausting time and brains in fettering nature's fleeting forms in marble chains, why have ye so neglected this, the finest sight brute nature can present? Is it because it is beyond the reach of your clumsy touch? See old Frank on that little rise some thirty yards away. He is pointing too, but pointing at Don. He smells nothing himself, but he knows Don don't lie, so he points too. That's what we call "backing."

Do not be in haste, the bird will stay there. Don would not stir a step for the world. Walk in and take first shot when the bird rises. Be cool, but also be quick; be deliberately expeditious. Don't be thinking of what a glorious roast he will make. Banish all such low, sensuous thoughts, and also all anxiety to get him, because it is your first woodcock, or because you want to kill as many birds as I do. All such thoughts will only excite and bother you. Make up your mind you don't care whether you get him or not; that you only want to see him fly, and, in fact, do not really care to hit him at all, but will just shoot at him to hurry him up a little. Now, walk in. I don't break my dogs to flush game, although it is sometimes convenient, and with some dogs perfectly safe, yet it is rarely necessary, and its tendency is always bad—and flush him yourself. You will find him about ten feet from Don's nose. If there should be more than one, take the bird that goes to the right, as you come up even with the dog. Away goes something brown with a whistling flight; it rises nearly perpendicularly for some ten or twelve feet, and then darts straight away. Bang goes your gun; the whistling stops. We hear something fall, and a shower of fine feathers comes floating back on the air. Well done for your first woodcock! Down go both dogs in their tracks. With breech loaders there is not so much need of making dogs "charge" at shot, but it is nevertheless a good practice to keep them strictly to it. When you are loaded I will tell Don to fetch it.

"I thought good sportsmen didn't allow pointing dogs to retrieve?" Some do not. Its tendency is, of course, to make them a little unsteady; but with well bred dogs there is rarely any trouble if you keep them well in hand. If it injures a dog it is nine times out of ten the fault of the owner in being too lazy, too careless, or too anxious to bag his birds. But see how eager he is waiting for the word, how happy he looks—

as he goes for the bird! On a walk, too, you see. He would like to go on a bound if he dared, but knows better. Never let a dog run in retrieving unless it is necessary to catch a wounded bird.

"Why not?" Why not! Look! There is the answer already: he is pointing again as stiff as a rock before he is half way to the dead bird.

Two more birds rise as we come up, a four gun battery immediately opens in their rear, and when the smoke clears away, the air shows nothing but feathers: the second one fell after I missed him with my second barrel; an elegant eye-wipe, that! He was crossing, and in my haste I forgot to shoot ahead of him. I fear you have been imposing on the credulity of your rustic friend in telling me you never shot woodcock before. After loading, Don brings the bird you first shot. See how carefully he holds it, and lays it in my hand. What a noble bird, too, for this time of year. See his rich, dark rosewood back, large, lustrous, expressive eye, set far back in his head. He looks like a gentleman of the olden time in his rich buff vest, aristocratic legs and feet, his odd looking bill, and beautifully mottled wings. And so he is. He's one of nature's noblemen, and the prince of American game birds. Don soon brings the other two, and on we go. In a few moments Frank is "drawing." There he stops; Don, too, and sure as you live on a different bird. He sees Frank, too, but you can see that he is on an independent point. Let us attend to his first, for Frank wouldn't break his point for an earthquake. Away goes Don's bird. Both guns crack together, and down he comes.

"There! Who hit him?"

What is the difference? Call him yours. A couple of hunters would squabble half an hour over that bird and want to toss up a cent for it, and all that kind of stuff. But we are after *sport* and not *meat*, and it makes no difference who hit or who bags him. But see! he fell right in front of Frank, is only winged, and is walking off too! See old Frank; he looks wistfully at the wounded bird and then at the place where his own bird is, and hardly knows what to do. *To ho!* Keep your point, old boy, we'll attend to the well one first. Away he spins upward through the trees, with a twisting, corkscrew flight, while both guns crack harmlessly behind him; mark him, though. We'll find him again. It is always best to mark game, no matter how plenty it may be. He may possibly have been hit and we find him dead, although it rarely happens that woodcock carry away shot in a vital place as quail sometimes do. I will send Frank for that wounded one, so watch him now; he is a better retriever than Don, and knows more than any dozen ordinary dogs. There he goes on his trail. You see he don't stop now to point at all, but walks right in for him! He knows the difference perfectly between the scent of a wounded and of a well bird.

"Is it possible?" Yes. All good dogs soon learn that; but see how he carries him by one wing. He takes them sometimes by both wings, but never by the body unless they flutter hard. He takes a short cut to reach us, and when half way slackens and stops. I really believe he is on another bird.

"What! with one in his mouth?" Yes. It is a rare thing, but good dogs will sometimes do it when occasion happens. I have before now seen him point with a dead bird in his mouth, but never with a live one, though I presume it is quite as easy to do. You take first shot again, and if we kill him I will make Frank stand there with the wounded bird while Don brings the other. That is a test of a dog's training, but he will stand it.

As the sun advances the birds get farther back from the wet ground, and we soon find ourselves in a heavy thicket that covers a long slope leading from the swamp. Here the birds are plenty. The dogs are drawing or pointing nearly half the time. Now look out for your barrels. You have done very well out in the open timber, but you have a different task on hand. This is no child's play. There is no time to take aim, and unless you fire the instant your gun comes to your shoulder you might about as well not shoot, for you will have little time to shift it to the proper place.

"Pshaw! why half the time I can't see anything but a yard or two of brown streak through the green leaves, how do you expect a man to hit that?" No matter, catch its direction and blaze away; for oftimes it is your only chance. With practice you will soon do capital shooting in this way, though not so good as where you have opportunity to get sight. You will, too, always be apt to fire directly at crossing shots instead of ahead of them as you should do, if at any distance; but even though we miss more, this is better sport than open shooting—at least it is for me. There is a satisfaction in stopping a whizzing streak with a shot quick as lightning's flash, that I do not feel where it is more easily done. The greater skill required the greater the sport. But let us now bid the Major good-bye for to-day. It is nine o'clock, and we have had good sport and made a fair sized bag, and there is no use in being swinish about shooting, any more than in anything else. To-morrow we will call again, perhaps in the evening. Evening is nearly as good as the morning for birds, though not for the dog's nose.

Fall woodcock shooting is far ahead of summer shooting, as the birds are larger, stronger and quicker, and the weather is cooler; then, too, other kinds of game are "ripe," and for variety we may occasionally pacify a ruffed grouse, or a few quail or snipe. But since the law allows it, and as it is a good time to escape from business, and there is nothing else to shoot, commend me to summer woodcock shooting. It is not generally known by Eastern sportsmen that splendid summer shooting is to be had in many parts of the West, although the birds are apt to scatter in the fall. On the Illinois river, and on the Mississippi bottoms in Minnesota and Wisconsin, I have seen as fine shooting as the heart of a reasonable man could desire. I presume good shooting may be found in certain places on almost any Western river bottom or swamp, although the choice grounds will vary according to the rise or fall of the streams, which are generally different in their action in this respect from Eastern rivers. You will also as a general thing have all the shooting to yourself, as very few Western hunters trouble them at all. I know many towns having plenty of sportsmen who hunt ducks, "chickens," etc., with great ardor, but never trouble anything smaller, except, perhaps, pigeons. For many years I was the only one in the city of Wabasha, Minn., who ever hunted woodcock, quail or snipe, although there were plenty of ardent sportsmen and many good shots there. At Henry, on the Illinois river, some years ago there were over twenty capital shots, and magnificent woodcock shooting within half an hour's reach; but only one person in the town ever touched them, and the rest used to look at us with contemptuous wonder as they saw us going out to waste ammunition upon such trifles. The West has many good sportsmen who are splendid shots and capital companions; but the majority of them like to see at least one pound of meat drop at every shot, consequently the Eastern man will generally have the small game all to himself.

J. S. VAN DYKE.

For Forest and Stream and Rod and Gun.

WISCONSIN FISHING.

HAVING in contemplation a business trip along the lakes, and thinking that perchance a little good fishing might be intermixed without detriment, I addressed a note of inquiry to the highest authority on such subjects, which speedily brought forth the following reply:

NEW YORK, May 25, 1877.

OFFICE OF FOREST AND STREAM AND ROD AND GUN:

My Dear Mr. L.—I shall set the example by going to Bayfield, Wisconsin, and the Apostle Islands. For information see our article this week. You might take Mackinaw Straits in. We don't go West enough. * * * Yours very truly, CHAS. HALLOCK.

I did not get started till the second week in June, and then stoppages at different points occupied the best part of two weeks before I touched Wisconsin soil at Milwaukee. At Sandusky I lingered long enough to run over to Put-in-Bay and "put in" a day with the black bass. It was, however, rather late in the season, and, though two weeks before boats had been averaging 100 fish a day, my luck was indifferent. I was, however, much pleased with the spot, and during early May and September the sport is unequaled. Jay Cooke formerly had a beautiful retreat on one of the islands, and the boatmen have fabulous stories to tell of the quantities of fish he used to catch with "bow-line and dipsie."

Returning to Sandusky and mentioning to a friend there that I proposed to try the fishing at Mackinaw, he remarked that it was unnecessary to go so far to catch trout, and that within five miles of that place he could insure me as good fishing or better than I could get at Mackinaw. Incredulous, I accepted his offer, and within an hour, armed with a letter, I was off behind a fast team for the grounds. The stream is only a short one, finding its source in several ice-cold crystal springs, and flowing over moss-covered limestone rocks to Lake Erie; is private property, and a permit is required to fish it. I reached the spot, hastily put on my fishing suit, adjusted my rod and flies, and made the first cast about six o'clock in the evening. There was a stiff breeze blowing, amounting almost to a gale, accompanied with a fine drizzling rain, and I was quite dubious of success. The man in charge informed me that I could not catch anything with *that* rig; that I would have to use bait, and that the pole would go to pieces with the first fish I took, as some of them were as heavy as five pounds. Strange as it may appear, it seems no one had ever tried the fly there.

In five minutes I had my first fish hooked—a noble fellow of about two pounds weight—and from that time till nine o'clock I was kept busy with them. Never was more sport condensed into a shorter space of time, and my host's respect for a fly and 7-oz. rod increased amazingly. I did not get any of the five-pounders, but I am told they do spear them of that size.

At Milwaukee I was so fortunate as to make the acquaintance of Henry Pratt, the general ticket agent of the Wisconsin Central R. R., and upon informing him that I was going to try the fishing, he very kindly provided me with a special excursion ticket, with stop-over privileges, and strongly recommended me to tarry at Butternut Creek station and experiment on the maskelonge in the lake at that point. The road runs from Milwaukee, 351 miles, northwest to Ashland on Lake Superior, and has been a number of years under construction, work being carried on at both ends. It was not till June 11 of the present year, however, that it was completed and the first train passed through to the lake amid great rejoicing along the line. It runs through the finest pine forests and mineral region of the State, crossing two of the longest iron bridges in the world; and the scenery at times is grand, especially along the Bad River.

Leaving Milwaukee at 1 P. M., I stopped the first night at Menasha, a pretty village at the head of Lake Winnebago, celebrated for its black bass fishing, and tried them after supper with live minnows; but it was too late in the season and the catch was trifling. On again the next morning, the settlements growing smaller and further apart; we reached Butternut at 6:20 P. M. Here I found boats, men and tents awaiting me, all provided beforehand through the kindness and forethought of Mr. Pratt. The lake is about two and a half miles from the station, and is a beautiful sheet of water five miles long, by an average of half a mile wide. The shores are high and densely wooded, while along the banks rushes and lily pads extend a short distance into the lake, affording splendid shelter for the fish. There are no settlements on the lake, and it has never been fished by white men until this spring.

We made our camp, and the next morning, by sunrise, were on the water. Spoons are used, and the fish are taken by trolling in the same way as at the Thousand Islands. Ordinary spoons will not answer, but I was fortunate enough to get a couple of "home-made" ones at Milwaukee that would hold a whale; and, armed with these and a stout braided line, I felt there was nothing to fear.

My first fish weighed 27½ pounds, and the smallest nearly 19, and one taken while I was in the camp, 37½ pounds; but unfortunately I did not catch him. This fish measured 4 ft. 1½ in. in length, 9 in. in depth, and 5 in. across the back. A boat will average on good days about 125 lbs., and there are legends of fish 6 ft. long having been hooked and lost, which may be true, though I saw none such. In my opinion they are not real maskelonge; certainly not the same as those caught at the Thousand Islands in the St. Lawrence, but are more like immense pike.

If further information about this place is desired, I have no doubt it will be cheerfully furnished by Mr. Pratt at Milwaukee, or by Hart & Barnidge, the hotel proprietors at Butternut Creek. The country is new and rough, and the accommodations not suited to ladies, unless they are of the hardy kind accustomed to camping out.

After three days spent here in the most enjoyable manner, I left reluctantly and arrived at Ashland at 11:20 P. M., to again find the hand of Mr. Pratt reaching on before me by means of the wires. The agent awaited us at the depot and informed us that quarters were ready at the private house of Eugene F. Prince, a most ardent sportsman, and the "Prince" of fishermen in this region. More of his hospitality on my return.

Taking the boat next morning we are at Bayfield in a couple of hours, calling on the way at La Pointe, on Madelaine Island, one of the Apostle group, formerly a station of the Hudson Bay Fur Company. It is noted for its church, near 200 years old, and its white fisheries. Bayfield is a pleasant little village situated on the south shore of Chequamegon Bay, which puts in here from Lake Superior. It has a very fair hotel, the Island House, kept by Mr. Knight, who is something of a sportsman himself and understands the wants of visiting members of the craft. There is also another large hotel not yet quite ready to receive guests. I had a letter to Mr. James Chapman, the acknowledged head of the sporting fraternity of Bayfield, who received me very cordially; but my bright anticipations were somewhat dimmed by the information that it had been raining almost every day for three weeks, that the streams were very high and muddy, and so much washings had gone into the lake that "rock fishing" was undoubtedly spoiled for the time being. This term does not indicate fishing for rockfish as one might suppose, but for speckled brook trout among the rocks which line the shore of the bay for miles. Numerous streams filled with trout run into the bay between Ashland and Bayfield and beyond, and the trout pass along the rocky shores from one to another, while many of them remain to take up a permanent abode. I was told that do not take the fly till August, and my experience corroborates it.

Not entirely discouraged, however, I took an early start the next morning with a boat pulled by a half-breed, Henry La Pointe, and a most excellent guide I found him. We first tried the Sioux River, but it was very high and discolored, and the only bites secured were from the black flies. We wasted the best part of the day here, and it was not till 4 P. M. that we got to work along the rocks. From that time till dusk I took 17 fine trout, the largest weighing 2½ lbs., and lost two. I followed directions implicitly, and this is the "rig" I used: A fancy fly, made for the Rangeley lakes, with six B B shot on the leader, for sinker, and a trout fin for bait. How is that, Mr. Editor, for a fly fisher? In this way trout are frequently taken weighing 3 and 4 lbs., and even larger, and in great quantities when the waters are in proper condition. I enjoyed the scenery, which is magnificent, the running in and out among the rocky coves, and the novel style of fishing, exceedingly.

The next day we bid adieu to Bayfield, intending to fish the rocks all the way to Ashland, a distance of eighteen miles; but a fierce northeast wind arising, we were glad to make our port, by aid of the sail, with all dispatch through a heavy sea. My friend Prince had arranged for a day up "Fish Creek" on my return, and I found him in readiness. We made rather a late start, and had a pull of at least an hour and a half to our fishing grounds, across the head of the bay. The creek is navigable eight miles for skiffs, but our time being limited and the water not in first rate condition, we did not go very far up. The fishing is done from the bow of the skiff, as it floats down the stream. I first tried a great variety of flies, but could get only one rise, and that a small fish, so I adopted the custom of the country and used minnows. We soon had them coming to the landing net in fine style, and by dark had made a good string, averaging ¾ lb., the largest 1¾ lb. The beautiful creek, densely shaded, an excellent lunch and the fine sport all combined to make the day one long to be remembered, but there were trials in store for us. A terrific thunder storm came up just before sunset, wetting us to the skin. Next it came on to blow a gale, and when we reached the lake the seas were running so that no skiff could live, let alone make headway. There was nothing left for us but to pull up our boat, hide our bulky and heavy traps, and foot it home around the shores of the bay. Here was an experience for a city youth. It rained in torrents, it thundered, it lightened, it blew. We had no light except the flashes, and quickly lost the trail, bringing up after blundering around the swamp in the midst of an Indian encampment. This we got out of as quickly as possible as the dogs were savage and made for us. We had now no resource but to follow the shore, which we did for two miles, often wading armpit deep, reaching home about 11 o'clock rather the worse for wear; but we brought our *fish* through.

A good hot supper awaited us, and with dry clothes and a roaring fire our equanimity was soon restored. Next morning I started for home, regretting much that my time was so limited; and in closing this hasty article I desire to bear witness to the beauty of the country, the hospitality of the people and the abundance of game, as, apart from the fish, excellent duck and goose shooting is to be had in the season. I feel particularly indebted to Mr. Samuel S. Fifield, editor of the Ashland *Press*, for courtesies extended, as well as to many others. To any sportsman coming this way I would say see Mr. Prince, at Ashland. He does not "keep a hotel," but knows how to take care of a tourist in a manner not to be surpassed. He is besides well-acquainted with all the fishing grounds, both at Ashland and Bayfield. Provide yourself with your own tackle, bring plenty of warm clothing, as the nights and many of the days are very cool, a good landing net and a small bottle of "fly mixture." The flies are not bad, but the mosquitoes are lively. If a water route is preferred you can go by steamer from Chicago, through the Straits of Mackinaw, but one needs plenty of time if he selects that course. From either Ashland or Bayfield the far-famed Nepigon River of the north shore can be readily reached. It is my intention to revisit these places next summer prepared to make a stay. In the meantime, as the country is a new one to most of Eastern people, I will be pleased to furnish any information to those contemplating a visit it is in my power to give. Board can be obtained at $1.50 to $2 per day, or $10 per week, and boats and guides at $2.50 per day. The sportsmen of the country, Mr. Editor, are very anxious that you should make your contemplated expedition, and I can assure you of a hearty welcome.

Philadelphia, July 10, 1877. WM. H. LIPPINCOTT.

A GOOD WOLF STORY.

CLARINDA, Iowa, June 1, 1877.

EDITOR FOREST AND STREAM:

A friend of mine, by the name of Irwin, living fifteen miles from town on a prairie farm, near some timber, one day last week took his gun with him to the field where he was plowing, while the horses rested, the ground being very wet and heavy. He sallied up the creek in search of wolves, which are very plentiful in that section of the country. On reaching the creek he started up something in the tall rushes. Not being able to see what it was, he ran up a little hill just in time to see where it stopped. He fired into the rushes a heavy charge of buck shot, at the distance of about one hundred yards. Imagine his surprise and delight when a splendid buck bounded in the air and fell dead. Horses and plow being now entirely forgotten, Irwin set to work to dress his game. Before he had finished, a large hungry wolf rushed on the scene, but beat a hasty retreat and succeeded in crossing the stream just as Irwin discharged at him his second barrel loaded with buckshot. He wounded him, and saw him tumble down the opposite bank. He then gave chase, and while trying to cross over on some willow brush, the wolf turned and attacked him with open mouth so suddenly that he lost his footing and tumbled into the water, fortunately not very deep. After a short scuffle both swam for the shore, Irwin taking the lead. On gaining the bank, he turned and dealt his wolfship a stunning blow, breaking the stock of his gun, but fully satisfied with his escape and success. We don't know how long it took Irwin to gain his breath and steady his nerves before scalping his wolf. Yet further peril still awaited him. On opening the animal, he found nine fully developed young wolves. He scalped all and brought them to town and received one dollar bounty on each. The venison he divided among his friends. Pretty good work for one day!

Fish Culture.

STOCKING THE BARREN WATERS OF THE GREAT DIVIDE.

SALMON CITY, Idaho Territory, June 24, 1877.

EDITOR FOREST AND STREAM:

I am located in the very heart of the Rocky Mountains, within one mile of the summit, and about 10,000 feet above sea level. The dividing line of waters is within one mile of our cabin, and occasionally I stroll to the top of the Divide, where one can see the streams stretching away toward both the Atlantic and Pacific Oceans. Although all streams in this section flow through mountain canyons for five or ten miles before reaching the river bottoms, and with a descent of from 200 to 400 feet per mile, yet their rise was almost invariably in some splendid little lake. In the canyon where I am located the stream at this season runs a thousand inches of water, and the fall at least one thousand feet per mile. Yet at its head nestled snugly among the mountains, and not over 1,200 feet from the top of the Divide is a beautiful lake, comprising about twenty-five acres, with water as clear as crystal, and apparently of great depth. Looking from the Divide into Montana one can see the streams heading in the same way. Not a fish or any living thing can be seen in this lake of ours, but the water is so beautifully clear that it seems to me trout would thrive in it. They certainly abound in all the streams running through the valleys and up the mountain streams, until you reach the canyons. Do you think they would live should we place them in the lake? J. W. B.

[REMARKS.—Although brook trout are indigenous to very many of the Rocky Mountains, streams and lakes, in some they are not found at all, and our inference would be that the waters are not adapted to their maintenance and propagation. Trout require something besides pure cold water. They want larvæ, aquatic plants, and varying bottom that is not all gravel or rocks. It would be worth while to try the experiment. It would undoubtedly succeed in some of your waters, and possibly not in others. It would add much to the attraction of your mountain region if the waters abounded in trout.—ED.]

CALIFORNIA SALMON IN LAKE ONTARIO.—A correspondent writing from New Castle, Ont., under the date of July 10, says that a 5-pound California salmon was taken that morning in a trap off Wilmot's Creek in Lake Ontario. These salmon, it will be remembered, were hatched in the Dominion government establishment, at New Castle, in the spring of 1874. The California salmon is larger, deeper in form, and heavier than the native salmon of the same age taken in the same waters. This is the third fish ever taken this side of the Pacific slope, one being taken at Monroe and one at Port Huron, Mich.

SHAD FOR SOUTHERN WATERS.—Spawn taken from Potomac waters has been successfully hatched at South Hadley, Mass., and last week Mr. Schuerman started with 100,000 young fish for the Chattahoochee River, Ga., where they will have been deposited before this reaches our readers. 50,000 young shad hatched at Havre-de-Grace have been placed in the Salt River, at Mexico, Mo., and a like number in the Kansas River, at Topeka, Kansas.

—Another *four-pound* grilse, or young salmon, was recently captured under Bosher's dam, above Richmond, in James River. This is undoubtedly one of the lot of California salmon hatched out and put into the river here by Dr. Robertson in 1874. This is evidence that the California salmon may be successfully introduced to the waters of Virginia. In another year these fish will probably be quite numerous in the James, and we trust that proper means will be provided to enable them to pass over the dams between Lynchburg and Richmond.

—A salmon, reported to have weighed nine and a quarter pounds, is said to have been taken July 1st in the Delaware, near New Castle, which is the third specimen captured in the river within three months.

—A turtle was recently taken below the mouth of the Delaware bay which weighed 400 pounds.

THE CITY FISHWAY.—In compliance with the requirements of the Fish Commissioners, the city of Cambridge is preparing to erect a fishway at Alewive Brook in Arlington. The towns of Arlington, Somerville and Medford are all interested in the brook, and the riparian owners upon it claim that previous to the erection of a dam upon it by the city of Cambridge in connection with the water works, alewives and other fish went up freely. The tide rises and falls about three feet below the dam, which is about seven feet in height above low water mark. It is not far from the almshouse. Mr. W. S. Barbour, the City Engineer, has prepared a plan for the fishway. It will be of wood, 41 feet in length, 6 feet in width and 2 feet deep. The entrance to the fishway is about one foot in width, and by means of partitions plentifully provided the course of the fish will be of the most zigzag character all the way up over the dam, and as the finny tribe are not so happy when there is no current to breast, one will be provided for at all stages of the tide. The fish would be sure to find the entrance if it existed, whatever from the ocean to the river in which they were hatched, if they swim hundreds of miles up or down the coast to find it, also prompts them to get as near the head of the river as possible.—*Boston Journal.*

ILLINOIS.—The bill to encourage the propagation of fish in Illinois waters has failed to become a law, notwithstanding it passed both houses of the Legislature. This will be sorry news to many of the ardent supporters of the bill. But then we can replenish some of our lakes bordering on Michigan, where people are enterprising enough to foster this important branch of industry. But does this speak well for our own State? R.

—A gentleman rather given to conviviality, desirous that the effects of a slight over indulgence should not be noticed by the groom who was holding his pony's head for him to mount, sprang so lightly into the saddle as to land on the turf on the other side. John, advancing to meet him where he lay, exclaimed, "Ech, sir, I hope you're no hurt?" "No, John," was the reply, "but I never knew the beast to do that before?"—*London Hornet.*

Natural History.

THE HELLBENDER AND HIS HABITS.

FOXBURG, Pa., June, 1877.

EDITOR FOREST AND STREAM:

In your last issue (June 21st) I noticed an article on the Allegheny Hellbender, which spoke of its amphibious habits as an ascertained fact, I think "Oconomowoc" is wrong in his theory, as from my experience in fishing on the Allegheny for many years, I have never seen a "bender" on shore, or even on a log in the river. I was surprised to see amphibious habits attributed to it in the article also to which your correspondent refers by Mr. Grote, which I have not at hand, but gather that he (Mr. Grote) is of the same opinion. I have had many opportunities for observing the hellbender, both by night in spearing fish, as well as by day in fishing; and I have seen them in numbers on the bottom of the river, but never on the bank. They prefer deep and mud bottoms to shallow and shelving ones, which is contrary to the habits of most amphibious animals. They are certainly not amphibious in their habits, whatever their power of living out of water may be, and I was told, in speaking of "Oconomowoc's" article to a lumberman on the river, that he had often caught them on outlines, and not liking to unhook them had tied them on shore where they would die in a couple of hours. It may be scientifically decided that they are amphibious; but the fact remains to me, and to any lumberman, fisherman, or boatman on the Allegheny River that they are never seen on land.

Their food, about which "Oconomowoc" is in doubt, is probably any thing that a fish will take, as I have caught them indifferently with minnows, crawfish, worms, meat, etc. They are sluggish in their motions, and although I have fished the river a great deal with live bait, I have never caught any on my rod, and have only seen one so taken, while on an outline they will take a minnow readily. ALLEGHENY.

[We referred the question as to whether this creature is amphibious to Mr. Mather, and the following is the reply.—ED.]:

EDITOR FOREST AND STREAM:

I have read with interest the articles from "Oconomowoc," "Alleghany," and also those from Prof. Grote concerning the habits of the hellbender, and wish to add my own observations of this queer, and to me attractive reptile.

I have known the menopoma for a number of years as most anglers know him; simply an undesirable customer to get upon your hook when you are striving for better things, and an ugly fellow to get off without cutting away your hook, but having had the care of several specimens in tanks for more than a year past, at Philadelphia, the New York Aquarium, and its branch the Seaside Aquarium, where I could observe them night and day, I have found them of great interest and so insensibly have learned to like them.

A letter from a friend in Elk Lick, Pa., says, "this is a tolerably good hellbender place," and he often catches and has studied them, and finds that "they do not always inhabit soft muddy bottoms; but on the contrary prefer a slaty, shelving one, and when one is under a stone and sees a school of fish approaching he gets ready for a spring at them, and is happy. In the streams that pour down the Alleghanys' side where there is not mud enough to plaster a robin's nest, he is found in great numbers. He is slow on land, but if you were trouting and saw one in six inches of water, I'll wager ten to one that you couldn't put your heel on him. * * * They are now found in the Juniata and Susquehanna."

Please notice that my correspondent, who, by the way, is a naturalist, speaks of their speed on land, thereby implying that he has seen them there, but whether of their own volition or not does not appear; but I have seen them in the aquarium lying for hours upon a large piece of cork placed on the surface of the water for their express benefit. I do not think that this reptile, covered as it is with a glutinous coating, could endure the direct rays of the sun without injury, and therefore if in its native haunts it comes out of the water at all, it is probably at some point well covered, or at night.

I have fed them with beef, fish and worms, and learn from a reliable observer that one taken with a hook threw up a strip of pork rind half an inch wide and five inches long.

The outer layer of the skin or epidermis is shed wholly or in part at intervals of two or three weeks, and is often eaten by the animal. I have never seen it entire as in snakes, but only a portion at a time, and find by microscopic examination that it consists of a membrane with ovoid scales, not imbricated, and although when fresh it appears of considerable thickness, it is exceedingly thin when dry. FRED. MATHER.

NANTUCKET ISLAND—*Bay of Fundy, July* 8.—Writing from the Bay of Fundy, so often spoken of as the "fog factory," I will mention that in the last thirteen days here there has been only one half day of fog and one rainy day, the remainder being very fine and warm. With a sea breeze on a foggy day, one needs overcoat and mittens for comfort here.

Professor H—— has been dredging for curiosities of the deep, so varied and abundant in this bay, and several gentlemen have been collecting wonders of the air and of the land in this vicinity. My mission has been to find a breeding place of the Bonaparte gulls (*Larus bonapartii* of Aud.), and in quest of this have had opportunity to make some additions to my ornithological notes and collection. I have with me one of my setters that I allow to retrieve my best specimens, it being exceedingly careful with a bird. Of these usually termed "game birds," I have seen only a few of the waders here.

I might be tempted to look for July woodcock to obtain a change of diet, but an occasional day's row of thirty miles has given me an appetite that actually craves for auks, guillemots, and lobster bait (flounders). Such a repast does not tempt a native, nor would turtle soup or a bottle of champagne. In my search for knowledge by experience, I often have a feast of fish, flesh or fowl, that is from unfounded prejudice regarded as unfit for food. July 6 I saw a flock of redbreasted snipe, or "dowitchers." These are the male birds now returning south from their breeding-places in the far north. It is but six weeks since they were flying north along the coast of Maine. I also saw, on the 6th inst., a willet, two redbreasted sandpipers, and a flock of peeps. Very likely, they will be at Long Island ere this reaches you. ROAMER.

ERRATA.—In FOREST AND STREAM, page 360, are two important typographical errors which may misinform readers. For *Helix albolateris* read *Helix albolabris.* For *Helix alternata* read *Helix alternata.*

ARROW IN THE HEART OF A DEER.—A Nevada hunter recently killed a deer, in the heart of which was found imbedded a stone arrow-head. The muscular substance of the organ had surrounded the arrow-head, and became calloused, showing it had been carried for some time.

[Several similar instances have been recorded, bullets being found thus imbedded in the hearts of animals, and in one case—that of a bear—two inches broken from the blade of a poignard was thus found.—ED.]

The St. Tammany, La., *Farmer*, says: A curiosity in the shape of a white coon, or some sort of hybrid oscillating between old Zip and a canine, was slung into our sanctum by a veteran sentinel of the hen roost.

ORNITHOLOGICAL NOTES.—Winthrop B. Stevens, of West Farms, N. Y., sends us the following list of the spring arrivals of our common birds during 1874, 1875, and 1876, as observed by him:

Wood thrush, May 8, 1874; May 10, 1875; May 6, 1876.
Cat bird, May 9, 1874; May 6, 1875; April 30, 1876.
Brown thrush, April 24, 1874; April 27, 1875; April 23, 1876.
Ruby-crowned wren, April 24, 1874; April 16, 1875; April 15, 1876.
House wren, May 4, 1874; May 7, 1875; April 29, 1876.
Black and white creeper, April 24, 1874; May 1, 1875; April 29, 1876.
Blue yellow-backed warbler, May 8, 1874; May 7, 1875; May 9, 1876.
Blue-winged yellow warbler, May 10, 1874; May 10, 1875; May 8, 1876
Nashville warbler, May 13, 1874.
Tennessee warbler, May 22, 1875.
Summer warbler, May 8, 1874; May 6, 1875; May 6, 1876.
Black-throated green warbler, May 8, 1874; May 10, 1875; May 1, 1876.
Black-throated blue warbler, May 8, 1874; May 10, 1875; May 9, 1876.
Yellow-rump warbler, May 1, 1874; May 1, 1875; April 24, 1876.
Blackburnian warbler, May 10, 1874; May 13, 1875; May 10, 1876.
Black-poll warbler, May 14, 1874; May 13, 1875; May 12, 1876.
Bay-breasted warbler, May 22, 1874; May 22, 1875; May 15, 1876.
Chestnut-sided warbler, May 18, 1874; May 10, 1875; May 8, 1876.
Black and yellow warbler, May 14, 1874; May 13, 1875; May 13, 1876.
Cape May warbler, May 13, 1875.
Prairie warbler, May 9, 1874; May 15, 1875.
Yellow red-poll warbler, April 19, 1874; April 19, 1875; April 24, 1876.
Golden-crowned thrush, May 9, 1874; May 9, 1875; May 6, 1876.
Maryland yellow-throat, May 9, 1874; May 10, 18.5; May 6, 1876.
Yellow-breasted chat, May 13, 1874; May 9, 1875; May 8, 1876.
Hooded warbler, May 16, 1874; May 14, 1875.
Green black-cap warbler, May 15, 1874; May 13, 1875; May 15, 1876.
Canadian warbler, May 16, 1874; May 21, 1875; May 21, 1876.
Redstart, May 8, 1874; May 7, 1875; May 6, 1876.
Scarlet tanager, May 17, 1874; May 16, 1875; May 14, 1876.
Barn swallow, May 1, 1874; April 30, 1875; May 2, 1876.
Blue-headed vireo, May 1, 1874; May 5, 1875; May 2, 1876.

—Walter Baker & Co. received the highest awards at London, Paris, Vienna and Philadelphia for their chocolate and cocoas. The public indorse this verdict by a constant and ever-increasing demand for these excellent preparations.—*Adv.*

GAME IN SOUTHERN WYOMING.

I TRAVELED back and forth through the wildest portions of Colorado, some years ago, in the mountains, through the parks, on the plains and along the river-valleys, and I did not see in three months one tithe of the variety or number of game animals that one week's trip in Southern Wyoming has shown me. And yet this is only the "outskirts of the game region," they tell me, who are supposed to know. Said one old hunter yesterday.

"This is nothing. Start at Rawlins, go through Whisky Gap to the Sweetwater River; up the Sweetwater to the Wind River mountains; pass along their eastern base, between them and the Big Horn River up to the Big Horn Mountains. Then go up to the western side around their northern end, down their eastern face, and across the country back to Fort Laramie or Cheyenne. *Then* you would see game."

Very good. I am going part way there and shall be able to prove partially, at least, the truth of the assertion. But here is what I have already seen in traveling across the open country from Rawlins, Wyoming, on the Pacific Railroad, to Camp Stansbaugh not far from South Pass, via the Seminoe Mountains and Whisky Gap: Buffalo, elk, black-tailed deer, mountain sheep, antelope, gray wolves, coyotes, sage-hares, cotton-tail hares, and—skunks, but perhaps that last one is only properly introduced because he dies game; and of birds, sage-fowl, sharp-tailed grouse, ducks, curlews and plovers, besides an excellent list of songsters whose names and fames are of ornithological rather than of sporting interest.

Antelopes, as I wrote before, were very common about Rawlins, but they were wild. It was a test of marksmanship to bring one down. But as we left there and marched over the open uplands toward the northward, where hundreds of cattle were grazing, the prong-horns became less timid, and would only move to the brow of the next ridge as our noisy train of pack-mules moved along, standing there and looking back at us in wonder and anxious curiosity. What pretty pictures their graceful forms, arching necks and shapely heads, crowned by the lyre shaped horns and long ears, made against he tender opal of the sky! They are the vagrants of the plains, having no visible means of support; yet those thin legs are capable of tremendous action, and the cantering of one always reminds me of the progress of a locomotive, the play of the slender legs resembling the swift and regular movement of the connecting rod. Their trot is a curious, stiff-legged affair, as though their heads were checked up as high as possible, causing them to mince their steps daintily. Most of the does were especially anxious not to be frightened away, for they had spotted fawns concealed in the sage-brush.

As we went on the antelopes increased in numbers, and lost their wildness. Sometimes we could count dozens looking a

us. Frequently they would even come toward us to get a nearer view, or would not even rise as we passed within fifty yards of them, but would only lift their pretty heads and gaze wonderingly at our strange cavalcade. The bucks and does were separate, but neither were accumulated as in the autumn. So tame were they on the great plains which stretch between the Green and Sandy Rivers on the west, and the Rattlesnake Mountains on the east, south of the Sweetwater, that you really could not frighten them—they could not be driven more than a few yards, and one was actually stoned out from among the mules. Fact! We killed only one or two.

Near the Seminoe Mountains, 20 miles north of Rawlins, among some sand-dunes which occupy the bed of an ancient lake, and where there are copious ponds of both sweet and bitter water, we saw our first elk,—a small herd, at a distance. But as we approached they increased affording several long shots without success. Just when we were going to camp in a grove of aspens, with dense underbrush, a cow-elk got up and crashed through the bushes. It was dusky, and we were not expecting it, so she got safely away. Suspecting she might have a calf there, we searched after supper, and soon verified our suspicions, finding a calf about three weeks old, which screamed so like a hawk, when it was brought to the tents and tied up, that one of those birds kept answering it from its nest on a tree not far off. The young elk was of the dark snuff brown color of its mother, but irregularly spotted, as are the young of most or all of the *Cervidæ*, with yellowish-white. Like the ostrich in the song, it probably thought itself safe when its head was hidden; for as soon as anybody approached down went its nose into the grass, while not a muscle of its ungainly body moved. Place it in a particular position, and it would lie stock-still for a half-hour together, watching intently all the time out of its large, dark, liquid eyes. Before dark we led it back to its lair, and the mother came and took it away during the night.

Ascending the mountain next day we came upon two or three small companies of cows and yearlings, and on our way back surprised a herd browsing among the willows not two hundred yards from the camp fire. We shot one and enjoyed the steaks, although the meat will be fatter in a month than now. Elk flesh is rather dry and inclined to be tough. Deer is like it, and neither is as good as nice antelope steaks. After that, for three days we were scarcely out of sight of elks, and never beyond where we were sure of getting them by a little exertion. They congregate in the little wooded gullies at the foot of the mountains, where they can hide their colors, and whence they can sally out upon the plains, or retreat to the high plateaus near the top of the range. As far west as this, however, probably because the country is less fitted for them, they are rarer; but we expect to find them abundant when we get up into the Wind River Mountains. All that we have seen were females and young; the bucks are still rubbing the velvet from their horns in secluded defiles among the hills.

We have seen buffaloes every day—straggling old bulls—alone or two together, weary and tough, hard to kill and harder to eat. We had not time to chase them to any purpose. They were wanderers from the "northern herd," which only a few years ago thronged these Sweetwater plains to such an extent that the Ute Indians always assembled here for their annual hunt. South Pass was another favorite summer feeding ground for them, but it is rare to see a single buffalo there now.

The whole country is good hunting-ground for mountain sheep, especially north of the Seminoe Mountains and the Sweetwater Hills, the plains being interspersed with small ragged hills of broken granite, where timber grows in abundance, and about which is splendid pasturage. Such places the sheep love, and there their noble heads are sure to be found. I saw them only once, and then out of range. Seven, with an old ram at their head, his horns coiling on either side until the size of his head was doubled, stood on the very brink of a precipice five hundred feet high, and watched us curiously as we filed along below. They looked very noble—the noblest game I have ever seen—and one would hesitate before shooting one, lest thus he should ruin beyond power of reparation the inspiring picture of mountain scenery of which the sheep made so important a part. ERNEST INGERSOLL.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING July 10.—One brown thrush, *Harporhynchus rufus*, presented; two alligators, *Alligator Mississippiensis*, presented; one water snake, *Tropidonotus sipedon*, presented; three brown coatis, *Nasua nasica*, born in garden; one crow, *Corvus Americanus*, presented; two bald eagles, *Haliaetus leucocephalus*, presented. ARTHUR E. BROWN, Gen. Supt.

IDAHO, *Camp Edwards*.—J. W. B. writes: "Here in the heart of the Rocky Mountains I am regularly receiving the FOREST AND STREAM AND ROD AND GUN, and a very welcome visitor it is. I think, as a sportsman's journal, your paper beats the world, being at the head of the sporting journals of the country."

J. B. D. C., writing from Corpus Christi, Texas, says: "I would not be without your paper for ten times its value. Living in a glorious country for game as I do, it is of immense value. I am getting up a club for you."

—A Texas correspondent writes: "Last winter two copies of your paper were taken in Houston; there are now, as I am told by the newsmen, about forty, and this number is steadily increasing. It is only necessary to get people to read a few copies of F. and S. to make them fall in love with it.

Woodland, Farm and Garden.

AGAVES.

OF the many plants suitable for the embellishment of large conservatories, for the ornamentation of flights of steps, placing in vases upon terrace walls, or for the thousand and one situations which may be found in a garden or surrounding a mansion, during summer, Agaves seem to be specially adapted because they enjoy the full exposure, and even our hottest weather seems only to add to their growth and intensify their markings. Though not altogether hardy, they may be grown by persons who have no glass structures whatever, inasmuch as they can be stowed in a cellar, or even in a stable during winter. In such a situation, however, they must be kept quite dry, and excluded as much as possible from the light, and for this purpose dry salt hay covered with matting is admirably adapted, as on cold nights they will keep out the frost as well. Agaves are popularly known as American Aloes, but they have really nothing in common with the genus Aloe. They are remarkable for their longevity, and it is a common fallacy that they bloom only once in a hundred years. With most of the species this is true in one sense, for the terminal bud, running up in the form of a flower spike, so completely exhausts the plant producing it that death is the result. The following make splendid specimens, and are worthy of more general cultivation.

Agave Americana, generally called "The Century Plant." This may be regarded as the type of the family. It forms a handsome plant in all stages of growth, whether the leaves are one foot in length, or six or seven in length and six or eight inches in width. They are thick and massive in appearance, somewhat sparingly furnished with spines at the edges, but armed at the points with very formidable ones. A fine specimen of this variety is now on exhibition at the aquarium in this city. It is known to be nearly sixty years old, was brought here several years ago from Georgia, and is said to be the second plant that has ever flowered in New York. The flower spike has reached the height of seventeen feet, and bears sixteen clusters of greenish-white blossoms, comprising 379 flowers, which, with their large yellow anthers, are odd rather than beautiful; but the rarity of its blossoming should make all desirous of seeing it a very fine plant in the collection of George H. Stuart, Phila., bloomed some years ago, and was exhibited for the benefit of the Young Men's Christian Association of that city, we believe. Several varieties of this noble plant, with variegated leaves, are still more beautiful and desirable than the type, notably *A. Americana variegata*, *A. Americana mediopicta* and *A. Americana striata*. The first of these is the more robust and useful variety, the centres of the leaves being dark green while the margins are deeply banded with yellow. *A. picta* might be mistaken for a variety also, but it is quite distinct. The leaves are longer, narrower and not disposed in the compact rosulate manner of *A. Americana variegata*. They measure from two to three feet long, but do not reach more than two inches in breath, the centre of the leaf is dark bright green, having a broad marginal band of pure white, and the edges are furnished with small red spines.

A. Mexicana is also a very desirable species, making a fine stout growing plant with leaves from two to three feet in length and about four inches wide, very glaucous green, the spines being somewhat small and distant. A plant of this species is now in bloom in the greenhouse of W. W. Burnham, Esq., 169th street and Eighth avenue.

A. coccinea has thick massive leaves of an intense deep green color, the apex being armed with a formidable red spine. *A. ferox* is a massive looking species, with leaves of a dark green color, and profusely armed with stout and sharp dark reddish brown spikes. It is, in fact, a veritable *Noli me tangere*. *A. mitriformis* is another deep green and very ornamental species with brown spines, and *A. lopantha*, *A. potatorum*, *A. salmianum* and *A. Humboldtiana* are all good, tolerably hardy, and very ornamental.

There are a number of varieties that are also very ornamental, though of smaller growth, and that require a green house in winter. Fine specimens of the following can be seen in the collections of H. Rathbun, Esq., South Amboy, N. J., L. Menand & Son, Albany, or William Bennett, Flatbush, viz.: *A. Applanata*, *Celsiana*, *Filifera*, *Maculata*, *Verschaffeltii*, *Xylinacantha*, *Marginata*, *Bachneriana* and others. The *Yucca* (Adam's needle) is a near relative of the *Aloe*, and the many beautiful plants of *Yucca filamentosa*, or "Bear's Grass," of the Southern States, now in flower in Central and Prospect Parks, must meet the admiration of even the most casual observer.

DON'T ROB THE BIRD'S NEST.—In the course of a recent lecture in Paris regarding the use of birds, an estimate was formed of the damage to crops by the robbery of a nest containing five eggs. During the first month each young bird eats on an average about fifty-eight flies or other insects in a day. The aggregate, multiplied by thirty, for the month makes 7,500 insects to every nest. Every insect eats daily from blossoms and leaves an amount equaling its weight until it reaches maturity. It was calculated that in thirty days each insect would damage thirty blossoms, and thereby destroy thirty fruits, and that 7,500 insects would kill 225,000 fruits. It will be well, therefore, for farmers' sons to reflect upon the damage done to their parents by the wanton robbery of a single nest.

CYPERUS ESCULENTUS.—Some members of the Central Horticultural Society of France are engaged on some cultural and applicatory experiments with edible tuberous roots of this sedge. Some cakes and a preparation of a kind of orgeat from the tubers were declared by the society to be excellent, and further experiments were recommended. It had been objected that the cultivation of this plant would often prove unprofitable, it being very susceptible to frosts, destroying the tubers, but by the method of cultivation found most successful this is of little consequence, as the sowing or planting is done in May, and the season for lifting and using the tubers commences in August and terminates in Oct. The following is the analysis of the tubers: In 100 parts there are 7.10 of water, 28.06 of oil, 29 of starch, 14.07 of crystallisable sugar, 0.87 of albumen, 14.01 of cellulose, and 6.89 of gum, coloring matter, salts.

—We received, the other day, from Messrs. Beach, Son & Co., splendid blooms of *Lilium auratum* and *L. excelsum*, grown on their farm at Peekskill. They also sent spikes, nearly two feet long, of the very singular *Lilium candidum var monstrosum*, covered with its curious dilated bract-like white petals; also cultivated specimens of *Lilium canadense*, with from 7 to 10 blooms on each spike. This variety, in its native habitat rarely gives more than 3 or 4 blossoms on each stalk.

POISON IVY.—Our article of July 12 has called out the following from a correspondent in Westchester:

MR. EDITOR: I have been poisoned frequently—mostly with ivy; once terribly with the poison sumach (poisonous *Rhus Darlington*). In all bad cases I apply a remedy handed down from our grandfather, viz.: Take the fresh bark of the witch hazel (*Virginian hamamelis*), boil and apply the liquor as hot as can be borne. It has never failed to cure in two or three applications. I once sent it to Pittsburg, over three hundred miles, to a friend by request, as he could get no remedy in the town to stop the poison. I sent the bark by mail, and received his thanks in a few days as it made a speedy cure.

Would it not be well to request those who try this remedy to report through your paper. I have no fears of the result.

ISAAC G. DARLINGTON.

POISON IVY.—A correspondent in Washington says that "a decoction made of rattlesnake weed (*Hieracium venosum*) applied to affected parts will, in most instances, afford immediate relief."

A NEW VARIETY OF COTTON.—M. Delchevalerie, the Inspector of Agriculture of Cairo, laid before the recent Congress of Amsterdam some specimens of a new cotton plant found growing in Egypt. In a field of cotton, among which were found some Bahmiehs (*Hibiscus esculentus*), a certain Cheik-el-Celed of the environs of Chibui-el-Kom, in Lower Egypt, noticed some specimens of fastigiate cotton plants, quite different to the others, and similar in habit to the Bahmieh or Bamia plant. The stems are about 8 to 10 feet high, straight, and with relatively few branches, and those ascending, not spreading as in ordinary cotton plants. Hence the planters of that region did not hesitate to call them "Kotn-Bahmieh." They collected the seeds carefully in order to plant them separately. The following year they obtained nearly half a *feddan* (about half an acre) of them, of which the seeds were collected in the same way, and Egypt this year already possesses important plantations of this new variety of cotton. The first samples which arrived in the market of Alexandria were distributed among several merchants, who sent them to Liverpool, where they were classed above "fair cotton," and nearly fetched the price of "good fair." M. Delchevalerie, in a note addressed to the Congress, suggested the idea that this cotton is a hybrid production between *Hibiscus esculentus* and the Egyptian cotton itself, and he proposes this summer to make some experiments at Cairo, in order to ascertain if this be so. If this hibridisation has really taken place between the *Hibiscus* (*Abelmoschus*) *esculentus* and the cotton, the fact will be of great importance from a scientific point of view, for it may give rise to other experiments in artificial fertilization between other genera of the same family. Similar facts are not unprecedented in the records of horticulture. However this may be, the new cotton plant is taller than the ordinary cotton. It is erect and scarcely branched, with the exception of two or three small branches at the base, which allow of the plants being planted closer. It has not the shrubby form of the ordinary cotton plant, which has numerous branches, themselves branched and producing here and there at the joints a capsule of cotton on a long peduncle. On the contrary, in the new cotton plant, the principal branch is straight and not branched. The capsules grow on the principal stem in clusters in the axils of the leaves, and are likewise borne on long axillary stalks. The roots are more tap-shaped than those of the ordinary cotton, whose root fibres moreover spread more horizontally. And what is more important is, that the new variety produces much more cotton. The cultivators of this new cotton plant have assured M. Delchevalerie that they have obtained fifteen quintals of it for *feddan*, in the rich soil of the Delta, while the ordinary cotton does not produce half that quantity. M. Delchevalerie informs us that he has instituted a series of experiments at Cairo on the cultivation of this new cotton plant, and he has kindly promised to let us know in due season the results of his researches concerning this important question.—*Gardener's Chronicle, London.*

NEW KINDS OF NEW ZEALAND FLAX.—Among foliage-plants, the different varieties of New Zealand Flax deserve a leading position. To the original type (*Phormium tenax*) have been added six varieties, of which five are very ornamental. *P. tenax variegatum* is not only remarkable for its size, but also for its beauty. Its leaves grow obliquely to a height of 10 feet, and without becoming actually pendant are curved down gracefully at the points. The edges are green, and the centre a very beautiful yellow. The only drawback to this variety is that it too seldom produces off-sets by which it may be multiplied. *P. tenax veitchii* is a magnificent and very vigorous variety, the leaves of which are straighter than those of the preceding kind, and are of a striated yellow. *P. tenax*

Calensot—The appearance of this plant is very handsome; the leaves are long, slightly curved, and striated yellow in color. The plant is a very vigorous one. *P. tenax sookii* is a compact plant, the leaves of which are comparatively short, stiff, straight, and of a variegated yellow color. This variety, from which numerous suckers may be obtained, has the fault of being unconstant; it almost always produces suckers that are completely green, and others from which the slight variegation rapidly disappears. *P. tenax saundesi* is a dwarf and stiff plant, the leaves of which are short, straight and upright. The small dimensions of this variety fit it for introduction into small beds. *P. tenax atro-purpureum* is a very robust and vigorous variety, of a fine appearance, which reminds one of its type. Its leaves are very large, not variegated, but having a beautiful glaucous violet tint, which varies according to the growth of the plant, but never disappears. This is a highly ornamental and very remarkable plant, which unfortunately is still uncommon. The New Zealand Flaxes require a consistent and rich soil; a mixture of friable and leaf mould is adapted to strong plants; the off-sets should be planted in dry soil, coarsely broken up, that is to say, not pulverized. Waterings, which must never be neglected, should be frequent and copious when the plants are rapidly growing. The *Phormiums* are propagated from off-sets, which produce the strongest plants. To hasten the growth of the parent plants a bed should, about the first fortnight in May, be made in the open air or under a frame; this is then covered with sand and peat, in which the plants are placed; the soil is covered with a good mulching, and it is kept damp with frequent waterings. In the autumn the plants are lifted and the off-sets detached. They are then potted and placed in a close house, in which there is a brisk temperature. When the appearance of the parent plant is not a matter of consideration, off-sets may be more rapidly obtained by piercing here and there with the blade of a grafting knife the leaves which form the heart of the plants.—*Revue Horticole.*

—The cork tree has been domesticated, or acclimated, or at the very least cultivated at Sonoma, California. A resident of that place has succeeded in growing five trees which are now twenty-five to thirty-five feet in height, and from ten to twelve inches in diameter in the trunk. One coat of cork, one and one-half inch thick, has been stripped off. The seeds were brought from Spain twenty years ago.—*Ex.*

RAFTS ON THE RHINE.—The northern slopes of the Alps and the secondary mountains in the south of Germany abound in pines, and the mode of conveying timber on the Rhine in great rafts is worth recording. A little below Andernach the Rhine forms a little bay where the pilots are accustomed to unite together the small rafts of timber floated down the tributary rivers into the Rhine, and to construct enormous floats, which are navigated to Dortrecht and sold. These machines have the appearance of a floating village, composed of twelve or fifteen little huts on a large platform of oak and deal timber. They are frequently from 800 to 900 feet long, and from sixty to seventy feet in breadth. The rowers and workmen sometimes amount to 700 or 800, superintended by pilots and a proprietor, whose habitation is superior in size and elegance to the rest. The raft is composed of several layers of trees placed one on the other and tied together. A raft draws not less than from six to seven feet of water. Several smaller ones are attached to it, by way of protection, besides a string of boats loaded with anchors and cables, and used for the purpose of sounding the river and going on shore. The domestic economy cannot be more complete; poultry, pigs and other animals are to be found on board. The dinner hour is announced by a basket stuck on a pole, at which signal the pilot gives the word of command, and the workmen run from all quarters to receive their messes. These rafts are not of modern invention, and are not confined to Europe. Evelyn, on the authority of Le Compte, says that the timber merchants of China transport immense trees, or floats, upon which they construct huts and little cottages, where they live. —*American Builder.*

The Kennel.

CANINE MEDICAL AUTHORITIES.

IN our issue of May 24 will be found, under the head of "Valuable Information," a criticism on Mr. Hallock's new book, "Sportsman's Gazetteer," to which our Western contemporary took exceptions in a reply to a correspondent, which called forth the following in the *Field* of June 26:

ARCHER ON MAYHEW.

Editor Chicago Field—Sir—In your issue of June 9 I find under the head of "Answers to Correspondents," the following:

INQUIRER, New York.—Do you agree with the critic of Mr. Hallock's new book in *Forest and Stream*, who says that Mayhew's work is of no value, and that he was inferior to Youatt and Blaine? Ans.—Decidedly we do not. We have seen Mayhew's remedies very thoroughly tested, and have known them to work wonderful cures. His system, whether old or new, was based upon common sense and humanitarian principles, while Youatt and Blaine direct the exhibition of doses that cannot fail to have the worst possible effects upon the general system, even if they cure the disease. The best authorities of England recognize Mayhew and regard him highly, and the statement you refer to is, in our opinion, a great error.

I presume the above is not from the pen of "Mohawk," as I have been led to believe him a physician. If I am right in this conjecture, I have no doubt but that he will bear me out in the following "criticism of the critic's critic."

First—A wrong inference is drawn by the implied assertion that Mayhew is inferior to Youatt and Blaine in the treatment of diseases of canines. This has no foundation on fact, as the writer in the *Forest and Stream* merely asserts that the latter are superiors in pathological sciences, which is not only true, but these authors are acknowledged to have laid the foundations of canine pathology, to which no veterinary has since contributed one jot or tittle.

Second—It is assumed that Mayhew *is* of value in the treatment of canine ailments, for "We have seen Mayhew's remedies very thoroughly tested, and have known them to work wonderful cures."

"Out of thine own mouth will I judge thee!" Medicines do *not work cures!* Were that the case, there would be no necessity for medical science. All medicines act either *directly* or *indirectly*. Of the first class, or those which act directly, we have examples in cantharides, on the neck of the bladder; in belladonna, on the iris; and in caustics applied to ulcerations, etc. The second class comprises by far the larger portion of medicinal substances; the cause of the disease being removed, the effect ceases and the result is the so-called cure. Medicines act simply by assisting nature to eliminate the disorder with which the patient is suffering. Were they *cures*, they would be specific, and a *specific* would possess like action in every case of the same nature, irrespective of temperament person, or the idiosyncrasies of disease. The instinctive healing power—the *Vis Medicatrix Naturæ*—will, undoubtedly, in the majority of cases, relieve disease without the assistance of medicines. The credit thus due is too often ascribed to the drug or drugs which have been administered at the time of, or just previous to, recovery. The aphorism that, "What is good for everything is good for nothing," is especially applicable to therapeutics; hence, the assertion that any one set of medicines are serviceable, or infallible, can have no foundation. The great fault with canine therapeutics lies in such assumptions, and in the fact that medicines are administered *empirically* in the majority of cases—prescribed by those who have no idea of *cause* and *effect*, and are consequently unable to distinguish between the workings of nature and disease or of the action of medicines. If the animal recovers the credit is instantly saddled upon the medicine given. If it dies—well! it was the "will of God." It can by no means be due to the ignorant application of the remedy! The great wonder to my mind is, that so *few* animals die under the dosings they receive at the hands of their masters, influenced by Mayhew and "Answers to Correspondent" in the columns of our papers. All are open to the same criticism, and in an equal degree; and the more so, as it would puzzle the most rank disciple of Paracelsus to define the ailment, and the cause for the selection of the prescription given, in the majority of cases.

Who would think of applying to a paper—even one edited by a medical man—for like information regarding men, women and children? None but the most arrant knave would dare to prescribe in the loose manner that *we all* give advice for our canine friends, particularly if they are the property of our neighbors. Yet dogs are subject to diseases of the nervous system so rare in man, and so vague in their symptoms as to be scarcely ever recognized. Undoubtedly a large per cent. o the canines that would recover if left alone, die through the mistaken zeal of their masters, backed by the "common sense and humanitarian principles" of Mayhew.

Of the humanitarian principles of the author I will speak farther on. The amount possessed is not original with Mr. Mayhew, M. R. C. V. S. (which title by the way, the gentleman, had no right to assume), and when backed up by the profound and inexcusable ignorance evinced, can not demand that the work should be passed by unnoticed.

This "common sense" author says (page 246): "The intestines of the dog are peculiar. In the first place it has no colon . . . . . The cæcum is no more than a small appendage, a little sac attached to the main tube."

This shows a degree of ignorance which cannot be accounted for except that the author mistook the language of that treatise from which he borrowed his *original* (?) matter, which says on page 49: "The intestines of the dog, both large and small, approximate so closely in size, that one unacquainted with the anatomy of the animal would be led to believe the dog does not possess a colon."

The assertion that the dog is without that necessary appendage, a colon, is ridiculous, and sufficient of itself to condemn the author. Could he had only suspended the stomach to its collar, he would have done the animal some service, as it could then have emptied and filled at the will of his master, and thus a world of trouble be saved; but no! he has taken away the colon and left the poor animal to be stuffed and stuffed with food and medicine with no way of disposing of the undigested and useless remnants. However, he proves the falsehood of the assertion and exposes his ignorance when he says: "The cæcum is no more than a small appendage, etc." Almost every schoolboy knows that the cæcum is the blind pouch or *cul de sac* at the commencement of the colon; therefore, no colon, no cæcum! Luckily for the animal he possesses both.

The error regarding the cæcum is not so palpable; he does not distinguish between the cæcum and its vermiform appendix. This would not be strange in one *ignorant* of *anatomy*, as the appendix in the dog is so large as to almost merit the title of *intestinum cæci*, which is often given, it being to a great extent continuous with the cæcum. If so grossly and unnecessarily ignorant in the groundwork of his profession, what must we expect of its superstructure?

Now, let us look at his *humanitarian principles*. Mayhew recommends hydrocyanic (prussic) acid in four-drop doses; and that no mistake may be made, he adds L. P. *i. e.*, London Pharmacopœa. This is an entirely different preparation from the "*acidus hydrocyanicum dilutium*" of the U. S. P. Allow me to quote from the L. P.: "So powerful a poison is evidently unsuited for ordinary medical purposes. A single drop placed on the tongue of a dog killed it in forty-three seconds; applied to the eye of a cat caused death in twenty seconds. The *dilute* acid is a powerful and direct sedative in doses of drops two to four, but the smaller dose should always be given at the commencement." I have known one drop of the *dilute* acid, of the L. P., placed on the tongue of a large healthy dog, to cause death in eighty-three seconds.

Mr. Mayhew prescribes opium in doses ranging from one to six or eight grains; two grains commonly. A surgeon in the U. S. army carelessly gave two grains of opium to his setter on the strength of this *humanitarian* authority, and with difficulty saved the animal's life. I gave three grains to a conch dog at night; in the morning the animal was dead. If any one has exceeded this dose, or approached within one grain without endangering the life of his animal, he must thank the chemist from whom he obtained the drug.

Again, Strychnia or brucia are identical in action, or at least sufficiently so for practical purposes. Mr. M. says that the former in *any* dose, no matter how small, is fatal to the canine; yet he recommends nux vomica, which is dependent entirely on these principles for its efficacy, in doses of two grains. As nux contains four per cent. of strychnia, he gives a trifle over 1-12 of a grain of strychnia, the dose of which for man is 1-32 to 1-8.

On pages 77 and 107 castor oil is condemned. He says: "It often does the ill which months of care are needed to efface, even if the life be not destroyed; * * * to the dog it is an active purge." This is all very true to a certain extent, and this information is drawn from the "Sportsman's Dictionary," as is all of value in the work that is not taken from Youatt and Blaine; yet in the face of this we find him recommending in other places castor oil as a "*gentle laxative.*"

I might go on and multiply evidences as to ignorance and inefficiency. In the whole work there is not a single hint as to the *action* of medicines, and the why and wherefore of their giving; there is not one jot of pathological information; the symptoms he gives seem to have a sameness that is not interesting, and are so "boggled" that they apply to all diseases pretty much alike.

With regard to the doses which have "the most possible effect upon the system," I can only surmise that this has reference to calomel. Mercury in any form is a dangerous agent in the hands of the non-professional man; but its effects are not more to be deplored than some others, as antimony, which Mayhew uses largely, under the name of "gray powder." Eclectics object to calomel; indeed to all mineral drugs, yet they all use them surreptitiously. One of this class, a personal friend of my own, remarked, "I never knew one of our profession but tried to use calomel, and always obtained salivation as a result." Iodine will salivate; podophyllin produces ptyalism, to which mercurial salivation is preferable, yet all these drugs are of the greatest value.

The treatment of Blaine and Youatt I do not uphold. It was in accordance with the light of their days. Of Mayhew we may say that he advocated a mode of hygienic procedure which, though not original, and extremely unpopular in that day, and moreover very imperfect, is nevertheless valuable. *As a work of reference his book is valueless; as an epitome of treatment, useless; as a specimen of veterinary ignorance, excellent.*

His reputation among sportsmen is entirely due to the pen of Wm. Henry Herbert, who, however much we may admire the man, had many faults, and possessed strong prejudices, that even led him to acts of folly—as preferring that his wife should die through the ignorance of an English quack, rather than recover under the care of an educated American physician.

As a representative of the "tight little isle," you will allow me to deny that Mayhew is highly regarded, or even recognized, by the best authorities in England. The utter incompetence of the author is well known and generally acknowledged. No one with a modicum of anatomical and therapeutical knowledge could, after once reading the work, form other than the most unfavorable opinion. The sportsman who must have this work will find his library references incomplete without the sporting adventures of "Baron Munchausen."

Of the works that go to make up the volume as published in the United States, I have no fault to find. Hutchinson's "Dog Breaking" is too valuable to suffer greatly by the association, though it is to be regretted.

In conclusion, let me say that I have no "ax to grind," being actuated solely by the desire of doing justice. With all their faults, Youatt and Blaine are to-day quoted by high medical authority in America and Europe; Mayhew never. The former have an intellectual and scientific basis, which the most vivid imagination cannot accredit to the latter in the slightest degree. I trust no offense will be taken, as none is intended, my aim being merely to expose a serious error. I have not seen Mr. Hallock's book, nor its proof sheets, but if any new light is shed upon the diseases of canines, all should unite in thanking that gentleman for his efforts.

I may say that I am fortunate enough to possess a copy of that rare work, the "Sportsman's Dictionary," and can verify the evidence of the critic in the FOREST AND STREAM.

Trusting you will pardon my prolixity, I am truly yours,
ARCHER.

ARE DOGS PROPERTY?—In our last issue we noticed the case of Eastham vs. Swinger as being on trial. It will be remembered that this suit arose from Swinger shooting a valuable setter belonging to Mr. Eastham, at Piqua, Ohio. The latter had loaned him to a friend, who, when returning home after a day's sport, allowed the dog to lag behind. Swinger shot the dog on the public highway, and was sued for the value of the animal. Judgment was rendered against him, whereupon he appealed the case to a higher court, when the former judgment was affirmed. As a last resort the case was taken to the Supreme Court which decided adversely to the defendant last week.

Mr. Swinger's bit of malice has cost him just $692.87, including the judgment of $100, that being the sum at which the dog was valued and taxed, consequently his legal value.

This is gratifying to owners of valuable canines. It constitutes dogs property, and goes far to ensure their protection.

FRENCH HOUNDS.—The *Gascon* hounds are noted for their partiality for wolf hunting. Though very strongly built, they are not remarkably swift, but very steady on the scent. The peculiarity of the breed is that it contains a marked Lupine strain, the custom of crossing with wolves being introduced early in the thirteenth century. M. Miramon de Montbrun refused $3,200 for a couple of these dogs.

IOWA FIELD TRIALS.—The Iowa Field Trials will be held at Hampton, Iowa, by the State Sportsman's Association, and under the auspices of the National Kennel Club, commencing Tuesday, Sept. 4. "Open to the world." The following are the stakes, all prizes being in cash:

Puppy stakes for pointers and setters under 18 months. Purse $235; $100 to first, $75 to second, $50 to third, $10 to fourth; $50 entrance.

Champion stakes for pointers and setters of any age. Purse $235; $100 to first, $75 to second, $50 to third, $10 to fourth; $10 entrance.

Brace stakes; $15 entrance; 50 per cent. to first, 35 per cent. to second, 15 per cent. to third. Two dogs belonging to different persons are eligible.

Entrance for Puppy and Champion Stakes close Wednesday, Aug. 15th, and must be made with entrance fee inclosed to

DR. J. I. LEAS,
President Iowa State Sportsmen's Association,
Hampton, Iowa.

Brace stakes close Tuesday night, September 3d, at the Cunard House, Hampton, Iowa.

Dogs will be transported free on the Chicago & North Western, Illinois Central, Milwaukee & St. Paul, and Iowa Central Railroads.

—Mr. Wm. M. Tileston's imported red Irish setter bitch Lill III. (by Shamrock out of Kathleen) whelped, on the 11th inst., nine puppies, five dogs and four bitches, the sire being Elcho. A portion of this litter has been taken from the dam and the little ones are being successfully raised on nursing bottles.

AN UNPLEASANT PROSPECT.—The sublimity of impudence was displayed in a barber's shop. One of Figaro's customers sees a dog of ungainly aspect sitting opposite intently watching him. "Why does that dog look at me so?" "Why, sir, occasionally my hand slips, and I am so unfortunate as to snip off a bit of ear." "Eh! and what then?" "Why, then he eats it."

HYDROPHOBIA IN GLASGOW.—Rabies is said to have broken out as an epizootic in Glasgow, over which great alarm is felt. Dr. McLeod, Prof. of Surgery in the University, deprecates the publicity that has been given, and consequent wide-spread excitement. In a lecture upon the subject he very justly remarked: "If a mad dog were to bite through the clothes he would not care, because the animal's teeth would be cleaned from poison by rubbing through the cloth, and 'there would be no fear of bad results.' If persons were bitten by a dog it was foolish to destroy the animal there and then, for more than once he knew of cases where men had recovered from what was thought to be hydrophobia merely by being shown the dog that had bitten them all sound and clothed in its right mind."

IOWA FIELD TRIALS.—The National American Kennel Club will have a grand series of events in September, beginning on the 4th, at Hampton, Iowa.

Dr. J. I. Leas, of Hampton, will furnish all information as to prizes, entrance, etc.

—Mr. S. B. Dilly, of Lake City, Minn., writes that on the 7th inst. his pointer bitch Minnesota whelped seven puppies, two dogs and five bitches, sired by Ranger. Mr. Dilley thinks this the finest lot he has ever bred.

NAME CLAIMED.—S. C. McCandless, of Atlanta, Ga., claims the name of Leila for his white and black ticked Laverack bitch pup out of Fairy II., by Pride of the Border, bought by me from C. S. Westcott, Esq., through Horace Smith.

BIG AND LITTLE.—Two dogs, belonging to a Centre Square merchant, had a lively time with a rat this morning. One dog had hold of the rat by the head and the other by the tail. The larger dog started around the Square, dragging the rat and small dog after him. The little dog, after tugging with the varmint about fifteen minutes, succeeded in taking it away from the big dog, and was happy. The scene was an amusing one, and we sagely reflected that the big dorg don't always win any more than the big man does.—*Easton Free Press, Oct.*

A POET AND HIS DOG.—Jas. Hogg told an anecdote of a collie which he sold a neighboring sheep farmer. Some little time afterward, while tending his own flocks, he saw a dog appear over the brow of a neighboring hill beyond which lay the farm to which his former companion had been sent. It trotted toward him till within recognizable distance, and then sat down and steadily regarded his old master with a reproachful expression. The shepherd went toward him, but the collie immediately retreated; he stopped—the dog again sat down and gazed wistfully at him; he called and whistled—the dog did not move. He again tried to diminish the distance between himself and his old friend, but in vain—the dog retreated in exact proportion to the man's advances; and never after would he come within speaking distance of the master, who, in his canine apprehension, had so lightly valued his faithful service as to consent to part with him; though ever and anon he would come and gaze from the hillside upon his former owner and his early charge.

NEW JERSEY—*Newark, July* 9.—My Trip to Colt's Neck.—I was much pleased to receive a letter from my friends Mr. and Mrs. Taylor, asking wife and self down to spend the fourth. We started on the third, and after a short but pleasant trip, we arrived at Frechold, and there saw the smiling face of Mr. T. The time from then until we went shooting was spent around the old homestead. Old Sank was my first thought among the dogs, as I was told he was gone up. But I found him as foxy as ever. I say foxy, and will tell you why. He will never give you a shot if he can help it, and will back out and wait until Taylor comes up before he will point after he sees you are coming and his master is not. He is getting old, but is yet too young for any dog that I have ever seen. Taylor has some fine looking pups running around got by old Sank, and said he had sold the others for ten and fifteen. I think they are very cheap. I will stop dog, and say a little on our shoot. I think I had as good shooting as any one could wish on a hot day. We got twenty-eight birds on the fourth, and the fifth and sixth we killed quite a number more. I found I was a good brush shot—something I have always understood—and if any one thinks I am not speaking the truth, he can see plenty of proof by going and looking at the bushy country we shot in. I suppose you have heard the hunters cry "mark," and I did it every time without the cry when a woodcock got up near me. Hope all had as good times as I had. Yours,
SNIPER.

INDIANA—*Rushville.*—Eperos writes that good sport is expected this fall in his section, provided the "domestic duties of Mr. and Mrs. Bob White are not interfered with. Very few quail were killed in this part of the State last fall and winter, and the farmers took particular pains to feed the little innocents during the terrible cold weather and deep snows." The same writer has been enjoying fine squirrel hunting during the spring, using a 22 calibre rifle of Forehand & Wadsworth's make, of which he speaks in the highest terms.

—How to have a good dog—Name him *Brag.*

—A friend in Maryland wishes to exchange "A good setter or pointer dog, any age; dog to be all right or no exchange," for a 12-bore, Remington, $45 breech-loading gun.

—Deceit is one of the greatest of evils, being the subtle dry rot of social and commercial life. An example of this is found in the various scented toilet soaps. B. T. Babbit, the soap manufacturer, has recently produced a soap perfectly pure and admirably adapted for old and young—an indispensable adjunct to toilet and bath room when once known. It is known as B. T. Babbitt's Toilet Soap.—*Adv.*

—A Paris showman, whose daughter was recently married, presented to his son-in-law, as her fortune, an elephant that danced a fandango, a camel that went down on its knees with its head to the east at sunset, a dog that reckoned up accounts, and two canaries that played cards. A more singular dowry is probably not on record.—*Paris Journal.*

Game Bag and Gun.

GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States. In New York shooting is prohibited until August 1.

AUTUMNAL SPORTS IN MICHIGAN AND WISCONSIN.—The following information will serve those who propose visiting the new hunting and fishing grounds in Northern Michigan, which are accessible by the Grand Rapids and Indiana Railroad. By a judicious use of one's time a six weeks' vacation may be made yield all the varities of hunting and fishing which this State and Northern Wisconsin afford, the latter country being now easily reached by the recently completed Wisconsin Central Railroad. A trip commencing about the middle of August and ending the 1st of October will yield grayling, bass, trout and maskelonge fishing during the first three weeks, and ruffed grouse and deer shooting in perfection during the last three. The editor only recommends what he prescribes for himself, and his faith is founded on abundant testimony:

BUFFALO, N. Y., June 29, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Noticing that you contemplate taking a trip to the northern part of Michigan tempts me to drop you a line. I, with friends, have for the last four seasons taken a trip to that section of the country, which has not only proven very delightful, but very healthful. We have always taken the lake trip, which if one has the time at his disposal is much preferable. Our objective point has been Pine River; if one is limited as to time then take the Grand Rapids & Indiana Railroad to Petosky about 12 miles from Pine River, which can be reached by steamer or wagon. Leaving here one can take a fine passenger boat which leaves each Tuesday evening during the season, stopping en route at Cleveland, Detroit, Port Huron, Mackinaw and Pine River (on Maps and Post Office Directory Chaifevoix). You will find there very good accommodations at the Fountain City House, kept by mine host "Dick Cooper." The steamers have most excellent accommodations. One is allowed sufficient time at the different stopping places to do a little sight-seeing; the scenery on the river is varied and very beautiful. Having reached Pine River the first thing in order after getting housed is to make an arrangement with a guide, he providing a boat with a well in it to keep fish alive, and generally blankets for camping out, the charge being from $2 to $2.50 per day for guide and boat; then next to procure needed supplies for the camp, which you will have no difficulty in doing, as there are two or three very good stores there. Having everything ready for a start early in the morning, you step on board of a very nice yacht which makes daily trips up Pine Lake to the Jordan and the Boyne rivers alternately (the Jordan being *the stream*). The lake is ten or twelve miles in length and very picturesque. Arriving at the dock or store at the head of the lake, which you will do in time to afford you some fishing that day, you transfer yourself and property to your boat, and after a pull of about five minutes you enter the Jordan River, the water of which you will find to be extremely clear and cold. The fishing grounds extend several miles up. Generally parties go anywhere from three to eight miles up the stream, and then camp either in bank shanties or in tents, which are very desirable to take with you. A party of three, I think, in the month of July last, in five or six days' fishing, took out when they left the stream 2,500 trout and grayling, besides using 600 to 700 in camp. They used the fly almost wholly. What renders it pleasant is that you fish from the boat, the guide generally handling the same with good judgment and skill. The stream is quite wide. To the bait fisher I would advise his taking worms with him using a large covered tin pail with air holes in the top filling in with plenty of earth. Keep it cold, on ice if possible, and the bait will pan out well. I advise this as it is almost impossible to procure in that country the needed quantity, as the soil is very sandy. While there last August we met a party who went in and came out at the same time as ourselves, who spent an hour or so at the dock at the head of the lake in securing with their landing nets a supply of young frogs, which they used to great advantage in the deep pools and log drifts. They had the finest lot of large trout I have ever seen taken with this bait.
SINBAD.

MICHIGAN.—*Detroit, July* 14.—July 9, Wm. Smith, Revere Gay and Mark Hyland were out after woodcock, and bagged 15. A. J. Rogers, E. W. Reynolds, S. H. Ives, and Samuel Tichner (a happy crowd of sports) returned to the city Thursday night from a week's trip in the yacht Sweepstakes. They brought home 90 black bass, 12 pike; also 15 woodcock.
ROVER.

SHOOTING WILD TURKEYS IN THE SOUTH.

ENFIELD, N. C., July 5, 1877.

EDITOR FOREST AND STREAM:

The idea seems quite common among those who write about our wild turkey that they are killed by the sportsmen of the southern States mostly during the season of incubation, by imitating the call of the female and thereby luring the male bird within reach of the shot in ambush. We have never known that method to be very successful; certainly it is not very sportsmanlike. It is undoubtedly indulged in by the negroes and a certain class of white people all over the south. The way, however, usual with sportsmen is to hunt them with a pointer or setter broken for that purpose. It is usual to go on horseback, with one or two dogs. Sometimes a common foxhound is also trained for the purpose, and adds greatly to the value of the pack, as he will slowly and patiently work up a cold trail which might, with pointers and setters, be passed over entirely. The only objection to the hound is that he is giving tongue on the trail, which will cause the turkeys to fly before the dogs get among them, and also cause them to fly all in one direction, whereas, one would like to be near to take advantage of the occasional beautiful shots to be obtained in the rush, for which purpose it is desirable that the dogs should be among them before the birds are aware of it, in order that they may be scattered in every direction. When so scattered, in the months of October and November, we notice their flight and endeavor to locate ourselves in a position somewhat central to their position, and make a blind of short bushes, which, when stuck into the ground, should look as if they grew there. The dogs are then taken in and the sportsman seats himself so that he can just see above the bushes. Within from twenty to sixty minutes the birds will begin to call, endeavoring to get together again, when we have only to answer and preserve an Indian stillness. The answers we make should be few and short. It is occasionally the case that the old hen who raised the brood will come early to a point somewhere near you and call in tones of command, which it is well to put an end to as soon as possible. The chance of alluring her within your reach is exceedingly small, and it is best therefore to take the fastest dog and drive her off. It is not unusual for one to kill from two to five at one place.
H.

CHILLED AND SOFT SHOT.

JACKSON, Miss., June 14, 1877.

EDITOR FOREST AND STREAM:

Below I give you the results of a trial made by Mr. John A. Galbreath, of this place, with English chilled shot and Tatham's shot (sent, of course). Mr. G. at the same time tried "Hazard's Ducking" No. 4, and "Dead Shot" FG, to see which of the powders gave the best result—the higher priced or the lower grade. He speaks highly of the "Dead Shot" in regard to its cleanliness. There I differ with him. I would not shoot it in my gun unless I could not get a cleaner powder, and have come to that conclusion after several tests.

My friend is very painstaking and methodical in everything he undertakes. He went to every store and counted the pellets in a measured ounce until he found one that approached the English shot in the number of pellets. His inquiry resulted in this, that in testing the shot by count he found a great difference in size in sacks of the same number and make. Tatham's No. 7 shot counted 316, 344, 352, 377 pellets to the measured ounce in four different places where it was for sale—their standard calls for 291 pellets. To verify his count I found that Mr. G's shot measure, made by Mr. Dougall, differed slightly from my Dixon No. 1,106. I give this as a hint to those intending to make trials as quite a factor in measuring powder and shot, and that the number marked on the bag is not an indication of the true size at all, differing as above stated.

The gun was fired off-hand at a thirty inch circle struck before shooting, distance forty yards, perfectly calm during the series of shots fired on different days; counted those pads only that were fairly cracked by three pellets; in two instances one pellet penetrated all thirty sheets used. Penetration pads were fastened together at one corner with a paper fastener, and to the tree by a tack driven through the middle. Had the pads been fastened at all four corners the gun would have shown still better penetration. Weather extremely dry and warm.

English chilled shot No. 6 ran 292 pellets to the measured ounce. Tatham's No. 6 shot used ran 273 pellets to measured ounce, all actual count. He added 19 pellets of Tatham's shot to one ounce, 20 to 1½ oz., and 23 to 1¾ oz. Penetration pads were made out of heavy, glazed hardware paper, 26x36 inches open sheet, 24 of which weigh 6 lb. 3 oz. I send you sample of the pads used. The gun is a 9 lb. 10-bore, made by E. C. Green, Cheltenham, England. He used an Eley black-edge wad next to powder, then a greased, rod covered wad, then another black-edge on that, three in all over powder and a black-edge on top of shot; U. M. C. Co.'s paper shells, not crimped. The pellets of hard shot came out almost entirely round; soft shot was smashed nearly flat by the shooting.

WITH HAZARD POWDER.

" 4½	dr. 1½	oz. "	" 184	"	15
" 5	dr. 1¾	oz. "	" 204	"	19
Average			198.1		18.1

Average of six shells, with chilled shot, right, pattern 230.5, pen'n. 21.5
Average of six shells, with soft shot, right, pattern 184.1, pen'n. 16.4
Average of six shells, with chilled shot, left, pattern 184.1, pen'n. 19.4
Average of six shells, with soft shot, left, pattern 178.2, penetra'n 15.4

What do we learn from this trial?

1. Hard shot makes a better pattern and has more penetration than soft shot, in figures, 207 to 181 and 20 to 16.

2. The pellets of hard shot do not lose their shape when shot against an oak tree, hence more penetration but less killing power, I venture to assert. The soft shot flattening paralyses the animal, when fairly hit, almost instantly.

3. Practically there seems to be no reason for using more than one ounce of shot, the pattern averages 200 pellets, using 1¼ ounce and 186 pellets with one ounce. Penetration, one sheet more in favor of 1¼ ounce, driven by an additional drachm of powder.

4. In regard to the powder used you will see that the pattern is in favor of the "Dead Shot," penetration a fraction in favor of the "Hazard," hence to people who will put up with a little extra dirt, would show largely in favor of "Dead Shot," it being about half the price of the other.

Mr. G's gun is a remarkable gun at a target, as I knew it to be in the field, with a beautiful gun, though not "made in London."

Finally, my position in making the report: I took the trouble to write the above *pro bono publico*. Mr. G. took the trouble to find out what his gun would do. I made use of his labor. I do not own an E. C. Green gun, nor do I expect to do so. I sell "Dead Shot" in my store, and intend to use "Hazard's Ducking" next winter; did use "Telegraph" last season. I say this, as I have no ax to grind with any one whatever, and hope I have not constituted myself into a "Returning Board."

I would caution any of your readers against accepting the above as a guide for their own guns. I have no patience with a man owning a gun, who, without trial, would accept from another party, who had probably never even seen the gun, as conclusive how much powder and shot to use in the field. Yours respectfully,
GEO. C. EYRICH.

"BOONE" TO "DOC."

MY DEAR FRIEND:

I read your letter on your trip to the shore with much interest. Am glad the boys got out of school and had a good time all to themselves. Nothing in my own remembrance matches my present feelings over a few days' run among the fields and birds, but the days when a teacher was sick, or some other opportune Providence gave us an unexpected emancipation from school in the midst of term. Well, Prince Hal was right! Boy or man, it's true,

> "If all the year were playing holidays,
> To play would be as tedious as to work;
> But, now, what seldom comes, unlooked for, comes,
> And nothing pleaseth but rare accidents!"

Oh, these accidents of the shore and the prairie; of the stream, the wood and the field! I presume that my fortunate knowledge of some of the parties to your trip gave your account of it the greater zest to me. I am going to give you a few thoughts suggested by your article.

1. How our chosen diversion of the gun fits in with need of men in all callings of life? There is yourself, friend Doc, to begin with. Though not averse to handling pills, you would scorn, as a man of the old line

to dispense pellets; yet, let the pellets be numbered 8, 9, 10, and let the patients be bay-birds, and the instrument of practice a Lefever, and you will drop the pills and dose out the pellets like the most homœopathic man of them all. And I don't blame you. In just two calls I made upon you last summer, half of your time was taken up with making prescriptions. If that be the case all the time, no wonder you fling physic to the dogs when chance offers, and fly from pills to pellets. Yet, even in these brief interviews, you had the craft to pump some shooting yarns out of Boone, and then sent them to the printer. Well, we both survived it, as patients will sometimes survive pills, and bay-birds, pellets. Then there is Soule; his calling, and a noble one, to teach the young business idea how to shoot. And yet how glad of an opening to leave the idea to its own practice, and off to the shore to shoot for himself, with elements as palpable and material as the ideas of his daily training are immaterial and spiritual. Ideas for shot; brains thrown aside for dull inert lead. Oh, friend Soule, the Scott, and the shore and the bay birds have a wondrous charm when they can bring a man to this! And then comes Prosser, out of that great establishment where gems and jewels, glistening metals and polished steel are before the eyes and under the hands all the day long. He, too, rushes to the shore, and vows that the emerald has no hue like the waving grass, and the ruby no glow like that of sunset to a man in the open air; and the topaz no saffron like that of the dawn, as one pushes from the shore and the diamond no sparkle like the sunrise, from which it borrows its light; and no sheen like that of its fellow borrower, the molten bay; and turquois and lapis-lazuli, no blue like that of the arch above one as the darkness covers the birds and dims the sight, and the gunner lies him home. And had Boone been of the party, he might find a word of fitness for himself, but he forbears.

2. The little account it is to a man, escaping from confinement to nature, from the town to the field or the shore, what his game is provided it is edible—a bird of wing, and frequent in the locality. For instance, my game of the year is grouse, mallard and geese; and yet my relish would have been just as keen for shooting these bay birds with my friends, as the larger and nobler forms I am in the habit of pursuing. You have the escape, the freedom, the solitude of field—of forest—or of shore; the cheerful companionship, the joint pursuit, the hourly comparisons, the joint return and the sleep of the painless. And then, for the time, the burden of care is lifted, time flies by as on wings, and exhilaration almost gives wings to ourselves. Old Horace says:

Care scales the galley's deck,
And rides behind the horseman's back.

But here is neither galley nor horse—business nor home, and our trip is well through before the cankering old fellow has found us out and straddled our shoulder again. Oh, if a good charge of No. 10 would dispose of him, wouldn't he get for pledge himself to let honest hunters go their way of life undisturbed.

3. The kind fatuity we are all under in regard to our guns. Friend Doc, if you should hold out your Lefevre to Soule for his Scott, or to me for my Parker, and we should say, as we certainly should, "No, I thank you," what noble compassion would fill your soul! Such infatuation would be wonderful to you—passing understanding, in fact, the weak point in your otherwise esteemed friends. Just think of it, you would say; "Such solidity, such workmanship, and such working; and then birds cut down at 60 yards, before their very eyes! Then see the action—see the grip, and to think of them putting the Scott top-action side-pushing, or the Parker button by the side of this. It calls up the Scripture: "Verily, every man, at his best estate, is altogether vanity!"

Just so, friend Doc, you are now just where Soule and Boone were with their guns three years ago. Months of use of our arms, where yours has had days, wonderful shots a hundred to your one, as yet; and hen. not a pin, not a catch, not one single element of our guns deranged all this time.

One of Cuvier's students came to him with great enthusiasm, showing a bone, palpably part of an unknown mammal. "Study that bone two years, my young friend, and then give me your opinion." Shoot your Lefevre three years, dear Doc, and then compare notes with us again.

Worthy friends, Doc, Soule and Prosser, there were two elements of imperfections, in your trip to the shore: 1st, Boone was not there; 2d, You parted without adjourning to meet Boone on the prairie for grouse the 15th of August. So mended, your trip would have been perfect. Make it perfect another time. Good-bye. BOONE.

PIGEON MATCHES.

LONG ISLAND GUN CLUB, *Dexter Park, L. I., July* 13.—Classified sweepstakes, $2 each; three birds each, 25 yards rise, 80 yards boundary, hand traps; $12 to first and $8 to second. The club rules to govern. This had ten contestants. On ties miss and go out.

*Edwards	1 1 1—3	†Miller	0 1 1 1—3

Board	10	Miner	7

St. LOUIS, June 19, 1877.

EDITOR FOREST AND STREAM:

Noticing in FOREST AND STREAM a desire expressed by some of our sportsmen to learn more about the conical base shell manufactured by the St. Louis Company, I inclose the result of the first of a series of trials instituted by Col. C. L. Hunt, to determine the merits of the same. I would advise from my observation at the trial that different guns, whether 10 or 12 bore, should be targeted, from the minimum to the maximum of the charges of powder given in the tables inclosed, and the charge between these two means giving the best pattern and penetration should be the proper charge for the gun:

THIRTY-INCH CIRCLE. PADS OF ST. LOUIS SHELL PAPER, HARD AND THICK. THREE SHEETS TO BE BROKEN.

No.	Gun.	Charge.	Distance.	St. Louis Shell.		Eley's Shell.		U. M. Co. Shell.		Average.
				Pat.	Pen	Pat.	Pen	Pat.	Pen	
1	Greener choke	2 drs., 1¼ oz. N. Y. S.	40 yds.	..	..	..	..	165	5	Average of 5 shots.
2	do	3 do do	2 do	do	..	..	172	5	..	..	do
3	do	3 do do	2 do	do	166	5	..	..	..	..	do
4	do	2½ do do	2 do	do	..	..	..	..	195	6	do

Smith	1	1	1	1	1	1	1	1	1—1	0
Holloway	1	0	1	1	1	1	1	1	1—	9

Ties on ten, Smith; ties on nine, Board; Gale and Hudson divided third money.

DOUBLE BIRD SWEEP.

Gale	10 10 10—3	Nichols	11 11 11—6
Hudson	11 11 10—5		

SECOND DOUBLE BIRD SWEEPSTAKES

Holloway	10 01 11—4	Board	10 11 11—5
Nichols	11 10 10—4	Gale	10 11 10—4
Smith	11 10 00—3		

Ties on four, Holloway.

SHOOTING CONTEST.—*Manchester Gun Club,* Saturday, June 30; single balls, 18 yards rise, 12 balls each.

Hudson	9	C Taylor	9
Hyde	4	F H Lewis	6
G Taylor	2	Woodbridge	8
White	9	Kohn	5
Carter	5	Loomis	7
Emery	7	Skinner	8
L Lewis	4	Johnson	6

White won first prize, Skinner second, Emery third.

Double Balls.

Woodbridge	8	Johnson	6
Hyde	4	F H Lewis	6
Loomis	5	Hudson	8
Carter	7	Skinner	9
C Taylor	7		

Skinner first, Hudson second, Taylor third.

Two sweepstakes were also shot, which were won by Hudson and Woodbridge by scores of 4 and 6.

Meriden.—A glass ball shooting match took place on July 4, which was participated in by the crack shots of Meriden and Wallingford. Three traps were used, placed ten yards apart, so that the shooters could not tell from which trap the ball would be sprung. The prizes were $9, $6, $4, $3. The following is the score in full:

E Soper	11	Sargeat	4
J Brogdan	12	S Bingham	8
J Ferguson	6	G L Strong	6
Tucker	11	E Post	11
Wilson	8	A Hall	9
Ganes	8		

—The Jersey City Heights Gun Club, Jersey City, N. J., was organized on Friday evening under very favorable auspices. The club comprises some of the best citizens of the Heights. the members are chuckfull of enthusiasm. Traps, balls, and other paraphernalia have been purchased, with grounds leased, and they propose to take no second place in the ranks with their brothers of the trigger. The following is a list of the officers for the ensuing year: Dr. John B. Burdett, President; Dr. John Q. Bird, Vice-President; Aubrey N. Staples, Secretary; Dr. P. W. Levering, Treasurer; Frank M. Thomson, Herbert Stout and Geo. B. Eaton, Directors. The second Wednesday of each month is their meeting day, with every Thursday as a day for practice. JACOBSTAFF.

OHIO, *Alliance.*—The Columbiana County Sportsman's Club held a glass ball tournament, July 4 and 5, 1877, under the management of S. J. McCartney, of Salem, Ohio. First match, 5 balls each, 18 yards, entrance $1.25.

S J McCartney	3	L B Arkwright	5
D H Sharpnack	4	J M Hilbert	4
C H Hope	2	Wm Bloor	4

L. B. Arkwright, of Youngstown, Ohio, first money. Ties on four for second money, 21 yards rise, won by Wm. Bloor.

Second match same as above.

Arkwright	3	McCartney	5
Sharpnack	5	Bloor	2
Hope	4	W G Merrill	4

Ties for first money, 21 yards rise, 3 balls, won by McCartney; W. G. Merrill, Akron, O., second money.

Same day, same as before.

Arkwright	5	Hilbert	3
Hope	3	Bloor	4
Sharpnack	2	McCartney	2

Arkwright first money, Bloor second.

Match at 10 balls, entrance $5; first money, $17.25; second, $12.25; third, $9.25; fourth, $6.25.

Arkwright	10	Gyger	7
Ruff	5	Wheale	8
Merrill	9	Pattison	9
McCartney	8	Marshall	6
Woodruff	8	Bloor	7

Arkwright first money, Merrill second, Wheale third, Bloor fourth.

Match, 5 balls, entrance $3.

Gyger	4	Marshall	4
Arkwright	5	Ruff	3
Wheale	5	McCartney	3
Merrill	4	Pow	2
Pattison	2	Snellenburg	4
Woodruff	5	Bloor	3

Arkwright, first money, $14; Pattison, second, $11; McCartney and Bloor divided third, $8.

Thursday, July 5; 10 balls, 18 yards, entrance $5; first money, $12.15; second, $10.10; third, $7; fourth, $4.

Arkwright	9	McCartney	5
Wheale	10	Ruff	2
Merrill	9	Snellenburgh	5
Gyger	5	Pattison	8

C. F. Wheale, Cleveland, first money; Snellenburgh second, Pattison third, McCartney fourth.

Eighteen yards, 5 balls, entrance $3; first money, $13.50; second, $8; third, $5.50.

Gyger	5	Marshall	4
Pattison	4	Woodruff	3
Snellenburgh	5	Willard	4
Arkwright	3	Stone	5
Wheale	4		

Stone first money, Wheale second, Arkwright third.
Ten ball match; entrance $5.

Pattison	10	McCartney	5
Wheale	9	Arkwright	8
Shellenmyzh	8	Woodruff	10

Pattison first money, Wheale second, Arkwright third.
Match, 10 balls, entrance $5; first money, $9; second, $6; third, $3; fourth, $1.

Wheale	9	Marshall	9
Woodruff	8	McCartney	6
Pattison	10	Fletcher	5
Arkwright	8	Boot	9

Pattison first money, Wheale second, Woodruff third; S. J. McCartney, of Salem, Ohio, fourth money.
Side match for balls, 5 shots.

Frank Bradley	4	Jas Williams	1
Walter Fletcher	5	Wm Oyer	0

Match, 10 balls, 26 yards, freeze out.

McCartney	10	Williams	W
Fletcher	W	Ayer	6
Bradley	W		

MICHIGAN, *Corunna.*—The following score was made by three members of the Corunna Gun Club, on July 4, at glass balls; 15 balls each, 18 yards rise.

Jud Peacock	1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1		1—14
Fred Betts	1 0	Geo Tuttle	6

Another match took place on Saturday the 14th inst.

Hurlingham Park, Detroit, July 9.—Medal shoot; 11 birds, 26 yards rise, 80 yards boundary; English rules.

J V D Eldridge	8	Goff Stenton	W
John E Long	10	M K Cristy	9
E H Gillman	10	George Avery	W

Gillman won in shooting off ties.
In a sweepstake shoot, seven entries, four birds each, Gillman won with all birds. Second sweepstakes, seven entries, seven birds, Gillman and Redman took all and divided money. Third sweepstakes, seven birds, seven entries, Christy and Long divided on seven birds.

LANCASTER, Pa.—On July 12 Alderman Spurrier and J. C. Anderson, bagged sixteen woodcock near Kinzer's.

NEW GUN CLUB.—A new gun club was organized at the Hoag House, Seneca Falls, N. Y., July 7, with the following officers: President, Horace Silsby; Vice-President, Jas. F. Lawrence; Secretary, J. T. Miller, Jr.; Treasurer, Milton Hoag.

ILLINOIS, *Dexter Park, Chicago, July* 13.—Shooting for diamond badge by the Audubon Club, at twelve tame pigeons to each man, sprung from five ground traps, distance 30 yards, use of both barrels allowed; Audubon Club rules to govern. The badge, of fine design and quite valuable, was won and held at the last match by Thos. Stagg, W. T. Johnson carried it off at this match by superior shooting, though hard pressed by E. Price. The second prize was a twenty-five pound keg of powder, won by F. J. Abbey.

Mears	1*	1*	1	1*	1*	1	1*	0	0	1*	1	1*	1*	0	—10

Ties on eleven—five birds—30 yards.

W T Johnson	1*	1	1*	1	—5	E A Price	1*	1	1	1*	1	0	—4		

Ties on ten, five birds, 30 yards, rise, won by Abbey with five straight birds.

Peoria, Ill.—Bogardus broke 400 glass balls in thirty-five minutes on July 13, 1877. When he had broken the last ball, his gun was levied on by an officer to satisfy an old execution.

CARLINSVILLE, Ill.—We have good prospect in this part of the moral vineyard for an abundance of game; chicken and quail have hatched well. The farmers rejoice in an abundant crop of wheat. Ministers of the gospel are quiet, and, take it all in all, we are content. C. A. W.

SANTA FE, NEW MEXICO.—The Fourth of July was observed by trotting, base-ball matches, picnics, etc. In the afternoon there was a large gathering at the Driving Park to witness a pigeon shooting match for a $50 silver goblet. There were ten entries, viz.: Taylor, Wheelock and Mczick, who withdrew at the eighth shot, having each killed but five birds; Andrews killed four birds, and withdrew at the seventh shot; Hill killed six birds, and withdrew after the ninth shot; Willson and Whitehead withdrew on seven, having killed three each. Captain Chambers McKibben won the prize, having killed ten straight birds.

MASSACHUSETTS, *Windsor.*—The Beaver River Club have decided to have, instead of their annual reunion and supper in December, a two weeks' encampment at Lanesboro Pond, five miles from Pittsfield, Sept. 5.

[We have received an invitation to be present, and are tempted with the promise of good black bass and trout fishing, besides woodcock, ruffed grouse and snipe shooting. In this locality one gun bagged 150 snipe between 11 A. M. and 5 P. M.—ED.]

Salem, July 12.—Bird calls from scattering shore birds were heard from four grass birds and one summer bird in Lynn marshes, the 9th; from one winter in Mill Pond, Salem, the 8th; from four summers flying over our harbor the 9th; from a small bunch of summers in the Ipswich Hundreds last week, and from some ring-necks on outside of Plum Island. Some birds have been passing over nights lately. They may have been robin snipes—it is time for them. The various grounds in this vicinity are in good order, and prospects seem fair for the season soon to begin. Glass ball shooting at the Grant Club House every pleasant Monday evening, at 5 o'clock.

TEAL.

The undersigned will be at Messrs. Fowler & Fulton's, 300 Broadway, for the next few days, for the purpose of taking orders for the FOX PATENT BREECH LOADING SHOT GUN (side action). Samples of the various grades on exhibition. W. H. CROCKER,
Manager for the American Arms Co., of Boston.

—With regard to Spontaneous Generation, Prof. Tyndall says: "When in our day I seek for experimental evidence of the transformation of the non-living, I am led inexorably to the conclusion that no such evidence exists, and that in the lowest, as in the highest of organized creatures, the method of nature is that life shall be the issue of antecedent life."

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

F. L. C., Cleveland, Ohio.—Consult a physican.

R. C. C., Cherry Hill, Neb.—Both equally good.

LOUIS K., Albany, N. Y.—Nothing; he is best let alone.

W. A. N.—We do not answer anonymous communications.

POINTER.—Thanks. We have mislaid your first; write again.

M. J. R., Brockville, Ont.—Twenty rods from shore seaward is the meaning of the statute.

W. H. D., North Cambridge.—Do you know anything of R. Jones, Liverpool, as a gunmaker? Ans. We do not.

G. N. B., Latrobe.—If you will describe symptoms we will prescribe, but know nothing of the article you mention.

H. A. LOUGHRAN, Alleghany, Pa.—Do wing shots shut both eyes when shooting? Ans. Never, unless when shooting from a *blind.* Ha! haw!

CONSTANT READER, Rouse's Point.—Where can I find a trainer for cocker spaniels—a good one? Ans. See our advertising columns.

W. E. D., La Porte.—Please give a remedy for hair growing on the inside of eyelid of a pup? Ans. Must be removed with tweezers.

F. W. G., Erie, Pa.—Can you inform me at what date the trout season closes on Canada shore, Lake Superior? Ans. Sept. 15th.

ED. H., Bloomington, Ill.—1. Write to Knapp & Van Nostrand, 289 Washington Market. 2. Address D. Hodgman & Co., 25 Maiden Lane, city.

F. J. R., Allentown.—Where can I get the old Allen self-cocking powder and ball revolvers? Ans. Forehand & Wadsworth, Worcester, Mass.

J. W. J., Opelousas, La.—Are what we call trout in the South black bass? Please answer in next number. Ans. Your trout is the black bass (*Grystes salmoides*).

A. H. S., Meshoppen.—What is proper charge for muzzle-loading shot gun, 11 gauge, weight 8½ pounds, No. 6 shot? Ans. 3½ drachms powder, 1⅛ oz. shot.

A. B. M., Philadelphia.—Will you inform me of the best work on the raising and training of dogs? Ans. Hallock's "Sportsman's Gazetteer," now ready.

J. A. D., Boston.—I have a Newfoundland dog. He is ten months old. Should you expect him to watch at that age? Ans. Hardly; he will soon learn, however.

PEANKERS, Hudson, N. Y.—Can you give me a receipt for driving rats out of a dwelling house? Ans. "Phosphorons paste." Chemists usually have it.

INSECT PESTS.—Glycerine and sweet oil, each 2½ ounces; oil of amber, 3 drachms; oil of pennyroyal, 2 drachms; tincture of iodine and carbolic acid crystals, each 1¼ drachms.

KIT, Brooklyn.—Your first and third questions we cannot answer, as we know nothing of the parties. "Fur, Fin and Feather" will give the desired information regarding Virginia.

W. E. C., City.—Black bass fishing can be had at Greenwood Lake. Snipe shooting at either Wm. Lane's, Good Ground, L. I., or Kinsey's Ashley House, Barnegat.

SUBSCRIBER, New Orleans.—I have a very intelligent young cocker spaniel that I desire to have trained. Will you give me the address of a good trainer? Ans. See our advertising columns.

W. H. M., Sterling Run, Pa.—You had better buy either of the books entitled Shooting on the Wing, 75 cents, 176 Broadway, Industrial Pub. Co. We cannot devote space to the information required.

EUG.—What is considered the best colors for trout leaders? I want to get some dyed. Ans. The colors obtained by soaking the leaders in indigo water, coffee and green tea.

A. S., Brooklyn.—Is there good shooting at bay birds this season near Saville, N. J.? Does Capt. Bill Sutton keep a hotel there? Ans. We can give you no further information than the article to which your letter refers contains.

E. C. K., Fishkill.—The game constable in our town has a copy of the game laws dated January, 1877, in which it is stated that the close season for woodcock does not expire until September 1. Is this correct? Ans. August 1.

M. B. S., Tomah, Wis.—We are shooting at single birds, and one of our men had both barrels loaded. The first was a snap shoot, and he shot the second barrel and missed the bird, and then claimed another bird. Was he entitled to another bird? Ans. No, he accepted the bird by firing his second barrel.

C. R., New York.—What time do snipe usually begin to fly about the eastern end of Long Island, on South Bay? How will I find the snipe shooting there about the last of July? Is there good ground about Speonk? Ans. Birds now coming in. Good bags being made at Good Ground.

WM. H. M., Sterling Run, Pa.—Do you know how Capt. J. E. Stetson, of New Haven, shoots at the running deer spoken of on page 347, June 8th? Does he hold ahead of the deer and shoot when it comes into the sight, or follow it up? Ans. Follows it up.

ROBT. B. P., Goochland C. H., Va.—Please send me a paper in regard to the training of a dog? Ans. We cannot, as the information runs through so many numbers. You want Hallock's "Gazetteer," which contains full information; price $3. We can furnish it.

J. B. D. C., Corpus Christi, Texas.—Please inform me of the origin of the Gildersleeve strain—the difference in character between them and the Irish, Laverack and Gordon setters, if any; also their relative worth, generally speaking? Ans. Address L. H. Smith, National Kennel Club, Chairman of Publishing Committee, Strathroy, Ontario.

CHINGACHGOOK, North Manchester.—I have a pointer seven months old that has a large number of warts on his lips and tongue. Can you suggest a cure? Have you learned anything more in regard to the Massey crimper? Ans. Apply glacial acetic acid, taking care not to touch the surrounding parts; but if you should, neutralize at once with sweet oil. 2. Not in market.

INQUIRER, Portland, Conn.—1. Would not a $60 or $75 Parker gun be as good as a more expensive English gun for one who shoots only a dozen days through the year? 2. What weight, bore and length of barrel would you recommend for general shooting, choke or plain bore? 3. How many shells would it be advisable for me to purchase? Ans. 1. Yes. 2. 7½ or 8 pounds, 12 gauge, 31-inch barrels, plain. 3. If paper, buy by the hundred. You are the best judge.

R. T. LAKIN, Station K.—Are the guns that fire the cartridge by a pin striking a cap in the centre of the shell needle guns? Ans. No, they are not. Needle guns derive their name from the fact that a hollow needle is driven into the centre of the cartridge through which the powder is exploded. The Springfield musket of 1869 was a modification of the needle gun.

MRS. B. H. B., Rockville.—Will you be kind enough to mail me a mange remedy for cats? We have a pet cat that has been troubled with this disease for nearly a year, at times badly off, and then again nearly well of it. Ans. Give one or two drops of Donovan's solution in milk thrice each day. Wash thoroughly with Caswell, Hazard & Co.'s juniper tar soap. Continue the solution for two weeks after animal appears to be well.

E. M., New Haven.—Where would you advise a party of gents to go this or next month where good trout fishing can be had, distance not to exceed twenty-four hours' ride from New York? Western Virginia and Pennsylvania have been mentioned to us, but would like to hear from you? Ans. We should be tempted to try the streams of the Aroostook, mentioned in our correspondent's letter last week. Magog, at the head of Lake Memphremagog, is a good centre; also the town of Munson, in Maine.

POINTER begs that you will convey his apologies to the oracle of that mysterious cavern of the F. and S. and R. and G. for having unintentionally trespassed on his sacred domain and promises to do so no more. Please answer my inquries in your next issue, and oblige. Ans. This time the question is not repeated. We cannot undertake to remember queries, subjects, names of persons, localities, distances, dates, etc. If it were mentally possible, we would make an engagement with Barnum, the showman. What was your question?

D. M. K., Pittsburgh.—Where can I purchase a piece of lancewood suitable for making a tip for a bass rod? Do you not think a 13½-foot rod of these materials, and weighing 1½ to 1¾ pounds, would have sufficient strength and elasticity for the bass in this neighborhood, or would you recommend a longer rod, say 16 feet in four joints, weight 2¼ to 2½ pounds, as best adapted for both bass and larger fish? Ans. A rather heavy rod, and perhaps too long, but will answer very well for fly and minnow. It is heavy enough for any bass.

SCUD, New Brunswick.—1. What is the difference between a gig, a shell, and a working boat? 2. Is Belmontyle oil or Eaton's rust preventative the best preventative for rust on the sea shore? Ans. 1. A gig is an open boat, carrying four six, eight or more oars. A shell is a light boat for racing purposes, decked over, excepting a cockpit in the centre. A working boat may be of any class for working purposes; oftentimes a heavy boat built after the manner of a shell is called a working shell, except that it is not decked over. 2. Both are reliable we believe.

WM. P., Waverly, Md.—My setter dog, five years old, is affected with some trouble in his ears that gives him great uneasiness and pain. He frequently shakes his head violently, flapping his ears and running about as if almost crazy. Ans. Give six drops Donovan's solution three times a day in water. If the eyes become infected or nausea supervene reduce the dose. Use in the ear twice daily either "black wash," to which 2½ drachms of fluid extract of conium have been added for every half pint, or the following: sugar lead, 1 scruple; wine of opium, ¼ oz.; glycerine, 2 drachms; rose water, grains to make one pint; mix and filter.

W. B. M., JR., Marietta, Ohio.—What game and fish are in season in West Virginia for the month of August? 2. What game and fish is in season in Virginia for the month of August? 3. What is the best artificial bait for trout in August? Ans. 1. All game and fish, providing no traps, nets, or contrivance is used. 2. No hunting allowed without a license ($3). Wild fowl must not be killed at all, except by a resident of the State. Non-residents may kill all other game legitimately between the months of July and January, providing it is not to be sold. Offering the same for sale, or attempting to remove game from the State is evidence sufficient to convict. 3. Live worms.

F. D. W., Auburn.—Will you please give the reason why you prefer a 12 bore gun to a 10 bore? Will the 12 bore shoot a string as far and with as killing power as the No. 10? And please give the reason for your opinion? For duck shooting which gauge is best? Ans. The larger the diameter of the bore the greater the charge required. The No. 10 gauge is the best for duck shooting because it can carry a heavier charge. Besides it chambers large shot better than the small bore. Experiments have long been made with guns and especially with rifles and cannon to determine whether the range of a small bore cannot be made as great as that of a large bore. The result has been ascertained that, to increase the range beyond a certain distance, the calibre of both the gun and missile must be increased. This can be shown by a mathematical formula.

D. M. S., Petroleum, W. Va.—I have a valuable shepherd dog that had distemper about Christmas time; got a little better, but did not recover altogether, and since has had a wheezing cough, similar to cough of a badly consumptive person. When he runs, one minute you would think he would choke to death with this cough; expectorates just a little phlegm; eyes run a little; appetite not good; is thin in flesh. Please advise me what to do for him? Ans. Give a tablespoonful of the following mixture three times a day: Muriate of ammonia, 2½ drs.; comp. syrup of squills, 1 oz.; fluid extract wild cherry bark, 1 oz.; fluid extract eucalyptus, 4 drs.; sweet spirits of nitre (Squibb's), 1 oz.; fluid extract balmony, 1 oz.; glycerine, 4 drs.; water sufficient quantity to make 8 oz. Shake well before using. Give plain diet.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oil-cloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAY, SONS & CO., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him or with any orders sent him. It is a good, reliable house.—*Adv.*

OUTRAGEOUS ASSAULT.—On Saturday, June 23, W. B. Robertson, Fish Commisioner, and three friends, who were camping on the head waters of the Tye River, in Nelson county, Va., were assaulted by a crowd of natives, who rolled rocks down upon their camp from the mountains above. One of the party, Dr. Wm. S. Morris, of Lynchburg, was seriously, if not fatally, injured, his skull being fractured. The attack was made while the party were quietly sleeping in their tents, and those who instigated the affair were cognizant of the fact that the party were there in the interest of fish culture, being the same that stocked the stream with California salmon and black bass last year.

The facts, as above stated, are printed in the Lynchburg *Virginian* over Dr. Robertson's own signature—a gentleman whom we know well, and a prominent citizen of the State. Not the mountains of the Blue Ridge alone, but the great backbone of the Apalachian chain, from Pennsylvania to its extremity in Alabama, is infested with a large class of men whose chief occupation is distilling whisky and growing tobacco in evasion of the revenue laws. They look upon all strangers, of whatever profession or occupation, as spies to ferret out their secret stills and manufactories. It is absolutely not safe for strangers or natives to penetrate some sections of these mountain ranges. Our own impression is that the mountaineers did not know or care who Dr. Robertson's party were.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 19, 1877.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

☞ Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS, Business Manager. S. H. TURRILL, Chicago, Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, July 20.—Trotting: Newark, N. Y.; Dexter Park, Chicago; East Saginaw, Mich.; Beacon Park, Boston; Arcadia, N. Y. Running meeting at Pittsburgh. Base ball: Boston vs. Cincinnati, at Cincinnati; Hartford vs. Louisville, at Louisville; Star of Syracuse vs. Chicago, at Chicago; Rochester vs. Rhode Island, at Providence; Active (deaf mutes) vs. Americus, at Jersey City; Oddfellows' Reunion and Picnic, at Jones' Wood.

Saturday, July 21.—Trotting as above. Running meeting, at Saratoga. Base ball: Boston vs. Cincinnati, at Cincinnati; Hartford vs. Louisville, at Louisville; Athletic vs. Philadelphia, at Philadelphia; Quickstep vs. Witoka, at Brooklyn; Manchester vs. Mutual, at Janesville, Wis.; Indianapolis vs. Chicago, at Chicago; Chelsea vs. Orange, at Orange Alaska vs. Americus, at West Brighton; Osceola vs. Active (deaf mutes), at Jersey City; Upper vs. Lower Floor Prod. Ex., at Brooklyn; Nameless vs. Lafayette, at Brooklyn; Star of Syracuse vs. St. Louis, at St. Louis; Rochester vs. Live Oak, at Lynn, Mass. Regatta of the Beverly Yacht Club, off Nahant, Mass.

Monday July 23.—Running meeting at Saratoga. Base ball: Evansville vs. Fairbank, at Chicago; Buckeye vs. Allegheny, at Columbus, O.; Forest City vs. Chicago, at Rockford, Ill.; Marion vs. Dixie, at Savannah, Ga. Athletic Games of the Albion Society, at Jones' Wood. Cricket match: Hamilton vs. Montreal, at London, Ontario.

Tuesday, July 24.—Trotting: Gettysburg, Pa.; Mystic Park, Boston; Cleveland, O.; Sycamore, Ill. Running meeting at Saratoga. Base ball: Boston vs. Louisville, at Louisville; Hartford vs. Cincinnati, at Cincinnati. Cricket: as above; Ottawa vs. Quebec, at Montreal.

Wednesday, July 25.—Trotting as above. Running meeting at Saratoga. Base ball: Boston vs. Louisville, at Louisville; Hartford vs. Cincinnati, at Cincinnati. Cricket: Ottawa vs. St. George's, at Montreal.

Thursday, July 26.—Trotting as above. Running meeting at Saratoga. Base ball: Boston vs. St. Louis, at St. Louis; Hartford vs. Chicago, at Chicago. Cricket: Hamilton vs. Ottawa, at Montreal.

A NEW ARCTIC EXPEDITION.—The Swedes are preparing to send out an Arctic expedition under the direction of Professor Nordenskjold. It starts in June, 1878, going from Gothenburgh, Sweden, to the North Cape, thence east, through the Polar Sea, through Behring's Straits, along the eastern and southern coasts of Asia, through the Red Sea, Suez Canal and the Mediterranean, to the Atlantic and home again in the autumn of 1879.

—The Editor of the *Pee Dee Herald*, Litesville, N. C., writes: "Your paper reaches me regularly and is much enjoyed. *It is the best* of its kind."

CARRIAGES AND CARRIAGE BUILDING

THE changes and reproductions of old styles which are found in the fashions of costume are equally prevalent in the designing room of the carriage builder. For many years the American carriage—a word in which is here included every kind of vehicle—was distinctive and peculiar. Innovation was resented by a public which had become wedded to certain styles. The object of the builder was, as a rule, the production of carriages which should represent the minimum of weight and in proportion to his success in that direction was the favor of the buyer. When, therefore, eight or ten years ago Brewster, of Broome street, built a carriage upon the model of the English family coach, suspended it by straps from heavy springs and invested it with all the massiveness of its prototype, his work was received with indifference, and the carriage still remains an ornament to his show room. It represented a change too radical and thorough to be accepted as an improvement. Time has shown, however, that Brewster merely anticipated the revolution which took place a few years later.

The heavier styles followed by British builders have several decided merits. Besides having a pronounced opinion in the matter of strength the Briton was found to possess certain ideas about comfort and how it could be reached which were worth investigating. The result is that many improvements have been introduced from England into America, and that styles which, a few years ago, would have been regarded with coldness, are rapidly winning their way to popularity. So complete is the revolution in certain quarters that the fashion there prevails of importing carriages from England. This is more particularly the case with vehicles of distinctively English types. Of these the four-in-hand is *facile princeps*. It is thought that because the model is English, in England alone can the carriage be built. This is erroneous, both in logic and in fact. America possesses advantages which England never enjoyed, and never can enjoy. Piano making and coach building are parallel cases. Apart altogether from the mechanism, there is something about the American piano which the European maker cannot imitate. One important point is the seasoning of the wood used in making the instrument, an operation which is never so thoroughly and perfectly done in Europe as in this country. The fact gives the American coach builder a similar advantage, and partially explains how he has been able to combine, to such a wonderful degree, strength with lightness. As to workmanship, there is literally nothing done elsewhere which cannot be done here. To import carriages from England is, in short, to be guilty of an act that offers no benefit of any kind as a compensation for its folly. They cannot stand the climate of America, by reason of the insufficient seasoning of the wood, and have no superiority of style or mechanism to counterbalance that grave defect. As a proof of this it may here be noted that an English brougham exhibited at Philadelphia, and bought by an American, is now undergoing repairs. The entire panelling warped and gave way, and is being replaced with the bone-dry wood of American seasoning. The prejudice against native manufacturers will, in this case, as in many others, probably linger for a time, but must ultimately break down before the overwhelming evidence of plain facts experience. A prominent member of the Coaching Club recently informed Mr. Brewster that, although he could turn out an excellent carriage he could not build a four-in-hand, and ordered one for himself from England. The imported "trap" has already several times undergone repairs, and Mr. Brewster is building two four-in-hands to order. These are simple facts of which the moral is for all to read.

It is curious to notice that, as in fashions, a fancied originality occasionally proves to be nothing more than a revival. About ten years ago a Parisian invented, or thought he invented, a peculiar button for the lower end of the jointed bracket used in opening and closing a landau. A peculiar kind of door handle appeared at the same time. These were copied by American builders in the belief that they were French inventions. A short time ago Mr. Brewster came into the possession of a carriage built by Leslie, of London, in 1801. It was imported on the occasion of a union by marriage between the families of Van Rensselaer and Vischer, and has the arms of both families on the panel. It is decorated in the gorgeous style of that day, painted yellow, lined with green, stands high off the ground, has a lofty seat for the driver, and board and straps behind for two footmen. It is just the style of carriage one associates with the early burghers of Manhattan, and which one would like to see rumbling down Broadway behind a pair of high-stepping grays, slow and pompous, and bearing the proper servants in livery. On this carriage appear the identical handle and button supposed to be modern products of the inventive genius of France.

While speaking of the older styles we may mention a carriage of the same character as the above, made by the first Brewster for General Jackson. It is travel-worn and about fifty years old, but is by no means the least interesting object to be seen in the mammoth establishment of the successors of the maker. The old idea of hanging the body of the vehicle from the springs was suited to days when roads were less smooth than they might have been, and the sword case behind—an invariable adjunct of the early carriage, and still attached occasionally as an ornament—suggests a time when travel was more liable to interruption from the Knights of the Road than at present.

Among the new styles adopted by Americans and rapidly coming into favor is the "whitechapel," an adaptation of the traditional butcher's cart. A design more at variance with accepted American ideas it would be hard to conceive. In the first place it has only two wheels. The objection that the weight is thus thrown upon the horse's back is of no moment whatever, as a sliding frame enables the body to be balanced upon the axle with the utmost nicety. The high wheels are heavily made, and the body has an appearance of solidity very far removed from the comparatively frail construction of the average buggy. The arrangement of the springs is exceedingly simple. The machine is built to carry four persons, and the weight, while it adds little to the horse's work, increases the comfort and easiness of driving. There is room for the display of a great deal of taste in the painting, fittings and trimmings of the whitechapel. A very "nobby" turnout consists of a bay horse with silver-mounted harness and an oak-colored whitechapel lined with drab. An equally handsome and less showy trap is painted chocolate, with a thin red line running round the panels.

A modified style of Tea-cart, of a light build, also commands a certain popularity. Broughams, landaus and landaulets scarcely require special mention, except for one feature, to which allusion has already been made, that they are now built much heavier than formerly. A great improvement has also taken place in the matter of painting and decorating. The glaring colors and blazing escutcheons affected by past generations and by more modern *parvenus*, have almost entirely disappeared, and in place of the former, quiet colors are seen, and combinations of harmonious shades. There is possibly no more beautiful and tasteful carriage for general or professional use than a dark-colored brougham with semi-circular glass front.

In track sulkies America stands alone. They are made as low as 48 pounds in weight, and to carry 140 pounds. The Earl of Rosebury recently took one home with him to England which weighed 51 pounds, and several others of about the same weight and carrying capacity have been bought by visiting gentlemen from Great Britain. It is probable that there will soon be a more equal interchange of other styles with England. The impetus lately given to driving as a fashionable amusement has had a wholesome effect upon the builders who are on the outlook for every new idea. The American was using a British fabric—linoleum—in place of the older matting for the feet, in open machines, before his British competitor had thought of it in connection with such a purpose. The tires are heated by means of a series of gas jets arranged in a circle, by which absolute uniformity of temper is secured. There are other improvements effected within the past few years that point to an ultimate superiority of the American built carriage, in regard to both mechanicism and style. In view of all this progress, however, the conservative may console himself with the fact that Brewster still continues to turn out the buggy, associated in the minds of numberless Americans with many a long and pleasant drive, at the rate of about three per day.

GAME PROTECTION.

THE FISHERY COMMISSION.—The Halifax *Herald* sums up the advantages for which the United States ought to pay a round compensation as follows: 1. The privilege of fishing and of landing to dry nets and cure fish on the coasts of the Dominion. 2. The liberty of landing on the Magdalen Islands, where formerly only entitled to fish without landing. 3. The liberty of purchasing bait, getting supplies, engaging fishermen, transshipping cargoes and outfitting vessels in British American ports. 4. The free access to all parts of the Labrador coast for drying nets, catching bait, etc. 5. The establishment of fishing stations along 3,500 to 4,000 miles of coast.

This looks like a weighty claim, but a careful investigation of the facts of the case show that the only concession for which compensation can be claimed, is the right to catch fish within three miles of the Dominion coast line. We see no reason for American fishermen landing to cure fish or dry nets. Certainly, the right to land at the Magdalen Islands is of no disadvantage to Canada, and the liberty of seeking foreign ports for the necessaries of life constitutes no claim, such being the usage the world over; and who profits most by this—provincial shop-keepers, residents of Canada, or the United States Government? The United States have thus far only fitted out two small vessels for Labrador, and it is doubtful if they desire to land for the purpose of drying nets; and as for the establishment of fishing stations, we do not see the necessity. American people prefer to build up their own ports.

With regard to the in-shore mackerel fishing, we have to say that Canada fixed a value for this when licensed fees were established—before the treaty was made—at 50 cents per ton. Have not our Canadian friends suddenly acquired a little check to make a claim of $1,233,333 annually, after the free admission of all sorts of fish into the market as a set-off to this very in-shore fishing? And that, too, for rights they would have gladly yielded, without the freedom of our markets, for $10,000 a year! We understand the Commission have adjourned to meet in the fall, when these questions will receive final adjudication.

LAW BREAKERS IN HIGH PLACES.—"Under Grip" writes from Boston, July 9: "I inclose you the *menu* of a choice but simple breakfast given to President Hayes on his recent visit. As possession of these same unfortunate birds (woodcock) would be by the law *prima facie* evidence of guilt, it strikes us that Messrs. Hall and Whipple may at least claim the merit of intrepidity."

JAMAICA PLAINS, MASS.—At the banquet given by the City of Boston to President Hayes, June 27, roasted quails were on the *menu*. This, in violation of the statute, which forbids the killing of any game between January 1 and November 1, and affixing a penalty of $25 for every such bird bought, sold or had in possession. How can minor offenders against the law with any consistency be punished when it is violated with impunity in the presence of the highest functionary of the land? S. C. C.

[Our readers will remember we called attention to the *late* President's feasting on woodcock during the close season. Why do not these gentlemen prosecute? Certainly a conviction under such circumstances would have a moral weight almost incalculable.]

GAME PROTECTION IN NEW MEXICO.—We have received a copy of the following order, which sufficiently explains itself:

HEADQUARTERS FORT SELDEN, N. M., June 20, 1877.

Circular 1.—With a view to preserve, protect and increase the game of this section, the months of March, April, May, June, July and August are hereby declared close months for game of all kinds upon this reservation. During the six months specified above of each year the killing and capturing by any means of all kinds of game is prohibited. Fishing with seine or net will not be allowed. Fishing with hook and line, or trot line, or in any manner excepting by seine or net may be practiced.

A strict observance of the foregoing is enjoined upon all persons upon this reservation. WM. O. CORY,
First Lieut. Fifteenth Infantry Com. Post.

—We are pleased to learn that the Philadelphia Sportsmen's Club will hereafter take an interest in the preservation of fish in the Delaware and assist the West-Jersey Game Protective Society in enforcing the law. The club employs detectives in the winter to ferret out dealers who violate the game laws.

—The citizens of Mohawk Valley, Oregon, have, as a measure for the much needed protection for deer, published a card prohibiting all deer hounding on their premises, and denouncing it in the vicinity.

—R. V. Pierce, Esq., President of the New York State Sportsmen's Association, has issued a warning to sportsmen and dealers in game throughout the State to observe the game law as it now stands amended, which prohibits the shooting of woodcock (except on Long Island), until August 1st.

—The Seneca Gun Club has been organized at Seneca Falls, with the following well-known gentlemen as officers: President, Horace Silsby; Vice-President, James F. Lawrence; Secretary, J. T. Miller, Jr.; Treasurer, Milton Hoag; Executive Committee, John G. Hoster, Romeyn P. Lathrop and Millard Ten Eyck.

—The Hudson River Association for the Protection of Game and Fish, of which Mr. John R. Wiltsie, of Newburgh, is President, have issued a placard, giving in convenient form a digest of the New York game laws, seasons, etc. A copy will be sent on application to the President. Inclose postage stamp.

—A meeting of the South Brooklyn Sportsmen's Club was held on the 29th of June, and the following gentleman were elected as officers of the club: Geo. E. Lloyd, Pres.; John Bowie, Jr., Vice-Pres.; Paul A. Bassinger, Sec.; Aaron Wittman, Treas.; Jacob Walters, Sergeant at Arms. Also a vote of thanks was given the late President, Mr. Gus Boysen, for his great interest and untiring efforts for the success of the club.

VIRGINIA.—*Norfolk, July* 9.—In your issue of 5th inst., you entirely misquote the game law of Virginia, as passed at the last session of the legislature. As your error may lead some of your readers into trouble, I hand you herewith a correct copy of our laws pertaining to game and fish, as issued by our State association for the protection of fish and game.

Very truly yours, S. R. WHITE,
Pres't. Norfolk Game Protective Ass'n.

[Then why in thunder don't your local papers print the law right? We copied it from one of them.]

—Ossiung writes from Sing Sing: "Your correspondent, 'M,' says, in your issue of June 14.: 'I fervently trust the worthy sportsmen of Michigan and other places where wild pigeons are so ruthlessly destroyed in nesting time, will be eminently successful in putting a stop to the barbarous practice,' I echo that sentiment cordially, as I would any other that tends to prevent the destruction of game wantonly or out of season; but I am afraid that success in that direction will be impossible so long as influential sportsmen and 'game protectors' favor the practice—nay more, send agents to the nesting grounds with instructions to procure birds at any cost and in any quantity, because the great society of sportsmen and 'game protectors' of New York want an almost unlimited number to kill at the Sportsmen's Associations when they meet for the purpose of having a grand good time, and devising methods for the more efficient protection of game!

"These same most enthusiastic protectors are doubtless highly delighted when they read in their Journal 'devoted to protection of game and the inculcation of a healthy interest in outdoor recreation' such welcome intelligence as this: 'The association have quite a number of parties out (after pigeons) who are using due diligence, and encouraging news was received from Wisconsin that they (the pigeons) had nested, but took to flight again and must settle soon, as they were dropping their eggs.' When they do settle, for the purpose of laying their eggs and raising their brood of young, how these 'parties' will scoop them in, and what glorious fun those refined and intelligent 'protectors' will have in shooting them! What nice medals some of them will win and with what 'honor' some of them will be covered! Funny, isn't it, that the masses don't take a more active interest in the work of protecting game when such educators are before them?

"I don't think much of pot-hunters, as a rule, but there are people who are more blamable than they—gentlemen sportsmen who have time and means to visit the most game abounding regions with all the modern appliances of sport, and destroy merely because they came for that purpose and the game is at hand, more than they have any use for; they do all the damage that the pot-hunter does without any of the extenuating circumstances which excuse the latter. A pot-hunter is a poor man who makes use of all he kills, perchance in feeding, clothing and educating a family, and what would those gentlemen do who have those nice game dinners which we now and then read of in your columns, unless there were *some* pot-hunters? Even though he does not live up to the spirit of the law, or 'hasn't a soul large enough to rattle in the hull of a mustard seed,' he isn't a willful waster. This is not a defense of pot-hunting, but to show that sometimes the very ones who are loudest in denouncing this evil commit a greater one themselves.

"To my mind, much more deserving the censure of true sportsmen are they who shoot birds upon their nests, who go to Rangeley Lake and kill hundreds of trout more than they can possibly use and throw them away; who shoot deer because they are so abundant, and leave their carcasses to pollute the air of a sportsman's paradise; who lie in a blind, still as death, refusing all chances for wing shots at single birds, till the brant are huddled by the acre within easy reach of the armory with which they are provided, and then blaze away, making a score which beats the recollection of the oldest pot-hunter, and then sigh that they did not provide themselves with a few more guns.

"A true sportsman, we believe, is one who, while he enjoys to the utmost the pleasures of rod and gun, would do nothing to make him a despoiler; one who feels no pleasure in waging a war of extermination—in short, a man who believes that all God's creatures were intended for man's use and benefit, and who uses them as a being endowed with intelligence and reason should."

GAME LAWS.—Alfred Perry, a wealthy resident of Redfield, Oswego county, N. Y., has been in the habit of inviting friends to visit his place on Salmon River to fish for trout, claiming that the State law prohibiting the capture of trout in Oswego county for three years is invalid and cannot be enforced. The Salmon River Club, of Pulaski, determined to bring the gentleman to book, have entered suit against him. It is understood that, whatever the result, the case is to be carried to the Supreme Court for final adjudication.

WEST HOBOKEN, N. J.—"Justus" writes: July Fourth inaugurates our shooting season—the opening of the woodcock slaughter! When shall this be remedied? This is a question which poor Frank Forrester has already asked, and is yet unanswered. New York has tried to better it, but as the law now stands it is almost worse than before. On the 1st of August, when the lawful time to shoot these birds opens, the woodcock are just beginning to moult, and therefore fully as weak if not weaker than early in July, and so it is all the same whether they are slaughtered on the 4th of July or on the 1st of August, for slaughter it is, as it is no feat to be proud of to kill the entire broods in an isolated swamp or wood.

This year nature more than law has protected the woodcock. Although the birds were plenty and well grown, and up to the last week in June on their usual feeding grounds, yet they are not there now on account of the heavy showers. The grounds are rather wet, and so the woodcock are scattered all over the country, as they find feeding grounds—highroads, cornfields and hundreds of other odd places now. I have yet to hear of a heavy bag in either Long Island or New Jersey. The Hoboken sportsmen are going to prepare a petition to be handed to the next legislature, which will have the signature of a great many influential citizens. Clubs throughout New Jersey should do the same and have the close season extended to the 1st of October. I here like to mention the idea of one of our leading sportsmen, that it would be the best law to have the close season of all game, as quail, ruffed grouse, woodcock and rabbits from Dec. 15 to Oct. 15. The latter date is late enough for the first brood of quail and grouse, and it is no use whatever to legislate for the second or a late brood of quail, as you will often find birds on the 15th of November not bigger than sparrows.

Now is the time to act. United we might accomplish much before another slaughtering period begins with the next 4th of July. JUSTUS.

TEXAS.—*Corpus Christi, June* 29.—Deer skins are coming in now by the hundred, the carcasses being left on the prairie as food for the vultures. Men are shooting young turkeys and half grown quail every day; but there is no way of stopping it without a law. We have plenty of game *now*, and we ought to have plenty *always*, and now is the time to commence to protect them. I believe the FOREST AND STREAM AND ROD AND GUN will do more to educate the lovers of the gun and rod up to a noble, generous and manly practice of the same than any other agent. Then we can get a game law through the Legislature; now the people laugh at it. "The idea," they say, "of a law that shall provide when a man shall go shooting!"

NOTES OF THE U. S. GEOLOGICAL SURVEY—No. 1.

RAWLINS is a little station on the Union Pacific Railway, two hundred miles west of Cheyenne, deriving its chief importance from the fact that the railway has a round-house and some shops here, and that it is the supplying point for the Snake River mines in northern Colorado and the shipping station of the ranchmen whose cattle range through the valleys of Snake, White, Green and minor rivers in northwestern Colorado and the adjacent parts of Utah and Wyoming. Seventy-five or a hundred thousand head will probably be shipped this summer eastward from this point, for which three or four cents a pound will be received, cash down. The "round-up," as the collection of each man's cattle out of the wide-spread, miscellaneous herd is called, is now taking place. Some of these White River cattle will no doubt be found to have strayed half way across the plains, three or four hundred miles from home.

This point is on the very dividing ridge between the drainage of the Atlantic and Pacific, albeit in a valley, and the altitude of the town is about eight thousand feet. But one would not at once, know himself to be so high, and least of all imagine that he was in the very heart of the Rocky Mountains, seeing about him only drab stretches of rolling sage-brush plains, until standing on some higher point he could see beyond, where

> "—The snow mountains lift their amethyst
> And sapphire crowns of splendor, far and nigh,
> Into the air around him."

This growth of sage-brush and grease-wood clothes the hills in a soft bluish dress, warm and misty in the sunlight, and purple in the shade. The bare spots on the hillsides, between the sage-brush, show a reddish tinge under the sun, and beyond lies the solid blue of the far mountains, crested with a silver snow line. Some of the lithographic illustrations in the Pacific Railroad Reports, volume xii., I think, give an excellent idea of what I see from my tent door. A closer view of the sage-brush discloses a scene altogether unlovely. The bushes are barkless and ragged, the stems split all into shreds as though dead for ten years, and it is a wonder that any sap can find its way through to nourish the dense growth of dusty gray foliage and scraggy twigs which surmounts the rough stems. The grease-wood is even worse to handle than this shag bark stuff, for its twigs are thickly covered with thorns and prickles. Frequently one has nothing else to burn for days together, and bleeding hands bear witness to the pain with which it is gathered; but it burns well, the wood having an oily quality which makes a hot, bright blaze. If you can stand the pungent, medicinal odor of sage, there is no more enjoyable fire out of the pine woods. These plants cover the dry and desolate regions, their tap roots sometimes penetrating thirty feet to find moisture, and between them the white alkali dust is poorly concealed under buffalo-grass, thistles and cacti; but many flowers of delicate pattern and brilliant hues are to be found everywhere. The orders *Compositæ* and *Leguminosæ* are most numerously represented. Along the banks of the few creeks there is even some sort of turf, green as emerald after a shower, but soon becoming sere under the blazing sun which shines unclouded during most of the short summer. This season, however, has been unusually late, the climate resembling that very graphic description of Baker's Park given by a San Juan miner who said that there they had a "nine month's winter, and three months damned late in the fall!" But the sun shines now, and we are happy. During a ten-day's stay here I have thus had an opportunity to see something of the animal life of the sage-brush, although not to study it in the least.

The antelopes are now moving about rather than seeking the pastures. The does are seeking retired spots in which to bring forth their little ones, or, with young fawns, are slowly proceeding to their summer haunts, while the bucks are going about pretty much by themselves. We see their pretty heads and white rumps above the sage-brush, and usually it is not difficult to get a shot at them. We have had prong-horn steaks every day. They are mostly fat and tender at this season, but the hair is just being shed and their hides are of no use. They are comparatively worthless at all times, being worth less than forty cents in Cheyenne.

Black-tailed deer and their fawns are also about, and our hunter, the famous "Mountain Harry" Yount, has kept our table supplied with this also. Over on Separation Mountain, yesterday, I saw hundreds of fresh tracks of deer and also of elk, which are still plentiful all through here. Both animals keep in the little gulches reaching up and down the sides of the mountains, where the pretty quaking aspen forever trembles its green and silvery leaves, and a rank vegetation of rose bushes, alders and service berries, with flowers between, are kept bright by the rills from the snow banks which lie all summer under the brow of the mountain. Afterward when we had proved the elk-tracks to lead out of the place on a gallop, as though he had been frightened, looking down into the valley from the top we saw three men acting strangely, and upon looking closer, with our field glasses, saw that they were staggering off under as much as each could carry of elk flesh. They were at least six miles from anywhere, so that by the time they got to the settlement they must have thought their game dearly earned. I hear that several bands of elk were seen from the railroad train early yesterday morning just below here, and along the open country north of here they are said to be abundant.

Besides the antelope and sage-hares the only game which can properly be said to be common hereabouts is the sage-cock (*Centrocerus urophasianus*), of which one may kick up a hundred in two hours.

The sage-fowl are our American representatives of the Old World pheasants, and the only bird in this country properly entitled to the name of "pheasant," notwithstanding that the grouse get it so widely. You find them everywhere on the sage uplands, and their nests are easily discovered, particularly when the mother-bird is sitting, for then she will not rise from her eggs, which are laid in a rude nest on the ground, until you have well nigh stepped upon her. I have seen one sit as quietly as a stone, while I rode by within twenty feet, trusting that her gray-and-black dun-colored plumage would conceal her by blending with the ground and the bluish stems of the bushes. But her black eye was flashing, and she was ready to spring every instant and try to lead me from her treasures by tricks and manœuvres. The eggs are as large as a domestic hen's, and are marked very much like those of the turkey. There are from twelve to twenty in the nest, and hunters here are of the opinion that two hens, at least, often lay in the same nest. The young are drab, spotted with brown, and have a peep like a barnyard chick. As soon as they are born they know how to behave and understand the mother's language, running and hiding in perfect stillness until they are assured of safety by the parent's voice. At such times, if you are quick enough to to catch sight of one of the little ones, you may go and pick it up without its trying to escape, or struggling in your hand. The young are hatched durning the first half of June.

At this season it is usual to see many sage-fowls together, and the small flocks will usually consist of those of a single sex. Sometimes, though, forty or fifty will be flushed at once, but in the fall they congregate into large flocks.

It has been said that this bird rises from the ground with difficulty. I cannot agree to this. They seem to take wing with

the speed and grace of a grouse, and the loud whirr of their wings strikes a chord in the nerves which makes them tingle and thrill in unison with it. Their flight is swift and arrowy, but not long continued, and they drop suddenly. From the noise of their wings in flight I can understand that their drumming in the spring, when they are strutting about their ladyloves, must be, as it is described, much louder and more whacking than that of the grouse. However, I have never had an opportunity of hearing it.

The sage-fowls live altogether on the buds and leaves of the *Artemisia* and some other herbs, and their digestive organs are specially modified to suit this soft diet, soft—that is for a gallinaceous bird. Their flesh is not good eating. It is tough and tainted with the medicinal flavor of the sage.

When in Cheyenne, the other day, I called upon Mr. Frank Taylor, a reader of FOREST AND STREAM, who has the finest mounted specimens of a pair of these birds that I have lately seen. He is making a special collection of all the birds related to this—the grouse, etc—and his cases are a delight to a sportsman's eye. Mr. Taylor is an enthusiastic sportsman and naturalist. His room abounds in the implements of venery and angling, and the trophies of the chase, from which, with his intelligent aid, one can get a fair idea of the birds and animals of all this region. No one with an atom of interest in hunting can resist the charm suggested by his stories, or refuse to promise to accept his hearty invitation to allow him to act as your guide at the first opportunity.

But this scribbling can't last forever, much as there is to be said about such a summer trip through the game-abounding mountains of Wyoming, as I am about undertaking. More anon. ERNEST INGERSOLL.

Rawlins Wyoming, June 12, 1877.

—The average mean daily temperature, at New Smyrna, Fla., for the month of June, was 81 deg. 45 m. The highest temperature was 96 deg., at 3 o'clock P. M.; the lowest, 72, at 5 P. M.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false cognomen (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

F. C. BECK, 1,294.—[*Adv.* ABBEY & IMBRIE, 48 Maiden Lane.

The Rifle.

AN ENGLISH VIEW OF THE INTERNATIONAL MATCH.

The *Volunteer Service Gazette*, the organ of the rifle shooting interest in Great Britain, has a very fair editorial on the coming international match in its issue of June 9, and puts several important questions in a very sensible way. From the full text, we quote as follows:

It is satisfactory to know that the Council of the National Rifle Association has this year determined to organize a team representing the United Kingdom to go to Creedmoor in September, and there to contend for the International Challenge trophy. It appears to us quite unquestionable that our rifle ought to be represented at Creedmoor by the best possible team which we can draw from the little group of islands we call the United Kingdom. To others it seems that the United ought to be disunited *pro tempore*, and that three teams of Englishmen, Irishmen and Scotchmen, respectively, should uphold our marksmanship in the United States. However, Sir Henry Halford, than whom a more competent captain could not be found, is this year about to get up the best team he can from England, Ireland and Scotland combined, and if all the leading small-bore riflemen work loyally together there can be no doubt that he may get together a team which will be found hard to beat even by the brilliant American marksmen. We hear nothing this year of any restrictions. We believe that the Irish accept the leadership of Sir Henry Halford, and we have no reason to doubt that the Scotch will follow their example. It would certainly be most inconvenient if one of our sub-nationalties (if we may so term them without offense) was to insist upon sending a representative team to contend against, *inter alios*, its own countrymen. But even if one of these kingdoms should be so ill-advised as to send a separate team, it appears to us that the National Rifle Association and Sir Henry Halford will now be wise in pursuing their own course, and going to America with the United Team. We adhere to the view we expressed last year, that they were then justified in refusing to organize a United Team when Scotland insisted on her right to send a representative team of her own. But the United Kingdom cannot always stand aloof because one of its component parts insists on taking separate action; and this year Sir Henry Halford must take his team to Creedmoor and do his best to win the International Prize, whether he has or has not to fight against a Scotch team. But we have little fear that the schism of last year, which was to a great extent to be excused by the somewhat careless action of the organizers of the match in the United States, will not survive in 1877, and that the team which will go to Creedmoor will be "united" in every sense of the word.

Sir Henry Halford has an arduous task before him in selecting the men for his team. There have been long and frequent controversies as to the best mode of selection in such cases. Generally speaking we are disposed to think that the judgment of the captain ought to be the best guide. But competitive trials relieve that officer, no doubt, from a great portion of his responsibility; and if he retains the nomination of one or two men, the system will probably work better than any other. In the present case the selection involves special difficulties, and we doubt whether if Sir Henry Halford were to take upon himself to select the members of a mixed team of English, Irish and Scotch, he would give satisfaction, though his judgment and experience are such that he would probably choose really the best men. It is likely, however, that some form of competition will be adopted for the selection, and we may express a hope that if this is the case the competition will be as wide as possible. It may or may not be advisable to reserve one or two places in the team for the captain's nominees, but with such a possible exception the best scorers at the competitive trials ought to be the men to go to Creedmoor. We are aware that some people hold that provision ought to be made for what is called a fair representation of Ireland and Scotland. We cannot agree with this view. We want to choose the best men, and it is, or ought to be, a matter of perfect indifference whether those best men turn out to be Englishmen, Irishmen or Scotchmen. No rule should be laid down as to any particular number of men of each nationality being admitted into the team. A place in the team should be open to any rifleman of the United Kingdom who shows that he can shoot better than his fellows.

We are glad to see that these visits to and from the riflemen of the United States bid fair to become an annual institution. It is, we believe, understood that the United States riflemen will not be represented in England this year, but we hope that in 1878 they will return the visit which Sir Henry Halford and his men are preparing to pay them. It ought not to be difficult to arrange a match at Wimbledon which should be worthy of the skill of the famous American small-bore shots.

CREEDMOOR, *July* 14.—Saturday last was a day of moment at Creedmoor, and the riflemen out had quite an exciting topic of talk in the protest in the *Spirit of the Times* match, Tuesday's work opened with the fifth competition for Sharp's prize of $250. The wind was from the 11 o'clock quarter, but so puffy and unsteady that first-class scores were quite out of the question, and the shooters were compelled to be content with the following record. There were 19 entries. Open to all comers; any rifle; distances, 800, 900 and 1,000 yards; 15 shots at each distance; no sighting shots or previous practice on the day of the match; one-quarter of the entrance money to be awarded to the competitor making the highest score, the winner of the prize to lead the scores at each distance:

	800 yds.	900 yds.	1,000 yds.	Total.
Maj H S Jewell, Rem Creed	69	69	53	191
W M Farrow, Ballard Creed	59	66	61	186
L C Bruce, Rem Creed	63	70	50	183
L Weber, Sharps Creed	65	58	59	182
A V Canfield, Rem Creed	57	61	55	173
L Geiger, Rem Creed	64	56	51	171
Lieut-Col E H Sanford, Rem Creed	65	48	56	169
N Washburn, Rem Creed	55	54	52	161
G L Morse, Sharps Creed	65	49	42	156
Wallingham, Sharps Creed	56	54	44	154
E H Raymond, Rem Creed	58	45	46	149
Gen F F Millen, Rem Creed	47	46	41	134

Before the long-range match had concluded, the time for the *Spirit of the Times* match had arrived, and Col. Wingate, the Vice-President of the association, informed the long-range men that such as chose might enter then for the 800-yards shooting, and come down to make their score upon the completion of their long-range work. The rule of the association is that in matches of this character all the members of a firing squad shall shoot alternately until their scores are completed. The match opened at 3 o'clock, and the shooting of those then and there present was over before four o'clock. At 4:30 P. M. the long-range men came down, but were met by a protest, signed by three of the contestants, denying the right of Col. Wingate to abrogate the rule or set it aside. The shooting went on, and the protests were entertained by Major Fulton, the executive officer of the match, a counter protest being also placed in his hands by Col. Sanford, who, on his leading score and the assurance of Col. Wingate that the infraction of the rule would be allowed, claimed the badge. The matter will be referred to the Executive Committee, who, no doubt, will sustain the protest, the case being almost similar to the barring out of Van Heusen in the contest for the Schuyler, Hartley & Graham prize, on August 19th last, by which decision Col. Wingate, then using the bogus name of Geo. Wood, took the first place. The scores of the ten-shot competition for the *Spirit of the Times* medal, at 800 yards, stood:

E H Sanford, Rem Sport	38	D C Pinney, Rem Mil	29
N M Farrow, Ballard	33	Dr A Stube, Sharps Sport	29
R H Keene, Sharps Sport	36	M Francis, Rem Mil	28
G L Morse, Sharps Sport	36	H W Gourley, Rem Sport	27
F A Dogro, Sharps Sport	36	J N Brown, Rem Sport	27
C W Minor, Sharps Sport	34	J E Irwin, Sharps Creed	27
G Rover (?) Sharps Sport	34	A Gee, Rem Mil	26
J L Price, Sharps Mil	33	M M Maltby, Sharps Sport	25
E W Price, Rem Mil	30	N D Ward, Sharps Sport	25
W H Murphy, Rem Mil	30	F H Holton, Rem Sport	20
J McGiensey, Ballard	29	H Fisher, Sharps Sport	20
A Anderson, Rem Mil	29	J Reddy, Rem Mil	15

The third competition for the Irish-American trophy took place at 200 and 500 yards distance. Sergt. N. D. Ward, of Company A, Ninth Regiment, was the winner, upon the score of 57 out of a possible 70 points.

THE BALLARD RIFLE MATCH.—The mid-week matches are proving great favorites at Creedmoor, and the Ballard rifle match on Wednesday, the 11th, was a successful one in attendance and the quality of the scores made. It was the second competition, open to all comers; 200 yards standing, any rifle; 15 shots without cleaning. The scores stood:

J F Rathyen, Ballard	5 4 4 5 4 5 4 5 5 5 5 5 4 5 5—70
J T B Collins, Rem Sport	4 4 4 5 4 4 5 4 5 5 5 4 5 4—66

ROCHESTER VS. NEWARK, N. Y.—The Rochester men have been meeting their friends and neighbors from Newark, N. Y., at a return match shot at the latter place, July 11, with 15 shots, 200 yds., off-hand, any rifle. Rochesters used muzzle-loaders; Newark men breech-loaders. At the previous match the Rochesters beat by 10 points.

The results came wonderfully close, and show that the men are well matched, standing:

ROCHESTER TEAM			
J H Brown	63	G T Stillson	61
G E Rider	62	H F Hart	60
S A Servis	61	E S Combs	58
Total			363

NEWARK TEAM			
Sackrihll	61	Wilcox	61
Harlock	63	Nicholoy	58
Elliott	61	Van Dusen	59
Total			362

ZETTLER'S RIFLE GALLERY.—The fourth competition for a fine gold medal, open to all comers, took place Friday evening, July 13th; this medal to be won by the best score of centres (40 points), Creedmoor rules, ten shots each entree, to be won three times. It has been won once by M. Lennon, once by P. Fenning, once by Wm. Brown and, last competition, by J. Murch, and will be shot for every Friday evening until finally won.

ZETTLER'S RIFLE CLUB held their weekly shoot July 10, at 207 Bowery, 100 feet, off hand, at Creedmoor target reduced, for a bull's-eye badge, presented by Mr. B. Zettler, shooting master of the club. Most bull's-eyes during July take the medal.

	B's-eyes.	P'ts		B's-eyes.	P'ts
Wm Klein	10	67	R S Brown	5	45
L Bird	8	48	M Dorler	6	45
J Dutil	3	48	B Zettler	4	44
C Zetter	7	47	F Fabarnis	5	44
D Miller	7	47	L A Beales	5	44
C Johnson	8	47	D L Beck	4	43
P Fending	5	46	G A Schurman	3	41
M B Engel	6	46	E A Moore	4	40

WEST SIDE GUN CLUB.—A first-class club of amateur shooting men has been organized on the upper part of the city. The list of members is a strong one, including many professional men, who wish to enjoy the sport, but do not care to court the publicity of Creedmoor. Headquarters are at Elm Park, Ninety-second street and Ninth avenue. The officers are E. Schweyer, President; D. Ferber, Treasurer; H. J. Lippe, Secretary.

BERGEN, N. J. VS. JAMAICA, L. I.—The crack shootrangemen of the Bergen Point Rifle Association and the Jamaica Rod and Rifle Association met for the return match at Bergen Point July 10, and resulted in a New Jersey victory.

BERGEN TEAM.		JAMAICA TEAM.	
F Rathyen	44	J W Crane	41
A Duane	41	T Rogers	43
H J Stilson	44	J Fleming	40
J T B Collins	43	G A Reed	40
H Meigs	43	W S Cogswell	39
J L Beach	41	H G Creal	38
A Vredenburgh	41	G Damon	36
F A Schilling	38	W S Elmendorf	35
Total	353	Total	310

UTICA, *July* 14.—Utica has at last organized a rifle association. The first meeting, held on the 11th inst., was very encouraging, the list of members footing up 215. The grounds have been selected, and it is hoped everything will be in working order. The following are the officers: President, Edward A. Tallman; Vice-Presidents, L. L. Hepburn, of Ilion, James C. P. Kincard, Utica; Sec'y, Major Matt Murray; Treas., Egbert Bagg, Jr.; Directors, John S. Hill, John D. Flower, Col. J. Stuart Lowery, T. Jay Grillith, Lieut. W. D. Stuart, Edward Roche, J. J. Flanagan, E. Prentiss Bailey, Col. Geo. Young, E. Z. Wright, Lieut. Col. P. F. Bulger, R. Winegar, Gen. Jas. McQuade, Col. T. M. Davies, Jas. H. Brand, Gen. S. Doving, Col. W. Wingate, Lieut. Col. Jas. Manning, Major Matt Murray.

SARATOGA.—On the afternoon of the Fourth the Saratoga riflemen were out for a couple of matches, both at 200 yards, ten shots each, off-hand, any rifle. For the J. H. Farrington prize the scores were:

O J Wing	41	W F Howard	34
Irvin Davis	40	W H Benson	33
Wm Leggett	38	A F Mitchell	31
Ezra Davis	34	John Webb	40
H W Hays	32	F D Wheeler, Jr.	38
Joel Hays	41	D Eddy	35
J H Moody	34		

For the Club's badge of honor the score stood:

W H Benson	41	F D Wheeler, Jr.	40
D Eddy	41	Irvin Davis	39
W F Howard	41	W I Leggett	39
H W Hays	41	F A Weller	38
Joel Hays	41	O J Wing	37
A F Mitchell	41	Ezra Davis	34
J H Moody	41	C C Myers	31

ANOTHER ATTRACTION AT SARATOGA.—Jerome Pitney, Esq., wishes us to state that there is now a rifle range of 800, 900 and 1,000 yards at Saratoga; also an off-hand range, which strangers will be welcome to use free of charge. It is only one mile from the hotels. The targets are canvas, and show up beautifully against a side hill. By calling at Brown's rifle gallery, No. 6 Grand Hotel block, they will always find some of the Saratoga Rifle Club, who will be pleased to visit the range with them.

OSWEGO.—Col. C. V. Houghton, of the 48th Regt., N. G. S. N. Y., has offered two gold medals under the following conditions:

Open for competition to all commissioned, non-commissioned officers, musicians and privates of the 48th Regiment, N. G. S. N. Y. Distance, 200 and 500 yards; position, standing at 200 yards, any at 500 yards; weapon, Remington rifle, State model; rounds five, with two sighting rounds; the opening competition to be on Saturday, July 14, 1877, at 5 o'clock A. M., on the Rifle Range of the 48th Regiment. All dates for further competition to be announced. The badges to become the property of the members winning them four times, not necessarily consecutive. No member can become owner of but one badge. To the members making the highest aggregate score a 14k. gold badge valued at $35.00. To the member making the second highest score a 14 k. gold badge valued at $15.00.

At the first contest the scores stood:

	200	500	Tl.		200	500	Tl.
E Purple	18	16	34	P O Wright	19	14	33
T Watson	18	15	33	A Snell	20	12	32
H C Thompson	22	7	29	Wm Sheldon	18	..	18
John McGuire	17	11	28	F Gomers	15	13	28
D C Hall	16	5	21	D Marshall	15	18	33
Geo White	20	20	40	A Harnes	11	17	32
T Donivan, 1st	15	11	26	J C Slight	13	12	25
L L Barnes	20	15	35	A Cavalier	21	19	40
J S Barton	21	23	44	Wm Johnson	18	6	24
C A Barton	19	20	39	Geo Huguuin	15	3	18
E Coe	21	8	29	C V Houghton	21	15	36
O A Clemings	22	16	38	E A Swingham	20	13	33
J L Woods	17	20	37				

—Fifty-six Californian riflemen have already qualified in the first stage to shoot for places on the inter-State match team.

A WOODCHUCK TARGET.—The *Oswego Times*, of the 5th inst., gets off the following dig at the recent "filed-sight" order:

Col. Hagunin has captured and sent to the Forty-eighth Regiment rifle team a woodchuck, which they will keep as a pet and feed on clover and green peas according to the Colonel's orders. It will be taken to Creedmoor next fall and exhibited as the coat of arms of the Oswego "woodchuck shooters." It would be well perhaps to secure another woodchuck and send it to the Seventh Regiment to be used as a target. Under Col. Wingate's latest order, allowing sights to be filed, perhaps the sharpshooters of the Seventh could hit a woodchuck at short-range. Give them a chance to try it anyway.

MASSACHUSETTS, *Lawrence.*—The Lawrence Rifle Club participated in a practice shoot at Merrimac Range, July 7; distance, 500 yards. The shooting was all good. The following are the two best scores made without sighting shots.

R F Sargent, Maynard Creed.

500.....5 5 6 5 5 6 6 6 6 5 6 5 6 6—84

C L Austin, Sharps Creed.

500.....6 6 5 6 5 5 6 6 4 6 6 6 5 6 4—82

MAJ. JEWEL'S SCORE BEATEN.—Mr. L. L. Hepburn, of the American Team, 1874, made the following score at Ilion, July 6, 1877, out of a possible 225, without sighting shots or previous practice:

800.....5 5 5 5 5 5 5 5 5 5 5 5 5 5 5—75
900.....5 5 5 5 4 4 5 5 5 5 4 5 4 4 5—70
1,000.....5 5 5 5 5 5 4 5 5 4 5 4 5 5 5—72—217

On Monday, July 9, the same gentleman made 213 over the same ranges, with a light, chopping wind from the direction known as 11 o'clock. Mr. Hepburn has invented a new bullet, which promises to outdo anything yet produced. These are the only two trials made with it thus far.

JAS. L. BURNS, Scorer.

WALNUT HILL RANGE, *Boston, July* 12.—Massachusetts Rifle Association; long-range match for a Ballard rifle, which has been won once before by Mr. Lowell, and seems destined, when another shoot for it has been held, to become his personal possession. Conditions—Second competition for the Ballard mid-range rifle, presented by Schoverling & Daly, New York. Distances, 800, 900 and 1,000 yards; rounds, 7 at 800, 8 at 900, 10 at 1,000 yards; rifle and position, any within the rules; possible scores, 35, 40 and 50; entries 18. The best scores stood as follows:

	800 yds.	900 yds.	1,000 yds.	Total.
John A Lowell	31	37	44	112
James Wilmot, Jr.	32	38	38	108
William Gerrish	32	32	43	107
B F Chamberlin	27	33	43	103
C C Hebbard	32	36	34	102
T H Gray	25	32	45	102
F J Rabbeth	31	37	32	100
A R Clark	30	31	38	99
W H Jackson	31	27	39	97
D Kirkwood	26	30	39	95

Short range match: Conditions—Second competition for the Sharp's long-range rifle, presented by the Sharp's Rifle Company. Distance, 200 yards; rounds, 10; rifle, any within the rules. Possible score, 50; entries 15.

John A Lowell	44	W H Jackson	40
F J Rabbeth	43	R S Gray	39
H T Rockwell	43	T H Gray	39
N W Arnold	42	S Wonder	37

J E Osborn	42	W L Geurier	36
D Kirkwood	41	H Pope	36

Mr. Rabbeth was the last winner of the prize.

—The Wimbledon meeting thus far is reported as being very successful and the shooting in the first stage for the Queen's prize exceptionally good.

—A. V. Canfield, Jr., and Dr. S. J. Scott have entered for the Centennial team competitons as the representatives of the Maryland Rifle Club.

CANADA VS. NEW YORK.—The rifle team of the Forty-ninth Hastings have challenged the Forty-eighth, of Oswego, to an international rifle contest, the first match to be shot at Belleville, Canada West, on August the 9th, and the return in Oswego on the 11th.

CONNECTICUT—*Bridgeport*, July 12.—Invitation shoot, with clam-bake attachments.

Short-range match, 200 yards; prize, the winning rifle.

FROGMOOR, *New Orleans*, July 11.—I send you below the champion score of the world, made by an individual and a team of six. At a meeting of the Governing Committee of the Crescent City Rifle Club, July 6, it was resolved to select a team of six to shoot for the bronze medal of the N. R. A., the highest score to win; also that the same six shoot against the highest score on record of six men, which is that of the Irish and Scotch on the first day of the last international match. The day appointed was July 10, 3:30 P. M. The day opened beautifully for the match, and had we commenced at two o'clock, or if Mr. Eyrich had made his usual average, the total would have been increased about 20 points; but his first shot at 1,000 yards, being shown up in the bottom corner of the target, almost upset him in finishing his score. The shooting throughout was magnificent, Arms and Eyrich opening with fourteen bull's-eyes at 800 yards, Mr. Selph making fourteen consecutive at 900 yards, and making a run of twenty-one consecutive bull's-eyes, and a total score of 219, the team making 1,214, winning the team match by twelve points. At the 900-yards range the wind was troublesome, but was more favorable at 1,000. During the shooting the wind varied from 12 to 6 on the dial. The following are the scores;

Dudley Selph.

800.....5 5 4 5 5 5 5 5 5 5 5 4 5 5 5—72
900.....4 5 5 5 5 5 5 5 5 5 5 5 5 5 5—74

1,000.....0 0 4 0 3 3 4 5 5 4 3 5 5 2 5—50—187

The team and reserve, who will shoot in the inter-State match, will comprise the above gentlemen, with Mr. James Buckley as captain, the latter gentleman acting in that capacity in the above match, adding a great many points to the scores by his careful watching and good judgment of wind. They will leave here about the middle of August for Creedmoor. Why don't the managers settle the date definitely when the inter-State match is to take place? [Date fixed between Sept. 10 and 13.—ED.] The following are the scores made on the 8th.

Col John Glynn, Jr.

800.....4 5 5 5 5 5 4 5 5 4 5 5 5 5 5—70

Mrs. Wm. Pierce, the wife of a member of the club, made the following score at 500 yards rest, Remington Creedmoor rifle: 5 5 5 5 5 5 5 5 5 4 5 5 5 4—73. She has an eye like an eagle, and her nerve is as steady as that of any marksman that I have ever seen. GUSSIE.

THE BRITISH RIFLE TEAM.—*London, July* 10.—The *Times* prints the following:

The Council of the National Rifle Association, having no funds applicable for the expenses of a Centennial team to America, appeal to all interested in rifle shooting to aid in raising the requisite sum of $7,500.

Sir Henry Halford, Captain of the United Kingdom Rifle Team, writes to the London Agent of the New York Associated Press in regard to the approaching match at Creedmoor as follows: "We have decided to sail for New York by the steamer City of Richmond on the 16th of August, so as to have time to get settled before the match. I hear something has been said about our having only two days for practice over the range at Creedmoor. Two days will be quite inadequate. I shall want at least six days, if possible."

—Second match between the Rahway and Hackensack rifle clubs took place on the range of the latter club, July 16, with the following result:

HACKENSACK.

A B Banter	0 4 3 4 4 4 4 4 4 3—34
W Clark	3 4 4 4 3 4 5 4 4 4—38
Van Valen	5 4 4 3 4 4 4 3 3 4—38
Van Strachwitz	3 5 4 3 4 4 5 4 4 4—40
Holberton	2 4 3 0 3 4 4 4 5 3—32
J G Fream	4 3 4 4 4 3 3 4 4 2—35—217

RAHWAY.

B A Vail	4 3 3 5 4 4 4 4 4 4—39
E Squier	3 4 4 4 3 4 5 4 4 4—39
G Melville	4 5 4 5 4 4 4 4 4 3—41
B Squire	3 4 5 4 3 4 3 3 3 4—36
Fred Alder	3 4 3 4 4 3 4 3 4 4—36
F S Sheldon	5 4 4 5 3 5 4 4 3 3—40—255

VERMONT, *Rutland, July* 16.—Rutland Rifle Club were out on Saturday, the 14th, practicing over their 500-yards range. The scores were very fair, considering the last five shots were fired in almost darkness.

Beattie	5 5 5 5 4 4 5 5 5 5 5 4 4 5 5—71
Himes	5 5 4 5 5 4 5 5 4 5 4 5 5 5 5 4—70

Kilburn	4 2 4 5 2 5 5 5 4 5 4 5 5 5 5 4—64
Marshall	4 5 5 5 5 5 5 5 5 4 4 4 4 5 3—63

EXCHANGING GUNS.—If you want a heavier or lighter or a finer quality gun than you have at present, it can be exchanged to good advantage at Charles L. Ritzmann's, 943 Broadway, above Twenty-second street.

—The Central Vermont Railroad publishes an illustrated list of summer excursions which may be made via that road. Three hundred trips are designated, including the principal summer resorts from the Gulf of St. Lawrence to St. Paul and Denver. The guide is to be had at 417 Broadway, N. Y., or any other of their offices.

—Horses are now being shipped to England from St. Louis. Several hundred have already been sent. It is said that England is preparing for war emergencies.

—An excursion train is to be put on the Long Island Railroad to run three times a week from Flatbush avenue, Brooklyn, to Greenport, starting at 8 A. M.; returning the same day, reaching Brooklyn at 9 P. M. A steamer from Greenport to Shelter Island will allow passengers six hours for fishing.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristris atrarius.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo oniuis.*	
Land-locked Salmon, *Salmo gloveri.*	Striped Bass, *Roccus lineatus.*
Black Bass, *Micropterus salmoides;*	White Perch, *Morone americana.*
M. nigricans	Weakfish, *Cynoscion regalis.*
Maskanonge, *Esox nobilior.*	Bluefish, *Pomatomus saltatrix.*
Pike or Pickerel, *Esox lucius.*	Spanish Mackerel, *Cybium maculatum.*
Yellow Perch, *Perca flavescens.*	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

For list of Trout Flies in season for July, see issue of June 28.

FISH IN MARKET.—Fish of all kinds are very abundant and the prices very low, as will be seen from our quotations for the week, which are as follows:

Striped bass, 15 to 20 cents per pound; bluefish, 6 to 8 cents; salmon, green, 20 cents; mackerel, 10 to 20 cents each; shad, Connecticut River, 50 cents; white perch, 15 cents per pound; Spanish mackerel, 15 cents; green turtle, 15 cents; terrapin, $12 per dozen; halibut, 18 cents; haddock, 6 cents; king-fish, 25 cents; codfish, 6 cents; blackfish, 10 to 15 cents; herrings, 6 cents; flounders, 8 cents; porgies, 10 cents; sea bass, 15 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 15 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $3 50 per 100; soft crabs, $1 50 per dozen; weakfish, 10 cents; frog legs, 35 cents per pound.

CANADA—*St. Johns, N. B., July* 12.—There is now very good trout fishing in most of the numerous small lakes that are to be found in a radius of ten or twelve miles back from this city. Mr. Dinger Scribner, the "Centennial Prize Medal Fishing Rod Maker" of this city and the writer have just returned from Ball's Lake where we had good sport. The trout taken from this lake are the finest flavored *Salmo fontinalis* that ever tickled the palate of an epicure. STANSTEAD.

SALMON.—Mr. Willis Russell writes from Montreal:

"I have just had good fishing on the Marguerite River. On the morning of the 2d July between the hours of 6 A. M. and 11 A. M., I landed 9 salmon averaging sixteen pounds. I hooked five other fish during the same period, and my loss in tackle was only one single fly. I therefore consider I have done well, have had magnificent sport, and I hope your readers will think so too. This river is full of fish this year, which we attribute to our having acquired from the net owners another day in the week of free passage for the salmon; there are consequently now two days in the week when salmon have a free and uninterrupted run up the Saguenay."

MASSACHUSETTS—*New Bedford, July* 16.—During the past week our markets have been filled with big fish, from sword fish weighing 600 to striped bass of 55. Numerous parties from the rural cities have made fine hauls, both at No Man's Land and the lower part of Buzzard's Bay. Scup, tautog, bluefish, etc., are extremely plenty, in fact the greenest countryman need not have poor luck at fishing. CONCHA.

MOVEMENTS OF THE FISHING FLEET.—The Fish Commissioners have granted the request of the Newburyport fishermen to be allowed to take porgies in the Merrimac River at and near its mouth. The receipts of Bank codfish the past week have been very large, fully 1,125,000 lbs. fresh and 70,000 lbs. fletched, overstocking the market, which had been poorly supplied for the previous fortnight. As a consequence, prices, which had ruled favorably, dropped to nominal figures, and most of the stock was disposed of at a cent and two cents per lb. for gray and white. Number of Bank arrivals 17. The number of Georges arrivals for the week was 38, bringing 750,000 lbs. codfish and 30,000 lbs. halibut. Georges codfish are in small stock. A few small mackerel have been taken off shore, but the entire receipts for July, from a large fleet, will not exceed 800 barrels. Whole number of fishing arrivals for the week 90. The first American mackerel catcher in the Bay was the schooner McLeod, of Boston, arriving at Port Mulgrave on the fourth. The schooner Allen Lewis, from the Magdalen Islands for Boothbay, reports small codfish plenty at the Magdalens, and numerous schools of large mackerel in the North Bay, between East Point, P. E. I., and Port Hood.—*Cape Ann Advertiser July* 13.

Kingston, July 14.—The tenting season in the woods of Western Ulster and Delaware is now in full blast. Several parties returned to this place to-day from the head waters of the Rondout, where they have been camping for a couple of weeks. Kingston will be well supplied with trout for a couple of days. The Honk Hill tannery last week turned the contents of a lime vat into the Lackawack stream, causing the death of hundreds of trout, suckers and pike. OUR HARRY.

CONNECTICUT, *Putnam, July* 14.—The black bass fever is raging here, and some fine ones of one to four pounds have been recently caught in Alexander's Lake. This lake is about three miles south of here, and is a beautiful body of clear water, upward of thirty feet deep in places. It was stocked about five years ago and protected for three years. The most taking bait seems to be live minnow, and for tackle it requires a stout pole, reel and landing net. In addition to the above lake we have, within a few miles of here, Woodstock Lake, Black Pond, and Pascoag Reservoir, all of which have been stocked with bass for five or six years and afford good fishing. O VERICUS.

LARGE SWORD FISH.—On Thursday, July 12, a sword-fish was captured off Narragansett Pier by Perry Ralph and partners. The following day, fifteen miles out, a second was captured, weighing three hundred and sixty-nine and one-half pounds. On a second trial, the same day, Ralph and party struck another, which after a severe fight was captured, and turned the scales at four hundred and eighty pounds. Chasing sword-fish is now a favorite amusement among the male guests of the hotel at the pier.

NEW JERSEY—*Kinsey's Ashley House, Barnegat, July* 15.—Best catch of blue-fish during the past week, 84. Sheepshead fishing has been fair. First crab caught to-day. Blackfish and sea bass biting good. B.

GOOD FISHING.—Mr. A. Boyce, of No. 45 Whitehall street, City, and Messrs. Wilder and Henderson, of Brooklyn, had fine fishing on Wednesday, July 11th, off Rockaway Shoals. While they were almost becalmed, they drifted into a school of blue and weak fish, and caught fifty-two in all, one-third of which were weakfish. Mr. Boyce caught two weakfish at once, on a light rod and reel, that together weighed ten pounds—the smallest fish caught weighed 4 lbs., and the largest 10 lbs.

Where the joke comes in: four or five "fresh young men" promised to go with them and take a lesson in fishing, none of whom were on hand at the time of starting; it is only necessary to add that the laugh was on those that did not go.

FISHING IN CENTRAL PARK.—Alderman Cole, July 10, offered a series of resolutions in the Board setting forth that the "large lake in the Central Park has become overstocked with fish of several varieties to such an extent as to render the water turgid and unhealthy, and to militate against its attractiveness and beauty," and that "much amusement and recreation might be afforded a great many of our citizens of piscatorial tastes if permitted to indulge, if only occasionally, in the sport of angling in the waters of the lake under the most stringent rules and regulations to be prescribed by the Park Commissioners." The resolution concludes with a request to the Department of Parks to "take into consideration the propriety of permitting residents of this city only to take fish by angling from the waters of the large lake in the Central Park near the Casino, and to report the result of their deliberations to this board as soon as possible."

A vote was then taken, but the resolution was lost. A motion to reconsider, however, was carried, so that the matter can be again brought up.

RICHMOND VALLEY, S. I.—Any one desiring a good day's fishing can have it here. The fishing never was better than at present. Take boats at foot of Whitehall street at 6, 7, 9, and 11 A. M., or 1, 4, 5, 6, and 7 P. M. Stage at depot.

—The Crossmon House is evidently taking the lead at Alexandria Bay this year. The proprietors are very much gratified with their business thus far this season. Already they have over a hundred boarders, and letters asking for accommodations during the last of the present month and the first of next, are being received daily. Summer visitors to the St. Lawrence are fast learning that the Crossmon cannot be excelled for comfort. Messrs. Crossmon & Son have reduced the art of conducting a first-class hotel to a science.—*Watertown, N. Y., Daily Times.*

—Correspondent G. W. D., July 8; writes us of the fine trout fishing to be found in the wilds of Forest, Elk and Jefferson counties, Pennsylvania, which are reached by wagon from Brookville, on the Red Bank Junction of the A. V. Railroad, along which the scenery is spoken of as being very charming and romantic. A good hotel, called the Central Hotel, will be found. At Brookville a wagon can be hired to take the visitor to Marion, which lies in Forest county. The road crosses the Clarion River at the old village of Clarington, "noted for its good bass and pike fishing." Col. Hunt keeps a good tavern at Marion, within easy distance of which place are three good trout streams called the Big and Little Salmon and Millstone Creek. Our correspondent and several friends tried all the streams and caught 105 fish the first day, but quite small in size. The next day two rods took 120. The opinion of our friend is that all the streams in the counties named are fished too much, and ought to be rested for two or three years. He adds that deer and bear hunting will be excellent next fall.

TROUT NOTES FROM STAUNTON, VA.—I am moved to write to you once more, even at the risk of being tiresome, by the quantity of trouting news that has been rife among us since my last. Our trout, as I have remarked before, are small, but they are almost innumerable. Out of one stream near this place (20 miles) there were taken by two rods in a day and a half 392; out of another—Ramsay's Draft—there have been, as known to me, since the first of April, over one thousand taken, and how many more may have met the same fate is, of course, unknown. These fish were all small, running from six to eleven inches. I wish you could see the "Ramsay's Draft;" it is nearly ten miles from its source to the cultivated land, where it ceases to be a trout brook. All this distance it flows through a narrow gorge, between lofty mountains clothed in maple, ash, fragrant pine and hemlock. Unlike the generality of mountain streams, its bed is not rocky; neither does it flow through laurel, the harbor for rattlesnakes and bane o' jointed rods and delicate tackle. For one who does not like to run rheumatic risks by wading, there is good sport to be had picking the way along the banks. The skill of the scientific fly-fisher is not required, but a light, ten-foot rod, as many feet of good sea-grass, a box of the much despised angle worm and a big basket is all one needs; and, with such equipment, and a little knowledge of trout, to the fisher who will come in April or May to this stream, we will guarantee a full basket.

Twelve miles westward from where Ramsay's Draft touches the foot of the Shenandoah mountain, is the hamlet of Mc-Do well, running past which, under a quaint-looking old bridge shaded with tall sycamores, is the fierce and brawling little "Bull-pasture;" and wherever on its banks a large spring can be found emptying—and there are many—there you will find the brook trout. Not such as those I have just spoken of as being taken in Ramsay's Draft, but stately, old, "mossy-backed" fellows, whose power and weight will try the strength of the best tackle, and the skill of the most scientific angler. I saw one of them two weeks ago, fifteen and three-quarter inches long, lying on a silver salver, flanked on either side, by one of twelve inches, giving symmetry to the picture, which lacked no other element of beauty. These three were caught in one of the deep blue pools of the Bull-pasture, at a point where a spring rises in the bottom of the stream. The bait used was a minnow or a fingerling trout, cut into strips and plaited on the hook as we fix the red angle-worm. These big fellows are a distraction to the dwellers in the mountains, as well as to all bait fishermen. There is only one certain way of taking them, and that is the fly. I saw a ludicrous example of this in the summer of 1874, while making a pedestrian tour, with a comrade, through Blackwater and Cheat counties. It was late in August, and the trout, numerous as they are in that country, could not be taken with live bait of any kind. My comrade and self were fishing down the Dry Fork of Cheat, a noble stream that flows along the western base of the main Alleghany chain, using the Montreal with a red hackle for a dropper, and catching rather more fish than we knew what to do with, when, late in the evening, we came upon an old mountaineer, sitting at the head of a lovely pool, fishing away for dear life. He had been hard at work for some three hours, he told us, and had but one trout, one sucker, and a small fall fish. We came plunging down the rough mountain spur that jutted into the stream so closely as to force us to climb, waded the ripple to our ancient fisherman, whipping the pool as we crossed, landing three fine trout each. Such astonishment as was depicted on the old fellow's countenance, was rare to see. "What sort o' bait you got, mister?" was his question. We showed him the collar, when he gave vent to an exclamation more remarkable for terseness of expression than piety, wrapped his line on his pole, put on his brogans and struck for home. I have had this experience repeated several times, and the result has ever been the same. From all these things, you can see that while our trout fishing in the Shenandoah country lacks the grandeur of the same sport in the Rangeley Lakes and the North Woods, still it is not to be despised, especially as it is attended with much less expense, and one does not need to deliver himself to the tender mercies of the ravenous musquito and terrific black gnat. At night, unmolested by these scourges of the northern trouting country, you can sit as peacefully as may be around your heap of smouldering logs, smoking your pipe, listening to the wierd music of the whip poor-will, the hollow roaring of the trout brook, or the yarns of your brother campers, anon getting up to cook just one more fish as your appetite gives you a parting reminder, or to refresh yourself with a small decoction of cold water, sugar and anything else you may have handy. These are pleasant things; and they are things that happen to most of the sportsmen in the Shenandoah Valley not unfrequently. They are going to happen to some six of us week after next (June 25) up in the valley of the Cowpasture—another of those Euphonious names—and if you like I will send the particulars; or, if you ever throw a line in bright waters, come down and go with us. We will give you a hearty old Virginia welcome, and show you fine sport. ASA.

MIDSUMMER ANGLING FOR TROUT WITH WORMS.—Providence has so regulated the laws of nature that trout take the fly best in March, April and May; the minnow best in May, especially in the evenings, and the worm best in June and July, returning again to the fly in the months of August and September. At least this is the case generally throughout North Britain. In June and July, the fish having been fattened by the flies of May, are in the best condition, and then the larger sized among them look with contempt on flies; they are too fat and lazy to trouble themselves about such small morsels, but will eagerly seize a goodly worm, if offered, as it provides them with a meal in an easy manner. Now, nothing will ever persuade me that when Providence has thus fattened the larger trout, it is to be supposed that they should then be left uncaptured to die a natural death, and so be lost to the food supplies of the nation. Rather, the presumption is that they are then meant to be captured, when they have attained full size and are in excellent condition. To do this effectively and extensively in June and July, the best means is clear water is with worm. Give up the old-fashioned single hook, and use a Stuart tackle, mounted on very fine gut. Next must come three or four lengths of thick gut, and then the reel line, so that a proper gradation of thickness may be obtained; for, note, that in casting with worm the throw must be made as delicately as in fishing with fly. Your rod must be 13 feet 9 inches or 14 feet long, and your line fine; the worms well secured, and tough, of a pale pink or flesh color, which are the toughest colors. Toughness I insist upon, as a long line must often be thrown, and that occasionally against the wind.

Take the case of two anglers out for a day's fishing in July, one preferring the fly and the other using worm. The morning is warm, the water low and clear, myriads of insects are afloat, and the fly-fisher has to contend against their attractions. He fishes the streams, we will say, carefully, and at least captures a dozen trout, all of which are small, and by noon not another fish is to be had. The worm-fisher, on the other hand, essaying first at the bottom of the rough streams, walks upward, casting his lure first to the edge of the stream nearest to him, where the water is partially quiet, then to the quiet water immediately beyond the stream, but still in the current, and lastly in the rough stream itself. Where the eddies are rough and deep a larger worm than usual must be employed. The worm-fisher meets his comrade at noon with two dozen and a half trout of good size. I am speaking, mind, of our border and Scotch waters, not of the much-fished English rivers. Luncheon is now eaten, while the fish are not feeding, a pipe is smoked, with a chat over old friends and other days, or a walk is taken to look at the beautiful wild flowers and plants peculiar to gravel beds. In some of the Scottish rivers, as for instance, the Tay, the large mussels may be searched for pearls, pebbles picked up, or the geological features of the river explored. The true angler is generally fond of all branches of natural knowledge. So the time passes until 2 o'clock, and now commences the real test between fly and worm. The afternoon generally brings a slight breeze, without which the fly-fisher could do nothing, for the bulk of the fish have left the streams, and are swimming in shoals about the shallow pools, lazily enjoying the sunshine. Six o'clock finds the fly-fisher with half a dozen more small fish; possible, if lucky, he may have one or two of good size.

Now mark the procedure of the worm-fisher, equipped as I have described him. He looks out for a long stretch of shallow water still to the eye, but really having a gentle current flowing through it. Here he places his back closely amongst the bushes, which frequently line the bank, so as to throw his person into shade. Next he casts a line of from twenty to twenty-four feet straight up the river, then straight up the centre of the river in the current, and, lastly, far over to the other side of the river. A slight breeze, we will suppose, curls the surface, and the water varies from six to twelve inches in depth. Soon the worm is quickly seized by the best fish in the shoal, and a very gentle turn of the angler's wrist fixes the hook. This done, the angler draws his quarry very gently toward him, allowing the fish to swim about as naturally as possible; and, as the shoal of fish will almost always have their heads directed up stream, the fish, with a little care, may be drawn to the angler's feet without alarming the others—and so fish after fish may be taken without moving a yard. Next the fisherman moves onward two or three steps, and casts his line in similar style. Let him wade very quietly so as to disturb the water as little as possible, and by casting lightly to a good distance, by six o'clock he ought to have taken three or four dozens of fine fish. The two baskets when compared will show five or six pounds in weight gained by the worm for one gained by the fly, and the fish taken in the former manner are generally much larger. Now, Pelagius, this sketch is no dream. I am not given to boast about my doings, but a friend tells me that he has taken this amount of fish hundreds of times by worm-fishing in this fashion during June and July in the Scotch and Border streams. Of course all days in these months are not hot, neither are all windy; but rely upon it that there is no day in these months on which the angler with worm will not fill a much heavier basket than is possible for the fly-fisher.—*Bell's Life.*

The remarks of our English contemporary apply also to American waters with slight variation as to season (which may be said to extend from July 1st to August 20th), and exceptions as to high latitudes, where the month of June is the best of all for fly-fishing—notably in the Nepigon River, on the north shore of Lake Superior. As to worm-fishing up stream or down, a good rule to observe would be, not to fish against the wind under any circumstances, if it can be avoided; otherwise, the wind being favorable, to fish down stream, if the current be swift, and up stream if it be sluggish. As between worm-fishing up stream and fly-fishing up stream, the former would be preferable.

—Mr. Henry Dyer has been testing one of Capt. White's Air Beds, upon which he drifted complacently for fourteen hours about Long Island Sound, when he was picked up by a passing schooner and taken to New Haven. The advantage of this bed is that it answers equally well on land and water. If blown up on a steamboat on the ocean, or a tornado on land, it is all the same, as long as the occupant keeps the bed under him.

SPLIT BAMBOO RODS.

To Our Customers and the Public: In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
—[*Adv.* Manufacturers, 65 Fulton Street, N. Y.

Yachting and Boating.

LONG ISLAND YACHT CLUB.—The Long Island Yacht Club held their annual regatta July 16, the course for three classes being from off the club-house, foot of Thirty-seventh street, Brooklyn, to and around Robbin's reef buoy, thence to and around Fort Lafayette, and back to the place of departure—a distance of ten miles—to be sailed over twice. The cat-boats sailed six miles over twice. We have space for only a summary:

CABIN SLOOPS.

	Start.	Finish.	Elapsed Time.	Corrected Time.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Reveille	1 46 26	5 33 10	3 46 34	3 46 34
Emma B	1 46 09	5 51 02	4 04 53	3 55 53
Admiral Rowan	1 46 41	5 45 03	3 58 22	3 53 02

FIRST-CLASS OPEN SLOOP.

Let Her Be	1 48 31	5 25 12	3 36 41	3 23 01
Susie S	1 55 14	5 29 31	3 24 57	3 24 57
C. M. Fell	1 49 57	5 34 09	3 44 12	3 37 32
Fannie K	1 48 44	5 51 24	4 02 50	3 56 10
Artful Dodger	1 48 57	5 48 54	3 59 57	3 54 07
Martha Munn	1 54 20	5 29 31	3 35 11	3 29 31

SECOND-CLASS SLOOPS.

Faith	1 58 02	5 48 57	4 00 55	3 59 30
Au Revoir	1 55 53	5 49 02	3 41 09	3 41 09

CAT-RIGGED BOATS.

Only Daughter	2 02 09	4 05 27	2 03 18	2 03 08
Kate Jordemon	2 02 00	4 06 11	2 04 11	2 01 11
Hi Pi	2 02 28	Withdrawn on first turn.		

Thus the Reveille won in the cabin sloops, beating the Emma B. 6m. 28s. In the first-class open boats the Susie S. won, beating the Martha Munn 4m. 34s. In the second-class open boats the Au Revoir won, beating the Faith 18m. 21s., and in the cat-boat class the Hi Pi wins, beating the Only Daughter 1m. 03s. The champion pennant is won by the Susie S. as the first yacht in. The breeze was in every respect favorable.

NEWBURGH YACHT CLUB.—For the Newburgh Bay regatta, which takes place August 1, four classes are open for yachts. The first is free to all open yachts over 26 feet in length, the second to all between 22 and 26 feet in length, and the third class to all under 22 feet in length; the fourth class is for all cabin yachts or yachts with working sails. All those entered in the first three named classes are restricted to single jib and mainsail; also open sloop rigged yachts entered in the fourth class will not be allowed a main boom which exceeds the length of the boat by over four feet.

The first prizes in the first, second and third classes are $75, $50 and $30 respectively; the second prizes of these classes will be pieces of silver plate.

The prize in the fourth class (only one being offered in this class), will be a piece of silver plate also.

Two minutes to the foot, water line measurement, will be the time allowance.

The rules of the Brooklyn Yacht Club will govern the race.

Entries—no fee being required—may be made to Mr. James Sloan, of Newburgh, as late as the 31st of the present month.

A purse of $150 is also offered to the yacht making the fastest corrected time over the course. H. F. S.

DORCHESTER YACHT CLUB.—This club held a regatta at Marblehead, July 14th. The race was very unsatisfactory, the wind being so light that none of the first class keel boats were able to sail over the course in the given time of four hours. Almost immediately after the start—2 P. M.—the second class centre-board sloops were sent off. Of these but one, the Nettie, succeeded in sailing the course.

In the third class, also centre-board sloops, the Druid came in first; but the adjudication of prizes was deferred on the claim of the Helen for a foul

DUXBURY YACHT CLUB—*Duxbury, Mass., July* 13.—Outside entries comprised boats of the Boston, South Boston, Dorchester, Lynn and Nahasset Yacht Clubs. Distance for first-class yachts, eight miles; for second and third classes, six miles. A flying start was made for each class. There were two silver prizes for each class. The following is a summary:

Name.	Owner.	Actual time.	Corrected time.
Maggie	E. C. Neal	1.54.45	1.12.34
Posy	F. C. Hersey	1.42.24	1.39
Idle Hour	A. H. Keith	1.54.03	1.25.32

Gladiator	Isaac Simmons	2.17.45	1.49.41

A pleasant feature of the day was the dedication of the new club house at Warner's wharf.

NEWPORT YACHT CLUB.—July 12th at Newport; course from Long Wharf to Bienton Reef and return; four entries—Sappho, Verona, Titania and Minnie. The Sappho won in 3 h. 9 m.

POTOMAC YACHT CLUB—*Washington, D. C., July* 12.—Twenty mile race for the championship, between the favorite yachts, Americus and Ella Treadwell, the latter a winner by a long lead.

MONTREAL.—The race for the championship of the Montreal Yacht Club took place on Saturday afternoon, July 7th, at Longueuil. There were seven yachts started. The Waterwitch had the lead at the first buoy by seven minutes, which she kept till the end, with the exception of a brush on the home stretch. The trophy is a very handsome blue silk flag, with M. Y. C., and an anchor worked in the centre.—*Montreal Star.*

NOVEL CRAFT.—A little steamboat has arrived at New York from Baltimore which was propelled the entire distance between the two cities without wheel or screw. She is called the Alpha, and in outward appearance resembles the tug-boats which ply in the harbor. Her length is forty-three feet, beam ten and a half feet, and depth about eight feet. She is supplied with a sixteen-horse power tubular boiler, which drives a pump. From the pump to the stern and bow of the vessel are two lines of pipe which strike the water about three feet below the surface. The pump drives through each pipe a two and a half inch stream, which enters the water through a seven eighth inch nozzle. With sixty pounds of steam the pump makes one hundred and eighty strokes a minute, each stroke driving a stream into the outer body of water. The invention is the result of many years of study, and it is asserted that it can be applied to ocean steamships with success. In moving through the water there is no ripple astern, and but slight displacement perceptible except at the bow. By shutting off the discharge from the stern pipes and forcing the water through the bow pipes the boat is backed, and by using one bow and one stern pipe she can be turned in her own length. The propelling power can also be used to steer the boat, the nozzle being used alternately as levers on the principle of the oar. The boat consumes but a quarter of a ton of coal per day, and is considered to be well adapted for use on the canals.

THE COUNTESS OF DUFFERIN.—Commodore Gifford, one of the owners, has arrived from Canada, and proposes to remove this vessel from the basin at Stapleton, taking her home to Canada. She is now being fitted out.

THE GREENWOOD LAKE RACE.—Courtney who was to have rowed a match with Riley, July 14, on Greenwood Lake, N. Y., became very sick immediately after taking a glass of iced tea after his dinner, and was unable to row. It is alleged that the tea was poisoned at the instigation of gamblers. Riley rowed over the course alone, making the three miles in 20 m. 47½ s., pronounced the shortest time on record. As Courtney did not start, all bets, except those on Riley's time, are declared off.

It seems hardly probable that the tea was drugged. Cheap green teas contain more or less poisonous matter, to which they owe their color, notably sulphate of copper. To a person in training and also suffering from the heat, such teas, particularly if drank hastily, often cause excessive and prostrating nausea; and the symptoms, so far as we can learn them, point strongly to this agency. If the tea was drugged, it is likely that this irritant—"blue vitriol"—was the agency used. We do not like to entertain suspicions of foul play knowing the good character of all the principals to the malad, venture.—ED]

BAYONNE REGATTA.—The Viking Rowing Association opened their new boat house by a regatta, July 14th. The first course being three-fourths of a mile and return.

1st Race.—Single sculls, won by Elliott in 10 m. 57 s.; this was virtually a "walk over," as early in the race Duncan broke an outrigger.

2d Race.—This was a four-oared race for a silver challenge plate, and was competed for by gig and barge. The gig won in 9 m. 38½ s.

3d Race.—Single sculls for gold badge, won by Cook, in 10 m. 29 s., Danagh fainting after rounding the stake.

4th Race.—This was a scrub race between the barge and the gig, the former winning. No time taken.

ARLINGTON BOAT CLUB.—Sea Cliff, L. I., July 12; course 1½ mile, with a turn. Summary:

Senior Single Sculls.—Frank Pidgeon, 1; George Thomas, 2; J. B. White, 3. Pidgeon won by five lengths in 8 m. 5 s.

Junior Single Sculls.—William Rexter, 8 m. 40 s.; J. Hutchinson, 8 m. 45 s.; B. F. Briggs, time not taken. Rexter won by two lengths.

Pair-Oared Gigs.—Two trial heats were rowed, and the third was postponed, owing to the lateness of the hour. In the first heat the crews were H. Buttman and J. Rods, with J. P. Valentine as coxswain, and J. Hutchinson and J. H. Brinkman, with Geo. Brighton coxswain. Won by the Hutchinson crew in 9 m. 35 s. Second heat—J. B. White and F. Pidgeon, with Geo. H. Cushman, coxswain, and Wm. Rexter and B. F. Briggs, with George Lucas, coxswain. White crew won by a length; time, 8 m. 28 s.

Four-Oared Shells.—Three boats started, with the following result at finish: 1. Harry Moore, 7 m. 18 s.; 2. C. A. Girdler, 7 m. 35 s.; 3. D. Leary, time not taken.

PALISADE BOAT CLUB—*Yonkers, July* 13.—Handicap single-scull race for a gold medal; five entries; course, two miles straight-away. Race close between Shaw (15 s.) and Jackson, the former winning by about a length. Time, 13 m. 40 s.

CARMANSVILLE, 152d Street.—The Carmansville Rowing Association held its summer regatta, July 14th, and opened with a race for four-oared gigs, the course being from the club house (152d street) to a stake boat anchored off Fort Washington, and return. Time 7 m. 10 s.

2d Race.—For eight-oared barges, one mile dash from Fort Washington down. Time 4 m. 54 s.

3d Race.—Three heats between pair-oared gigs; won by Messrs. Knapp and Cushing, making the mile in 6 m.

4th Race.—Mile dash in single sculls; won by Mr. Wilson in 7 m. 10 s.

SAN FRANCISCO, *July* 4.—Single scull race, distance 2½ miles. Entries: E. Nelson, D. Leahy, A. Stephenson. Nelson won in 25½ min., Leahy second.

Third-class four-oared shells. Entries: Ariel crew—A. Rogers, F. Smith, E. Flanders, L. Stephenson; Neptune crew—C. Lynch, P. Hayes, G. Bogart, L. Booba; Pioneers—J. Sullivan, D. Leahy, P. Harrington, J. E. Brennan. Ariels won in 24½ min., Neptunes second.

First-class four-oared shells. Entries: Neptunes—A. Stephenson, D. Morris, C. West, M. Daly; Pioneers—P. Brennan, E. Nelson, M. Sullivan, M. Long; California Theatre Club—T. Gausman, J. Winters, J. Romer, T. Harrington. Pioneers won in 23½ min., Californias second.

Five-oared and six-oared barges. Five entries. Pioneers won in 27 min., Californias second.

National Pastimes.

CRICKET.—The Peninsular Club, of Detroit, on their annual Canadian tour, played their first match at Toronto, July 9. The scores were: Peninsular, 44 and 63; Torontos, 52 and 55. July 11th they met the local club at Paris, whom they defeated by a single inning, scoring 113, Paris scored 42 and 40. The fourth and last match held at London, Ont., July 12th, the Peninsulars were the winners, scoring 95 at one inning, London scored 27 and 35.

The second match was not sent us by our correspondent, nor were we informed where it took place, though we understand the Peninsulars were beaten.

—The American cricketers of the Longwood Club of Boston visited Staten Island, July 16, and played the Staten Island Club a four-inning game, the result of which was a creditable victory for Boston, with six wickets to spare.

GERMANTOWN VS ST. GEORGE—*Hoboken, N. J., July* 14.—Won by the former, with a score of 150 to 99, as follows:

POLO.—The game of polo seems to be increasing in popularity. A game was played at Newport, R. I., July 13, on the grounds of the Westchester Club. On the 12th a game was played at the Driving Park at Buffalo, N. Y., by the Polo Club of that city. We understand that clubs are forming in Detroit, Chicago, Cincinnati, and other Western cities.

—Professor Cavill, the English swimmer, proposes to swim across the channel, a feat which he has already attempted. As a preliminary trial he swam in the Thames, July 27, from London Bridge to Ballast Wharf, Greenlithe, a distance of over 20¼ miles, in five hours and four minutes.

CANADA.—*Ottawa, July* 2.—Two mile foot race for a gold medal or $20 to first, and silver medal or $10 to second. Entries—John Albertie, John Raine and the Indian Daillebout. Raine won by twenty yards in 10:23. One mile race for gold medal to first and silver medal to second. Entries—Parrington, Daillebout, White Eagle, Raine, Irvine, Paul Laramie, Thos. Ross, Albertie, E. O'Brien and John French. O'Brien won by only a few inches in 4:30; White Eagle second.

New Publications.

THE POCKET GEOLOGIST AND BOOK OF MINERALS. By Fred. H. Smith. Baltimore: Sun Book and Job Printing Establishment.

This small pamphlet contains in a convenient form an outline of all the essentials of geology, and will be found of value to the student or professional. The text is written in a clear, condensed style, compressing a great amount of valuable matter into the smallest possible compass, and thereby meeting the demand for a pocket manual, which shall be complete in scope, while handy in size and form.

"MY HOME IN FLORIDA" is the title of a little pamphlet written by Rev. C. G. Selleck, of New Smyrna, and gives the experience of the author in seeking and finding a home among the orange groves. The quiet picture of Florida life as here portrayed is certainly pleasant to contemplate, and the evident sincerity and common sense of the writer inspire belief in his statements. There are many useful hints and much valuable information, which will be of benefit to intending Florida immigrants. The book is published by the Florida Star Co, New Smyrna, Fla. Price 35 cents.

THE PROCEEDINGS OF THE PROVINCE OF QUEBEC RIFLE ASSOCIATION FOR 1876 makes a neat little pamphlet, and the report shows that "the work of the association has been carried on efficiently and successfully, and that the interest in our prize meetings is on the increase." The full scores for the eighth annual prize meeting held at the Point St. Charles ranges in August last are given. The Quebec men stand willing to co-operate with the Dominion Rifle Association in sending a team to Creedmoor next fall, but whether any step have been taken we have not yet heard.

In *Lippincott's* Lady Blanche Murphy continues her pleasant description of a tour "Down the Rhine." This and "Edinburgh Jottings," by A. S. Gibbs, are the illustrated articles of the number. Rebecca Harding Davis begins a new story entitled "A Law Unto Herself," and there are several other stories and sketches of interest. The Monthly Gossip has a sketch descriptive of the modes of disposing of the Paris dead, which, notwithstanding its somewhat unattractive title, is treated in a decidedly readable way.

The current number of *Fur, Fin and Feather* is fully up to the usual standard of excellence attained by that useful publication. The latest corrections and alterations in the game laws are given with the usual compendium of entertaining matter on a variety of subjects.

The *Popular Science Monthly* opens with the second and last paper of the series, by Spenser, "On the Evolution of the Family." The "Tides" are discussed by Prof. Schneider, and there is an important paper on "Ground-Air in its Hygienic Relations." "The Discovery of the Circulation of the Blood" is reviewed by Dr. G. J. Fisher. Dr. Paul Bert talks on "Atmospheric Pressure and Life," and there are papers on the "Material Resources of Life," "The Zodiacal Light," and other subjects. The department devoted to Correspondence, and that of Popular Miscellany are occupied by a variety of important topics and valuable discussions.

St. Nicholas is eminently a Fourth of July number. "Gunpowder" is treated of by an ex-officer of the U. S. Army; Mrs. Lucretia P. Hale has one of her lively "Peterkin" papers, telling us how "The Peterkins" Celebrated the Fourth," and "A Boy's Life on a Man-of-war" is described by a naval officer. Noah Brooks has an entertaining sketch of George the Third, and Susan Archer Weiss contributes the leading paper on "Nellie in the Lighthouse," which will be of interest to old as well as young. Ernest Ingersoll concludes his interesting articles on "Wild Mice and their Ways." Sandford B. Hunt writes a seasonable article on swimming, and under the title of "Going a-Gypsying," John H. Pulgrs gives directions on camping out. There are many other excellent contributions in prose and verse, making this an admirable number of a magazine which has no rival in the world.

The Pennsylvania Railroad has published an elaborately prepared pamphlet, descriptive of its numerous and famous summer excursion routes. This road is noted not less for the perfection of its equipments than for the romantic natural scenery which everywhere greets the tourist. Those who are debating where to spend a short vacation in the summer, should avail themselves of the full information here given, and then if amid the numberless attractive excursions enumerated, they are still in perplexity we shall not wonder. The circular may be obtained at any of the company's offices.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

Scribner's opens with an illustrated article on "Bow Shooting," by Maurice Thompson. This interesting subject is treated not as we might expect from an antiquarian, but from a practical standpoint, embodying the writer's own experiences in the shooting districts of Florida and other parts of the country. A large space is devoted to a story of Russian life, "The Woodman of the Steppe," by Tourguénieff. "The Last Indian Council of the Genesee" is well described by David Gray. "Richmond Since the War" is treated of by R. W. Wright, and the "Battle of Bunkerhill," not generally given in the histories, is graphically described by W. H. Bishop. "The Mormon Theocracy" is described by J. H. Beadle," and "The Nether Side of Life Insurance" by James Wicks. There are an addition to these a score of other topics, which combine to furnish most excellent reading for this summer season.

NOW READY,

THE

Sportsman's Gazetteer

AND

GENERAL GUIDE.

WITH MAPS AND ILLUSTRATIONS, 850 pp., Price, $3.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM;" AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST and STREAM" PUBLISHING COMPANY.

1,000 Copies Sold in Advance of Publication.

The book is a complete manual for sportsmen:

It gives every sportsman alike method for capturing every known game animal, bird and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the kind of accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)

It gives the scientific name and specific characteristics of each species it describes, with the *habitat* and breeding habits of each—a most valuable contribution to science.

It describes 297 varieties of edible fish alone, that may be taken with the hook; 50 varieties of ducks, 50 varieties of snipe or waders, and the different methods of shooting each.

Its instructions for capturing large game are very minute, and the chapters on woodcraft, outfitting and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and his points for bench judgments fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.

Every scientific portion of the work has passed the inspection of an officer of the Smithsonian Institution.

It contains very useful recipes and remedies for wounds, bites, poisons, illness, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat, and every sportsmen's rafe once list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.

It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

ENDORSEMENTS.

"I can judge from your advanced sheets that your book will be a *rade mecum*, invaluable to sportsmen."—*Dr. H. C. Yarrow, U. S. A. Smithsonian Institution.*

"Your forthcoming book will indeed be a treasure. The labor it necessitated must have been immense."—*S. C. Clarke, Jamaica Plains, Mass.*

"Having examined the proof sheets of your forthcoming book, I predict an extraordinary sale."—*G. Bird Grinnell, Peabody Museum, Yale College.*

"That portion of your book relating to woodcraft, outfitting, camping, etc., is simply complete. I can scarcely add anything."—*H. M. Mitchell ("El Cazador"), Los Angeles, California.*

"Your book is much needed, and I have every confidence that you are capable of covering the whole ground. We need something more recent than Frank Forester."—*D. C. Estes, M. D., Lake City, Minnesota.*

"The Bermudas."

NOW A FAVORITE AND DELIGHTFUL WINTER RESORT, is reached in seventy hours from New York, and being surrounded by the warm waters of the Gulf Stream enjoys an equable temperature of about 70 deg.

The elegant British Steamships "Bermuda," and "Canima," 1,000 tons, fitted expressly for the passenger travel, are dispatched from New York for Bermuda fortnightly, making connection at Bermuda with steamers for St. Thomas and West Indies. For full information apply to A. E. OUTERBRIDGE, Agent, 29 Broadway, N. Y. Dec 21 1y.

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
OF NORTHERN MICHIGAN, VIA
Grand Rapids and Indiana Railroad.
(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike** and **Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as **ice for packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in counties new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

J. H. PAGE, G. P. & T. A., Grand Rapids, Mich.

Gunpowder.

NEW YORK, July 10, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Please say, for the information of some of my friends who may be misled by current statements, that I am still on the same powder for all out-door shooting, which I have used for several years past, never having risked the use of the nitrated powders except when shooting in a confined space in-doors, when the smoke from any regular powder would produce a smell rather offensive to some people, and cause somewhat greater obstruction to vision.

CAPT. A. H. BOGARDUS,

Champion Wing Shot of the World.

SEND FOR DESCRIPTIVE CIRCULAR.

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

All goods sent, charges paid, to any address on receipt of price. Address

SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the **Judges** in their **Report**, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.'S** exhibit **as the best Instruments** at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS RANK.**

This Medal and Award was granted after the most severe competition of the best makers, before one of the **most competent juries** ever assembled.

New styles and prices just issued, which are in accordance with our rule, the **BEST ORGANS** for the least money.

We are prepared to appoint a few new Agents.

Illustrated Catalogues mailed, postpaid, upon application to

W. & C. SCOTT & SONS.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent-Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.

[Extract from FOREST AND STREAM, New York, December 28, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

Paper and Metallic Shells

FOR

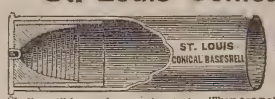
Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.



THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2⅝, 2¾, and 3 inches; No. 12—2½, 2⅝, and 2¾ inches. Longer Shells will be made at extra cost. They are not malliable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.

Factory and office, No. 2,239 De Kalb street, St. Louis, Mo.

LEGEND OF YOSEMITE VALLEY.

IT is only a legend—a wild, strange tale
That may fade with the vanishing Indian trail—
The trail that the ancient Aztecs trod
To the northern shrine of an Aztec god.

The trail still stretches, but dimly seen,
From the prairie brown to the uplands green;
From uplands green to the mountains white
It is visible still to the Indian's sight,
And Indians murmur in native rhyme
Of Aztec rites in the olden time.

Yosemite canyons still bear trace
Of mystic marks of a former race—
Of a race that has faded and left no sign
But the legend told in this tale of mine.
And a few wierd marks on the canyon's side
That gathering lichens dimly hide.

The Aztecs came by the southern trail
To the Vernal Fall and the Bridal Veil,
From the Tlascalan Temples and Aztec fanes
That moulder now on the southern plains;
From the sun-god's throne to the star-king's bed
In the miracle vale of the bright Merced.

And the Indians gazed on the cortege small,
Passing up through a rift in the canyon wall;
And they heard the peal of the Aztec bell,
The drumbeat's throb and the trumpet's swell;
And they saw the deeds which were done below,
And they heard the shrieks in the mountain snow,
And they fled, like deer from a forest flame,
When the Tlascalan priests and their cortege came:
Three filleted priests with sun-king's bands,
Plumed, jeweled and stained by an Inca's hands;
Three innocent virgins borne to bleed,
To suffer and die by a Pagan creed—
A sturdy band of the Inca's braves,
A toiling throng of the Inca's slaves.

They slowly file from the canyon's gloom,
And wearily climb to the highest dome;
And the Indians say that the victims' shrieks
Still echo at night through the mountain peaks.

Two on the mountain and one below,
One by the river and two in the snow,
Cometh sullenly, sweeping, a vapor gray,
And encircles the peak where the virgins lay.

In Yosemite's valley still grimly stands
An altar chiseled by human hands;
The lichen has burnished the cruel stains
Of virgin blood from virgin veins,
And richer and greener the mosses cling,
To the cromlech stone of the Pagan king.

Were Druid rites of the distant East
Held here, of old, by the Aztec priests?
The convex stone and the sculptured wall,
And the perishing Indian tale are all;
Are all that are, till a poet's strain
Shall awaken the past to the world again.

—*San Joaquin Valley Argus.*

For Forest and Stream and Rod and Gun.

The Heart of the Nation.

EXPERIENCES IN MISSOURI—REMINISCENCES OF ANTE-BELLUM DAYS—HOMES FOR SPORTSMEN—THE METROPOLIS OF THE SOUTHWEST.

LATE in the night of a stormy, blustering April day of the present year, the westward-bound train, on the Mo. Pacific R. R. from St. Louis, packed with legislators, lobbyists, emigrants and the omnipresent commercial traveler, rushed shrieking into the depot at Jefferson City, the capital of Missouri. There were a few pleasure seekers aboard the train, but not many; for at this season of the year there are few pleasures to be found in travel, and they are to be sought for in the woods and along the river bottoms. But the number of enthusiasts who shoulder their guns and pack their "grip sacks" with the wardrobe necessary for a ducking expedition, are not by any means named legion. Our sleeping coach was detached from the train, and run upon a siding, while the remaining cars thundered onward in their westward course, leaving us to quietly sleep away the balance of the night, with the mighty Missouri rolling by on the one side, and the silent city reposing on the bluffs above. The genial rays of the early sun streamed in through the narrow windows of our nomadic lodging house, and our eyes were opened upon daylight and a due realization of the stomach's wants. The appreciation of the first was glorious after the satisfaction of the latter. Daybreak had dispelled darkness. All signs of the storm were dissipated, and the generous *menu* of the Madison soon appeased the gastronomic cravings. Two years had been reeled off into the lap of time since last I had visited the place.

The prosaic city of Jefferson is spread over the irregular line of bluffs which seemingly have drifted in from the westward during past ages, and terminated a somewhat uncertain prehistoric journey upon the south bank of the "Big Muddy." History informs us, in a traditional manner, that Rome was built on seven hills. Missouri's capital "sees" that, and goes fifty better. Real estate here, in the shape of building lots, is somewhat a delusion. One can never know where to look for a sewer line, whether in mid-heaven or deep in the recesses of the earth. It is not infrequent that denudations of the hilltops occur, and a cottage that once reposed upon a pinnacle may be found, after the phenomenon of a land slide, projected downward upon a cherished lawn beneath. But they are a patient people, the dwellers of Cole county, and, unlike Mark Twain's hero of the Sierras, they never find this state of affairs growing monotonous. There is to be found hereabouts scarcely any vestige of former greatness, such as mouldering castles, Cardiff giants and Aztec mummies; you find no traces of antique splendor and no musty chronicles of mighty deeds done by mighty men with lance and sword. No poetic legends cling around ivy-grown ruins, gloomy and grand. True, there stands upon one of the highest bluffs overhanging the turbid waters of the Missouri that dismal architectural affectation, which the present Missourian's grandfather conceived and dedicated, some time in the early part of the present century, to the use of a law making people, which might be excepted and rendered classic—placed at the disposal of the relic hunter and his Vandal hammer. The Capitol is the hub around which everything in its vicinity revolves. Paradoxical as it may appear, every person's face is turned Capitolward, while the buildings all present their rear gables. Within the limit of space, as prescribed by the corporate bounds of the city, lies the Capitol's great satellite, the penitentiary, whose influence is felt throughout the plane of the State's social and political elliptic; and it is no mean adjunct to the local census. The enumeration of the indigent unfortunates who are forced through circumstances, referable to sundry unpleasantnesses, to take up a temporary abode and accept, with becoming humility, the munificence which a bountiful commonwealth extends to them, must increase the city's population at least two thousand. The estimated population of Jefferson City is eight thousand. In the government of this institution the State has experimented considerably. The Legislature savants, while in session last winter, were too greatly occupied with the discussion of Retrenchment and Reform, as applicable to clerical salaries, the security of their own per diem, and the investigation of "slush takers," to give the requisite attention needed by the several charges upon the State. Many of the institutions supported by the State were left in a condition not creditable to the commonwealth of Missouri. The public-school system is good, but the folly of many States in attempting to support a University upon limited endowments is fully exemplified in Missouri. Society at the capital is very similar to that in other States, being quite brilliant, but in Missouri it is marked by an excess of democratic ease and freedom more observable than along the Atlantic coast. The ladies one meets here are intelligent and beautiful—rich types of perfect womanhood. Once every two weeks during the session of the Assembly a reception is given at the Executive Mansion. The history of the gubernatorial receptions from early days down to the present is an epitome of reminiscences dear to the heart of every Missourian. How many life destinies have been mapped out in the spacious corridors of the noble mansion! How many gay flirtations have transpired beneath the brilliant chandeliers! How many convivial assemblies of *bon vivants* have discussed the sparkling vintage of the blue grass region within those hospitable walls! What lovely women have thronged those halls, and given their exquisite presence to make a thousand hearts beat happily!

"Then all was jollity,
Feasting and mirth like wantonness and laughter,
Piping and playing, dancing and masking,
Till life fled from them like an idle dream."

Reviewing the administrations of the past, one who is acquainted with the history of the Capitol deduces the conclusion that society, during the sitting of the 29th General Assembly, more nearly approaches the select circle of *ante-bellum* days. There was a time when Jefferson City boasted of the genuine aristocracy of the South and her "high-toned southern chivalry." But the devastating hand of war changed affairs materially. Property and fortune were lost, and the population of the country unsettled and demoralized. Of late, the work of reconstruction has steadily revived society and brought it nearer to the pristine era of glory. Many anecdotes are told of the eccentricities of Missouri's free-hearted governors. One in particular I recall that was related to me by an old newspaper man:

"There was big-hearted Bob Stewart, and I tell you, Colonel (everybody gets a shoulder-piece in this country), he was one of the boys. Good wine and lovely women were his weakness; good fellowship his motto. A bright future dawned for him, but liquor got the upper hand and laid him low. He was a most convivial fellow, and when he slipped into the Governor's chair he made wild riot in the old mansion. But with all his weaknesses, he had a great heart, and there was often a fund of humor, which cropped out in singular instances. Upon one occasion, he came across a gang of convicts at work and questioned each of them in turn as to the offense committed. The first one said he had been sentenced for robbery, a crime of which he was innocent. The second one had been sent up for horse stealing, and declared his entire guiltlessness of so heinous an offense. The whole gang were suffering innocents, except one old man, whom the Governor spoke to last.

"'Well, old party, what are you in for?'

"'I stole a sheep.'

"'So, you stole a sheep, eh?'

"'Yes, sir. My family were starving, and I stole it for them to eat.'

Gov. Bob mused a moment, and then turning to his secretary, who accompanied him, said:

"'See here, make out this rascal's pardon immediately. We can't have him in the penitentiary any longer corrupting all of these innocent men.'"

I had not been in Jefferson but a few days before I met that genial sportsman, Dr. Phil. T. Miller, also Maj. J. A. Hannay, of the Versailles *Gazette*, a person of decided piscatorial proclivities; gentlemen both, with hearts that warmed toward their brethren of the rod and gun. To meet them was to dine with them. The Doctor is a strong advocate of the No. 10 moderate choke, and the Major thinks that the pleasures of the forest and stream are centred wholly in the rod, while your correspondent bases his expectations of earthly bliss in the 26-inch sporting rifle, *mais chaucon son gout*. As we tarried late over an evening dinner, a discussion arose upon the merits of our respective sports.

"I tell you," said the doctor, as he lifted a glass of the sparkling "Imperial," and marked with a critic's eye the dancing bead and play of light through the rich hyaline,—"I tell you that the only pleasure of the gentleman is to be found behind a good double gun, over well-trained dogs; and I ask nothing better than a Lefever or Scott, No. 10. I never return from shooting in the crisp, bracing air of early morning without feeling invigorated and prepared for the day's work to follow. The delightful companionship of my gun and dogs, the full game bag and the keen appreciation of a richly earned breakfast bring joy to the senses and strength to body and mind. And *apropos* of dogs, Eastern gentlemen seem to have gone wild on the subject of setters, insinuating thereby that the pointer must take second place. I prefer the pointer. I find him easier to manage and keep than the setter. He is stauncher, stands heat better, and his short, sleek coat is as a suit of mail against burrs."

"In some respects," I replied, "I quite agree with you. The gentlemen of New York and other northern States adopt the setter from many weighty reasons. He is better able to endure the rigors of the cold climate and chilly waters of the northern latitude than his thin-skinned compeer, and his shaggy coat is a safeguard against thorny underbrush. But I am not prejudiced in favor of one particular breed of dogs. I believe in both the setter

and pointer, according to the work and its location. Still, I will say that I think the pointer a more tractable animal, and, by virtue of his short hair, more cleanly around your house. I permit my dogs to invade the interior of my habitation, and find pleasure in their society."

"There I am with you," he replied. "I have too much regard for the welfare of my dogs to keep them kennel bound. In order to keep your dog in health he must have fresh air, plenty of exercise, and, above all, society. My dogs run through the house, office and yard at will, and they are never subject to disease."

"Although we agree pretty evenly upon dogs," I continued, "yet I am not the enthusiast with the shot-gun that you are. There was a time when I found no greater sport than emptying a double dose of No. 8's into a bevy of quail, but that day is past. I begin to look upon the shot-gun, with the large bores and enormous charges now universally used, as a means of indiscriminate slaughter. When you make a distinction between the man who shoots for gain and the man who follows hunting as a recreative sport, the discrimination in favor of the gentleman is one of science and accuracy. It is not true sport to send a handful of shot in thirty yards at a close flying flock of birds; nor is it, by any means, scientific shooting to launch 500 pellets at short range upon a single bird, where a difference of three feet in the line of sight does not diminish the chance of killing. I prefer my small calibre Maynard, sending a single leaden sphere where you aim it, with the chance of an alternate hit or miss. If I must use the double barreled shot-weapon, then commend me to a small calibre bored for close shooting, and increase the range and decrease the charge. But here sits the Major disconsolately toying with vacancy, and looking unutterable things at our monopoly of the conversation. Will you not favor us with an expression of your views?"

The gentleman appealed to shifted his feet to the window ledge, buried his evenly cut incisors into a fresh cigar, deliberately lighted it, sent a cloud of smoke curling above his head, and leisurely replied:

"I do not cast my predilections upon shot-gun or rifle, although I may occasionally practice with either. I am, sir, a brother of the angle. I live in clear waters, down beneath the sparkling waves, among the finny denizens of the deep—in my mind. Believing that it is only the amount of intellectual excitement we bring to bear in overcoming the inhabitants of the air and water that distinguishes our pursuit of game from the herd who kill for gain, I rely upon art to overcome superior force. I choose to exercise my skill with a single hair and delicate lancewood accompaniment as a means of enjoyment."

"Well, gentlemen," said the Doctor, as he tossed away the stump of a well-burned cigar, and noticing with admiring eyes the graceful figures of three fair Jeffersonians walking up the street, "I shall be pleased to accompany you the first of the week upon a ducking expedition up the Osage, where I promise you good sport at long or short range, and a plethoric game-bag proportionately."

Missouri is a rich State. Rich in mineral wealth, and in a soil filled with decomposing esculent productions that have deteriorated in the lapse of ages. Thousands of acres are silently waiting for the plow to come and bring forth rich harvests. The country in the southern and western portions of the State is really beautiful. Live, energetic men are wanted, who are more intent upon developing wealth and adding to the prosperity of a country, rather than the many large land owners to be found throughout Missouri, who do not cultivate their broad acres, but walk the streets with dignified mien talking politics, imagining themselves statesmen, and boasting of a past greatness which a growing fossilism will forever debar from returning. Frequently you meet with a person of thrift, who is rarely "to the manor born," with pluck and ambition enough to rub against the prevalent style. When the miserly owners of this vast territory, rich in ores and fertile soil, shall have passed away beneath the grateful touch of death, then may we look for greatness in this country. Here is the opportunity for thousands of men to make for themselves beautiful homes without a large outlay of capital. All of the cereals can be grown. Grasses grow in abundance, and the country is well adapted to grazing and dairy purposes. In this climate, where the famed blue grass abounds, cattle can subsist with but little care the entire year. The sporting is good, and game is to be found in abundance. Missouri has taken the question of preserving the game into consideration in season, and enacted laws for protection before the forests and prairies have become depopulated. The more intelligent citizens see the wisdom of this procedure, and aid and support the statutes to their fullest extent. If those who have grown rich from farming in the vicinity of Rochester and Ithaca, or from dairying in Orange and Cortland counties, were located along the line of the Iron Mountain Railroad, or the Mo. Kansas and Texas route, they would find their store of dollars on the increase. Or if the laborer (who finds a scarcity of work in the great cities of the East and desires a breath of fresh, invigorating air and a taste of pure water) would invest his savings here in a small farm, he would soon find himself possessed of a comfortable home and a life of out-door enjoyment.

St. Louis is the metropolis of the West and South. The compromise which gave the domain of the State to slavery checked its growth materially until after it had passed through the ordeal of the war. How then it sprung up with new life all the world knows. It is now a great cosmopolitan city, rich in wealth and social life, active in commerce, growing and healthy. Looking down upon the St. Louis of to-day from the high roof of the superb new temple of commerce, one can hardly believe that the vast city spread before him, throbbing with energetic life, represents the growth of half a century. The smoke-tinged buildings and varied architectural groupings, have the aged appearance of some transatlantic city. From the bustling life on the levee, that fringes the Mississippi for many miles, rise acres of stately magazines of commerce, and far away to the west stretch long avenues bordered with elegant residences. A network of railways meets the eye, and the hum of a myriad-tongued voice greets the ear. The city, which stretches for thirteen miles along the bluffs above the river, with a population of over half a million, a banking capital of twenty millions, has bridged the mighty Father of Waters, and talks of contracting the cotton, iron and cattle trade of the South-West. Ayes! and more; these "dare and do" people look forward to the day when a line of ocean steamers shall lie moored beneath the eternal arches of their great bridge. They have unlimited confidence in that indomitable engineer, Capt. Eads, and his jetty system, and the possibility of restraining the giant river in this gigantic enterprise. Think of it! An ocean harbor one thousand miles from the sea!

The athletic clubs and sportsman's associations are growing healthy and strong. The St. Louisan is firmly impressed with the fact that a stirring life, wherein the brain is actively employed, must be balanced by a corresponding amount of physical exercise, free from anxious care, in order to equalize life and preserve perfect health. Considerable agitation manifested itself in shooting circles last spring over the new game law of Illinois, which prohibited non-residents of the State from entering and taking game. The bottom lands and lake region of Southern Illinois have heretofore presented fruitful and convenient shooting and fishing grounds to the gentlemen of the Mound City, and this statute necessarily causes some commotion. There is a fair prospect of the St. Louis nimrods having to look for sport a few miles further from home, within the confines of their own State. I was told by Mr. C. M. Huson, an enthusiastic sportsman and member of the law firm of Tarry, Blair & Huson, that the services of their firm had been solicited to test the constitutionality of the bill.

Early summer and the blistering rays of a June sun were upon us before I thought of turning my steps eastward. The *dolce far nitente* in the sombre Missouri forests was soon to be exchanged for the cool waters and shady banks of Cayuga Lake. The evening before my departure from St. Louis, while the sun was yet some hours high, I set out on a farewell ride in the environs of the city. Down through Carondelet past the arsenal, and out upon the bluffs beyond the Jefferson Barracks my good steed bore me. Onward I journeyed, nor meditated a halt till the light of day was slowly disappearing in the western sky. Away in the distance I beheld a dark bluff towering upward, high above the silent river, and upon its crest a solitary tree. Solitary and alone! Not so much as a dwarf oak growing near. Thither I turned my horse's head. Reclining upon the brow of this gigantic bluff, beneath the lone sentinel, I turned my eyes toward the distant city to perceive its walls no longer gleaming. Far in the distance the flickering gaslights are seen, sparkling beneath the dull, leaden cloud of smoke that hovers over the Western metropolis. Up and down the river the steamers' lights are dancing above the rolling flood. I hear the shrieking of the steam whistles, and mark the echoes far and near. Sitting in the deepening twilight my thoughts ran upon the past and future of Missouri. The past filled with discord; the broad fields desolated and brothers battling in unholy strife. The present, viewing the ground over which a fierce storm had passed, picking up the fragments and adjusting them to a new regime. The future prosperous; old scars obliterated, new men new manners, and industry and ambition erecting monuments of progress and wealth upon every hill-top, in every vale. It is rank heresy to prophecy anything short of greatness for this people. That memorable phrase of one of Missouri's Governors in the early days of the war, that "Missouri will hold to the Union as long as it is worth the effort to preserve it. She cannot be frightened by the past unfriendly legislation of the North, nor dragooned into secession by the restrictive legislation of the South," is emblematical of the independence of the commonwealth and typical of a bold, free spirit. To-day the *ante-bellum* feeling is rarely manifested. Progress is the word, and old enemies work side by side, burying the animosities of the past in improving the fascinating opportunities of the present.

Cayuga Lake, N. Y., July 2, 1877.

SALMON FISHING ON THE RIVER JACQUES CARTIER.

BY CHARLES LANMAN.

SOME of my friends, the wise of their generation, have occasionally expressed surprise at my fondness for angling. While the phantoms of their summer pursuit have been associated with conventional life in pent-up cities, it has been my choice, supplied with sketching materials and fishing tackle, to breathe the pure air of the wilderness. I have no desire to combat the prejudices alluded to; but, by way of showing how much may be seen and enjoyed during a single fishing excursion, I propose to write a chapter about the Jacques Cartier River, in Lower Canada. In 1859 I made a flying visit to this stream, which resulted, first, in my tumbling into its pure waters, and secondly, in my falling in love with one of the most beautiful rivers on the continent. On several occasions since then have I visited it; and if I can now impart to my reader a tithe of my pleasurable experiences, I shall be quite contented. On the score of novelty, moreover, I desire no better fortune to attend this chapter than has already attended my descriptions of the Saguenay River and Lake Memphremagog, since it was not long ago that two distinguished American authors, after traveling far over the world, first visited them, and expressed surprise at their grandeur and beauty. I beg the favorite authors alluded to not to rest satisfied until they have followed me a little further in my American wanderings, and have finally spent a summer on the Jacques Cartier.

This river derives its name from the famous discoverer of Canada, who wintered at its mouth in 1536. It rises in a mountain wilderness, bounded on the north by Lake St. John and the Saguenay River, and, after a winding course of perhaps one hundred miles, empties into the St. Lawrence twenty-five miles above or westward of Quebec.

Its waters are dark, but very pure, and its entire bed and banks are extremely rocky, slate, granite and limestone lending their strata to diversify the scenery.

In the variety of its scenery, indeed, as well as in beauty, it is probably not excelled by any other river, and from its fountain-head to the St. Lawrence it is made up of a continued succession of small lakes and rapids, deep pools and falls, with high and fantastic banks, everywhere covered with luxuriant vegetation, in a state of nature. The country out of which it runs is a vast forest, only intersected by the hunting trails of the Lorette Indians, who go there in the winter to kill the bear and the caribou. Just before emerging from this wild region, it runs along the eastern base of a mountain called Tsonnontonan or Great Mountain, which, although only 3,000 feet high, commands a view of about 100 miles of the St. Lawrence valley, as well as the blue tops of the Vermont and New Hampshire Mountains. The country lying south of the Great Mountain is comparatively level and tolerably well cultivated, the population being wholly composed of habitans, but the immediate banks and valley of the Jacques Cartier are everywhere in their primeval condition. Indeed, on account of its ravine-like character, it was marked out more than 100 years ago by military men as a natural barrier that could be made available for the protection of Quebec from a foe marching upon it from the west; and it is well known that in 1759, the French, after they were expelled from the citadel city, found a safe retreat on the western side of the Jacques Cartier. Good fording places are almost unknown, and the localities where bridges are practicable are few and far between, the only bridges now spanning the stream being one ten miles from its mouth; another about a mile below, called Dery's bridge, and one in sight of the St. Lawrence. My stopping place has always been in the immediate vicinity of Dery's bridge, and I must now tell the reader how this delightful locality may be reached. From Montreal you have to take the regular evening steamboat for Quebec, which will, provided you have dispatched a proper telegram beforehand, transfer you into a small boat off Cape Santé, about three o'clock in the morning, and in that pleasant village you can obtain a calashe that will take you to Dery's bridge in less than two hours. From Quebec, and that I think the better starting place, there are two routes, and either of them will repay the tourist or angler; but the best course to pursue is to go by the river route and return by the other, which is inland. Every mile of the first-named road commands some object of interest, and while the first seven miles are as smooth as a floor, and lined on either side by elegant country residences and mansions, the balance of the way presents a continuous view of the superb St. Lawrence, the neat cottages and thatched barns of the habitant yeomanry seeming to vie with each other in making delightful impressions upon the mind by their rural and picturesque charms; green fields sloping down to the margin of the great stream, giving place to pretty villages on the hill-tops, and they, in their turn, when the tide is low, looking away upon broad reaches of a barren strand. The inland route is equally interesting, only that mountain views and glimpses of a forest land take the place of the grand St. Lawrence. At Quebec the most comfortable of vehicles may be obtained, with accommodating drivers; and those who propose to make an extended visit to the Jacques Cartier ought not to omit a quiet talk, respecting supplies, with the butler of Russell's Hotel, than whom no man better understands the art of satisfying the desires of the human appetite.

And now for the accommodations that are to be met with on the Jacques Cartier River. There are two cottages at the middle bridge belonging to Louis Dery and Bazile Trepanier. The former is a regular inn, and adjoins the western extremity of the bridge, and with its romantic views above, around and below, with its comfortable rooms, pretty garden, curious sign-board, cozy out-houses and agreeable habitant family, is just the spot that anglers and artists are wont to visit in their dreams. The other cottage alluded to stands on an open plateau overlooking the narrow valley through which the river runs, and about 300 yards from the eastern extremity of the bridge, the proprietor and his family, like their friends under the hill, being habitans. An accident took me to this house originally, and since then it has been my headquarters when in that region. M. Trepanier cultivates several hundred acres of good land, and has surrounded himself with all the substantial comforts to be found among the more prosperous farmers of Canada. He is also an inveterate angler, and knows everything about the doings and haunts of the salmon, and while he willingly devoted himself to me personally, his wife seemed wholly bent upon making the two ladies who always accompanied me as comfortable and happy as possible. One half of the main cottage was entirely given up to us, who were the only guests, and with clean beds, nice cooking, and every possible attention, it was not difficult to enjoy the good things that were placed upon the board. From the post-office of Point aux Trembles, six miles distant, we were daily supplied with Washington and New York papers. The mornings and evenings were devoted to fishing by the deponent, and the noon-tide hours, by all of the party, to scenery hunting and sketching. Thus divided as was our attention, between matters pictorial and piscatorial, the weeks flew rapidly away, and our enjoyment of the bracing air, the fresh scenery and the sparkling waters, only seemed to become more acute the longer we remained. But now for the main idea of this disjointed essay

As it would be impossible to sketch either with pen or pencil all the more striking points on the Jacques Cartier River, I will confine myself to a space of perhaps three miles, near the middle of which is located Trepanier's cottage, and I begin with a place called the Rocky Reach.

The river at this point, after fighting its way through a regular herd of huge bowlders, spreads itself to the width of a quarter of a mile, makes a broad bend and then flows over a multitude of large flat rocks, the tops of which, when the water is low, forming tiny islands, as smooth and clean as a marble floor. If water sprites do ever haunt this northern stream those granite islands must be their midnight meeting places. Emptying into the river at this place is a small stream of extremely cold water, and for that reason the bend is a favorite congregating place for trout, which are very numerous, so that the pleasure of throwing the fly, while wading from one rock to another, is only to be equalled by the delight of lounging on the islands to rest like seals on the sandy bars of Labrador. A locality, designated as the Red Bridge, is not worthy of note, on account of that structure, which is common-place, but here the river makes another of its graceful sweeps, fretting itself into foam, then a plunge, as if angry at the boldness of a rocky point bristling with cedars and trying to impede its course, and soon hushing itself into a repentant mood, passes under the bridge and glides onward, rejoicing in the sunbeams. Here small trout may be taken in abundance. Onward still, and we come to a cluster of islands around which the water tumbles in every conceivable manner, and from which spring up against the sky a number of stupendous pines; and while the right hand shore is covered with a dense forest, that on the left presents the appearance of a causeway, formed of limestone by the hands of man—but when the foundation stones were laid the world itself must have been in its infancy. The next spot that has a character of its own is known as "the Basin," lying directly by the side of a pretty fall, and deriving its name from a huge hollow, filled with pure water to the depth of ten or fifteen feet, and which the trout have monopolized as a kind of breeding place. It is indeed an aquarium of magnificent proportions. But the view from the margin of this basin, looking down the river, is remarkable from the fact that the strata of the rock and the outline of the hills converge just at the point where the stream disappears from sight, and the idea of a funnel is strikingly realized. Farther down and we come to a long, curving stretch of water, where the river seems to have fallen into a profound slumber—deep and peaceful, on one side the rocky bank rising perpendicularly from the water's edge to the height of perhaps fifty feet, haunted by echoes and looking precisely like the inner walls in ruin of a stupendous amphitheatre, crowned and greatly beautified by a vigorous growth of Alpine vegetation; on the opposite side, the rocks sloping smoothly to the water, as if nature had made an unusual but most successful effort to please the brotherhood of anglers. And such mammoth trout as have been, and may still be taken there when the weather is favorable, no man will ever number, and the capture of a brace or two of three-pounders in the midst of such scenery at the sunset hour, is an event long to be remembered. But the river is now beginning to murmur in its sleep, and after a few more fantastic performances with two

or three islands, we shall soon behold it, on our friend Trepanier's land, making the two grand plunges of its life. What the entire descent may measure cannot be stated with accuracy, but for a distance of perhaps a quarter of a mile, the bed of the river presents a mass of foam, at the foot of which the whole river rushes through a space not more than fifteen feet wide with a mossy bluff bulging up on one side, and on the other a kind of broad domain of flattened limestone. Just below the Trepanier falls the river is spanned by the picturesque bridge that bears the name of Dery, and in a deep, black pool directly under the bridge, and almost under a part of Dery's garden, hundreds of salmon may sometimes be seen resting themselves before attempting to surmount the roaring torrent in their pathway up the stream. From Dery's bridge to a spot called the Hospital, a distance of half a mile, the course of the river is through a gorge or chasm of solid rock, very closely resembling the Montmorency Gorge, where the rapids are terrific, and the sides have been washed out or undermined, and made into innumerable caves; one side immediately overhung with primeval vegetation, a few trees spanning the entire stream, and the others presenting a kind of freize-work pavement, broad, uneven and peculiar, covered with tiny streamlets of spring water, and flanked by forest-covered hills. The Hospital is the paragon of salmon pools, and derives its name from the supposed fact that here the salmon spend a considerable time recruiting their strength after the toils experienced in their rough passage from the St. Lawrence—some nine miles away. Passing down a little further, we come to what appears to be the mouth of a small but wild mountain stream; a second glance reveals a picturesque old mill partly hidden in a cleft of the hills, and from which the water issues; and on entering into conversation with the worthy miller he will mention the singular circumstance that the supposed brook which turns his great wheel is a part of the Jacques Cartier itself, which has performed an underground journey of a mile, having left the parent stream some distance above the Trepanier falls. Onward still, for a few hundred yards, and a lovely spot called the Schute reveals itself to view. It is a sloping rock spanning the entire river, down which the waters rush without making a great noise over a long, inclined plane until they find their level some ten or fifteen feet below, and form a line of foam across the stream. Above this schute are two of the finest salmon casts imaginable, and below it a number of charming pools, with a beautiful island, and a glimpse downward of rough water hemmed in by perpendicular ledges, far as the eye can reach, all crowned with deep green vegetation. The Everett Cliff, as it is called after the proprietor, is the last feature that I would specify as coming within the range of the three miles already mentioned, and it is a fitting climax to the whole. It consists of a slaty cliff, said to be two hundred feet high and perpendicular, more than half a mile in extent, covered with feathery foliage, out of which come gushing here and there little streamlets only to be lost in the deep, black pools and wild rapids below. At the upper extremity of this cliff is a kind of lake-like sheet of marvelously dark and still water into which another cliff from the opposite side of the river pushes its lofty and jagged profile, as if for the very purpose—which it certainly succeeds in—of filling the beholder with amazement. Grand in itself, it faces a scene that is both grand and beautiful; and, indeed, like every other prospect on this charming river, after having once been witnessed, cannot be forgotten.

But the piscatorial attractions of the Jacques Cartier now deserve attention. The principal game fish of this river are salmon and trout, though the black bass and dory, or pike-perch, are frequently taken in some of the lower pools. The trout always have been, and still continue to be, abundant; and specimens weighing three and four pounds are no great rarity. A few years ago the salmon were even more numerous than the trout, but the cunning arts of pot-fishermen or poachers had well nigh exterminated the race, and would have done so entirely but for the interposition of the Quebec anglers, who caused stringent laws to be enacted, and now see to it that the river is properly protected. Judging from my own experience, an industrious angler might count upon a barrel of fine salmon in one month—but how, as a pot-fisherman might say, can the unnumbered pleasures of a month on such a river be compared with a lot of fish swimming in their brine? In weight the salmon range from eight to sixteen pounds, and the season for throwing the fly generally extends from the twentieth of June to the twentieth of August. As to the extent of their journeys up the Jacques Cartier, accounts strangely differ; some of the inhabitants allege that they never go higher up than Trepanier's falls; others think that they go to the source of the river, but never return (which is, of course, a mistake); and Trepanier informed me that he had once taken six hundred in one night with a net, some distance above his falls. As to that locality I have myself seen them clearing its foamy waters and passing upwards and onwards in high glee. The proverb about the early bird is particularly applicable to the angler who would kill a fair proportion of salmon. On that score my own zeal was seldom at fault, and one gentleman who chanced to find me at work on his arrival at the pools, on three successive mornings, gave it as his opinion that I slept upon the rocks all night, and that Trepanier was sufficiently foolish to do the same thing. The real truth of the matter was this. I usually left my bed at three o'clock, and never had to wait for my companion; and the walk of ten minutes down to the chosen pool was invariably delightful. On arriving at that spot our first business was to collect some drift wood and make a good large fire, not only to warm ourselves at the moment, but to dry our clothes after having had a struggle with a salmon; and while waiting for the sun to rise and the fog to disappear, Trepanier would smoke his pipe, and leisurely examine my book of flies, and generally went to some convenient place to enjoy a bath. We stopped fishing usually about eight o'clock and went to breakfast; and if, during the morning, we hooked five or six salmon and lost them all fighting one or two of them for more than an hour, we only considered the sport as *good*; if we actually captured two fish we were well satisfied; but if we could stagger home under the weight of four salmon, two grilse, and a large trout, as the writer once did, we were decidedly hilarious, especially if one of the beauties happened to be a sixteen-pounder. And when it is remembered that such a labor of love was usually rewarded by a breakfast made up of such things as broiled trout or salmon, stewed pigeons, fresh eggs, rare *café au lait*, with richest cream, French pancakes and maple syrup, and two or three kinds of berries, the reader may imagine that the "good time" of philosophers had finally arrived. The middle hours of those pleasant days were wholly devoted to the ladies, with whom caleche drives, or walks in pursuit of the picturesque, were enjoyed by both Trepanier and myself; for after his afternoon nap of thirty minutes, he was always on hand to play the escort with his rough but kind-hearted attentions. As evening approached, all the anglers who happened to be congregated at Dery's home—and there were sometimes eight or ten—would assemble on the two banks of the river, all in sight of each other, and if there happened to be a sprinkling of ladies who had accompanied their husbands, which was oftentimes the case, the movements of the anglers while throwing the fly were perhaps more graceful than usual, but their success more doubtful. In all my adventures, I do not remember a single locality with more pleasure than this spot known as Dery's Bridge, nor one which, on the score of scenery and sport, and the refined and cultivated character of its visitors, so completely realizes my idea of the golden prime of good old Izaak Walton.

I would have my readers remember, however, that the pleasures of salmon fishing in the Jacques Cartier are derived more from the surrounding associations than from the number of fish captured; and many persons undoubtedly carry with them from the river more distinct recollections of the springs gushing from the hills, of a certain angler's cabin, with its supply of newspapers, and of the picturesque groups occasionally assembled there, than of the "oceans of fish" which fortune may yield. Many salmon, however, are taken, and a few incidents touching their capture will appropriately conclude this chapter of riverside talk.

On one occasion, for example, I saw an army officer (who had served with honor in the Crimea), capture, within one hour, at the right hand cast, above the Schute, no less than three fine salmon, landing them without the assistance of his habitant attendant. The only man who can compete with Trepanier as an angler is Edward Dery, the son of Louis, and a bolder or more expert fisherman can nowhere be found. He it is, by the way, who, in times past, when the salmon would not rise to a fly, was wont to descend a rope ladder, suspended over a fearful caldron of foam, and take out with his gaff a few salmon bolder than himself. He is about the only man also who has the hardihood or courage to throw the flies directly under Dery's Bridge; for where he secures one, after hooking him, he loses a dozen that rush down the gorge to the Hospital pool, carrying all before them. One fish that I saw him hook there not only smashed his rod, but carried one-half of it a mile down the river in less than five brief moments. That the excitement of salmon fishing is sometimes contagious the following incident will prove. I had hooked a large fish at a rapid spot known as the Black Rock, when Trepanier gave his accustomed shout, which caused a gentleman on the opposite side of the river to run down and witness the fun. After my salmon had made his third magnificent leap and rush, and I was keeping him away from a dangerous rock, my spectator became quite frantic, and, to my astonishment, plunged into the stream, and, just as Trepanier had gaffed my fish, up came the stranger to my side out of the water, panting like a "spent swimmer" as he was. He had crossed the river—kicking a few fish under the chin, perhaps, as he passed along—simply for the purpose of having a look at my prize. He was a lawyer, just arrived from Quebec, and a novice in the art of salmon fishing; and I subsequently heard that he has, on more than one occasion, swam across the great St. Lawrence just for the fun of the thing. I also heard that the art he seemed to understand so well was inherited, and that his father had saved from drowning no less than a dozen Americans during the war of 1812, which kindness an American gentleman reciprocated by putting him in prison. Though Trepanier's exploits have not been as daring as those of young Dery, he kills quite as many fish during a season, and, upon the whole, is probably better acquainted with the river. The very last fish I saw him capture gave him a pretty hard run. He hooked the salmon near the head of the Black Rock Island, but on the western side; followed him to the foot of the island, played him half an hour in a pool at that point, when the fish started up stream again, but now on the eastern side of the island, on reaching the middle of which he seemed ready to give up the battle, when he broke away and Trepanier made a rush, catching the salmon in his arms. The largest fish it was my fortune to capture on the Jacques Cartier weighed sixteen pounds. I hooked him while wading, and after tiring my arms until I could hardly hold the rod, he gave me two duckings and nearly carried me down a rapid, and then, by way of displaying his genius, ran completely around Trepanier's legs, tangling my line dreadfully; but a successful sweep of the gaff was soon made and he was landed in triumph. As to the flies that do the best execution on the river, their merits I shall not discuss, because I never knew two anglers to agree on the subject, and my experience has taught me that strength and size are of more importance than color or beauty.

Fish Culture.

REPORT OF THE COMMISSIONER OF FISHERIES OF THE DOMINION OF CANADA, FOR THE YEAR 1876.

A PARTIAL abstract of this report, that portion relating more particularly to fish culture, has already been given to our readers, (see FOREST AND STREAM, June 14). The statistics which occupy the greater part of this somewhat voluminous document are of special interest now that public attention has been called to the subject by the meeting of the Commission of Arbitration of United States and Canadian Fisheries.

The returns from the various fishing districts show that considering the prevalent depression in other branches of industrial commerce, the fishing industry is, comparatively speaking, in a flourishing condition. The gross value of the produce of these fisheries in 1876 was $11,147,590, which is an increase of $661,917 over that of the year 1875. The total exports for 1876 were $5,501,221, of which the United States and the British West Indies received respectively $1,475,330 and $1,348,637. Of the total imports $1,455,851, the United States furnished $692,855.

A comparison of the total exports of fish and fish oils for the fiscal years 1875 and 1876 exhibits an increase for the latter year of $120,694; while a comparison for the same year shows a decrease of $144,439. In the last six months of 1875 there were exported to the United States market $999,650; to other countries $2,502,550. The imports for the same period were, from the United States, $337,846; from other countries, $24,072. During the last six months of 1876 the exports to the United States were $783,653; to other countries, $2,755,347; the imports for the same period being, from the United States, $444,920, and from other countries, $179,626.

These statements suggest: the yearly increasing productiveness of the fisheries; their unfailing contribution to the population in labor and food; their influence as an incentive to industrial enterprise; their great value as a staple of trade; the gradually increasing independence of the Canadian fishing interests of United States markets, and the growing importance of their produce as regards the increase of mercantile marine, extension of foreign commerce and development of natural resources.

The total number of fishing licenses issued in Ontario, Quebec, New Brunswick and Nova Scotia was 1,364, the total sum accruing as rents under leases of angling privileges being $3,295. The number of salmon caught by anglers with artificial flies was 2,880, and the outlay of private persons on the thirty-two rivers fished by these angling parties was about $30,000.

The experiment of shipping whitefish and salmon eggs to Great Britain, at first unsuccessful, resulted in the safe conveyance of a quantity, which hatched immediately upon their arrival, and were saved in Professor Buckland's tanks, at Kensington. The experimental reservation of Rice Lake to be fished only under license has proved successful, and it is recommended that the same system be applied to the waters in the vicinity of the Thousand Islands.

The returns for the artificially-bred salmon of Lake Ontario are meagre; trap netting has been found feasable, and it is suggested that the privileges of thus capturing these fish be rented for a term of years.

The report embraces the detailed reports of the various fishing officers, with the details respecting the quantity and value of the fish caught in each subdivision of these districts, and much interesting matter regarding the condition of the fishing, the state of the river, observance of fishery laws, etc.

CALIFORNIA SALMON IN LAKE ONTARIO.—We referred last week to the statements of fact contained in the following letter from the Superintendent of Fish Culture in Canada:

THE FISHERY, Newcastle, July 9, 1877.

EDITOR FOREST AND STREAM:

I think I have the right to claim the credit of heralding to yourself and your readers the capture of the first California salmon this side of the Pacific slope. One of the most beautiful and symmetrically formed salmon (grilse, if you like,) that can be imagined was taken by my men this morning in a net, in company with some of his *Salmo wilmoti*, cousins of the estuary of Wilmot's Creek in Lake Ontario. This *rara pisces* was 18 inches long and 6 inches deep, through from back-fin to belly, and just turned the scale at five pounds. I claim this to be one of a brood turned out of this Newcastle hatchery in the spring of 1874. It was bred from the first lot of California eggs kindly presented by Prof. Baird, of the Smithsonian Institute, to the Canadian government, and forwarded through the instrumentality of Livingstone Stone from the breeding works on the McCloud River in California. This *Salmo quinnat*, or, I shall dub him, *Salmo bairdii*, will be a trifle over three years old since he emerged from the shell. For size and weight I therefore think he stands unparalelled for his age, and I am doubtful whether there is any similar record relating to the *salmonoids*.

The markings of this pretty fish and the whole contour of the body were extremely beautiful. The back down to the lateral line presented a handsome vermiculated greenish hue, thence down to and underneath the belly a bright silvery shade prevailed. The eye was unusually small, but very sharp, keen, and strikingly beautiful in its brilliant colors of green and gold. The head, tail and fins were, as compared with our native salmon, very much smaller. The body was covered with small iridescent scales, giving to the whole fish the most gorgeous sheen imaginable—in fact, the *tout ensemble* of this little stranger for beauty and symmetry is beyond description. The flesh is very similar in color to the *Salmo wilmoti* of Ontario, inclining to pink, but turning almost white when cooked. The meat was unusually fat and oily, but very firm and extremely delicate to the taste, with a flavor not unlike the best conditioned whitefish. There was found in the stomach half digested food, as if of small fish and crustacea. This, then, adds another proof to my theory, of the easy naturalization or acclimatization of the salmon of the sea to large inland fresh water lakes, particularly when an abundant supply of necessary food is found for their sustenance. A question arose, what should be done with this novel specimen of the salmou family? Should he not go to the projector of his race, Prof. Baird? This was negatived, for the feelings of the foster-parent came uppermost, and if cannibalism is charged against one who eats his own propagation, he was cannibalized—scalped—and his skin made a trophy of, as it was mounted, and now presents a very fair specimen in death of what the body was when alive; and the flesh was eaten and very much prized by your humble servant. SAM WILMOT.

CATFISH AND SPAWN—Among the many interesting and instructive objects of study to be found in the tanks of the New York Aquarium, there is one deserving of especial mention the catfishes and their spawn. At present, they—the male and female fish—are engaged in the very interesting occupation of hatching the eggs, and the embryo fry are easily discerned within their semi-transparent covering. The movements of the male fish when watched closely, disclose the fact that precisely the same as in the artificial propagation of fishes, the principal object is to keep the water pure that immediately surrounds the spawn, to accomplish which he covers the eggs with his body and fans them with his fins, by which means the desired object is attained. It was probably from observing the movements of live fishes in the act of hatching their young that the art of artificial breeding was first suggested, and consequently attempted, and as we now know with such grand results. The first thing the female fish does is to discover a place suitable to deposit the spawn, which, when done, it is left entirely to the care of her spouse, who digs a hole to the bottom of which it attaches the eggs by a kind of cement, and then, as stated, covers them and keeps the water constantly agitated by fanning it with his fins. At the end of the ninth day the young fishes are seen within, and three days later they break their covering and come forth possessed with all the

playfulness of a sportive kitten. For the first week or two they derive their sustenance from the sac to which they are attached, but when it is entirely absorbed by the little fellows they are in a condition to accept food or seek it for themselves. They are subsequently separated from their parents, as it is supposed the catfish eat their young the same as pickerel.

R. F. H.

THE HUDSON RIVER SALMON.—We are very much pleased to receive the following letter from our valued correspondent. We trust that dwellers on the Hudson who have any more light to shed on this important subject will not permit it to be hid:

NEW YORK, July 16, 1877.

EDITOR FOREST AND STREAM:

If you are correct in your surmises that the salmon lately taken in nets off Staten Island and up the Hudson were the results of my efforts of a few years ago, perhaps some data may be interesting.

In March, 1871, I procured from Mr. Samuel Wilmot 2,000 salmon eggs, and placed them in Mr. Christie's hatching troughs at Clare, Dutchess County, the headwaters of Fishkill Creek, where I also placed 600 Schrodie salmon, or "land-locked salmon" spawn Both lots of eggs hatched out soon after, and in May, 1871, I removed 1,500 young salmon, and 500 Schoodics to two spring ponds, a few rods off, where the movements of the youngsters could be easily watched. My intention was to keep them there several years, and observe the effect of good feed on salmon confined in fresh water.

Unfortunately for the result of the information which I hoped to gain by this course, Mr. Christie the next year removed from and let his place to some persons who neglected the wire screens at the outlet of the ponds, and the young fish thus escaped into the race, and thence into Fishkill Creek, whence I caught with hook and worm several young salmon of both kinds in 1872; their length averaged five inches, the land-locked salmon being the largest.

In 1873, I could find no *Salmo salar*, and only a few Schrodies. Perhaps some of your readers can say what has become of the latter, and whether they have increased since. The *Salmo salar* undoubtedly dropped over the dam to salt water. Yours, MANHATTAN.

SALMON HATCHING ON THE COLUMBIA.—The Cannery men of the Columbia River having become alarmed at the very marked diminution of the salmon in the river this year, have formed an association under the name of the Oregon and Washington Fish Propagating Society, for remedying the evil by artificial hatching, and have raised a working fund of twenty thousand dollars for this purpose. They have placed the whole matter in the hands of Mr. Livingston Stone, of the U. S. Fish Commission, who, by special arrangement with Prof. Baird, U. S. Commissioner, is authorized to carry on this work in connection with the salmon breeding at the United States station on the McCloud River, California. The fact that necessity has compelled this resort shows what dearth must follow wanton waste or excessive drain upon natural supplies. Ten years ago the Columbia river fisheries were thought to be inexhaustible.

—Salmon are now daily seen in considerable numbers in the Merrimac at Amoskeag Falls, N. H. The Fish Commissioners recently examined the head waters of Pemigewasset and other tributaries of the Merrimack in the north part of the State, and found them thoroughly stocked with young salmon—fish that have not been seen there for thirty years until the present season.

—Prof. Hurd calls attention to the deleterious effects of the fish offal thrown overboard by those engaged in fishing off Labrador. The anchor ice freezes the offal and prevents its being eaten by marine animals, or decomposed by the water. When the temperature rises the offal rots, the foul gases are confined by the surface ice, and young cod and other fry are thereby destroyed.

—100,000 young shad were shipped from Holyoke, Mass., Saturday, July 14, to the Red River, Arkansas.

Natural History.

FURTHER EVIDENCE ON THE SPARROW QUESTION.

NEW YORK CITY, July, 1877.

EDITOR FOREST AND STREAM:

Having seen several articles in your paper concerning the advisability of cultivating the English sparrow, I deem it not only a pleasure to add my testimony against them, but a duty, to use every means in my power to aid those who desire to banish to the city the little pests, as much the enemies of our birds as ever Tories were of Whigs. I saw that a number of the defendants of the sparrow give as a reason for allowing them to increase, that they eat the worms off the trees and vegetables. Can it be that they do not know that our native birds do the same? In a city where the latter will not live the sparrow may have his work to do, but certainly in no other place, and for no other reason could any one ever care to raise them, for they are neither handsome nor songsters. That they do drive away all other birds from any locality which is so unfortunate as to have them for inhabitants is to me, and any close observer, an indisputable fact. Some years ago several of the neighbors brought large numbers of them to this place. In an incredibly short time not a forest bird was to be seen or heard. This was borne impatiently for a year or so, until the guns of more than one lover of justice and friend to the birds drove the usurpers from the place. Since their banishment the forest birds have returned in full force, and once more their sweet notes are heard around the home of him who made the study of them and their habits his life work.

TANAGER.

NEW YORK CITY, July, 1877.

EDITOR FOREST AND STREAM:

Let me say a few words for the dear companions of my childhood. I live in one of the loveliest spots on earth, on the banks of the Hudson. Magnificent old forest trees surround me while I write, and the songs of many birds fill my heart with their melody. To my mind their notes this afternoon have a pleading tone, and I feel compelled to answer their appeal by using my small influence against their enemies, the sparrows. Years ago our ears were delighted with the thrilling notes of the thrush, the meadow lark, the oriole, and many birds who found a welcome home in our grand old pines and oaks. We little thought when we welcomed as enthusiastically as any one the importation of the sparrows that they would destroy this pleasure for us; but sad experience has taught us a lesson regarding them. As they accomplished their work so well in the city, it was deemed advisable to try them here also; why, I know not, as I cannot remember that we were ever much troubled in our locality with the worms and caterpillars that did, I know, infest New York. But ont they came in great numbers, and bitterly did we rue the day. One by one our dear little songsters disappeared—larks, thrushes, scarlet tanagers, orioles, all fell victims to the quarrelsome dispositions of the little sparrows. Even the robins could hardly hold their own against them. For three or four years we suffered the loss of our favorites, and then indignation overpowered us, and we rose in a body to drive the intruders away. We have done so almost entirely, and this summer, for the first time in many years, have again welcomed our native birds, but if we are to keep them we must destroy the sparrows, as they do most certainly fight and kill all other birds.. Let them keep to the city where they have done and are doing a good work, but leave us in our country homes our own feathered songsters.

FIDELIS.

[We welcome ri ht warmly the above graceful contributions. Our correspondents are ladies. Then, too, the lines come from the direct descendants of that man who, during the early days of American scientific research did perhaps more than any one before or since has done for the advancement of its interests. They come from those living on the spot where the immortal artist-naturalist spent some of his happiest years; where, having accomplished his great life-work, he passed into a ripe old age, then peacefully away. Among those grand old forest trees still dwell his children's children. The tall pines still nod and toss their giant tops. Still does the winter winds sigh and moan through their gnarled and knotted branches. But over scenes how strangely changed! Yet a romance will ever cling to what remains, and invest the old home with a peculiar charm. From those so nearly related to the great naturalist, and living where he lived, we receive the few lines we print with a feeling that savors of reverence.—ED.]

CHICAGO, July 9, 1877.

EDITOR FOREST AND STREAM:

I have read with a great deal of interest the letters and opinions of correspondents about the English sparrow. I cannot account for the bitterness of some writers against this plucky little bird, unless it is that he is a Britisher; and they invariably decry everything coming from England: dogs, guns, gentlemen sportsmen, even breeders who visit our dog shows—all fall under the same scoring satire of their pens. But in their very bitterness they open themselves to charges of lamentable ignorance. They only speak of him as a denizen of the city and the city parks. The sparrow will bear study; his habits are those of a Bedouin; he is plucky to the greatest limit, and will often fight to the death. We have watched the bird under many different circumstances in dirty, smoky London; in the beautiful green meadows and gardens of English country life; on the lawns and terraces of the palatial homes of the English upper tendom. They do not regard him as a nuisance, but give him his modicum of fruit ungrudgingly for the slugs and worms he destroys. In my boyhood's home we have watched them for hours carrying grubs, worms, slugs to a nestfull of callows, as we called them, the parent birds bringing a worm or some such food at least once in ten minutes, and this from sunrise until dark; yet they had five mouths open wide every visit they made to the nest—always hungry—so hungry that I remember them trying to swallow my finger when I clambered up to the nest. The very amount of food they hunt for their young would repay for a year of idleness. Many years ago the farmers paid us a premium for their eggs; but before I had doffed my school jacket to enter my profession, I remember we were promised a sound thrashing if we robbed a sparrow's nest.

Here, in our public parks, we have noticed them feeding contentedly with other birds without fighting or quarreling; indeed they were too intent with the business in hand to fight. They fly from tree to tree, where catbirds and bluebirds are flitting, disturbing none of them; and one day during this week we saw one taking his morning bath in a pond right alongside some little ducks no larger than itself.

I was somewhat surprised at a remark made in a recent letter. Some one said, "Starlings sing." The first time in my life that I have heard of such a thing, though I have kept them, petted them, have had them so tame that, being loosed from the cage, they have found a mate and built their nests in the tall poplars on the lawn fronting the house. They would fly round us while we fed the chickens, or visited the orchard, twittering all the time; but the only song we ever heard from them was a shrill scream somewhere away up in upper C, and running down a "starling's gamut." The cock birds were handsome fellows, and as they came to know us, they would come out to the outside branches and begin their greeting in answer to our morning's whistle. But during twenty years of acquaintance with generations of birds we never yet heard a starling sing.

NORMAN.

SOUTHERN MAMMALS BY "TISHMAN."

BATON ROUGE, La., July 13, 1877.

EDITOR FOREST AND STREAM:

A few days ago I sent you a short article correcting some misstatements made by Dr. Young, in the last number of your paper, and as I consider this an important matter (for the statements referred to are to form a part of a history of North American Mammals,) I inclose a few lines from a friend of mine, a surgeon in the regular army, from the same portion of Mississippi as Dr. Young.

BONNIE BLUE FLAG.

BATON ROUGE, La.

EDITOR FOREST AND STREAM:

My attention has been called to a statement of Dr. Young's in a late number of your paper, in a communication furnished by him to Dr. Coues on Southern mammals, in which he says that the common deer (*Cervus virginianus*) is rare in Mississippi. Now, Mr. Editor, though this is an error, yet I would not have taken notice of it had it not been that Dr. Coues is writing a history of the N. A. Mammalia, and I think it the duty of every one to prevent an error or misstatement from being published about the mammals of our Southern country. I am from the same part of the State as the Doctor, and I know that deer are common in parts of Mississippi. I can take a hound at any time from my father's plantation and start up deer in a short distance, and I know that the portion of Mississippi known as the "Mississippi Bottom," is famous for not only its deer, but also for black bear.

TISHMAN.

The letter to which our correspondent "Bonnie Blue Flag" alludes, has been referred back to Dr. Young for examination, so that he may make the revision which we are convinced, by the testimony of many gentlemen, that his notes require. However, under the circumstances, we feel at liberty to print the above letters now, trusting to hear from Dr. Young in due time.—ED.]

RED-HEADED WOODPECKERS.—(*Melanerpes erythrocephalus*)—This handsome bird is so named from picking holes in the trees to procure the insects which form its food. As there are so many different species of the woodpecker tribe in North America, and their habits are so nearly alike, I will not give a description of them all, but will describe the one above named. The male measures nine inches from point of the beak to the end of tail, and ten inches from tip to tip of wings; beak long and straight, one and one-half inches in length, adapted for piercing the bark; a long slender tongue, very hard at the point; iris dark brown; legs quite short and strong, having four toes, two before and two behind. The tail consists of ten hard and elastic feathers, which act as a prop to aid the bird in climbing; head and neck of a beautiful rich, velvety red hue; breast and belly pure white; back and part of the scapulars a glossy black. The eggs are five in number. On one occasion I found six, but this is seldom met with. The shell is smoother than in any other species of the woodpecker family. They are of a beautiful clear white color, marked with redish spots at the large end. Length of eggs, 1.07 to 1.12 inch; breadth, .77 to .84 inch. They often vary in measurement. These gaudy birds often wander over trees in every direction, striking the bark on hollow or decayed places with their beaks, and thrusting their tongues into its crevices in search of insects, or their larvæ, on which they feed. Instead of a nest it forms a circular hole in the decayed parts of trees. The male and female sit alternately. After enjoying their feasts they retire in parties to some neighboring trees to amuse themselves by gamboling and sportively chasing each other. This bird is frequently invaded in its cozy home by the black snake, which glides up the trunk of the tree and enters the apartment, devours the eggs, or callow brood, in spite of the cries and flutterings of the parents. On the 28th of June, 1869, while on a visit to a friend of mine, at Gwyned, Pa., I took a stroll down through the orchard, and on hearing the pitiful cries of these birds, I hastened to the tree, where, as my friend informed me, one of the birds had made its home. On arriving at the spot, I noticed the female flying from one limb to the other in a frantic manner. To my surprise I saw a large black snake on the trunk of the tree, its tail partly coiled around a small limb, striking at the aperture in quick succession. After watching the manœuvres for a few moments I cut a small sapling, and striking the intruder across the back, it fell at my feet quite dead. It measured five feet nine inches in length. One of its eyes was picked out by the male bird, which was in the cavity trying to defend its young.

GEO. BOUDWIN.

MORE ABOUT REVERSED SHELLS.

WEST CHESTER, Pa., June 23, 1877.

EDITOR FOREST AND STREAM:

My attention has been called to a letter in No. 18 of your journal for this month, signed "T. W., Leesburg, Va.," containing the query whether latitude influences the production of sinistral or left-handed shells. This departure from the primary organic form is rare in the different species of American land shells, but is more common in some fresh water species. In my collection, which embraces many hundreds of North American land shells, I possess only one, *Patula cooperi*, W. G. B., from Colorado. That latitude predisposes to the formation of the sinistral shells I am not prepared to affirm or deny; but it must be admitted that we possess more sinistral or left-handed shells from warm climates, probably for the reason that hot and moist climates are more favorable to the growth of this form of animal life, and the generic and specific forms of mollusk are more numerous, and hence reversed shells more frequently occur. This remark more especially applies to the genera *Helix Bulimus partula* and *achatinella*, among which we meet with numbers of reversed shells, whose normal type is dextral. In one species of *Partula P. Sinisthorsa*, Pease, the individuals are almost all sinistral, the dextral ones forming the exception. This also holds in several species of the genera *Helix and Bulimus*, where the usual form is sinistral. These are all denizens of warm countries, as South America, East Indies, Siam, Malebar, etc.

We also find the whirls of some fresh water and land shells instead of being coiled on themselves in the usual manner, are drawn out and separated, presenting the appearance of a corkscrew (*Scalariforme*). The question, doubtless, has occurred to others besides your correspondent—What causes these abnormal forms? and how shall we account for these vagaries in nature? To this the answer must be returned, that the hidden operations of nature's laboratory are not easily solved; but in all probability the forces which produce the abnormity in the one case cause the other, and depends on the departure from the vital law which determines hereditary transmission of form the operation of which is probably "past finding out." In endeavoring to define the cause of these abnormal forms we can only conjecture that it is to be found in a *reversal of the vital forces acting in the segmentation of the yolk of the egg in the earliest stages of the formation of the embryo*, as it is here the change first occurs which determines the form of the future individual. We know that in the eggs of snails (which afford good material for observation) a short time after they are deposited by the parent, the germinal vesicle, which lies in the midst of the yolk, rises to the upper part where the germ is seen to form, and a distinct rotation of the yolk occurs, after which it undergoes segmentation and the germ appears. This rotary motion is due to cilliary action, and consists of two or three turns in one direction and the same number in a reversed direction, and possibly in this primary vital action lies the secret of reversed shells. Almost all the species of shells in which reversed individuals occur are viviparous and are born with from one to one and a half whirls, and it is possible that a slight disturbing force, such as might be produced by an overcrowded condition of the germs in the ovisac would affect a change in the direction of the apicae whorl so as to produce a sinistral individual, thus verifying the adage that "as the twig is bent the tree is inclined."

I incline to the opinion that the true solution as to the cause of sinistral shells probably lies in the vital actions which occur in the earliest stage of the formation of the embryo. Whether our North American land shells, if transplanted to a warmer climate, would show an increated number of sinistral individuals I am not prepared to say, but before making up my mind I would like to see a few of "T. W.'s" sinistral shells.

W. D. HARTMANN.

HYBRIDS.—The Brooklyn *Eagle* of July 21 says: "Nine out of every ten cases of supposed *hybrids* are brought on by ignorance and superstition."

We are glad to have the matter settled. The mysteries of reproduction, and of deformities, hybrids, etc., have long been a constant puzzle to us. Our cucephaloncan now take "a rest" while the *Eagle* superintends the manufacture of monstrosities, etc., for Barnum. After all there is nothing like the *Eagle* for science.

FIGHT BETWEEN A TROUT AND A WATER-SNAKE.— AW. Chase, of the U. S. Coast Survey, in a note to the editor of the *Popular Science Monthly*, describes as follows a contest which he and a brother officer witnessed in 1867 on the Purissima, a small trout stream about twenty-four miles south of San Francisco:

We had been fishing on the stream, and came to a high bank which overlooked a transparent pool of water about ten feet in diameter and four feet in depth. This pool was fringed with willows, and had on one side a small gravel bank. The trout at first sight was lying in mid-water, heading up stream. It was, as afterward ascertained, fully nine inches in length, a very desirable prize for an angler. While studying how to cast our flies to secure him, a novel fishermen appeared, and so quick were his actions that we suspended our own to witness them. This new enemy of the trout was a large water-snake of the common variety, striped black and yellow. He swam up the pool on the surface until over the trout, when he made a dive, and by a dexterous movement seized the trout in such a fashion that the jaws of the snake closed its mouth. The trout had the use of its tail and fins, and could drag the snake from the surface; when near the bottom, however, the snake made use of its tail by winding it around every stone or root that it could reach. After securing this tail-hold it could drag the trout toward the bank, but, on letting go, the trout would have a new advantage. This battle was continued for full twenty minutes, when the snake managed to get its tail out of the water and clasped around the root of one of the willows mentioned as overhanging the pool. The battle was then up, for the snake gradually put coil after coil around the root, with each one dragging the fish toward the land. When half its body was coiled it unloosed the first hold and stretched the end of its tail out in every direction, and, finding another root, made fast, and now using both dragged the trout out on the gravel bank. It now had it under control, and, uncoiling, the snake dragged the fish fully ten feet upon the bank, and I suppose would have gorged him. We killed the snake and replaced the trout in the water, as we thought that he deserved liberty. He was apparently unhurt, and in a few moments darted off. That the water-snake of our California brooks will prey upon the young of trout and also smaller and less active fishes, I have noticed, but never have seen an attack on a fish so large or one more hotly contested.

REMARKS.—We have more than once seen the common black snake attempt to capture trout. In Pike County, Pa., Moses Westbrook, Esq., had an octagonal basin of twenty feet diameter, containing a magnificent spring-head, in which he kept a large number of fine breeders. There seemed to be a great colony of black snakes resident in the neighborhood, although constant warfare upon them nearly wiped them out. They were constantly on the watch at the outlet, where the water discharged over a screen, forming a capital base of operations. Very many fine two and three-pound fish disappeared mysteriously before the cause was positively ascertained.

DO FISH SLEEP.—In answer to a correspondent's question, "Do fish sleep? and if so under what conditions as to time, place, etc.?" the *Aquarium Journal*, for July, says:

Though the most constant and careful watching of fish in the aquarium tanks has failed to determine that they do sleep, yet the question was regarded as of sufficient importance to suggest an extended inquiry. In reply to several letters addressed to leading naturalists, we have received but one which deserves special attention, since the others simply stated that the observer was himself in doubt. The single communication to which we refer was from Professor D. S. Jordon, of Butler's University, Irvington, Ind., and we give it in full, as follows:

IRVINGTON, IND., May 23, 1877.

To Editor of Aquarium Journal.

DEAR SIR: Your letter, with the request that I give you my views on the subject of whether fish sleep, is at hand.

I have made no observations on that point which seems to me to have any special value. The matter looks to me thus: As we go downward among the lower types of the vertebrate nervous system, we find the different nervous states less specialized, and less and less distinctly marked. Man and the higher vertebrates sleep soundly; birds sleep "with one eye open." Reptiles are torpid, or half asleep, much of the time; but their asleep and awake stages are much less different from those of birds. In fishes I am unable to distinguish any sort of sleep except such as involved in states of quiescence in certain species, and in torpidity at certain seasons in others.

If any important facts have been adduced to show any real or periodical "sleep," I have not noticed them.

Very truly yours, D. S. JORDAN.

Although we are in doubt as to whether there are any *positive facts* to be presented on the subject, yet, should any reader have in his possession information which may be of service, we should be pleased to receive and consider it.

BREEDING SEASON FOR QUAIL—*Claremont, Dodge Co., Minn., July* 16.—In FOREST AND STREAM of June 28, I notice an article from the Nashville *Rural Sun*, in which the writer claims that our birds "pair off earlier, breed earlier and mature earlier than in the Southern States." Again he says, "In the Northern States, the quail are nearly all grown by the 15th of August, and none are too small to shoot by the 1st of September."

I respectfully beg leave to differ with the writer—not about his quails, but about ours. I have lived here eight years, and have spent considerable time in the field, and have naturally watched the quails pretty closely. I find that they breed twice, and frequently three times in the season; and while some of them are full grown on the first of September, there are others which are not half nor even one-fourth grown.

I remember one time in particular of seeing a brood in September that was only just hatched. I was out hunting prairie chickens (we seldom call them grouse here), and as Fly made a point and no bird rose, I tried to urge her forward, but she would not move an inch. I then began to look for the cause of her point, and soon saw, not three feet from her nose, and in plain sight, the mother quail brooding her little chicks, of which only three or four were in sight. I bade my dog come away, and left them undisturbed.

There will be very few quails this fall, though they were never so plenty as last year. I think, on an average, once in four years they will nearly all be frozen or starved to death here, but they breed so fast, that in two or three years they are quite plenty again.

There is a good prospect for plenty of chickens of good size by the 15th of August; the nesting season having been particularly favorable the broods came off early.

G. H. HOUGHTON.

WOODCOCK A LA BOURGEOISE—*Columbus*, O., June 26.—On the return from a short drive westward last evening, and just before our share of the cyclone, in crossing a ditch or run we startled a woodcock (*Philohela minor*) and her brood of five from beneath the temporary bridge over said run. Although not an uncommon thing to find woodcocks' nests containing five eggs, as we learned at home in New Jersey, this is the first time we ever beheld a family of five young. The little ones were scarcely larger than rails (*Porzana carolina*), and they had actually "to climb" to top a low snake-fence, behind which they immediately dropped. There was no mistake in the number, as I had ample time, and counted first the birds and afterward their little "long-bills." The old bird jumped with a ring, which attracted my attention and caused me to check the horse. A second thing of interest to me is that they should be found so far away from home—the nearest cover of any respectability being at least a mile distant—in a road (middle mud-road to Cemetery and Asylum for Idiots and Lunatics) so frequently traveled; but "there's no accounting for tastes." I regret I did not get out and see if I could have flushed the little fellows a second time, but the storm was racing with me—it beat me by a full length—and "I did not like to tarry."

With esteem, I remain, BOURGEOISE.

A QUEER FISH.—R. E. Robinson, of Ferrisburgh, Vt., writes:

An acquaintance of mine while fishing for trout in a small brook in East Montpelier, early in June, caught a queer fish, described as follows: Total length, 4½ inches; breadth of head, nearly 1 inch; pectoral fins, 1⅜ inches long; eleven long, hard spines (these fins are so large that they have the appearance of wings); anal fin, 1 inch wide, 9 short spines; ventral fins small; first dorsal, 5 spines; second dorsal, 15 spines and rather short; caudal, 1 inch broad and rounded; is scaleless and beautifully mottled brown or light yellow, the dorsal fins the same; yellowish white beneath; two small, sharp white spines behind the eyes near the side of the head. It was caught by Lee Harvey, and preserved in alcohol by Howard Putnam, of East Montpelier, in whose possession it now is. Will you give us its name?

[The specimen is doubtless one of the *Cottoids* or "Miller's Thumbs," and may be either *Cottus gobioides* (Girard), which is found in Lamville Co.; Vermont, or *Cottus boleoides* (Girard), found at Windsor, Vermont. Though, in making this statement, we must say that the fin formula furnished does not correspond with Girard's description; but unless a person knows exactly how to count fin rays he may easily err. The number of ventral spines should have been given, as this is an important point.—ED.]

DURATION OF LIFE IN ANIMALS.—The duration of life in animals is estimated as follows by a German author of the last century:

The elephant, 150 to 200 years; camel, 50 to 60; ass, 30 to 50; horse, 20 to 30; deer, 20; bull, 30; ox (draught), 19; cow, 20; lion, 60; bear, 20; wolf, 20; dog, 25 to 28; fox, 15; sheep, 10; hog, 20; cat, 18; squirrel, 7; hare, 7 to 8; goat, 10. Of birds: Parrot, 110; eagle, 100; swan, 100; goose, 50; sparrow-hawk, 40; canary (if it breeds annually), 10; do., if it does not couple, 24; nightingale and lark, 16 to 18; peacock, 24; turkey, 14; hen, 13; quail, 6 to 7; duck, 25.

CAUSE OF THE FISH-LIKE ODOR IN DRINKING WATER.—In answer to the question, "What cause, then, can be assigned for this most peculiar odor?" Prof. Lattimore asserts in the *Popular Science Monthly* for August, that it must be due to the decomposition of some form of fresh water algæ. He draws his conclusions partly from the investigations of others, and partly from his own observation and experiment. After the disappearance of the odor from the water he observed that microscopic algæ, which had collected on the filters through which water had been flowing for twenty-four hours, exhaled an odor strikingly like that given off by a blade of early spring grass, when crushed by the fingers. A minute quantity of these algæ put into distilled water, and kept covered for a few hours, revealed an odor which was distinctly recognized as that which had recently affected the water from the lake.

—We have received from the General Passenger Agent of the Kansas Pacific R. R., a circular announcing that this company are prepared, upon application, to offer special rates to parties who desire to explore Kansas and the Rocky Mountains in the interests of science. There is no more enticing field for the geologist than the country through which the K. P. passes. Its cretaceous especially has furnished the most interesting specimens ever discovered in this country; the *Odontornithes* or birds with teeth, and the *Pteranodontia* or toothless *Pterodactyles*, both lately described by Prof. Marsh. The carboniferous, too, and the Miocene are both more or less well developed in Kansas, and then beyond Denver rise the grand old mountains that we all so long for during this hot weather. Don your hickory shirt, then, young man, and with your geological hammer in one hand, and your rifle in the other, start out for a couple of months' work on the plains and in the mountains.

—The managers of the London Zoological Gardens have offered a reward of $2,500 for the safe delivery in England of a monster anaconda, measuring thirty-six feet in length, and a yard in diameter, now holding undisputed possession of a large pond near Matarm, Venezuela. These serpents are caught with live dogs as bait. After swallowing the dog the snake takes a nap and the fisherman takes the snake.

PROF. PROCTOR ON THE SEA SERPENT.—In FOREST AND STREAM of Aug. 12, 1875, we published a "Plea for the Sea-Serpent." There have been, since that date, numerous sea-serpent hoaxes, as well as several observations reported by men whose testimony merits at least a suspension of judgment. Prof. Proctor sends an interesting letter to *St. Nicholas* for August, and some of the facts he mentions, it will be remembered, were urged by us in our article. The Professor says:

1. A great number of foolish stories have been told about the sea-serpent by anonymous hoaxers, so that—

2. Persons of known name are apt to be ashamed, rather than otherwise, to describe any sea-creature (or appearance) which they supposed to be the sea-serpent. Yet—

3. In 1817, eleven Massachusetts witnesses of good repute gave evidence on oath before magistrates (one of whom corroborated the evidence from his own observation) about a serpentine sea-creature seventy or eighty feet long, seen in some cases within a few yards. It presented all the features afterward described by the officers of the "Daedalus."

4. In 1853 five British officers record a similar experience.

5. In 1848 the captain of a British frigate sent to the Admiralty an official description of what he and a scientific surgeon, by himself and his officers, traveling past his ship, close by, so that he could have recognized the features of a human person at the distance with the naked eye."

6. Captain Harrington and his officers saw such a creature in 1853 under such circumstances that he says: "I could no more be deceived than (as a seaman) I could mistake a porpoise for a whale."

7. The story last related, marvelous though it is (rejected by myself on that account, when first received, as a probable hoax), has been deposed to on oath by all who were on board the "Pauline" at the time. The captain of the "Pauline" writes to me that, instead of being anxious to tell the story, he and his officers and crew were in twenty minds to keep it to themselves, knowing that they would be exposed to ridicule, and worse.

8. It is certain that creatures of the kind—*i. e.*, not sea-serpents, which few believe in, but sea-saurians—were formerly numerous. (See Lyell's "Students' Geology."—*Lias, Plesiosaurus Dolichodeirus.*)

9. Of other creatures, numerous at the same time, occasional living specimens are still found. (See Lyell—*Lias Chimæra.*)

10. Agassiz ("Zoologist," p. 2395) states that it would be in precise conformity with analogy that such an animal as the Enaliosaurus (which, see Professor Winchell's "Sketches of Creation," p. 178, would precisely resemble the sea-serpent as described) should exist still in the American seas

11. Of several existent sea creatures only very few specimens have ever been seen (in some cases only one).

With these, and many like facts before us, we may believe that the above-mentioned observers were deceived, and doubt whether any Enaliosaurus continue to exist. But there is no scientific reason for denying the possibility of their existing, and being occasionally seen. The foolish stories told by hoaxers have no bearing on the case one way or the other; at least, they *should* have no bearing with those who can reason aright.

Yours truly, RICHARD A. PROCTOR.

MESMERIZING ANIMALS.—An exchange notes with surprise, the experiments of Kircher, in "bewildering hens." This is nothing new or strange. It has long been known that pigeons and other fowls were very susceptible to mesmeric influence, and so also are rabbits, squirrels, guinea pigs, frogs, etc. Men have been mesmerized by simply gazing intently upon a bright surface, as a mirror, new surgical instrument, or other bright reflecting body.

Dr. Henbill places a frog on its back, with its leg and thigh flexed, holding it quiet for some time; thereupon Mons. Ranis remains in that position motionless, except as to breathing, for five or six hours. The Doctor believes this to be sleep; but from the fact that to produce this state the finger must be held steadily before the eyes of the animal, and the sleep induced is often cataleptic in character, we must reasonably suppose *animal magnetism*, so called,—to be the agent. The papers of Dr. Carpenter, on Odolysm, etc., in the *Popular Science Monthly* for June and July of the current year, throw much light upon this subject, considering that as yet the alphabet of psychological science is not yet mastered.

—An Artesian well in Ventura County, Cal., which was bored in 1871, spouts up, every April and May, immense quantities of fish. The fish, supposed to be trout, are of various sizes, the largest being one inch in length. The nearest stream where fish are found is twenty-five miles distant.

—Mr. C. R. Thatcher has returned to England from his five year's conchological exploring tour in the far East, bringing with him an entirely new genus, which the London Zoological Society have named in his honor Thatcheria.

A CAT HOSPITAL.—The *Tribune* reporter has found an old woman on Division street, between Essex and Norfolk, who devotes her whole time and purse to the gratuitous nurture of disabled cats. She has more than fifty on her hands now.

—A Pottsville (Pa.) sparrow and a young chicken recently engaged in mortal combat over a crumb. The sparrow triumphed and flew off with the prize, leaving the chicken dead

—A fossil *iguandon*, 60 feet long and 18 feet high, has been found near Canon City, Col.

ARRIVALS AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JULY 21, 1877: one common starling (*Sternus vulgaris*) and two black-tailed hawfinches (*Coccothraustes melanurus*), presented by Mr. John Sutherland, N. Y. City; two red foxes (*Vulpes fulvus*), presented by Mr Nelson Norton, Selden, Long Island; one Horned owl (*Bubo virginianus*), presented by Mr. James Butler, N. Y. City; one black bear (*Ursus americanus*), presented by Capt. E. C. Stevens, S. S. City of Austin; one horned owl (*Bubo virginianus*), presented by Mr. M. V. B. Sandford, Jersey City; one prairie dog (*Cynomys ludovicianus*), presented by Miss Jennie Banks, Englewood, N. J.; one pair tortoise, presented by Capt. Vesper, bark Levanter; six cygnets (*Cygnus olor*), bred in the menagerie. W. A. CONKLIN, Director.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN DURING WEEK ENDING JULY 17, 1877: One collared peccary (*Dicotyles torquatus*); two barn owls (*Strix flammea var americana*), purchased; one sparrow hawk (*Falco sparverius*), presented; two white rats, presented; two kangaroo rats (*Hypsiprymnes rufescens*), born in garden.

ARTHUR E. BROWN, Gen'l. Supt.

SPLIT BAMBOO RODS.

To Our Customers and the Public: In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
—[*Adv.* Manufacturers, 65 Fulton Street, N. Y.

Woodland, Farm and Garden.

WINTER-BLOOMING BEGONIAS.

THESE favorite plants are seldom seen where their capabilities, from a decorative point of view, are thoroughly developed. To be sure, the florist grows a benchful of B. Saundersonii or B. Incarnata for winter, and perhaps a few plants of B. Dreggeii for spring or summer, but we seldom see them get that attention and care in a greenhouse that they deserve. Scarcely any other genus of plants is so distinct in habit, and but few will thrive so well under commonplace treatment as these; and yet we find them almost banished from nine-tenths of our private greenhouses to make room for novelties of far less value from a gardener's standpoint. Many of the best begonias are profuse flowering plants, not less acceptable because they persist in blooming all the year round, and they are by no means particular as to the position or soil they occupy. The dwarfer kinds can be grown either in pots or baskets, and the tall growing sorts may be planted out and trained up pillars, or in any out of the way place in the greenhouse, just where the tender and fashionable novelties will not thrive; but no matter how or where they are grown, their foliage and flowers being so distinct from any other plant, they are simply invaluable for the quantity of cut blooms they supply during the long winter season. For dinner-table decoration, or in vases of loose flowers, they are unsurpassed, on account of the crystalline brilliancy of their colors, which show remarkably well under artificial light. The white kinds, as B. Spathulata and B. Dreggeii, glisten like snowflakes, and the rosy, crimson or scarlet flowered species are still more beautiful. For bouquets, they are not so well adapted, as the flowers have a curious knack of dropping from their stalks just at the critical moment. They are easily propagated, either by cuttings, leaves, or by divisions of the fleshy tuberous roots, and can be grown in any good compost, sufficient drainage being always secured. Recently some attention has been given to the half hardy tuberous-rooted section, and while for brilliancy of color in the flowers and freshness of foliage, many of them are unsurpassed, yet blooming as they do during the summer months, when the greenhouse cannot vie with the flower garden, and, in fact, is often neglected altogether, they are not likely to be of great service in this country. The following kinds will be found both useful and desirable, and are grown chiefly for winter decoration. B. Dreggeii (*Syn. B. parviflora*), a compact, bushy species, producing a copious supply of its white buds and snow-white flowers, set in foliage of the most vivid green imaginable. B. Spathulata, an erect growing plant with rounded shining leaves, and pearly-white blossoms. B. Fuschioides, a well known favorite, with long red shoots, clothed with bright leaflets of a metallic green tint, and enlivened by its gracefully drooping racemes of heart-shaped coral-like buds and flowers, admirably adapted for cutting for vases, or other decorations. It flowers best when planted out and trained up a wall or pillar. B. Hybrida Multiflora is a seedling, similar in habit with rosy flowers and very free blooming, but not equal to the former in beauty. B. Nitida is a splendid variety for covering pillars or walls in a warm plant house, and will well repay a little extra attention, as it is almost always in bloom; but it must be planted out, and have plenty of root room and good treatment to grow it to the best advantage. The foliage is large, and of a pleasing bright green color, while its large rosy flowers are produced in immense panicles, borne on stiff fleshy stalks from the base of every leaf. For cutting, this variety is unequaled, and the flowers may be arranged along with the rosy Calanthe Veitchii, the rich purple Lælia Anceps or L. Autumnalis, the snowy Cœlogyne Crestata, or the Scarlet Flamingo plant, without loosing any of their beauty by the contrast of such lovely rivals. B. Saundersonii is a well known variety, with bright green foliage, compact habit, and bears a profusion of crimson flowers all season long. B. Incarnata Superba, Ingrammi Insignis, and others are all good varieties, but not better than those already named, though they give more variety of course. B. Manicata, B. Hydrocotylifolia, and the cross or hybrid between them are also good sorts, with graceful semi-transparent light pink lace-like flowers. B. Weltoniensis is also a valuable variety with light green foliage and bright pink flowers. It lasts a long time when cut, and flowers well when bedded out in summer as well as flowering freely in winter. B. Prestoniensis, with orange colored flowers. B. Subpeltata Nigricans, with dark mottled foliage and pink blossoms, and B. Pearcei with its golden yellow blossoms and beautifully marked foliage are also desirable varieties; nor should B. Glaucophylla Scandens be forgotten, an admirable basket plant with light green foliage, and long pendants of rich salmon colored blossoms. Indeed all of the above are well worth growing by those who require a supply of decorative plants and cut flowers during the dullest portion of the year.

THE ROSE SLUG.—Mrs. H. D. Graves, of Essex Co., N. Y., writes to the florist, Vick, that she destroys the rose slug easily by the application of a solution composed of one pint of dairy salt and one pint of soft soap, dissolved in ten gallons of soft water. Dissolve the soap thoroughly in the water, then add the salt, stir well, and shower the bushes soon after the leaves appear; again after the bloom is over. One application is generally sufficient if taken in time. After sunset is the best time to do it.—*Rutland Herald.*

—California has produced a pink rose six inches in diameter, or eighteen inches in circumference.

POISON IVY.

EDITOR FOREST AND STREAM:

In compliance with your request for information concerning the poison ivy, in FOREST AND STREAM of July 12, I will state that there are several varieties of *Rhus* that are poisonous, of which the following is a brief description:

Rhus toxicodendron—Poison oak.—A creeping shrub from one to three feet high, with long, cord-like shoots and strong lateral fibres.

Rhus radicans—Poison ivy.—A vine climbing to the height of twenty feet or more. The leaves of both of these varieties are arranged in threes. The *R. radicans* somewhat resembles in appearance the Virginia creeper or American ivy, but the latter vine has its leaves arranged in fives. These two varieties are well known, and a more extended description is not necessary in this connection.

Rhus venenata—Poison sumach, also known as poison ash and poison elder in various localities.—A shrub or small tree growing from ten to twenty feet high; trunk, from one to five inches in diameter; pale grayish bark; leaves about three inches long, nearly half as wide, oval, and arranged in pairs, from three to six pairs with a terminal leaf on each leaf stalk; very small, greenish flowers; round, smooth, greenish-white berries about the size of small peas. This is more poisonous than the species named above, and all are found throughout Canada and the United States.

Rhus pumilum,—This is the smallest and most poisonous variety, and is confined to the Southern States. It is about a foot in height, of a trailing habit, with a hairy stem; leaves arranged similarly to *R. venenata*, but coarsely toothed, and with a velvety or hairy surface; the berries are covered with red silky hairs. The two latter varieties resemble somewhat the common sumach.

Some persons are peculiarly susceptible to the poison of the *Rhus*, while others are as singularly exempt from its baneful influence. When its effects are simply external the simplest and best remedy is a saturated solution of bi-carbonate of soda, applied several times a day, and permitted to dry on; this will effect a rapid cure. Common washing soda sprinkled on is also good. Another certain remedy is a solution of hydrochlorate of ammonia, or sal ammonia, one ounce to a pint of water, applied frequently with a soft sponge. Solutions of borax or copperas may also be used with good effect. A decoction of the bark of the common elder, in buttermilk, is a favorite domestic remedy. When there is internal inflammation or much constitutional disturbance, hydrochlorate of ammonia should be given in doses of five grains in gum arabic water every three hours. This, with cooling and mucilaginous drinks, and, if necessary, a saline purgative, will soon cure the worst cases. In California a decoction of *Grindelia robusta* is used as a certain and effectual application in poisoning by the poison oak; the fluid extract may be obtained at any drug store, and is probably as good as the crude article.

The remedy mentioned by Mr. Ames in FOREST AND STREAM of June 28 as the "black-spotted alder," is doubtless the *Hamamelis virginica* or witch hazel, which is called "spotted alder" in some localities, and a decoction of the bark is much used in domestic practice and by Indians in this and a variety of other external inflammations. The fluid extract, or Pond's extract, may be obtained at the druggists, and is as efficacious as the decoction.

I think that the black alder, alluded to by "Jacobstaff" in FOREST AND STREAM of July 12, must be the *Rhus venenata* described above, which is, in some localities, known as "poison elder." I know of no variety of alder possessing such poisonous qualities. OCONOMOWOC.

IVY POISONING.—In answer to "Jacobstaff's" letter in the FOREST AND STREAM of the 5th inst., I for one have used the wash made from the spotted alder, and found it everything that Mr. Ames represents it to be for ivy poisoning, of which I have been a victim.

New York City, July 17. FRED. GRAHAM.

POISON IVY AND DOGWOOD.—L. P. Simmons, a blacksmith of Marshfield, Mass., recommends the shop water of a blacksmith's trough as a sure cure for poison ivy and dogwood.

SUMACH.—Another correspondent recommends strong salt and water, "*as strong as it can be made*," as an antidote for the poisoning of sumac.

THE PROPOSED SEA IN THE SAHARA.—The plan of certain French *savants* to make a sea of the great African desert calls forth considerable discussion from different quarters as to the probable effect upon the balance of the world, and climatological effects to be produced in Africa and Europe. The Providence *Morning Star* says:

The calculation is that the Sahara covers 4,000,000 miles, and the seas of the globe 150,000,000. Every foot of water spread over the African desert would lower the sea one-thirty-eighth of a foot. If this inland sea were to attain a depth of eighty feet on an average, the whole oceanic world would shrink all around some twenty-six inches. What would become of our harbor? How could the Cunarders and Star lines get over the bar in New York Bay? How Rhode Island would grow in agricultural dimensions and diminish in clam fields? Norfolk would be left as about the only accessible harbor on our southern coast. Holland would save half the expense of draining the Zuyder Zee.

P. Jackson.—Under favorable circumstances the spores of Adiantum Farleyense germinate freely, but being originally a sprout from a Scutum, the seedling plants, though bearing a strong resemblance to a Farleyense in a young state, invariably revert to the original form.

—Gorham, Me., has a curiosity in the shape of a rose which has bloomed from the middle of a healthy shoot, sending out its petals on every side, while the stem, bearing normal leaves, grows from the centre of the flower eighteen or twenty inches. There are no stamens or pistils. Some of the petals are developed into green leaves, much darker than others on the same bush, and of an entirely different shape.

—Cultivate frogs, toads and lizards. Put them in your gardens, and as the evening approaches they will hop from their hiding-places and snuggle down in some convenient spot near the gutter, or where they know their food will come plenty. The ants, roaches, mosquitoes, etc., they consume in a night is marvelous, and thus they keep down the insect pests.—*Scientific American.*

—The first bale of new cotton was received in New Orleans on the 10th of July. It was raised in Cameron County, Texas, by Marion & Follian.

—The grain fields of Central New York are said to be full of sparrows which have deserted the neighboring towns.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contignity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed; signs of suffering, etc.

KENNEL REGISTER.—We are in receipt of numerous applications for blanks for the Kennel Register. This matter is no longer in our hands. Those desiring to register must henceforth apply to L. H. Smith, Strathroy, Ontario, Canada, who is the Secretary of the National Kennel Club, and Chairman of Committee on Publication.

CONTINENTAL DOGS.—We hear but very little in this country of the thoroughbred dogs of the continent of Europe, being so completely absorbed in the contemplation of the "blue bloods" of Albion. We clip the following from the *Live Stock Journal and Fancier's Gazette* of June 15, 1877, which treats of several favorite Continental breeds, many of the specimens of which, though seemingly possessing no trace of pointer or setter blood, are not without interest:

There are on the Continent four recognized classes for setting dogs, viz.: The Braque, the Epagneul, the Griffon and the Barbet. As I have for the last fifteen years shot in the fields, marshes and woods of France, Germany and Belgium, whenever I have the opportunity of going abroad, I have seen all the breeds of dogs at work, and I feel that I can speak with confidence about their points and characteristics. The generic term *Braque*, includes all pointing or setting dogs with short hair, such as English pointers and Spanish pointers, as well as the original French *Braques*, of which there are noless than six grand varieties, viz., the Braque Dupuy, the Braque de Picardie, that of Navarre, of Anjou, of Allemagne, and du Bourbonnais. Concerning the English pointer, the general opinion of Continental shooters is that he is too fast for their narrow fields, and that he is totally unsuited to the requirements of the man who wants a dog-of-all-work. Of course, few pointers will take kindly to their pot-hunting style; that is clear, if that is what they mean. To wish that a thoroughbred pointer should go hunting in thick and prickly covert, through furze after rabbits, and to expect him to retrieve from land and water, *in all weathers*, is too much of a joke for some of the dogs' feelings. Hence, the soft and thin skinned English pointer is held in mediocre esteem by any but the swell shooters, who like to have a well-bred, elegant-looking dog, anyhow, for a companion. In the provinces, when the land is open, however, the English pointer is preferred, because he saves the sportsman's legs considerably, can go at a good pace, and, being in a plain, his master can always see him. Of course, as time goes on matters will improve, and a certain proof that the pointer blood, at any rate, is favorably looked upon is that almost invariably the services at stud of a good British pointer, who works well in the field, are always eagerly sought after everywhere on the Continent.

The Spanish pointer is a slow coach, and a heavy one withal; but if he is slow he is sure, and he possesses a nose which some English pointers might very well envy. The style of the Spanish gentleman is pretty much like that of his master—*i.e.*, he takes matters very coolly, never is in a hurry, trots along in earnest, but without any flurry, is everlasting in bottom if not pressed, and dearly loves the gun. In short, he hunts *for* the gun, whereas the English pointer hunts for himself. A good Spaniard will come to a point with the staunchness of an Egyptian pyramid. There is no nonsense about *him*. The birds are there, and no mistake. I never saw a Spanish pointer make a deliberate false point. In short he uses his good sense, and, when coming on a scent, he does not get cateleptic for good, unless he makes sure that they are there still. If the birds lie well, the Spanish pointer moves his nose in their individual direction, where they are scattered, so that, within half a dozen or so, one may get a tolerable idea of the numerical force of the covey. Some dogs are very apt to do that sort of thing when they are old and experienced, and I strongly opine (especially when they take their point by dropping) that they have been much used by netting poachers. Given a quiet moonlight night, and good fields with plenty of birds, and a Spanish pointer well-trained to the work, and two poachers will "drag" hundreds of partridges in the night. But the dog must lie down in his point, not necessarily when taking his point, but when he sees the men coming, or when the net gets over him. There is an enormous amount of game taken in that manner on the Continent, and were it not for the sagacity of their dogs, it would be a very difficult matter indeed for the men to know exactly where to drop their abominable implements. Hence the Spanish pointer being a steady ranger, perfect finder, and strict pointer, is almost universally adopted by poachers wherever quiet work has to be undertaken by them. The best Spanish pointers I have seen have, almost invariably, been purchased by sportsmen directly from poachers, and I must candidly say that where game was pretty plentiful no better allies to the gun were needed. Had there been a deal of ground to cover, matters would have been different, however, for the English pointer will indubitably cover ten times more ground in the same than his Spanish *confrere*.

The Braque Dupuy is very much like the English pointer in build, but his head is squarer, and he is stouter on his pins. He is a moderately fast ranger, and a clever finder of game, very staunch and steady. When brought up to it he does not mind rough work, but few of them go well to water. They have rather peculiar heads, the muzzle being short and square, the nose turning up slightly, their ears are set high, and their lips are long. They are dashing workers, and are very greatly prized. I have seen a brace that would come to their points at awful distances, by a tropical heat; hence for the hot departments of France they are admirably suited. The Braques of Picardy, Navarre, and Anjou differ only in markings. The so-called German pointers are, however, perfect monsters in size. I have seen one which was as big as a small donkey. When this fellow came past you at a trot he shook

the very ground, at least I used to say so to his owner. I only saw that dog twice out in the field, and never saw him on point. He seemed to have no nose, although his master greatly prized him, perhaps, merely for the originality of his size. He retrieved, however, fur very well, bringing a hare or a rabbit a quarter of a mile, if necessary; but as he swallowed two or three partridges I voted him rather *de trop*, and begged to be excused killing game to such a brute. On the other hand, I have seen some pointers in Germany (not to be confused with German pointers) which were excellent in their way, but then again, tastes differ. A German shooter expects his pointer to point everything, and to remain steady until the gun can get near, in the open. But under covert, the dog is expected to spring roebucks, hares and rabbits, and, *mirabile dictu, he must give tongue* then!

The Braque du Bourbonnais looks, at a distance, uncommonly like the old English bob-tail sheep-dog, but of course he is short-haired. His tail, however, is naturally a regular stump. Query: How did this hereditary short tail occur? In look this Braque *sans queue* is not exactly fascinating. He is a sturdy, stumpy, coarse-looking fellow; but under all this coarseness, this Bourbonnais Braque hides an extraordinary intelligence, and most remarkable aptitude. I once sent one over to an old friend, while I was in France, about ten years ago, and he wrote back as follows: "I did not want a sheep dog! What have you sent me one for?" I replied, "Try him in the field;" and he found him such a nice companion, and so well suited to his age (he was nearly seventy), that he declared the dog to be the best he had ever had. This dog had a double nose, a peculiarity which is cried down by some people who have never tried the dogs, but who object on principle, of course, to anything of which they know absolutely nothing. Now, in practice, a double-nosed pointer is perhaps not better than an ordinary nosed one, but he certainly, and emphatically, is not worse, and that is a great thing to say. Moreover, for finding birds in very hot weather (putting aside pace) I have rarely seen anything so good as two or three double-nosed dogs belonging to the breed I am now alluding to, and if prejudices could be put aside, I should like to see some tried by competent authorities, and I warrant these dogs would, judiciously crossed, greatly improve in nose certain breeds of British pointers which have all that could be wished for in pace and style, but are wonderfully deficient in making out their birds, and finding out whether they are still "there," or "have been" there, and are gone.

L'epagneul is not, as his name would imply, a spaniel. An *epagneul* on the Continent is a setter, and the breeds are there simply innumerable, and are not distinguished by any particular names. All setting dogs with long and silky hair are called *epagneuls*. Our regular spaniels are called *petits epagneuls* (small spaniels), and are understood to spring their game, not to set at it. There are but few of the latter class ever used on the Continent, except by Englishmen. Continental sportsmen decidedly have a preference for setting dogs to springers, hence the depreciation in which are held the latter.

The *Griffon*, according to my opinion, is simply a cross of rough hound with a smooth pointer, or long-haired setter. I is undoubtedly a very ugly dog, coarse, ill-built, but daringt ardent, indefatigable. He will go through a thicket, however impenetrable, and if there is game there, out it must come, *volens volens*; he will find it out, and clear the place of it. The Griffon, therefore, has some good qualities, but it is a deuce of a job to break him; and as to classifying him by rights with setting or pointing dogs, why surely there must be somewhere a stretch of imagination. The Griffon rarely points at all of his own accord; those who do have been a long period trained for it, and make a bad sort of point. In short, that sort of dog is not at all bad for beating about a very rough country, but pointing is not by any means their most brilliant point. (Excuse the bad pun.)

And the same is to be said of the *Barbet*. The Barbet is simply a water spaniel. Now, my Diver was as good an Irish water spaniel as ever lived; he certainly used to make a sort of point (a microscopical one), and then up he would get the birds; and so do Barbets, only with this difference, that their points are even far less pronounced than my late Diver's short stop. However, Barbets are called *chiens d'arret* (setting or pointing dogs), on the Continent, and, while protesting against the appellation, it was my duty to notice them. They are excellent water dogs, will beat reeds, etc, admirably, find the birds well, bolt them well, and retrieve them capitally; but that is all that can be said in their favor, for there is really no cataleptic aptitude in them, and, therefore, why they should be classed by the French authors as setting dogs fairly beats "this child." In looks, Griffons are like coarse setters, with something like an otter-hound's coat on. Barbets look, and are, I verily believe, mere poodles. Now, by all that's good, who ever did see a poodle on point—except perhaps on a mutton-chop? No, no, Messrs. Revoil, de la Neuville, and others, as lawyers say, your books on sport are extremely interesting, and very clever, but, may it please your authorships, we can't swallow a pointing or setting poodle, and that is the plain fact.

Should any of my readers wish to get more information on the subject of setting dogs on the Continent, I would recommend them to procure "*Le Chasse au Chien d'Arret*," by the Viscount de la Neuville, and the "*Histoire des Chiens*," by Revoil. There are in both works, numerous and somewhat inexcusable mistakes, which the average British sportsman will at once detect, so that he really could not be led away, and the general hints are interesting. To give an instance of the ludicrous errors into which the last-named author was led, the reader will find, page 192 in his book, the following, at any rate, quite new information:

"Cockers and springers are the dogs which Englishmen prefer for grouse shooting, because they never go far from their master, quarter brilliantly, and then suddenly come to a point!"

Good, is it not? ALCURIO.

A "WHOPPER."—The Newcastle *Paragraph* tells a splendid li—story of a fat cur which entered a ground-hog's burrow, and was unable to back out on account of the large quantity of loose earth which he had thrown in a heap behind him. Realizing his terrible situation he set to work to dig his way out, which he succeeded in doing after *twenty-eight* days of hard labor. When he emerged he was lean as a skeleton and his toe-nails worn off, possessing but just strength enough to to crawl home. The point at which he emerged was some twelve or fifteen yards from the entrance to the burrow.

—Mr. A. E. Godeffroy's pointer bitch Queen whelped twelve magnificent pups on the 9th inst. The sire is Sherwood's Sancho, and Queen was originally from the same kennel.

A COCKER KENNEL.

EDITOR FOREST AND STREAM:

When there is anything good in the country people like to know where it is to be found. To those of your readers who take pleasure in dogs, and especially in cocker spaniels, a word about the kennel of Mr. F. H. Hoe, of Tarrytown, N. Y., might be interesting.

That gentleman resides on one of those lovely eminences that overlook the Hudson, where he takes pleasure in keeping and raising high-minded, aristocratic cocker spaniels. Being deeply interested in this particular species of the genus *canis*, he devotes himself personally to the care and training of his dogs.

I would like to see a picture of the animals that now compose his kennel. They would make a handsome group. The position of honor of course would be given to Witch, the paterfamilias, because he has been out in the world and has gained for himself no small degree of reputation. His picture appeared lately in *Harper's Weekly* as the winner of both the first prize and the special prize at the recent dog show in New York. He is the three-year-old son of Romeo and Juliette, and is a thoroughly trained dog. He has a cocker spaniel head of the most approved type. It is not necessary, however, to enumerate his good qualities, for his pedigree and fine points have already been dwelt upon sufficiently since he began his public career. His reputation is secure and irreproachable.

But Witch has a dangerous rival in Madge, the prospective materfamilias of the kennel. She was purchased by Mr. Hoe from Mr. S. J. Bestor, of Hartford, the well-known importer of cocker spaniels, who had reserved her out of a litter from Juliette by Snip, for his own use in kennel and field. She is now about ten months old, and is a remarkable animal, not only for beauty but for intelligence and disposition. She is a most affectionate creature, and takes an idea like a flash. Although she has not been through a regular course of training herself, she has learned from observation of the other dogs to retrieve and down charge beautifully. Like Witch, she is a handsomely marked liver and white, and is beautifully feathered. In "head-piece," and particularly in eyes, she will surpass even Witch. Her ears are well attached, and her chest is strong and well-developed. Her fore-legs are white, distinctly ticked.

Mr. Bestor, her breeder and former owner, says of her: "I had reserved Madge for my own use in the kennel and field, and part with her with a degree of regret to Mr. Hoe, although I am glad she goes into the ownership of an appreciative and intelligent gentleman. Madge I regard as a representative cocker bitch, and I am free to acknowledge her as one of the best, if not the best specimen, I ever bred. She is sure to make a reputation for herself, her owner and her breeder." Witch and Madge being both the offspring of first class imported dogs, Mr. Hoe is just in expecting great things of them, and I feel confident that he will not be disappointed. Nellie and Wag, both pure liver, complete the group. Nellie is the daughter of Puss by Fly. She recovered recently from a distemper, which was cured by doses of aconite and nux-vomica, five drops every three hours. She is just now convalescing from a perforating ulcer of the eye, which Mr. Hoe cured by belladonna in some potent form. I did not inquire particularly about the mode of treatment for the two maladies, but Mr. Hoe would no doubt furnish the particulars to any one who might have need of information on the subject. Wag, the lively son of Witch and Nellie, is a dog of the place, having been born and bred on the spot. There is a strong resemblance between him and his dam, and both are exceptionally fine animals. These four will soon go into their new quarters—a fine house with all modern conveniences, in which the strictest sanitary laws are to be enforced. Diet, light, temperature and exercise will be regulated for the highest good of the dogs.

It is surprising that cocker spaniels are so little known and appreciated among American sportsmen. They need only to be known to be appreciated. If they were kept only as pets or house dogs they would give infinitely more satisfaction than nine-tenths of the other dogs that are devoted to that service. They are surprisingly handsome, intelligent and affectionate, and I hope that we shall soon see more of them adorning our fields and lawns. FALSAM.

KENNEL OF E. S. WANMAKER.—This kennel is located on what is known as "Saddle River" road, one and a quarter miles from Hohokus Station of Erie Railway. The valley derives its name from the stream (Saddle River) which courses at the very door of Mr. Wanmaker's residence, affording fine accommodations for swimming and cooling the dogs during the heated weather. The kennel consists of twenty stalls, three feet square, running the entire length of a large commodious barn, and is ventilated from four sides, above and below. For coolness in summer it has no superior, and can be made warm and comfortable in winter. There is room for one hundred dogs. The outlet from the kennel leads into the exercising grounds, which consist of a fine grass plat—upward of three acres—nicely shaded by a thrifty apple orchard. Here the dogs are allowed to run three times daily—one hour in the morning, a half hour at noon and an hour again at evening. Water from the well is furnished them fresh twice daily, and always remains in vessels at each stall night and day. The diet is of the very best, and is given in abundance twice daily, morning and night. Mr. Wanmaker states that by this mode of feeding his dogs are kept not only in better condition and health, but also quiet all the time. Everything is kept scrupulously clean, each stall being swept out daily, and washed thoroughly with soap and water twice each week. At present there are but twelve dogs there; among the number some very fine ones—Gordon, English and Irish setters. Besides the dogs boarding there, are four belonging to Mr. W.—Ripple, by Pride of the Border out of Jessie, a very promising puppy; Leaf, a red and white Irish puppy, by Plunkett out of Stella, is a fine specimen of her race. But there are others equally as fine, and a visit to this kennel will repay any lover of canines. Mr. W. invites inspection, and will be glad to entertain all who may come.

NOTICE,

THE NATIONAL AMERICAN KENNEL CLUB STUD BOOK.

Those who have not sent pedigrees of their dogs to either the FOREST AND STREAM or the *Chicago Field* will please forward same at once to Mr. Arnold Burges, Hillsdale, Michigan, who is compiling the work. Pedigrees must be sent before September 1st to appear in the first volume of the Stud Book. It is intended to record the pedigrees of pointers, setters, spaniels and retrievers of all kinds. Entries of pedigrees are free, and parties wishing their dogs to be entered in the first volume must accept this as a final notice.

L. H. SMITH,
Chairman N. A. K. C. S. B. Compiling Committee.

THE KENNEL FIELD TRIALS.

NASHVILLE, July 18, 1877.

EDITOR FOREST AND STREAM:

We are all fixing up for the field trials, and will certainly make them more successful than any held here before. From what we can learn twice as many dogs will be entered as last year. We have a fine prospect for birds everywhere, and especially so on the grounds over which the trials are to be run. In addition to what will be raised on the grounds, we intend turning loose several hundred more before the beginning of the trials, so that we may have enough birds for a dog to make his fine points without hunting all day. Our sportsmen are enthusiastic on the subject, and are all working with a vim. Quite a number of home dogs will be run, and we hear of quite a number from your section, which will be entered and run by the Nashville Kennel. Geo. C. Colburn, of your city, will probably have two in Fred Massey, of Brooklyn, one, and Alfred Jenkins, Jr., of Baltimore, two, *native curs*, except one, as Burges and Smith would style them. But native or not, if we can only get Massey's Duke, Youmans Taylor's old Sancho, and Sancho's pup, young Sancho, property of Geo. C. Colburn, down here in time, we will make Smith think that his blue bloods are not quite invincible, notwithstanding the snubbing manner in which he spoke of old one-eyed Sancho and his get. All these dogs of which we speak will probably be run from Nashville Kennel, and all are natives except Alfred Jenkins' imported red Irish dog Derg. By the way, Mr. Hamilton S. Gittings, who has charge of Nashville Kennel, is one of your men. He was raised in Baltimore, and has broken in that section for some years, breaking some of the best dogs there. He is now permanently located here at the seat of the field trials. Let his friends know where to find him. Our sportsmen are now lying idle waiting for dove shooting, which will begin the first of next month, as you are aware we have no woodcock in this State, as they do not breed here. We, however, find a few scattering ones in the fall and spring. H. M.

BIG DOG STORY.—Under this caption the *Popular Science Monthly* for August, '77, publishes the following letter:

The perusal of the interesting article on "Canine Sagacity" in the December *Monthly* gave me great pleasure, and caused me to recall to memory a very remarkable case of the same character which came under my own observation about two years ago. I was then practicing medicine in Galveston, Texas. One day I was called to see a patient, Mrs. Wechsler, the wife of a German butcher. As I entered the hall of the house where she lived, I was met by a large black dog, who under no consideration would let me pass, until Mr. Wechsler himself came to pacify and assure him all was right. The dog then followed us into the sick room, and, while I was examining the patient, the dog was watching all my movements most attentively. When I departed I noticed I was followed by the dog, who did not leave until he had seen me enter my office. A few days after this the dog entered my office, apparently very uneasy about something. The thought struck me at once that perhaps I might be wanted; so I put on my hat and followed the dog, who immediately started for home, where I found Mrs. Wechsler sick in bed, with no one in the house to attend her. She was surprised at my timely call, and when I told her that I had been called by the dog, she related to me what was even more astonishing. She had suddenly been seized with a violent attack of vomiting fifteen or twenty minutes previously, when the dog had picked up an empty tin pan and placed it beside her bed before *running for the doctor*. This dog, who was only eight months old, had never received any kind of training. It is therefore evident that something like the following train of thought must have passed through his mind: Seeing me examine the patient and prescribe for her, he must have conceived the idea that I was the proper person to be there when she was sick. Having made up his mind on this point, the next thing to be done was to find out where I lived; and this he did by accompanying me to my office. Seeing her vomit, he brought her a tin pan, which he had probably seen her use for that purpose, and then set out for my office. The dog called for me a number of times afterward, but never without my services were needed. He was never told to fetch me, but determined himself when it was necessary to do so. JOHN SUNDBERG.

Baltimore, Dec. 4, 1876.

GOOD DOG.—A merchant of Paris has a handsome country house in the environs, which is occupied but two months in the year, at other times being left in the care of an old pensioner, Lerat by name. The first of last May two men in blouses stopped before Lerat's door, carrying a large box which they asked leave to deposit for an hour in the garden, professing to be unable to carry it further on account of its weight. Assent being given, the box was set down behind the stable and the men departed. Just at evening Lerat was attracted by the loud and continued barking of his dog, and, tracing the animal, found him standing guard over the box; and who, on the appearance of his master, began to scratch at the box, snarl, and show his fangs. Creeping up cautiously, Lerat detected a movement within, when he ran for assistance. Procuring the gardener, and arming themselves with guns, the two men approached the chest. Opening it suddenly they discovered a blue-bloused occupant, who darted out and attempted to escape. Covering him with his gun, Lerat called upon him to halt, when the would-be robber fell upon his knees, begging for mercy, offering to confess everything. He was handed over to the *gensdarme*, however, who that night planned a trap by means of which the two accomplices were captured in the act of burglarizing the house. The three men are now serving out sentences in the galleys.—*Der Waldmann.*

DOG SHOW IN ILLINOIS.—There is serious talk of a bench show to be held at Bloomington, in order to increase the interest of sportsmen in high-bred dogs.

—During a thunderstorm two dogs that howled dismally at night were struck by lightning and killed. Howling dogs should cut this out and paste it in their hats.—*Norristown Herald.*

NAMES CLAIMED.—Mr. P. H. Morris claims the names of Czar and Sultana for two lemon-and-white Leicester Peerers, puppies. They are from Smith's Strathroy kennel.

—I claim the name Put for my lemon and white setter dog, whelped Feb. 1, 1877; bred by Ethan Allen, of Pomfret Centre, Conn. S.T. HAMMOND.

—Mr. Robert H. Morris claims the name of Con for his red Irish setter pup, by F. A. Watson's Grouse, out of Jule by Putnam's Dan.

Game Bag and Gun.

GAME IN SEASON FOR AUGUST.

Woodcock, *Philohela minor.*
Black-bellied plover, ox-eye, *Squatarola helvetica.*
Ring plover, *Ægialitis semipalmatus.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Red-breasted snipe or dowitcher, *Macrorhamphus griseus.*
Red-backed sandpiper, or ox-bird *Tringa americana*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tuttler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds. Many States permit prairie fowl (pinnated grouse) shooting after August 15th.

MORE RECOIL THEORY.

STEUBENVILLE, OHIO.

EDITOR FOREST AND STREAM:

I observe in your paper a very elaborate expression of opinions concerning the cause of recoil. The subject being of interest to the philosopher and importance to the sportsman, and no proper explanation being yet made by your correspondents (to my mind), I take the liberty of making a few suggestions.

In expelling a ball from a barrel, force is required to give it motion to overcome the retarding influence of friction in passing through the barrel; and, lastly, to counteract the effect of atmospheric pressure. This force, when developed by the flash of the powder, is equalized on all its surroundings. There is exactly the same pressure on each side of the barrel, and the same on the breech-pin and the ball. The friction of the ball in passing through the barrel would have the effect of moving the barrel in its own direction; but this effect is counterbalanced by an equivalent force pressing against the breech-pin in the opposite direction. The principle is illustrated by lying in a skiff on water, with the feet against one end and the shoulder against the other. The end may be pushed by the feet until pushed out without imparting any motion to the vessel. Simply because there was as much pressure in one direction as in the other. Let us estimate the amount of force needful to overcome the friction of a tight ball in passing through a barrel as being 50 lbs., and we have then, thus far, 50 lbs. pressure against breech-pin and 50 lbs. against the ball, which serves to pull the barrel in the opposite direction from the force against the breech-pin.

The next division of force we have is that portion that is necessary to give motion to the ball. If the ball lying loose in the barrel and could be expelled without any friction, it would require a force to do so in proportion to the velocity given the ball. This force being derived from the same source as that just mentioned for overcoming friction, we must add it to that in its pressure on the sides of the barrel, the ball and on the breech-pin, and we will estimate it at 25 lbs. But it will be observed that this 25 lbs. has only an effect on the barrel to push it backward by the pressure of that amount on the breech-pin. If an individual stand on a skiff on water, and push against another vessel of like weight and like size, the force will be equalized, and both vessels will move from each other exactly the same distance and at the same rate of motion. But if the vessel on which you stand be four times the weight of the one you are pushing, you will only move about one-fourth as far as the other. The force is as fully equalized as in the former case, but the one being four times the weight of the other, the same force will only have one-quarter the effect on it that it has on the lighter one in imparting motion.

On the same principle we have 25-lb. pressure on the breech-pin that is developed for moving the ball from it, and just in proportion as the ball is lighter than the gun, just in that proportion, all other things being equal, will the recoil be light; and in proportion as the ball is made heavy, so will the recoil be increased. Suppose the man in the skiff would push against a steamboat, it is apparent that his recoil would be very manifest, and if our friend Mr. "Smooth-Bore," who claims, in his lengthy article on this subject, "that the missile plays no part in the action of recoil," will load his gun with a missile as heavy as the gun, he will find that the gun will go just as far as the missile, and if he will make the missile as heavy as himself and the gun, both he and the gun will go together one way, and the missile an equal distance the other. This, no doubt, would be thought by him a very crude way of arguing a question, but I would recommend him the experiment if the above explanation is not sufficient to correct his erroneous notions of recoil.

We come now to the third division of force needful to expel the ball, viz., force sufficient to resist atmospheric pressure. The pressure is on the outer extremity of the ball, and the force to propel the ball against and through it lies in the same receptacle as the force for the other purposes. Its effect, also, like the last force mentioned on the barrel, will only be to throw it backwards. Springing up as it does between the air and the breech of the gun, its effect would be to drive the barrel in one direction and the air another. Estimating this at 25 lb. also, we have now out of the entire force developed, which presses, for the sake of count, some 100 lbs. between the ball and breech-pin, and only 50 of this backward pressure is counteracted. Hence we have the recoil.

The following deductions may be made from the above:

1st. Recoil commences with the first motion of the ball, and continues until it leaves the barrel.

2d. The resistance of the atmosphere being in proportion to its velocity, or the velocity of the object coming in contact with it, it follows that whatever increases the speed of the ball through the barrel will increase the recoil.

3d. As more force is required to produce a fast motion of a ball than a slower motion, it follows that all circumstances, such as quick powder, large charges, etc., that are capable of causing increased velocity, are likewise capable of causing increased recoil.

4th. The weight of the ball governs the tendency to recoil to a great extent.

5th. The weight of the gun in excess of that of the missile is the great regulation of recoil.

6th. That the barrel is moved by recoil before the ball leaves it.

7th. The line of the barrel being above its parallel extended from the breech, where it rests against the shoulder, would cause its point to rise with a recoil, and if from any cause a greater recoil is produced than provision has been made for in adjusting the sight, it must result in an elevation of the range of the ball. Hence we have "over-shooting" with heavy loading.

Your correspondent now feels like recoiling himself after writing this hot afternoon, and will say adieu. J. F. P.

—Charlie, son of "Jacobstaff," a boy but fourteen years of age, and Will Lane, Jr., are earning reputations as crack shots. Charlie writes us a very nice letter, too, evincing talents far beyond those usually recognized in boys of his age. The boys are enjoying good sport among the jacks and dowitchers at Lane's, Good Ground.

—Baybirds are reported uncommonly abundant at Seaville, New Jersey.

THAT DITTMAR POWDER.—Some time in the spring a friend purchased some of the Dittmar powder, with a view to trying it in his rifle—the powder being contained in (I think) a half-pound can. The rifle was a heavy muzzle-loading sporting gun, with a barrel at least a quarter of an inch thick, which was of good quality steel. He loaded "same as black powder," bulk for bulk, and fired it. The result was that the barrel went into six separate pieces, which were found, besides other small pieces which were not found. Besides this, the tip-stock was blown into splinters, the trigger-guard loosened and the gun completely wrecked generally. I also succeeded in blowing one of the tubes out of my gun with some of the same. After this I shall use nitro-glycerine in preference. I do not say this to injure the reputation of Mr. D.'s powder in any way, but simply to show what it has done for my friend and myself. The rest of the can of powder and the remains of the rifle can at present be seen at one of our gun stores.

Woodcock are quite plenty in the surrounding country, and the pot hunters are shooting them right along in the face of the law, although several of the aforesaid pot-hunters neither shoot for a living nor sell their game. There was a match at glass balls here last Friday between D. Worms, of Springfield, Mass., and L. Abbot, of this city, resulting in favor of Worms, by a score of 23 to 13 out of possible 25. Dog poisoning is on the wane in this town, for which let us be truly thankful. If I go into Massachusetts or Long Island and kill woodcock, would it be a breach of the law which says that "no one shall have in his possession any woodcock, partridge (ruffed grouse), or quail between the first of January and first of October," provided, of course, I wanted the birds to eat and give away?

But, as I have already protracted my letter more than I meant to, and hoping its length may not be wearisome, I remain, Yours truly, S. H. H.

Bridgeport, Ct., July 12, 1877.

[If our correspondent had followed the directions of Mr. Dittmar, we think the result would have been different, as he says: "Care only has to be taken not to compress into too small a space, as it is more elastic than black powder. * * * It is *three times* as *strong as black powder, and three times as bulky.* * * * Simply use force enough to permit the bullet to rest on the powder."—ED.]

SMALL VS. LARGE BORES.—Maj. H. W. Merrill writes: To throw equally far, guns of different gauges should have charges each proportional to the areas or surfaces of their bores. When so loaded the gas is equally compressed and powerful, but otherwise not. The areas for these guns, as taken from the table hereafter referred to, are 1 for No. 14, and 1.12 for No. 12. These numbers 1 and 1.12 represent not only the ratios of the areas of these guns, but they represent, also, the *capacities* of their cylinders for containing the gas or force to be used. But now observe, the larger the capacity for confining an equal amount of gas, for the charge is the same, the less will be its expansive force or power. In this instance, as will be seen, the small bore has 12 per cent. advantage in compression over the large bore, while the amount of shot to be thrown is equal. Hence, the small bore should throw the farthest or give the best penetration with *equal charges.* As you, Mr. Editor, correctly remarked, "Increase the diameter to a foot, and the charge would scarcely make a disturbance in the cylinder." The force, instead of being concentrated, would be divided up and lost, as it were, in open space. Other reasons may enter this question to a certain extent, 'tis true, but the main one is plain. But the cardinal point to be always held in view is, that guns are alike entitled to terms of equality if possible—to be loaded with charges which differ in size as their bores differ. Then, each pellet in each gun will be backed with an equal amount of powder, and for the same length of barrel the compression and force of the gas will be the same; and it is doubtful if a little difference in the lengths of the barrel will make any essential difference. If not, it would seem that almost perfect equality may be established for our guns in shooting, especially with like made ones. When we shall come to regard this rule of proportionate charges, and to study well the theory and facts on which it is based, we will then have but little trouble in applying its principles to account in a satisfactory manner for quite all those little mysteries which have so long produced a conflict of opinions, even among all those, I may safely say, who have used the shot-gun. If these guns were of similar construction and not faulty—they should kill equally far, provided they were loaded as above described—the best wins. (See No. 2, FOREST AND STREAM, Feb. 15, 1877, or ROD AND GUN, April 7, 1877, for explanations and table mentioned; or Hallock's "Sportsman's Gazetteer."

MAJ. H. W. MERRILL.

New Rochelle, N. Y., July 6, 1877.

SMALL BORE VS. LARGE.—Writers labor very earnestly to convince sportsmen that a small bore gun will shoot shot as far and strongly as a large bore. If there has ever been anything to the contrary published in the columns of FOREST AND STREAM, it has escaped my notice, and certainly no intelligent hunter will gainsay the argument; but when it is asserted that a small bore gun will shoot closer than a large, with all due respect, I beg to differ. If he who really believes this should issue a challenge to shoot with a small bore shot gun (not larger than 20 gauge and as much smaller as he chooses) against a 10-gauge gun, at any sized circle from three inches to thirty, any distance from thirty to eighty yards—that will test the matter. And if he does not go home a badly whipped man, then I will make a public apology, and pay his bills besides. I once owned a gun which was originally a rifle, and had been smoothed out. The job was so nicely done, that, if properly loaded with a patched ball, it would shoot inside a 5-in ring, 100 yards, as often as it was held there. This gun would drive No. 4 shot through an inch pine board at thirty paces. It would also scatter more, and farther, and worse than any gun I ever saw. It was, in fact, perfectly worthless as a shot gun, and I afterward had it re-rifled; its gauge was 42. I am also bound in honor to say that I once knew of a gun of 36 gauge, which shot splendidly; but it was not a cylinder bore, for a bullet which had to be driven very forcibly into the first three inches next the muzzle, would drop loosely a foot, so that it was in fact a choke-bore—years before such were ever heard of. But what I wish to be understood as saying is, that a gun will not shoot closer simply because its bore is smaller than another, but rather the reverse, other things being equal.

One statement commands my unqualified admiration, which is: that small bores are much better than large, therefore use a large bore rifle. This is logical and consistent; but I cannot agree with him that "the killing power of a projectile is in direct proportion to its diameter." That means, I presume, that if a bullet of a certain diameter, shot through an animal, would produce death in two hours; one of twice the size shot through the same place would kill him in one. Having used all sizes from 32 to 60-100, on the largest kind of game, I can testify that this is not by any means the case. But enough for the present. PENOBSCOT.

SMALL BORES.—"Fourteen-Gauge," writing from Newark, says: "'Smaller-Bore,' in your last issue, strikes the right spot. I have long maintained that if a bird is not covered by the gun he deserves to be let off. Shooters sometimes want a gun that will cover a barn-door at 40 yards. 'Smaller Bore' says: 'A small-bore requires a true aim.' That is just the beauty of shooting, and I agree with him heartily. If a shooter throws a charge from a 14 or 16-gauge at a quail going down wind in the fall, he does something that he can talk about with a clear conscience, wholly free from murderous twinges that certainly must trouble the sportsman who uses the larger bores. I trust that 'Smaller Bore's' No. 16 will convert some of his less orthodox friends."

PAPER AND METAL SHELLS.—In your issue of May 24, 1877, Mr. A. G Dole answers my letter of April 26, on loading shells. I have read his communication with great pleasure. He seems to favor the exclusive use of metal shells, which cannot be crimped, and says that that is no reason why paper shells should be. Now, the great trouble with metal shells is that the wad over shot is apt to get started from carrying in the pocket, or in a belt, and more especially so, by the discharge of one barrel of the gun jarring the charge in the other. But suppose the paper shells be loaded in the same manner as the metal shell, the edges are likely to become bent, and thus impair the shooting, particularly if the charge does not fill the shell, which very often happens. I cannot agree with A. G. D. that the crimping offers too much resistance to the charge, as I think crimp ng could be done in such a manner as to set the wad just as firmly, and no more so, as the ramrod in the old muzzle-loader. The only question in my mind is, should the paper shell after the explosion be of the same length as the chamber, and how is this to be attained? I have loaded my shells with two wads, then cut them off, leaving just enough to crimp, and though I made no thorough experiments at targets am of the opinion that if the shell is shorter than the chambers there is a tendency to scatter the shot. There is a great diversity of opinion on loading of shells, no two writers holding the same opinion; many of them differing widely I should like to hear from A. G. D. again. A. B. B.

New York, July 9, 1877.

NEW GLASS BALL TRAP.—Mr. Fred Andrews, of the Bloomington (Ill.) organ factory, is the inventor of a new trap, which throws the balls in three different directions, the person shooting not knowing which way the ball will be thrown. The Evergreen City Club are practicing with the new trap, and give it their unqualified approval. Mr. Pres. Bently made seven out of ten balls at the match of this club held Saturday, July 14.

NEW YORK, *Adirondacks, Meacham Lake, July* 10.—The severe weather of February and March has not used up the game entirely. We see deer in the lake almost every day, and we find a great many broods of partridges. The early, dry spring saved them. The young partridges are about the size of full grown quails now, and able to fly well. Last week my brother and I had a good sight at a white deer. It was feeding in sight for twenty minutes, while we sat in the boat watching it, about sixty rods away. It looked to be pure white. We could not see that it had a colored hair on it. We did not disturb him, but let him go out when he got ready. The boys have just cut a path to the top of the De Bar Mountain, the highest peak in this vicinity. All parties up pronounce the view very fine. A. R. FULLER.

MARYLAND—*Frederick, July* 19.—There is no scarcity of game in this section of the country. Pheasants, woodcock and hares abound throughout the Frederick Valley from the foot-hills of Catochin Mountains to the summit of the Linganore Hills. Along the grown up water sides of the Monocacy River, Linganore Israel, Tuscarora, Bush and Bennett's Creek you can hear on every side, from early morn till dewy eve, the well-known and familiar love notes of "Bob White;" and the hills and mountain sides that are covered with second growth, or with pine, hickory, oak, chestnut, laurel and the like are filled with gray and fox squirrels, which may be seen leaping from tree to tree, while the young hares scamper along the paths. In the thickly wooded and secluded spots the ruffed grouse awaken the echoes with their drumming, and there is scarcely a mountain ravine, down which the smallest stream or thread of water trickles, especially where the foliage overhead is dense and shady, and where the rich black vegetable loam is covered with long grass—or a quiet lonely brake, bay or thicket, where you will find snugly cuconced one or two broods of woodcock.

HILLS OF LINGANORE.

VIRGINIA, *Abingdon Park,* July 20.—As regards deer, there is one section of this State, I know to my positive knowledge, where they swarm. I rarely ever take a stroll through the woods without seeing some. I speak truly when I say for every rabbit started there are two deer. This region is known as the Blackwater region, and comprises the two counties of Sussex and Southampton. It is thinly settled, and few hunt since the war. As a hunting ground for deer, turkeys, quail, 'possums, raccoons, foxes, *et al.,* I consider it unequaled in this State; and I have hunted much since the war. To get there go to Richmond, then to Petersburg, Va.; take the Petersburg and Weldon R. R. and stop at Stony Creek station, Sussex Co. There is a boarding house at the station for the interior; there is no need of inns, every house having, like the Irishman's shanty, "the latch hanging outside of the door;" and board, if insisted upon, can be got for a song. The best headquarters for the sportsman are Sussex, C. H. and Jerusalem, the county seat of Southampton. There is no public conveyance at depot (Stony Creek), but a private one can always be had.

KENTUCKY, *Stanford, July* 20.—No sportsmen of this locality dared hope that the quails could survive the extreme cold and snow of such unprecedented depth and continuance last winter. Especially did they despair when on several occasions domestic fowls were "frozen to death" upon their roosts. But the causes of apprehension proved a "blessing in disguise," as they put a stop to shooting early in December, and the birds survived the winter. If the multitudes of pairs can be taken as an index to the crop, this part of Kentucky will not have produced such an abundant harvest of the little fellows in the last twenty years. A country friend told us that he believes there are fifty pairs of birds on his farm of 250 acres. KENTUCKIAN.

OHIO, *Greenville, July* 16.—"F. G. S.," your correspondent from Fern Bank, writing under date July 6, says the quail law is on for another year yet in this State, and gives "Gloan" as his authority. If "Gloan" will look at the law a little closer he will find he is mistaken, as the law is off the 15th day of September, 1877. Quail has not been so plenty here for (10) ten years as they are at present; in fact farmers

are complaining about them taking up grain this spring. Woodcock shooting is good. H. C. Helm and J. Clark bagged 52 last Wednesday. Would like to know when the chicken law is off in Indiana. J. S. C.

[The law in Indiana is off August 15.—Ed.]

Wellington, Ohio, July 16.—I think we shall have unusually good quail shooting here this fall. The birds seem very plenty, notwithstanding the hard winter. H. J. L.

INDIANA, *Hoosier Hall*, July 17.—If the frequent and heavy rains do not seriously interfere, we shall have magnificent shooting this fall. Very few quail were killed in this part of the State last fall and winter, and the farmers took particular pains to feed the little innocents during the terrible cold weather and deep snows of the winter. EPERGOS.

ILLINOIS, *Bloomington, July* 16.—The coming season promises to be a fine one for chickens and quail. The covies are large and numerous. Some persons are shooting young chickens already. Such will find trouble if it does not cease. We are in the centre of the best chicken grounds in the State. J. S. S.

PIGEON MATCHES.

PENNSYLVANIA, *Sharon*.—The medal contest between E. N. Ohl and C. E. Tribby came off July 14, ten glass balls, eighteen yards rise, club rules.

Ohl	1 1 0 1 1 0 1 1 1 1—8	Tribby	1 1 1 1 1 1 1 1 1 1—10

After this match some fine class shooting was indulged in, these gentlemen being assisted by the Greenville Club.

OHIO, *Cincinnati*.—Scores of the Cincinnati Shooting and Fishing Club, July 4. Match for a hat at five single birds, 26 yards rise.

H Koch	5	R McGraw	4
W Caldwell	4	J Fallis	4
W Y Sedam	4	R Blair	3
D. Disney	4	M Langdon	3
G W Pinkard	4	C Epply	2
P McAvoy	4	W Campbell	2
P Reinshagen	4	T Baum	1
W Miller	4		

Won by H. Koch.

Match for club medal, ten single birds at 26 yards rise, and six double birds at 18 yards.

W Caldwell	1 1 1 1 1 0 1 1 1 1—9	11 11 11—15
H Koch	1 1 1 1 1 1 1 1 1 1—10	10 11 01—14
G B Ellard	1 1 1 1 1 1 1 1 0 0—8	11 10 11—13
M Langdon	1 1 0 1 1 0 1 1 1 1—8	10 01 11—12
J Fallis	1 1 0 1 0 1 1 0 1 1—7	11 10 11—12
G W Pickard	1 1 1 1 1 1 1 1 1 0—9	10 00 10—11
W Miller	1 1 1 1 1 0 1 0 1 0—7	11 10 10—11

	Single.	Double.	T'l		Single	Double.	T'l

W Cambell	7	3	10	T Baum	5	2	7
R Blair	6	3	9	C Epply	5	1	6
P McAvoy	4	5	9	W Y Sedam	1	4	5

Caldwell having won the medal three times in succession, it becomes his property.

Match at 20 glass balls, Wright's patent trap, screen before the trap, 18 yards rise.

W Caldwell	17	D Disney	9
G W Pickard	17	P McAvoy	6
R McGraw	13	G B Ellard	5
W Campbell	12	T Baum	5
H Koch	11	J Fallis	5
M Langdon	11	C W Epply	3
W T Sedam	10	R Blair	0

After shooting off ties, the prizes were awarded as follows: First, Caldwell, a hunting coat; second, Pickard, keg of powder; third, McGraw, 200 shells; fourth, Koch, shell crimper; fifth, Langdon, cleaning rod.

KENTUCKY, *Louisville*.—Tournament of Louisville Gun Club, held July 4. Club sides match, ten single birds, 21 yards, 80 yards boundary.

J M Barbour, captain	9	J Val Cowling, captain	10
G W Moore	8	L W Noel	8
W F Booker	7	E Y Peak	6

MINNESOTA, *Henderson*.—A challenge match was shot between Messrs. Paine and Dell, July 13, for the champion badge of the Henderson Club; 15 balls, 18 yards rise; Bogardus' trap and rules.

M Paine	1 1 1 1 1 0 1 1 1 1 1 1 1 1 1—14
Dell	1 1 1 0 1 1 1 1 1 1 1 1 1 1 1—14

Ties at 21 yards, three balls each.

Paine	1 1 1 1 1 1 1 1 0 1 1 1 1 1 1—14
Dell	1 1 1 1 1 1 1 0 1 1 1 1 1 1 0—13

Mr. Paine still retains the badge.

—The Seneca Gun Club has organized at Seneca Falls, N. Y., with these officers: President, Horace Silsby; Vice-President, James F. Lawrence; Secretary, J. T. Milier, Jr.; Treasurer, Milton Hoag; Executive Committee, John G. Hoster, Romeyn P. Lathrop and Millard Ten Eyck.

DETROIT, *Michigan*.—State medal shoot, Hurlingham Park, July 20, 1877; 11 birds each, English rules.

E H Gillman	withdrawn	George Avery	10
Goff Stenton	10	Ed S Barbour	9
Harry Hawkins	8	J V D Eldridge	withdrawn

In shooting off ties Mr. Stenton won.

In sweepstake shoot, 26 yards rise, 80 yards boundary, plunge traps, miss and go out, four entries, 11 birds each, Stenton and Barbour divided on 11 birds. Second sweepstake, five entries, Stenton won with eight straight birds.

TORONTO, *July* 19.—The first quarterly shoot of the Toronto Gun Club came off on July 11 at the Woodbine Track. Thirty members of the first, second and third class put in an appearance. The match was 21 yards rise, 80 yards boundary, two traps 15 yards apart, 10 birds each. Mr. Loan as trapper, Mr. Loudon as referee. The scarcity of birds prevented the shooting off. The following are the ties:

First Class.

C Pickering	10	J James	10
C Small	10	J Taylor	10
J Farrell	10		

Second Class.

T Winfield	10	W Morley	10

In the shoot off, second class, Morley won; third class, M. Wilson, with a score of 7, two fell dead out of bounds. First class ties will be shot off at next match.

T. G. C.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

C. S. S., Fairport, N. Y.—See answer to "Sucker" in this column.

E. A. G., Middletown, Ct.—See answer to G. D. C. in this column.

P. M. B., Woodstock, Canada.—Address queries relative to Nuttall, Ornithological Club, to Ruthven Deane, Cambridge, Mass.

CAPT. VIELE, U. S. A.—The specimen of bird sent us is the Massena quail or partridge of the Southwest, *Cyrtonyx massena*.

T. G. D., Louisville, Ky.—What is the proper food for young mocking-birds? Ans. Figs, raisins, hard boiled eggs, finely minced raw beef and insects.

SCRATCH, Saratoga Springs.—Give us a description of your dog's disease and we will prescribe. See the note at the head of the kennel column.

J. M., Quincy, Ill.—Where can I purchase a long bow and outfit, and probable cost? Ans. At Peck & Snyder's, Nassau street, this city. Cost $2 50.

CRAWFORD, Girard, Kansas.—Please give me a receipt for cleaning brass shells? Ans. You will find several receipts in your copy of Hallock's Gazetteer, already mailed to you.

WAUSHINEE, Ct.—Cannot identify the "wind fish" without a description of its shape, color, form of gills, place and structure of fins, scales, etc. Never heard of wind fish, but have known a whale to come to the surface to blow.

C. M., Worcester, Mass.—Would you kindly say where you consider most grizzly bears can be found? Ans. In California along the foothills of the Coast and Cascade ranges, wherever oaks and manzanita are found. Also in Oregon up to latitude 40 degrees.

PHENIX.—Hudson, Ct.—Can I shoot partridge, quail, woodcock and duck in the State of Maine after the first of Sept. without violating any of the game laws of the State? Ans. The law permits shooting the birds named named after Sept. 1.

J. S., Stratford.—1. I have a setter bitch that I prize highly, but she is subject to having pups. 2. Is there any way to prevent her coming in heat? Ans. 1 Most dogs of the sex are. 2. Give five grains of powdered *excissicated* alum in water morning and evening. Spaying must be done by an expert.

AMATEUR.—Troy.—Can you give me the addresses of two or three places on Long Island, or New Jersey coast where good fishing and shooting can be had next month, together with good accommodations for a lady? Ans. Noyac or Good Ground, Long Island, or Seaville or Barnegat, New Jersey.

H. W. A., Nahant, Mass.—Will you please give me a receipt for a good preparation to anoint the bottom of a canvas canoe to prevent the same from leaking? Ans. Take sixteen pounds orange shellac and four and a half gallons alcohol. Let the shellac dissolve in the alcohol and apply with a brush.

H. J. F., Dansville, New York.—I have three setter puppies that are afflicted with lice. What is the best prescription to use for ridding them of the "varmints?" Ans. Wash with Caswell & Hazard's Juniper Tar Soap throroughly. Then apply Persian Insect Powder. Soft soap rubbed in and allowed to dry and then washed out is also effectual.

CHARLES, Warren, Warren Co., Pa.—Please inform me in your next issue when the shooting season opens for prairie chickens and quail in the States of Illinois, Missouri and Kansas? Ans. Illinois, Sept. 1st; Missouri, Aug. 15; Kansas, August 1st.

W. E. P., Cincinnati.—Where can I procure the B. Wright patent glass ball trap, and what is its cost? 2. Are robins considered game birds, and when does the law expire to shoot them in Kentucky? 3. Is it contrary to law to shoot blackbirds? Ans. 1. We do not know of such. 2. No. 3. No.

O. W. D., New Haven.—Will you please settle this disputed point? A, B, C, D played a game of croquet, A and C partners against B and D. The situation was as follows: D and B both rovers; D hits B, knocking him against the finishing stake. Does D have another turn? Ans. Certainly, if he has not already played on both the other balls.

E. D. M., Sag Harbor.—What are the merits and characteristics of the strain of spaniel called the "Columbias?" Ans. You must mean the Clumbers; there is no breed called Columbia. They are larger dogs than the cocker, but equally valuable in every way.

SNIPE, New York City.—1. What is the weight of Capt. Bogardus' gun with each set of barrels? 2. Could it not be used with success for all kinds of feathered game? 3. What would such a gun cost if made to order in this country? Ans. 1. 10 lbs. when either set is on the stock. 2. Yes. 3. About $300.

COL., Rosedale, Kas.—A couple of friends of mine have a dispute and have left it to you to decide. H. bet T. that W. would not kill five birds out of five from a trap, neither of them naming conditions. W. killed four and the fifth fell dead out of bounds. Ans. If his opponent killed five inside of boundary W. lost.

B. A. S. S., City.—Please inform me where good black bass fishing may be had, within 250 miles of N. Y., during the month of August? Ans. Go to Greenwood Lake via Greenwood Lake Railroad to Turner's on the Erie Railroad, 47 miles from Jersey City, or to Sloatsburg, on the Erie Railroad.

G. P. L., Manchester.—Will you please inform me if Frederich Oswauld's book "The Setter's or Pointer's Training without Punishment" can be obtained in the English language? Ans. It cannot, so far as known to us.

BLACK RIVER.—Arkansas.—In our issue of July 5 a correspondent whose name has slipped us, invites readers to join a contemplated hunting and trapping party on the Big Black River next fall. If he will communicate with Wm. Jewell Jones, 1,007 Locust St., St. Louis, Mo., he will obtain a member, probably.

F. H. S., Bethel, Ct.—Please give the most direct route from Albany to the Adirondacks near some lake? Is there a complete map of the Adirondacks? if so where can I get one and what is the price? Ans. "Wallace's Adirondacks" will give you the desired information and has maps for sale at this office. Price $2. The copyright is owned by the Forest and Stream Publishing Company.

G. F. L., Boston.—I have an Irish setter pup three years old. I have relieved him from worms and give him enough exercise, but he is as poor as a crow. Can you prescribe a feed. Ans. Some setters are naturally lank and no amount of feeding will fatten them. The reasons for this are the same as with man. You might try oat meal and beef broth diet.

SUCKER.—Pike, Ills.—To answer your queries as to fishing, baits, flies, etc., through the columns of this paper, would encroach too much upon the space set aside for such purposes. You will find the subject very thoroughly and exhaustively treated in Hallock's Sportsman's Gazetteer, 166 pages being devoted to this subject alone. Price $3, now out.

T. C., Kebley's Island, O.—In the scores which you publish of glass ball shoots in various parts of the country, are two traps used, and if so how are they set? The scores in some instances are so large that I can't believe they are all quartering shots. 2. Do a majority of the best shots use both eyes in taking aim? 3. Have the game laws of Illinois, Iowa, or Kansas undergone any change since last year? Ans. 1. Reports seldom state the number of traps used. 2. No. 3. Yes. See *Fur Fin and Feather*.

H. E. W., Hope, R. I.—Myself and a friend anticipate going either t Florida or to Monroe, Pike or Wayne counties, Pa., the coming fall for hunting. Can you advise us through the columns of your paper which would be the most advisable trip? What is the principle game in the above named counties in Penn? Would we be apt to find quail and grouse plenty? Ans. Should think you would enjoy the Florida trip the best. Deer, ruffed grouse and rabbits. No quail.

MAJ. G. K. SANDERSON.—Please prescribe for canker of ears, internal? Ans. Use a P. P. Syringe, and wash out the ear every morning with castile soap and tepid water; then pour in "black-wash" to which fluid extract of conium has been added in the proportion of 5 drs. of the latter to a pint of the former. Give internally 5 drops of Donovan's solution in water three times a day, one hour after feeding; never on empty stomach.

J. W. K., Ayer, Mass.—1. If a first-class setter bitch should by mistake be lined by an inferior dog what would be the effect on her pups that she might have afterwards by a thorough bred animal? 2. What can you urn ish a first class dog for, etc? Ans. 1. The puppies will probably be fall curs and unfit for sale or use. 2. We do not deal in dogs. A dog such as you describe would be worth $50 to $100.

MOHAWK.—Amsterdam.—I have a W. W. Greener treble-wedge fast-action top lever choke-bore breech-loading gun, weight seven lbs. Is it heavy enough? In trap shooting what amount of powder and shot is used? What size of shot is used for woodcock and partridge shooting? Ans. Yes, heavy enough. Any amount of powder, 1¼ oz shot. No 10 for woodcock. No. 8 for ruffed grouse in fall, No. 6 later. Try your gun at a ream of wrapping paper and count pellets and penetration. Load 3½ powder, 1¼ oz. shot.

G. D. C., Plainville.—Is there anything I can give my setter to prevent canker in ears? can cure it for a time by using sulph. copper, or sugar of lead, etc., but it returns. His coat does not lie quite right and I often notice him taking grass. Eyes also inflamed at times; feed him scraps from table; appetite capricious. Ans. Feed oat instead of cornmeal. Give 6 drops of Donovan's solution three times a day, in water, taking care it is not given on an empty stomach. If under two years of age give 4 drops. Wash out the ears with castile soap and tepid water every morning, using a small P. P. syringe for the purpose; then inject black wash, to which 2½ drachms of fluid extract of conium have been added for every half pint of wash.

J. THOMAS, JR., N. Y.—1. Do cases of hydrophobia ever originate with he females of the dog family? 2. Also, does it ever develop with a fit which, after the convulsion has passed, leaves its victim apparently wild and crazy, snapping and biting at everything within reach, and uttering piteous howls and barks? Such symptoms recently came under my observation, the subject was immediately declared mad and shot. Ans. 1st. Just as much as with males; neither have hydrophobia unless first inoculated with the virus. 2d. No. The case you mention we have had full particulars of, and much regret the death of the bitch which was suffering from epilepsy induced probably by purpuria, change of climate and ill results of a sea voyage.

C. A. H., Boston, Mass.—I have a fine setter pup, 8 months old. Nearly two months ago he showed slight symptoms of distemper, and I brought him out all right I thought. Since then, although in excellent spirits and condition, there has been a slight discharge from the eyes and penis; the latter is often considerable, and appears to be from inside of the sheath, and back as far as the sheath can be drawn. Within a few days I notice that he sometimes vomits his food, yet he takes his rations with great relish, and is all life and ambition. I beg your indulgence and advice. Ans. Give four drops Donovan's solution three times a day in water, taking care not to give on empty stomach. Apply "black-wash" to the generative organs.

CARR.—Nelles Corners, Ont.—Will you please answer the following questions in your next issue. 1st. What is the longest throw of a cricket or base ball on record, and who was the party who threw it? 2nd. Where can I get a pair of bullet moulds to cast the hollow bullet in which to insert a 22 Cal. cartridge to make explosive bullets? 3d. What is the reputation of the Wakefield double rifle and shot gun? Are they considered good rifles and guns. I have one marked R. Wakefield, London? 4th. Can you send me the *Sportsman's Gazetteer* by mail on receipt of price, and is it out of press—ready? 5th. Where can I get a book on the birds and animals of Canada which points out where they are to be found, and when and where the best shooting is in Canada West? Ans. 1st. The longest throw of a base ball, as published in our issue of July 12th, was stated to have been made by John Hatfield, at Brooklyn, L. I., Oct. 15, 1872, 133 yards, 1 foot, 7½ inches. 2d. The Providence Tool Co. should be able to supply you. 3d. Don't know the gun. Must be an old maker. 4th. Ready for delivery on receipt of price, $3. 5th. Hallock's Gazetteer will inform you.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oil-cloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. PRAY, SONS & CO., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him or with any orders sent him. It is a good, reliable house.—[*Adv.*

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, July 27.—Trotting: Mystic Park, Boston; Cleveland, O.; Sycamore, O. Running Meeting at Saratoga. Cricket: Montreal vs. Ottawa, at Montreal. Base ball: Indianapolis vs. Louisville, at Louisville; Auburn vs. Manchester, at Manchester; Champion City vs. Allegheny, at Springfield, O.; Arlington vs. Alaska of S. I., at Stapleton Flats; Resolute vs. Defiance; Witoka vs. Haymaker, at Lansingburg.

Saturday, July 28.—Running meeting at Saratoga. Cricket as above. Base ball: Boston vs. St. Louis, at St. Louis; Hartford vs. Chicago, at Chicago; Manchester vs. Red Cap, at St. Paul; Auburn vs. Lowell, at Lowell; Rochester vs. Star of Syracuse, at Buffalo; Putnam vs. Lafayette, at Prospect Park; Eon vs. Mohawk, at Tottenville, S. I.; Alaska of S. I. vs. Eagle, at West Brighton; Witoka vs. Hartford (amateurs) at Hartford. Regatta of the Beverly Yacht Club, off Swampscott, Mass. Handicap games of Scottish American Club.

Monday, July 30.—Running meeting at Saratoga. Prize shoot of Narragansett Gun Club, at Newport, R. I. Base ball: Manchester vs. Minneapolis; at Minneapolis; Erie vs. Syracuse Stars, at Erie, Pa.; Indianapolis vs. Boston, at Indianapolis; Witoka vs. Waterbury, at Waterbury.

Tuesday, July 31.—Trotting: Westminster, Md.; Keene, N. H.; Buffalo, N. Y.; Freeport, Ill. Running meetings: Saratoga, N. Y.; Parker City, Pa. Base ball: Chicago vs. Cincinnati, at Cincinnati; St. Louis vs. Louisville, at Louisville; Indianapolis vs. Boston, at Indianapolis.

Wednesday, Aug. 1.—Trotting as above. Running meetings as above. Cricket: Montreal vs. Port Hope. Regatta of the Newburgh Yacht Club.

Thursday, Aug. 2.—Trotting as above; also at Jefferson, O. Running meetings as above. Cricket: Montreal vs. Port Hope. Base ball: Chicago vs. Cincinnati, at Cincinnati; St. Louis vs. Louisville, at Louisville.

TO OUR CORRESPONDENTS.—We earnestly request our correspondents and contributors to remember that in writing for the printer only one side of the paper should be used. We have now on hand a considerable number of communications which cannot be used until they have been copied, and when our copyist will have time to take them in hand is one of the things "no fellow can find out."

The destruction of life and property by lightning, during the past month, has exceeded that for a similar length of time for many years. The reported disasters of this nature are confined to no particular locality, but occur in all parts of the country.

THE GAME OF CHESS.

WITH regard to the origin of the game of chess we are much in the dark. Although it was handed down to us from the Saracens it is by no means probable that they were the original inventors of it. According to some it was originated by the celebrated Grecian hero Diomedes; others say that the two Greek brothers Ledo and Tyrrheno were the inventors, and that being greatly pressed by hunger sought to alleviate its pangs by this amusement. It is certain, however, that it is a game of very ancient standing, and in former ages was fashionable in every part of Europe. But of late years it has fallen into disrepute entirely, on account of the study and intense application of thought required to play it. To-day it is a great favorite with the people of Iceland with whom study is a pastime and thought an amusement.

Chess was formerly practiced by the greatest warriors and generals, and for a number of years was deemed as essential to the military man as the stock and waist belt, as inculcating strategetical ideas and principles. There is no game so peculiarly interesting as Chess, and we read that Tamerlane was a devotee of the game and engaged in its playing during the very time of the decisive battle with Bajazet, the Turkish emperor, who was defeated and taken prisoner. It is also related of Al Amin, the caliph of Bagdad, that he was engaged at chess with his freedman Kuthar, at the time when Al Mamun's forces were carrying on the seige of that city with so much vigor that it was on the point of being carried by assault. Dr. Hyde, quotes an Arabic history of the Saracens in which the Caliph is said to have cried out when warned of his danger, "Let me alone, for I see checkmate against Kuthar!" We are told that Charles I. was wrapped up in this game when the news was brought of the final intention of the Scots to sell him to the English; but so little was he discomposed by this alarming intelligence, that he continued the game with the utmost composure, so that no person could have known that the letter he received had given him information of anything remarkable. King John was at chess when the deputies from Rouen came to accquaint him that their city was beseiged by Phillip Augustus, but he would not hear them until he had finished his game.

The following remarkable anecdote is related by Dr. Robertson in his "History of Charles V.: John Frederick, Elector of Saxony, having been taken prisoner by Charles, was condemned to death. The decree was intimated to him while at chess with Ernest of Brunswick, his fellow prisoner. After a short pause, and giving utterance to some reflections on the irregularity and injustice of the Emperor's proceedings, he turned to his antagonist, whom he challenged to finish the game. He played with his usual ingenuity and attention, and, having beaten Ernest, expressed all the satisfaction that is commonly felt on gaining such victories. He was not, however, put to death, but set at liberty after five years confinement."

We are informed in the Chronicles of the Moorish Kings of Granada, that in 1396, Mehemed Balba seized upon the crown to the prejudice of the true heir, his elder brother, and that his life was one continual round of disasters. His wars with Castile were invariably unsuccessful, and his death was occasioned by a poisoned vest. Knowing his death to be inevitable, he dispatched an officer to the fortress of Salobrena to put his brother Juzaf to death lest that prince's adherents should form any obstacle to the succession of his son. The alcalde found the prince playing at chess with an *alfaqui* or priest. Juzaf begged hard for two hours respite, which was denied him; at last, with great reluctance, the officer permitted him to finish the game; but before it was completed a messenger arrived with the news of the death of Mehemed, and the unanimous election of Juzaf to the crown. We have also a curious anecdote of Ferdinand, Count of Flanders, who, having been accustomed to amuse himself at chess with his wife, and being constantly vanquished by her, a mutual hatred took place, which became so violent that when the Count was taken prisoner at the battle of Bovines she suffered him to remain a long time in prison, though she could easily have procured his release.

In the seventeenth and eighteenth centuries voluminous works were written upon the game of Chess. Sarasin wrote an express treatise on the different opinions of the originof the Latin *schacchi*, whence the French *echecs* and our chess is formed. Menage was also very full upon the same topic. Leunclavius took it to come from *Uscoches*, famous Turkish robbers; Sismond from the German *seache*, "Theft," and that from *calculus*. He argued chess was the same with the *ludus latrunc ulorum* of the Romans. This opinion was also countenanced by Vassius and Salmisius, who derived the word from *calculus*, as used for *latrunculus*. Telosanus derived it from the Hebrew *scach, vallavit et mat mortuus*; whence *check*, and *checkmate*. Fabricus says: "A celebrated Persian astronomer, one Schatrenscha, invented the game of chess, and gave it his own name, which it still bears in that country." Nicod derived it from *schecque*, or xeque, a Moorish word for lord, king and prince. Bochart adds, that *scach* is originally Persian, and that *scach mat* in that language signifies that the King is dead. These latter opinions—of Nicod and Bochart—were also held by Scriverius and appear the most probable.

There is, in the British Museum, a small treatise on chess, written, as supposed, about five hundred years ago, at the end of which is a representation of a round chess-board, with directions for placing the men upon it. In this the knight can cover the sixty-four squares on the board in as many moves. The board is divided into these sixty-four parts by four concentric circles, having an empty space in the middle; and each of these is divided into sixteen sections. No. one is placed in the outermost circle; No. two in the third circle counting inwards in the division to the right hand of the former; No. three is placed in the outermost circle in the division to the right hand of two; four in the third circle counting inward to the right hand of three; and thus alternately from the first to the third, and from the third to the first circle, till the round is completed by sixteen on the third circle to the left hand of one. No. seventeen is then placed on the division of the innermost circle to the right hand of one; eighteen on the second circle counting inward to the right of seventeen; and thus alternately from the fourth to the second, and from the second to the fourth circles, until the round is completed by thirty-two, directly below No. one. No thirty-three is then placed on the third circle directly to the right hand of No. two; thirty-four on the fourth circle to the right hand of four; and thus alternately between the third and fourth circles, until the round is again completed by forty-eight on the fourth circle, directly beneath thirty-three. The numbers are now placed in a retrograde fashion; fifty on the outer circle in that division immediately to the right hand of one; fifty-one on the third circle, to the left hand of two, and directly below No. thirty-two; fifty-two is then placed on the outer circle, immediately to the left of one; fifty-three on the third circle, directly to the left of sixteen, and thus alternately on the first and third circles, until the last round is completed by sixty-four between the numbers three and five.

On this round board, suppose the black king to be placed in No. forty-eight on the fourth circle, the queen stands on No. seventeen to his left, the bishops in thirty-three and two, the knights; eighteen and forty-seven, the castles in three and fifty; the pawns on nineteen, four, forty-nine, sixty-four, and on forty-six, fifty-one, thirty-two, and one. The white king will then stand at in twenty-five, opposite to the black queen; the white queen in forty, opposite to the black king, and so on. In playing on a board of this kind it will be found, that the power of the castle is double to that in the common game, and that of the bishop only one-half; the former having sixteen squares to range in, and the latter only four. The king can castle only one way, and it is very difficult to bring the game to a conclusion.

A very complicated game was invented by a Duke of Rutland during the last century. In this the board has fourteen squares to its breadth, and only ten in height, making in all one hundred and forty; and there are fourteen pawns on each side, which may move either one, two, or three squares the first time. The other pieces were the king, queen, two bishops, two knights and a *crowned castle* uniting the move of the king and the castle, and rook. On the other side of the king was a *concubine*, whose move united that of the castle and knight, two bishops, a single knight, a crowned castle, and a rook. In this game the pawns are of little use, rather encumbering the board than otherwise; and the knights lose much of their value, which consequently renders the game more defectiv and less interesting than the common one.

IRA PAINE.—This renowned shot has returned from his English trip, arriving July 17th per steamer "Queen" from London.

Mr. Paine desires to return thanks, through the columns of the FOREST AND STREAM AND ROD AND GUN, for the many courtesies of which he was a recipient; notably from the members of the Irish Team and Dublin Gun Club. The latter challenged Mr. Paine to shoot thirty birds at thirty yards rise with Mr. Donnellan for £50. The match was won by the American champion with the greatest of ease. Several other matches were offered by the club, but were of necessity refused, Mr. Paine having already engaged passage in the Queen for July 4th. In all his matches, Paine used a superb breech loader made by Stephen Grant, of London. He brought with him also a handsome two year old thoroughbred stallion, by Rosecrucian out of Gamos.

A NEW BELT.—A. A. Case, of Chetopa, Kansas, leader of the Irish team in their chicken hunt in 1874, and one of the best shots and most practical sportsmen in the West, has invented and patented a game belt which surpasses all previous appliances for the easy carriage of game. It is a belt so adjusted as to evenly distribute the weight over the shoulders and body front and back. It has four hooks on the rear on which can be hung as much game from snipe and quail to ducks and grouse as a man can carry. In the front are pockets for ammunition which is convenient, and the game hangs in the rear out of the way. It is the Excelsior Game Belt; the price is $4, and particulars can be had of the patentee. This is the second belt patented by Kansas gentlemen, Mr. N. S. Goss, of Neosho, having some two years since contrived a very excellent belt.

THE SPORTSMAN'S GAZETTEER.—The "Gazetteer" duly came to hand; and to say that I am delighted with the book only faintly expresses my appreciation of it. How you have been able to gather so much valuable matter together is almost a mystery to me; it certainly speaks well for your industry and knowledge of the subjects discussed. For the size and valuable information contained, the price, I think, is remarkably low, and I would not be without it for double the price. Every sportsman and everybody interested in sporting matters should have a copy, and I shall take great pleasure in recommending it to my army friends. H. C. YARROW, M. D.,
Washington, July 20, 1877. U. S. A.

GAME PROTECTION.

VIOLATIONS OF THE GAME LAWS.—We are informed that a certain man from Stratford was seen shooting woodcock in Milford township on the last day of June past. This was in flagrant violation of the game laws of the State of Connecticut which have never permitted the shooting of woodcock before the first of July. This year the State Legislature enacted that there should be no summer shooting of this bird, it remaining a close season until October. This man has before, we hear, been known to break the game laws with impunity. We would here warn him and all of his ilk that the citizens of Milford are now thoroughly aroused on this subject and are determined to see their game laws enforced. With this object in view, we are making strenuous efforts to convict these law breakers. A reward of $25 has been offered by a gentleman resident of Milford for the conviction of any one found shooting out of season, and we think it will fare badly with this Stratford man or any of his friends if they fail to elude the vigilance of our self-appointed detectives. The penalty by law for this offense is twenty-five days in jail and $25 for each bird shot or found in possession. If you will kindly insert this in your valuable journal you will oblige the lovers of sport but upholders of the law.

The above is clipped from the Bridgeport *Standard*. The recent change in the game law of Connecticut, postponing the shooting of woodcock until October 1, will be one great means of preserving the ruffed grouse during the close season. Experienced sportsmen affirm that the risks these birds run of being killed—not unfrequently while protecting their young and helpless broods—by the thoughtless and impulsive gunner or unprincipled pot-hunter while woodcock shooting in midsummer, are beyond belief. I am informed it is the intention of the sportsmen in this part of the State to respect the change in the law.

SENEX.

MASSACHUSETTS.—The following letter appeared in the *Boston Journal*, July 18. The Massachusetts law is certainly defective, and should be altered, if intended at all to accomplish its purpose:

To the Editors of the Boston Journal:

The Secretary of the Massachusetts Fish and Game Protective Association is constantly receiving communications from anonymous writers in regard to the enforcement of the law for the protection of woodcock. For the information of your readers I would say, the present law, as passed by our last legislature, is virtually good for nothing, as it reads: "Whoever in *this Commonwealth kills any woodcock* or any ruffed grouse, commonly called partridge, or has in possession any of said birds *taken or killed within this Commonwealth &c., &c.*" Now it can readily be seen that our hotels and dealers in game can have in possession or offer for sale any woodcock within the close time mentioned, viz, the 1st of January and 1st of September, not killed in this State. The thieves and poachers can kill them here and ship the game from Rhode Island or Connecticut, and thus throw the whole burden of proof on us, to show they were not killed in those places. If the law read, as it should, similar to our trout, smelt and lobster laws, "Whoever sells or *has in possession, no matter where taken*," then we could convict. The present law was drafted and passed before the game and fish interests were united, and the gentlemen who were influential in having it done were told that it would be utterly good for nothing in its power to protect. Had they heeded our advice and profited by our experience in the fish laws they would have made it a success, and have done some service toward the protection of this beautiful bird during the moulting season of July and August. If persons will cease writing us *anonymous letters* and sign their *real names*, giving positive information of any violation of the law by killing in *this State*, we will see that the offenders are prosecuted.

JOHN P ORDWAY, President,
GEORGE B. BROWN, Secretary,
Of the Mass. Fish and Game Protective Association.

[To this above, Mr. W. Minot, Jr., formerly Secretary of the Society for the Protection of Useful Birds, responds that the game laws are "no doubt very defective, but the possession of birds out of season is *prima facie* evidence to convict, and the burden of proof is upon the offender in all cases. For instance, if the bills of fare furnished for the entertainment of the President of the United States, as published, are genuine, it could readily be proved by the evidence of His Excellency the Governor and His Honor the Mayor and many other distinguished witnesses that quail and woodcock were among the dainties which appeared at the breakfast and dinner; the burden of proof would then be upon Messrs. Hall & Whipple, of Young's Hotel (if they were, as reported, the caterers on both occasions), to show either that they did not furnish the birds at all, or as to the quail, that the birds furnished had either been frozen all winter or shot on their nests in some other State; as to the woodcock, that they were also obtained elsewhere. We think Massachusetts should have sufficient interest in the enforcement of game laws to assist other States in the same; and not make her borders a refuge for the poacher of Connecticut, Rhode Island or New York, and encourage the Bay State pot-hunters to violate the laws of these States.—ED.]

—Chief Justice Agnew of the Pennsylvania Supreme Court was out hunting woodcock a few days ago with a party of friends. One of the party began shooting pheasants, and the result was that all were hauled before a country magistrate, who fined them for violation of the game laws.—*Boston Journal.*

Brainerd, Minn., July 15 —Inclosed find game laws (condensed) of Minnesotta for 1877, they may be of interest to sportsmen intending to visit the State this fall, viz.:

When lawful to kill or traffic in game—Woodcock, from July 4 to Nov. 1; pinnated and sharp tail grouse, Aug. 15 to Oct. 1; quail, Sept. 1 to Dec. 1; ruffed grouse, Sept. 1 to Dec. 1; aquatic fowl, Sept. 1 to May 15; elk, deer, etc., Nov. 1 to Dec. 15; brook trout, April 1 to Oct. 1.

The prospects for sport among the pinnated and sharp tailed grouse this fall are dismal enough—the wise grangers who attempted, by the help of their mouthpieces the local politicians, to pass a law last fall prohibiting all grouse shooting in the State for three years, on the ground that shooting off the chickens was the prime cause of the grasshopper scourge, have burned up nearly all the eggs by setting fire to the prairies in May, to kill the hoppers. They did burn a few locusts, but drove most of them into plowed ground, while the fire running through the grass burned the grouse eggs up. Letters received from sporting friends West all read alike; very few old birds and an occasional scattering small covey of young birds. Some of the old birds will lay again and raise a late brood.

Ruffed grouse will be plenty as usual, as the season has been in their favor, and they have not suffered from fire as did the unlucky "Western grasshopper bird," as we have been told to call the sharp-tailed grouse. Deer are very plenty, and "the show for slathers of ducks is first-rate," so K. writes. In common with sportsmen throughout the country, we have been amused by the attack upon the brotherhood, emanating from that Indiana genius who "whelts" away at half fledged meadow larks and immature squirrels with what the boys call a "bow-gun," and calls it sport and attempts to bring discredit upon those who prefer to use the gun.

It does not seem to have had much effect upon sportsmen as yet. We do not notice that any of them are offering their guns at panic prices and buying "bow-guns." The "bow-arrow" man's ideas about sport are about on a par with his knowledge of natural history, for he would make us believe that the woodpecker drills holes in the trees, so he can suck the sap. Mr. Woodpecker would have a hard time "wetting his whistle" with sap from a dry pine or hemlock. Any one who has paid any attention to their habits know it is food they are after, and not sap.

HAVILAND.

MOOSE HUNTING IN NOVA SCOTIA.

THREE years ago the game laws of Nova Scotia were in a most deplorable state, and game, in consequence, became almost extinct. The law, apparently all sufficient, was practically a dead letter, there being neither organizations to enforce it, nor means to prosecute. Game was wantonly and maliciously destroyed in all months, without reference to close or breeding seasons, condition of the game itself, or the necessities of life. The day of total extermination of the caribou and moose was at hand, and it seemed as if nothing could prevent it; and such measures as were attempted proved futile, and apparently accelerated the ruthless hand of the destroyer. Finally a number of public spirited gentlemen in Halifax, assisted by others throughout the province, took the matter in hand, and reorganized the association known as the Game and Inland Fishery Protective Society, which had done good work in former days. With infinite labor the society succeeded in procuring an enactment that forbade the killing of moose and beaver for three years, and also embodying stricter regulations regarding the killing of game birds and hares. At the expiration of a year some minor details seemed to demand revision, which was accordingly perfected; notably those referring to the appropriation of the funds derived from fines, and the disposal of forfeited meat and skins; an additional penalty was also enacted for hunting with dogs. Next a committee of the society solicited the Government for an appropriation to assist in enforcing the law. This was but partly allowed, only $840 being set apart for the purpose, and with these slender means the society began its work, dividing the Province into six game districts, for each of which a game commissioner was appointed, who was to receive the merely nominal salary of $50 per year. The office of chief game commissioner was necessarily filled by Fitz Cochran, Esq., the Secretary of the Society, owing to the paucity of funds appropriated.

The second year Government came to the rescue, increasing the appropriation, and the laws were enforced with unequaled vigor. These expire on the first of September next, when a new law will take effect, by which it will be lawful to kill moose and caribou in the months of October, November, December and January. We are informed that the increase of game under the three-year enactment has surpassed the expectations of the most sanguine.

As the small Government grant, out of which the salaries of the commissioner and wardens were paid, was cut off by vote of the House of Assembly last session, the law will be carried out by the voluntary service of the Game Protection Society. A system of licenses has also been adopted, under which non-residents of Nova Scotia will be obliged to pay the Provincial Treasurer $20 per year for the privilege of the game laws. Officers of the Army and Navy are, however, taxed but five dollars. From this it is hoped that a fund will be realized to pay at least a portion of the expense of enforcing the law. Meantime all citizens of Nova Scotia who take an interest in the preservation of game are asked to subscribe to the funds of the society, the fees being two dollars per annum, or ten dollars for a life membership.

We doubt not that many Americans will take exceptions to the laws of Nova Scotia as they now stand. Not long since, those who crossed the border from this side to Rice lake, were compelled to pay $1 for the privilege of angling therein, and the consequence was that many of the old frequenters were driven out—not on account of the fee but because of the principle involved, according to their light. While we opine that the fee exacted in this case produced disasterous results, the exactors losing more than they gained, we cannot but look upon the Nova Scotian enactments as just and proper. This Province must now be looked upon in the same light as personal property—a preserve in fact: the people, at considerable expenditure of time and money, have prevented the total destruction of the game in the Province, and are certainly entitled to reap the results of their labor. They have compelled their neighbors and friends to respect and obey the law, as well as residents of other Provinces and the States; and when so much has been accomplished, and by so great personal effort and sacrifice, we feel assured that no true sportsman will object to the license clause.

There are those, to be sure, who will grumble; but we venture to say they will be confined almost wholly to that class of men who brag around the camp while their comrades are cutting the wood for the fire, and who couldn't shoot a moose if they put their whole effort to it for a month at a time. Nimrods of this ilk always get their antlers at the taxidermists.

We are indebted to Mr. Fitz Cochran, Chief Game Commissioner, for a copy of the report of the society.

MEERSCHAUM AND AMBER.—Meerschaum, so popular with the consumers of tobacco when made into pipes, cigar-holders, etc., is found in Germany, the Crimea, Liberia, Turkey, Greece and Algeria. Its name is derived from two German words meaning, literally, sea foam; and from this the vulgar have derived the theory so often promulgated, that it is the result of hardening of sea foam by being mixed with clay. Clay it most certainly is, but it is composed entirely of fine particles of silicate of magnesia, and is precisely similar in character to *talc, steatite*, soap-stone and French chalk—though meerschaum owes its beauty to its comparative lack of organic substances. Pure talc and some soap-stones are so free from organic matter that they are used as meerschaum, and defy detection except by the expert. When first taken from the beds this mineral is soft and plastic like potter's clay; but continued exposure to the air dissipates the aqueous admixture and consequent hardening results. Amber, which is so closely associated with meerschaum, is vulgarly believed to be a product of diseased *cetaceans*—particularly sperm whales. This belief seems to have arisen from the fact that the technical name for amber is *succinum*, and an acid distilled from it is known officially as *Acidum succinicum* with the chemical symbol of $2(HO), C_8 H_4 O_6$. The action of nitric acid upon margaric, stearine, spermaceti and other animal fats gives the same chemical result, and the product being precisely the same, is also known as acid of amber. Moreover, an amber can be made from these fatty materials that will defy the closest scrutiny. Pure amber, or native amber as it is called, is a bituminous product, usually regarded as a fossil resin, brought from the southern coast of the Baltic where it is thrown up on the beach by the action of the waves; it is found, too, on the coast of Norfolk, England, and is occasionally found in beds of brown coal. It is a hard, brittle, combustible, tasteless substance, sometimes perfectly transparent, or translucent, but generally semi-transparent, or opaque, of a glossy surface which takes a good polish and becomes electric by friction. It is found of all colors, but chiefly yellow or orange, and often contains fossil leaves and insects. In the British museum is, or was, a piece of amber weighing upward of four pounds, which contained such forms in as perfect preservation as the hairy mammoths in the ice rocks of New Siberia. In Assam and China certain coniferous trees are found which yield a resin of the same nature and appearance as amber. It is generally believed to be identical with the *succinum* of the Baltic, though inferior for the arts, probably through lack of age and hardness resultant upon fossilization. The amber oil sold in our chemists' shops is supposed to be the result of a distillation, by means of a glass retort, of Baltic amber mixed with its weight of fine white sand. In reality it is a product of fermentation of asparagin—a crystallized product of the juice of asparagus—and malic acid—a product of the apple. This fermentation produces an acid liquid, an oil and a concrete acid; the oil is separated from the other products and known as the *oleum succini* of commerce.

ROCKAWAY BEACH.—A dozen steamers now run to Rockaway Beach daily, some of them making two trips. These lines of communication and the railroads afford great facilities for reaching the beach, though scarcely more than enough to accommodate the many thousands who daily resort there, the greater portion of whom seem to be German families. The large steamer Plymouth Rock and the really magnificent new steamer Columbia are both running. The latter was built especially as an excursion boat. She has every conceivable appointment that comfort, convenience and emergency may require. Her main saloon is 300 feet long, and the boat accommodates over 4,000 people easily. Last week Capt. Holton invited us into the pilot house of the Americus, a staunch and well appointed steamer often chartered by the yacht clubs as an excursion boat for regattas, and we enjoyed a delightful whiff of fresh air and a view of the harbor and ocean. One can scarcely enjoy a pleasanter trip than a sail to the beach and return by same steamer. It depends upon one's taste and appreciation whether he remains at Rockaway, although everything seems to be provided to amuse and entertain. One can get a good *table d'hote* dinner at the Sea Side House for $1, or a five cent sandwich at the booths. For lack of more intellectual amusement he can throw base balls at the head of a negro rag woman, and if he succeeds in knocking a pipe out of her mouth is entitled to a prize of a glass of lager.

BOAT AND YACHT BUILDING.—We print this week the first of a series of articles on the construction and rigging of boats and yachts, from the pen of a practical and competent naval architect, who will sign himself "Nauticus." Instructions will be given in such a simple and intelligible manner that any one handy with tools can construct boats and yachts from the specifications given. The simplest forms of crafts will be first described; and these will be followed by instruction in curved sections, models, working drawings for boats, and sail drawings, with the necessary computations. Diagrams will be supplied when required to make the text intelligible. See our yachting department. The next article will pertain to skiffs and canoes.

A work of this kind has long been in demand, and we therefore accordingly endeavor to supply it, as has been our habitual endeavor from the outset, whenever we can serve our readers.

SCIENCE FOR 1876.—Forty-five scientific expeditions were fitted out during the year 1876. Of these, twenty-four had their field in Europe, seven in Asia, seven in Africa, five in America, and two in Oceanica.

HELMBOLD.—The new store of Dr. Helmbold, corner of Broadway and Seventeenth street, is, without doubt, the finest pharmaceutical establishment in the United States. Such splendor is rarely witnessed. Illuminated crystal mortars, chandeliers of unique and costly pattern, and counters of Formosa, Paoli and Italian marbles meet the eye at every turn, while the shelves and mountings are superb in ebony and gilt French plate. The magnificent marble soda fountain, without attachments, alone cost $6,000.

The Doctor has long been held up before the world as lunatic, and has lately published a defense, which is well worth perusal. He gives no pleasant view of the interior of Insane Hospitals, and the frequent repetition of cruelties described causes one to ask: "Can such relics of the dark ages exist in an enlightened country, in the nineteenth century?" That such are not exaggerated, is evident from the vein in which the book is written; and we cannot but respect the Doctor for the modest manner in which he relates his story, and his kindliness in suppressing names. Only a few weeks since a devilish piece of work came to our knowledge. The wife of a citizen of Michigan was confined in the State Asylum. Although he wrote, and several times visited the asylum, he was not allowed to see the mother of his children, or to hear from her, it being represented as "impolitic." He has just heard of her death, which occurred some months since, her illness and burial being carefully concealed. With such knowledge, it is to be regretted that Dr. Hembold has not more thoroughly ventilated the Asylum question. We express no opinion as to his sanity, but we may be allowed to remark that, if insane, it is to be regretted that others are not attacked with the same malady, for in such case insanity and artistic taste must go hand in hand.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

P. O. Box, 1,294.—[*Adv.* ABBEY & IMBRIE, 43 Maiden Lane.

The Rifle.

—The Executive Committee, N. R. A., have passed the following:

Whereas, We are informed that Col. Henry G. Shaw, president California Rifle Association, and one of the incorporators of this association, will accompany the team which will represent California in the inter-State match to be shot at Creedmoor in September next; therefore,

Resolved, That Col. Shaw be invited to act as one of the range officers of the National Rifle Association during its annual fall prize meeting of 1877.

THE SANFORD PROTEST.—It was, of course, very manifest to those who know the ins and outs of Creedmoor manipulation and management, that the secret meeting of the Executive Committee on the Sanford protest in the *Spirit of the Times* match, was to hatch up a result, the details of which it would be inconvenient to put before the public. By all rules of consistency, for the sake of precedent, and on the single ground of fair play all round, the decision should have been to sustain the exact enforcement of the printed rules of the association; but for the sake of harmony in the board, the star chamber finally reached this lame and impotent conclusion:

Resolved, That in the case of appeal of Col. E. H. Sanford, in the *Spirit of the Times* match, contested on the 14th inst., this committee is of the opinion that this appeal should be sustained. That the vice-president, being the senior officer present and then in charge of the match, had the right, prior to the commencement thereof, to authorize long-range competitors to shoot therein upon the completion of their scores in the long range match for which they had previously entered, and in which they were then shooting, and that said appeal be and is hereby sustained.

This gives the badge for the third time to Col. Sanford, and closes this series of competition. If the *Spirit* cares to replace it, a suggestion that something like fair play should enter into the competition would be appropriate.

THE INTERNATIONAL TEAM.—The selection of the members of the American team for the present year opened at Creedmoor on the 17th inst., but made rather a poor start. But 27 riflemen came to hand. Brooklyn furnished a large contingent of competitors, but excepting Canfield and Scott, from Baltimore, the South and West were entirely unrepresented. The New England riflemen came down in good strength, the Walnut Hill rifle rangemen and the cracks of Willowbrook among them. On the first day only 800 yards shooting was accomplished, a severe thunder storm completely breaking up the day's work. The score of this first day, with the names of the rifles used, and the places from which the riflemen hail, stand as follows:

Isaac L Allen, Brooklyn, Remington	71
L L Hepburn, Hion, N. Y., Remington	70
L Weaver, Brooklyn, sharps	70
T S Dakin, Brooklyn, Remington	70
C G Blydenburgh, Brooklyn, Remington	69
W M Farrow, Bridgeport, Ballard	69
A Hebbard, Boston, muzzle-loader	68
A V Canfield, Jr., Baltimore, Remington	68
G W Yale, Hartford, Yale	67
H C Coleman, Goshen, Remington	67
H S Jewell, Brooklyn, Remington	67
F J Rabbeth, Boston, Peabody-Martini	67
G L Morse, Yonkers, Remington	67
W H Jackson, Boston, Remington	65
H Fulton, New York, Remington	65
Wallace Gunn, Bridgeport, Sharps	65
Homer Fisher, New York, muzzle-loader	64
A D Hodgman, Yonkers, Sharps	64
James Wemyss, Jr., Boston, Remington	64
L C Bruce, New York, Remington	63
Thomas Lamb, Jr., Brooklyn, Peabody-Martini	62
Frank Hyde, Bridgeport, Sharps	61
Henry White, Holyoke, Ballard	61
S J Scott, Baltimore, Remington	58
N Washburn, Hartford, Remington	58
H F Clark, Poughkeepsie, Remington	53
George W Davison, Holyoke, Peabody-Martini	50

On the day following the men managed to get in a full score; but while it was as good as could be expected, the weather received a good share of the blame, which the men felt due to themselves for not shooting up as high as they had hoped to do. Jewell was the only absentee, owing to pressing private calls. The scores stood:

Allen	800	5 5 5 5 5 0 5 5 5 5 5 4 5 5—67	
	900	5 5 5 4 4 5 5 4 5 5 5 5 5 5—71	209
	1,000	3 4 5 4 4 4 4 5 4 3 4 5 5 3—62	
Lamb	800	4 5 5 5 0 4 5 5 5 5 5 5 5 5—72	
	900	5 5 5 4 4 4 3 5 5 5 5 5 5 5—67	209
	1,000	5 5 5 5 4 4 0 4 5 4 3 4 4 3—60	
Hyde	800	5 5 5 5 4 4 5 5 5 3 3 4 4 5—66	
	900	5 5 5 5 4 4 5 5 4 4 5 5 5 5—72	197
	1,000	4 5 3 0 3 5 5 4 4 4 5 4 4 5—59	
	800	5 5 5 5 4 4 5 5 5 5 5 5 4 5—71

—Notice is hereby given that "The National Rifle Association," a corporation having its business office in the City of New York, desiring to assume a new corporate name and be known as "The National Rifle Association of America," in pursuance of a resolution of the Board of Directors thereof, passed June 7th, 1877, will make application to the Supreme Court of the State of New York, at a special term thereof, which will be held at the Court House in the City of New York on the third Monday in September, 1877, at the opening of court on that day, for an order authorizing said corporation to assume its proposed new corporate name, to wit: "The National Rifle Association of America."

N. P. STANTON, President.

Dated New York, July 12, 1877.—*N. Y. Register*, July 16.

PARKER GUN MATCH AT CREEDMOOR.—Saturday, the 21st, was a rather dull day at Creedmoor, and beyond a little mid-range shooting by regimental men and others, the day's work was confined to long-range work in the third match for the Parker gun prize; 30 shots with any rifle at 1,000 yards was the requirement, and the resident riflemen were out getting in a few shots to keep them in service for the international team selection work. Out of the possible 150 points, the gun had been taken firstly with 122 points by Capt. Anderson, and later by Ransom Rathbone with 128 points. The third match with good weather, gave opportunity for better scores as follows:

Isaac L Allen	137	A Anderson	113
H S Jewell	133	J K Knight (bogus)	110
C E Blydenburgh	130	Wm Hayes	109
L L Hepburn	129	F F Miller	108
T S Dakin	128	H P Sedgwick (?)	102
W M Farrow	123	J P Walters	93
A V Canfield, Jr	117	J A Hary	75
S J Scott	114		

D. Jones, H. Fisher and D. Smyth retired.

MILITARY TEAM MATCHES.—Col. Wingate, in Circular Order No. 6, instructs the N. G. S. N. Y. touching the Nevada badge competitions, returns of practice for which are to be rendered to him prior to Nov. 1. He also calls attention to the Creedmoor military team shoots. In the State match, competing teams will be conveyed to and from Creedmoor at State expense, and will have tents and camp equipage placed at their disposal without charge while on the range.

WATERLEY, N. Y., July 16, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I beg a space in your columns to speak of the contest on the Fourth of July for the Remington Creedmoor Sporting rifle. It would appear from that that I was successful only on account of my brother and I shooting the same rifle. Such a statement is unjust, as the record will show that in shooting matches with Ithaca and Rochester teams I excelled twice. Another time I stood a tie with the highest scores in our team, and used a rifle alone; and my brother has made the highest scores that have been made on our 1,000-yards range on two different occasions, he shooting his rifle alone. I know not the experience of other marksmen, but my own experience has convinced me that I can shoot best alone; and I believe such would be the verdict of all good marksmen who would try to shoot with another manipulating the sights, with him shooting at long distances. A. HILDEBRAND.

[It undoubtedly gives an advantage for a marksman to have his elevations and gauges set by a fellow shooter. The Creedmoor rules forbid this double use of a rifle.—ED.]

WALNUT HILL RANGE, *July* 17.—The first match was for a Sharps mid-range rifle, five shots each at 200, 300 and 500 yards; position standing at each range. The scores stood:

Arnold	2 4 5 4 5—22	5 3 3 4 4—19	0 2 3 4 5—14	5—56
Frost	4 5 4 5 5—23	4 3 4 4 4—19	2 4 0 0 5—11	5—53
Lockhart	4 5 2 4 5—20	4 5 4 5 3—21	2 0 5 4 0—11	5—52
Rockwell	4 4 4 5 4—21	3 2 5 5 4—16	2 5 0 2 4—13	5—50
Frye	4 4 4 4 4—20	3 3 3 3 4—16	4 2 3 0 4—13	4—49
Noyes	4 4 5 4 4—21	5 4 3 0—16	5 0 2 0 4—11	4—48
Mortimer	4 4 4 4 4—20	3 3 2 3 4—15	3 2 0 2 5—12	4—47
De Bar	4 4 4 5 3—22	5 4 0 3 0—16	0 0 4 0 0—4	3—36

Later in the day they tried their skill in competition for a Remington long-range rifle, ten rounds each, at 200 and 500 yards. Out of the possible 100 the following scores were footed up, Mr. Jewell for the second time leading the field:

O M Jewell	4 4 4 4 5 5 4 4 4 5—42	5 5 5 5 5 5 5 5 5 4	42—91
Wm Gerrish	4 5 3 4 5 4 6 4 4 4—42	5 5 5 4 5 6 5 4 5 5	48—90
A P Clarke	4 4 4 4 4 3 5 4 4 5—41	5 5 5 5 5 3 4 5 5 5	48—89
G L Winship	4 5 4 4 3 4 4 4 6 4—41	5 4 5 5 4 5 5 5 5 5	48—89
J H Frost	4 5 4 4 4 3 4 4 5 4—41	5 4 5 5 5 4 5 5 5 5	48—89
H T Rockwell	4 4 4 4 4 4 5 4 5 4—42	5 3 4 5 0 5 5 3 5 5	40—82
C D Mosher	4 4 4 4 4 5 5 6 4 4—42	3 3 2 4 5 3 5 4 4 5	39—81
Selden Wilder	4 4 4 4 4 4 3 4 3 3—38	2 5 4 3 3 0 5 5 5 4	36—74
J N Frye	4 4 5 4 4 3 4 5 4 5—42	4 3 4 0 3 5 5 3 2 2	29—71

SPRINGFIELD, Mass.—A correspondent from this point says: "The Rod and Gun Club have completed a rifle range, and have commenced practice. The range is pronounced by good judges simply perfect. We have a good location; buildings and ranges at all distances up to 1,000 yards. The Massachusetts Arms Company have presented the Club with one of their Maynard Creedmoor rifles, and sent it down yesterday by Mr. Hadley, who made a few trial shots and ended off with the following score at 1,000 yards—5 3 4 5 5 5 5 5 5—47. Mr. Davidson, of Hartford, made at 800 yards—3 5 3 3 5 4 5 4 5 5—42. Mr. Hubbard, of Hartford, also did some fine shooting at 800 yards. The members of the club, with one or two exceptions, had never shot at long range before, and did not shoot regular strings, but most of them got on the targets after a few shots, and give promise of good scores after a little practice."

MASS., *Lawrence*, July 14.—A portion of the Lawrence Rifle Club practiced at Merrimack range to-day, some of the members shooting 800 yards and others 500 yards. With a possible 50 at 800 yards the following scores were made:

A Richmond, Maynard	49	R F Sargent, Maynard	43
R F Lord, Remington	47	C L Austin, Sharps	41

At 500 yards, out of a possible 50, the best results were:

O M Jewell Maynard	50	A M Derby, Remington	46

THE CALIFORNIA INTER-STATE TEAM.—The first of the competitions in the second stage of the scheme of selection of the inter-State team to represent California was held at the San Bruno ranges, near San Francisco, on the 8th inst., with 47 competitors, and the shooting was really very fine. The second and third contests are fixed for the 15th and 22d, and the fight is sharp and keen to get into the first sixteen. The scores in a possible 200, with 20 shots each at 200 and 500 yds., stand as follows:

C. P. LeBreton	161	J. Robertson	148	G. F. Millett	139
M. A. McElhinny	157	W. F. Murray	148	W. Haynes	137
Wm. Wright	157	Thomas Murphy	145	H. H. Burrell	137
T. E. Carson	156	B. H. Ladd	144	W. F. Leeman	136
Frank Alton	156	G. H. Woods	147	R. G. Hanson	132
John McComb	155	G. Strong	146	A. H. Heintz	130
Wm. H. Brockholt	154	W. C. Erben	146	C. M. Gilmore	126
H. F. Backus	154	W. W. McGovern	145	R. Burke	125
J. W. Machr	154	Jas. W. Bates	145	C. F. Waltham	124
E. W. Unger	153	H. J. Burns	142	M. Deane	111
J. P. Warren	153	J. S. Campbell	142	W. Wagoner	121
Louis Beirere	152	R. A. Sarle	141	M. Dunn	120
P. R. McElhinny	151	F. G. Blum	141	C. H. Bradley	120
J. Weisi	150	H. Hook	141	M. Unger	117
E. N. Snook	149	H. T. Sime	141	C. B. Preble	114
C. Nash	149	D. W. Swan	139		

THE CALIFORNIA INTER-STATE TEAM.—The California team to represent the State in the inter-State military match at Creedmoor, in September, has been selected after three very severe competitions, aggregating 120 shots at 200 and 500 yards. The team consists of Charles Nash, Louis Barrere, Joseph Moher, Thos. E. Cannon, Joshua Robertson, Edw. H. Ladd, John P. Warren, Geo. John McComb, Geo. Strong, Edward N. Snook, Jr., Wm. Wright, Harry Hook, Capt. Henry J. Burns, Captain H. W. Broockhoff, Elijah Unger and Charles P. Leburton. General McComb was unanimously chosen captain of the team. The party will leave for New York about the 8th of August.

—Messrs. Backus, Shaw and Le Breton have been appointed a committee to prepare a programme for the fall tournament of the California Rifle Association, to be held in October next.

FROGMOOR—*New Orleans*, *July* 19.—The second practice of the team took place July 15th. When the firing commenced at the 800 yards range, everything was favorable for fine scores. During the firing at 900 yards the wind was very strong, gauges changing from two to five and six points constantly, wind varying from five to three. Mr. James Buckley will captain the team at Creedmoor.

The following are the scores:

	800 yds.	900 yds.	1,000 yds.	Total.
Egleth	68	67	73	207
Selth	73	61	70	204
Glynn, Jr	67	62	69	198
Arms	78	57	68	197
Babbitt	72	61	64	196
Manning	70	62	58	190
Renaud	63	52	56	175

The third competition for the Lilienthal Cup took place yesterday. Throughout the day the wind was very troublesome, ranging from 3 to 9.

	800 yards.	900 yards.	1,000 yards.	Total.
Manning	70	63	69	204
Selph	66	66	69	201
Arms	69	57	66	192
Eyrich	64	63	60	187
Glynn, Jr	65	64	54	186
Babbit	61	63	55	179

The members of the C. C. R. Club are highly indignant at the articles which have appeared in the *Turf, Field and Farm*, and *Wilkes' Spirit*. The editor of the former says that the dispatch *laid over from Thursday until Tuesday*, which is not true; also that it was telegraphed to *only one paper*, which is untrue, we have seen the dispatch in every Associated Press paper which we have received here. For the *Wilkes' Spirit* we have nothing to say, as we can expect no better from that journal. GUSSIE.

[We have seen no reason to doubt the dispatch asserting the champion score of Mr. Selph, though we can candidly say that we should not expect to see him equal it at Creedmoor.—ED.]

New Orleans, July 12, 1877.—*Gentlemen:* The following is Mr. Dudley Selph's score, made on Tuesday, July 10, between half-past three and seven o'clock. Thermometer 92 to 94°:

800	5	5	4	5	5	5	5	5	5	4	5	5	5	4—72
900	4	5	5	5	5	5	5	5	5	5	5	5	5	5—74
1,000	5	5	5	5	5	5	4	4	5	5	5	5	5	5—73—219

With a Remington rifle, Dupont's FFG, Berdan shells 2½-in., 90 grains.

Dudley Selph, Rem	219	Col Jno Glynn, Jr, Rem	203
Maj Wm Arms, Rem	210	E T Manning, Rem	191
John K Renaud, Rem	204	R G Eyrich, Rem	157
Total			1,214

Yours truly, JAMES BUCKLEY, Crescent City Rifle Club.

HAMILTON, *Ontario, July* 13.—Several members of the Victoria Rifle Club were out at their ranges on the 13th inst., to test the merits of the Remington breech-loading rifles, with which they are now armed. The practice was conducted in the usual way, with one sighting shot at each range, and their shooting was excellent considering that the marksmen had had no preliminary practice to find elevation, etc. The weather was all that could be wished for, but the wind, although not strong, was a little tantalizing. Mr. Hepburn, of the Remington Works, Ilion, came over to teach the men. The Victoria men say that their new weapons shoot with much less recoil than the muzzle-loaders, and are much more easily manipulated than was expected. The following are the scores of the men who took the full number of shots. Mr. J. J. Mason and Mr. Cruit, of Toronto, did not fire their full number, but their shooting could not easily excelled as far as it went.

J Adam	800	5	5	5	5	4	5	5	4	4—47		
	900	5	5	4	5	5	5	5	5	5—49	139	
	1,000	4	3	4	4	5	5	5	3	5—43		
J M Gibson	800	5	5	4	4	5	5	3	5	5—41		
	900	5	5	5	5	5	3	4	5	5—47	123	
	1,000	5	5	5	2	5	4	4	5	4	3—42	
F Schwarz	800	4	3	4	4	5	5	4	3	5	4—41	
	900	4	5	4	5	5	4	4	4	4	3—43	132
	1,000	5	5	5	5	5	5	4	4	5	4—48	
Mr Hepburn	800	4	4	4	5	5	4	4	4	3	5—42	
	900	3	5	5	5	5	5	4	4	5	4—45	132
	1,000	5	5	5	4	4	5	5	3	5	3—44	
G Murison	800	3	5	5	4	5	5	5	5	5	5—47	
	900	4	5	4	3	4	5	5	3	5	5—43	126
	1,000	0	3	5	5	5	3	5	5	5	3—39	
G Margetts	800	2	4	3	4	3	5	5	5	5	5	4—40
	900	4	4	4	2	5	4	5	5	3	5—41	114
	1,000	5	4	3	4	0	3	3	3	4	3—33	
Jos Mason	800	4	3	4	5	5	4	5	4	4	5—43	
	900	4	0	3	5	0	4	3	5	3	4—31	109
	1,000	3	4	4	5	0	5	3	4	2	5—35	
A Pain	800	5	4	0	4	5	3	5	4	5	4—39	
	900	0	4	3	5	5	2	5	5	0	4—33	103
	1,000	5	3	3	2	5	3	4	3	0	3—31	

On the following day a few men were out with their Snider rifles, and by way of sample for our own National Guardsmen in the coming match at Creedmoor we give the following top scores:

Lieut Col Gibson	200	3	4	4	4	5	5	5—30	
	500	5	4	5	5	5	4	5—33	93
	600	3	5	4	4	5	4	5—30	
Lieut Adam	200	2	5	5	4	4	4	4—28	
	500	4	4	5	3	5	4	5—30	88
	600	5	3	4	4	5	5	4—30	

—The ninth annual prize meeting of the Ontario Rifle Association will be held on the association ranges, Garrison common, Toronto, on Tuesday, August 28, and following days. Over $3,000 are offered in prizes.

LIEUT.-COL. W. D. OTTER, Sec., Box 359, Toronto.

ENGLISH RIFLE SHOOTING—*London, July* 10.—At Wimbledon to-day, in the shooting for the Kolapore Cup, at 200, 500 and 600 yards, the score of the English team aggregated 608, and that of the Canadian team 586.

In the first stage of the shooting for the Elcho Shield, 800 yards, 15 shots each, Ireland scored 543, Scotland 530, and England 513. At the end of the shooting at the 900-yard range the score was: Ireland, 1,060; Scotland, 1,000; England, 991. The shooting for the shield terminated with the Irish team winning by a large number of points. The highest possible score was 1,800. Ireland scored 1,568; England, 1,464, and Scotland, 1,439.

The match between members of the Houses of Lords and Commons was won by the Lords team by the following score: Lords, 404; Commons, 375. The highest possible score was 500.

Competition has commenced at Cambridge, England, for the selection of a rifle team to compete in America. The competitors have elected Lieutenant Fenton, of the Irish eight, as a member of the team, although he was unable to take part in the competition. They used the Metford and Rigby small bore rifles. There was a strong, varying wind and occasional showers. Each competitor is to have each day fifteen shots at 600, 900 and 1,000 yards. Ferguson, of Scotland, to-day beat anything done at Wimbledon by making 208 out of a possible 225. The scores of the others were as follows: Rigby and Dyas, of the Irish eight, 197 and 186 respectively; Fenton and Humphrey, of the English, 185 and 184; Dunlop, of the London Scottish, 183; Sir Henry Halford and Mr. Pigott, of the English eight, each 182; Mr. Gilder, of Harrow, 177; Mr. Fraser, of Cambridge University, and Major Young, of the Irish eight, each 176.

—The writing-rifleman on the *Pacific Life*, discussing the international match question, gets off the following, which, in view of the acknowledged fact that the big match last year fell to the Americans mainly through their luck in drawing the targets to which they were accustomed to shoot, sounds rather high ordered. To say that one range is precisely as good as another is to contradict the experience of every rifle shooter. The *Life* says: "A good marksman can shoot over one ground as well as another, and he has no important advantage in shooting in a match at a target at which he has been accustomed to practice. The new comer can soon learn all the tricks of wind, light and atmosphere peculiar to any particular locality, and he is always permitted sufficient practice for that purpose before he engages in a match.

—In competing for a Creedmoor rifle recently at Salt Lake City, six matches were shot, which was finally won by G. A. Mears, whose best score was 43 out of a possible 50, 200 yards.

—A championship match between the Houston, Galveston and Dallas long-range rifle teams is expected to take place at the horticultural exhibition, to be held at the former place in August.

—The Boston rifle-writers compliment Mr. Lowell as follows: "The future meetings threaten to be simply gatherings of the M. R. A. members to see Mr. Lowell carry off the honors, unless he 'lets up' on his practice."

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Serranus ocellatus.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land-locked Salmon, *Salmo gloveri.*	Striped Bass, *Roccus lineatus.*
Grayling, *Thymallus tricolor.*	White Perch, *Morone americana.*
Black Bass, *Micropterus salmoides; M. nigricans.*	Weakfish, *Cynoscion regalis*
	Bluefish, *Pomatomus saltatrix.*
Mascalonge, *Esox nobilior.*	Spanish Mackerel, *Cybium maculatum.*
Pike or Pickerel, *Esox lucius.*	
Yellow Perch, *Perca flavescens.*	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES FOR AUGUST AND SEPTEMBER.

GRAY COFLIN, No. 10 and 11.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's herl; wings and setæ, hyaline.

BROWN COFLIN, No. 10 and 11.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's herl; wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wing.

The white moth, for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season.

At this season use the small flies for day fishing, and the large flies for evening and night.

FISH IN MARKET.—The fish supply for the past week has been very small, presenting a marked contrast with the abundance of a week ago. Our quotations are as follows:

Striped bass, 18 to 25 cents per pound; bluefish, 8 to 10 cents; salmon, green, 20 cents; frozen do, 25 cents; mackerel, 25 cents; shad, Connecticut River, 50 cents; weakfish, 10 cents; white perch, 15 cents per pound; Spanish mackerel, 18 cents; green turtle, 15 cents; terrapin, $12 per dozen; halibut, 15 cents; haddock, 8 cents; king-fish, 25 cents; codfish, 8 cents; blackfish, 10 to 15 cents; herrings, 6 cents; flounders, 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 18 cents; soft clams, 30 to 60 cents per 100; pickerel, 15 cents; salmon trout, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $3 50 per 100; soft crabs, $1 50 per dozen; whitefish, 15 cents; frog legs, 35 cents per pound.

THE RIO GRANDE TROUT.—This beautiful fish inhabits the head waters of the Rio Grande, New Mexico; Sangre de Christo Pass, Colorado; and Brazos and Chama rivers, New Mexico. As a game fish it cannot be surpassed. Hallock's new book, the "Sportsman's Gazetteer," contains the first description of it that we have seen. Something more is furnished in the following letter from an army officer, dated July 1, 1877:

"Three days ago I pitched my tent at this point, head waters of the Rio de la Jara, at the foot of the snow range of the Rocky Mountains. The stream here is a mere brook six to eight feet wide and two to two-and-a-half deep, running through a grassy valley without a tree or shrub. As our elevation is 7,870 feet, and the Rio de la Jara empties into the Rio Grande, you will understand that there is a pretty strong current here, and that the weather as well as the water is cold. Ice formed in my tent night before last. With this introduction, knowing your interest in trout fishing, let me tell you that I never saw or heard of anything to equal what we have here. The first day in camp I caught twenty, the next day one-hundred-and-eight, and to-day eighty. The first and second day I went up stream where the fish are smaller but more numerous; to-day down stream, where I found them larger. I fished with two artificial flies on my line, one about eight inches above the other. The trout took the fly, but I found it a great improvement to put on the same hook with the artificial fly a grasshopper or the head and shoulders of one. I frequently caught two trout at a time, and often, too, found that one trout had taken both hooks, showing their avidity. The first day I walked as quietly along the bank as I could, but found that I could not avoid alarming them, as there is no cover on the bank. Yesterday and to-day I crawled to the bank on my belly and laid perfectly still, on opposite side from the sun and out of sight, and threw the fish back to an orderly, who took them off and baited hooks. It kept us both busy. The average weight of the 108 yesterday was about one-third of a pound. The average of the eighty caught to-day is about one-half a pound. I inclose a sketch herewith.

We value this sketch very highly, and shall preserve it with care. The Gazetteer says: "The color is yellowish, brown above, with small spots composed of decussating lines; a red band on each side of the chin."

BLACK BASS AT SHARBOT LAKE.—Take 6 P. M. train at N. Y. Central, arriving at Watertown 6 A. M. without change of cars. At 7:30 A. M. take train to Cape Vincent, then boat to Kingston, Ontario, thence forty-six miles on Kingston and Pembroke R. R. to Sharbot Lake, arriving at 6 P. M. This lake is fourteen miles long and four wide, thickly studded with islands. A good hotel, $2 per day. You can catch more black bass in one day than among the Thousand Islands in a week. Hubbard Clark caught 71 last Friday with the wind in the northeast; weight from 2 to 3¼ lbs. The railroad was completed to this place last year, and until then no white men fished in the lake, consequently it has not been fished dry, and you don't have to wait all day between bites. This is the best place to fish I ever tried. R. P. F.

KING OF LOBSTERS.—On Saturday, July 14, Mr. F. H. Weissman, of Newmarket, N. J., caught on the Cholera by means of hook and line, a huge lobster, which weigbed eighteen pounds. It is now on exhibition at Mr. W.'s residence, and measures three feet one inch in length, and eleven, by seven inches across the claws.

—There was recently captured in a seine near Galveston, Texas, a grandicore, six feet in length, and weighing 125 pounds. These are known as the gamest fish of the gulf, and it is believed impossible to take them with hook and line.

—Postmaster Chase and Major Thos. McCarthy, of Syracuse, returned to that city July 17, from a fishing trip to the Cascopedia River on the Bay Chaleur in Canada. They went with Indian guides and birch canoes far up that river, and give glowing accounts of the sport to be found there. Mr. Chase carried home as trophies of his skill two salmon weighing respectively twenty-five and twenty-seven pounds.

—Mr. Eaton, of New Bedford, Mass., captured eight striped bass last week off No-Man's Land, which averaged fifty pounds each. Good catch!

VERMONT—*Newport, July* 18.—Lunge fishing in Memphremagog very fair this spring. *Salmo fontinalis* in plenty a few miles from here, averaging three-quarters of a pound. Got 40 trout Saturday, weighing 35 pounds. KIT.

MASS—*Springfield.*—Striped bass are caught in great numbers at the falls, eight miles below the city; the heaviest seen tipped the beam at thirteen pounds. Several salmon and grilse havealso been caught in the Connecticut this year, for which we return thanks to the Fish Commissioners. S. J. H.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port, the past week, has been 86, viz., 21 from the Banks, 38 from Georges, 26 from mackereling trips, and 1 from Labrador. The mackerel receipts have been light, and prices show an upward tendency. The receipts of codfish have been about 1,800,000 lbs. from the Banks and 570,000 lbs. from Georges; the halibut receipts have been about 245,000 lbs. fleshedand 265,000 lbs. fresh from the Bank and 15,000 lbs. from Georges.—*Cape Ann Advertiser.*

NEW YORK—*Meacham Lake, July* 17.—Since my last we have passed from bait to fly-fishing. Our spring or bait-fishing was unusually good; everybody caught trout. All hands are willing to allow that my hatching works are a good thing. I have had to combat the very strong prejudice of the natives all the time I have been at work; but this year they show less of it, and begin to talk encouragingly. I think now I will be able to get a little help, as several of the guides have asked me to help them stock other ponds and streams nearer their homes. This is what I have waited for. I want them to take an interest. Our fly-fishing is first-rate. No very large catches to boast of, but one rod brings in from twenty to fifty good trout as the result of one day's fishing. The fish run of fair size. Several of one pound each have been taken during the week. One afternoon last week I ran over to Buck Pond, and with my 7-oz. Orvis rod caught twenty-six trout, two at one cast of a half-pound each. It was the same little rod that I took the 4-lb. 2-oz. trout with at Clear Pond in the fall of 1875. I have been turning in trout, chubs, dace, sunfish and pouts into Clear Pond for five years. The water is so clear that it is very difficult to catch a trout, though we have taken more this year than any season before, and thus far have not seen one of less than one pound, all very fat, with stomachs full of young sunfish and chubs. A. R. FULLER.

SALMON OF THE NEPISSIGUIT—*Rochester, N. Y., July* 13.—Herewith we inclose score of salmon catch on the Nepissiguit River, N. B., of Mr. Jas. R. Chamberlin and writer. Several grilse were taken, weighing from 3½ to 5 pounds. We spent several days on the Miramichi, but were too early. We saw Messrs. G. G. Kennedy, of Roxbury, Mass., and E. C. Pierce, of Springfield, at Bathurst, who were just from the Metapediac where they had very good success considering the short time there—think their largest fish weighed 34 pounds. The early season seemed to make fishing no earlier than usual. The present is no doubt the best time to be on the rivers of N. B., but ten days or two weeks later for the Miramichi as that river is filled with logs and nets.

Judge Souther, of Erie, was in our party, but unfortunately sprained an ankle the first day on the Nepissiguit so had to stay in camp, though he killed one 12-pound salmon on the Miramichi, which was the only one taken there. We had a splendid time, besides seeing the great fire at St. John.

W. S. KIMBALL.

[Our correspondent's score comprises 16 salmon for two rods, weighing 212½ pounds in the aggregate. The largest weighed 16 pounds.—Ed.]

Four fishermen at Himmanville, N. Y., in two days' fishing caught a total of 285 fish, of which 167 were black bass. They were all taken with rod and fly.

WISCONSIN—*Island House, Bayfield, July* 10.—Chapman was up the shore yesterday doing up the rock fishing. He caught 23 fish, and they weighed 38 pounds; the largest weighed 3½ pounds and several of them were of two pounds weight, but few of them were less than one pound.

The rains are over, and the streams are getting clear, and fishing good. Three young boys are at Sand River, camped, and catching so many that they are salting. The boys are from Cleveland. W. KNIGHT.

MICHIGAN—*Grand Rapids, July* 17.—On July 7 your correspondent took a train of the Grand Rapids and Indiana R. R. for Mayfield, our old camping ground. Dinner hour found us at Reed City, where we enjoyed, what is quite a rarity in such a place, a good dinner at the railroad eating house. At 5 P. M. we grasped the outstretched hand of mine host Dawdy, of the Dawdy House, the prince of landlords and a jolly companion. Next morning we started for the Boardman, a beautiful stream, abounding in trout and graylings. Leaving the stream after six hours of good sport, I counted up and found eighty-seven handsome trout in my basket. I had four days' fishing, and they were nearly a repetition of the first.

VALLEY CITY.

WHAT ONE FARMER DID IN MINNESOTA—*Perham, Minn., July* 11.—Some six miles from here, over a level prairie road, but just in the edge of an oak forest, lives one Enrich Steinbach, a farmer, who has on his homestead a lake five hundred yards by three hundred and sixty, being almost a perfect oval, with a depth of some fifty feet. Three years ago this lake was but a "thing of beauty" to the eye, now it is the most heavily stocked with pike, pickerel, suckers and black bass of any of the hundred lakes in the vicinity, though it has no outlet or inlet, being surrounded by high banks. It received its stock in this way: Enrich, fishing in the Red River one sultry afternoon, thought to himself, "how much more handy 'twould be if my little lake had fish in it; then I could fish every day as there would be no walk to speak of." Jumping up he started for home, and soon returned with two pails, a tub, and an assistant to carry them. In a couple of hours he had them well filled with the varieties mentioned, and was soon wending his way home to the little lake. They have since increased to such an extent that they will jump at a bare hook, and indeed bite at your feet if immersed in the water.

BOAT AND YACHT BUILDING—1st Paper.

THE SCOW.

THIS boat, in its primitive state, was nothing but an oblong box, with upright sides and ends, made water-tight. Experience soon gave the ends a slope, to prevent piling water up in front and dragging it behind. The sides were also bevelled to prevent rough water so easily washing inboard, and to give more room and spread for the oars.

To make a good one, procure two boards for the sides, either pine or cedar, 14 to 16 feet long, 14 or 16 inches wide and 1 inch thick. These boards should be as near alike in quality as possible; for, if one bends more easily than the other, the boat will be crooked, or lopsided—therefore be careful that they both bend alike. The best way to test the boards is to lay them alongside one another, resting their extreme ends on sawhorses or some equivalent. Then lay equal weights on the centres of the boards, sufficient to deflect them 6 or 8 inches from the horizontal line. If both boards are now found to be curved alike, all right; if not, try until you find two boards that will bend alike. This point is very important, and must be kept in mind when selecting side boards for skiffs or any boat similarly built.

We now determine what width to make our boat. Four feet will be about right for the one under consideration. Take a piece of board of that length 12 inches wide and 1 inch thick, cut the ends to the level you require, the sides to be say 4 inches to the foot, which will leave the board 4 feet long on one edge and 3 feet 4 inches long on the other. Next saw the side boards to the same length. Across the middle of the length of each draw a pencil mark, with the aid of a square held on the edge of the board. Now determine what curve you would like for the ends; say one of 6 feet radius. Take a strip of board 5 or 6 feet long, and of sufficient width. With a cord or piece of lath 6 feet long, describe on it a segment of a circle (I should explain that the cord or lath is used as a compass, by fastening one end to the floor with a small nail or awl; at its other extremity a pencil is attached). On the sides of the sideboards which will be placed in the inside of the boat, proceed to draw off the curves by the aid of the pattern board, placing the pattern so that its one end will start from a point 3 inches from the upper edge of the sideboard at the ends; bring the other end of pattern down until it strikes the bottom edge; with a pencil mark the curve; do the same with the four ends of sideboards; set the sideboards up on edge, parallel with each other, and fasten the 4 feet beveled board between them by two screws in each end of the "mould board." The mould board is set on the line drawn across the middle of the sideboards. Let the wide edge of the mould board come flush with the edge of sideboard designed for the top of boat, or gunwale. Now, if not done previously, cut the ends of sideboards down to the curve line, pass cords around the two ends of boat, and draw the ends together until they are 2½ or 3 feet wide, according to fancy. Now level the saw benders on which the ends of the boat are resting, so that the skeleton will be out of "wind;" then stay-lath the mould board to the side pieces, so that the angles between the same will all be alike.

The boat is now supposed to be resting squarely on the benches, with the bottom edges of sideboards up. The beveling of the sides of boat gives a concavity to the upper edge or gunwale of boat. This concavity is called the sheer, and is desirable; but it also gives a convexity to the bottom that is *not* desirable. Therefore, from the points where the end curves of boat end on the bottom, make the bottom straight or nearly so by shaving down the sides. With the aid of a straight-edge board laid across the boat from side to side, bevel the sideboards so that the bottom boards will fit neatly on them. Nail on the bottom boards, which should be placed crosswise the boat. Set and drive the nails carefully, so that they will not come through the sideboards. Common cut nails are the best for this purpose. Boards for bottom may be of pine or cedar, ⅞ or 1 inch thick. Close the ends of scow by nailing the end boards on outside of the side pieces; bevel their edges so that the last bottom boards will fit over them neatly; plane the ends of the bottom boards down smooth with the sides, and turn the boat over. Remove the stay-laths, take the screws out and remove mold board, plugging with pine plugs any screw or nail holes. Next determine how wide a platform you want at ends of scow. This is a matter of fancy. They can be made from 1 to 3 feet wide. Use 1-inch boards, tongued and grooved together. Cut a strip 1 inch deep, and sufficiently long to allow for the width of platform. Out of the top edge of sideboards of boat cut the end board to correspond, and fit the platforms to place. Before nailing platforms in place, nail lengthwise through the centre of bottom of boat with clench nails a board 8 to 10 inches wide, long enough to reach from one end to the other, allowing for the curve of ends, and ¾ inch thick. The ends of board may be planed thinner, to allow it to bend more easily to the curve of bottom. Bevel the two upper edges of board, to give a neat appearance; afterward nail he platforms in place.

Next come the side strips, or mouldings around the top edge or gunwale of boat. Take two strips of inch boards, 2 to 2½ inches wide, and the full length of boat. Nail with clinch nails around the upper edge of side boards; bevel off the ends of strips to give a neat finish to ends of boats. A rowing seat should be placed about the centre of the boat's length. Make it of a piece of board one inch thick, 9 or 10 inches wide and of the proper length. This can only be fitted by trial, sawing off a little at a time until it fits in place. Saw two pieces of board of the same width as the seat, and of such length that when placed one under each end of seat against the side boards, it will leave the upper side of seat, six and a half or seven inches below the gunwale or upper edge of side board. Fit another rowing seat in the same manner three feet ahead of the first one, measuring from centre to centre of seats. For the proper position of rowlocks I will give a rule that I have deduced from my own experience, and which I believe is the only true one: Bend the fore arm up toward the shoulder, set a square in the angle between the arms at the elbow, close the fingers on the palm of the hand and take the distance to the knuckle joint of first finger. This will give the distance to set the centre of rowlock from the edge of seat. In my own individual case this distance is 11½ inches. Those with longer or shorter fore arms will govern themselves accordingly. Rowlocks of galvanized iron may be bought cheaply. Those which swivel on a plate are the best. Set a pair for each rowing seat. The rowlocks should measure 2½ inches between the widest part of the horns. Seats may or may not be fitted in the ends of boat, as the builder prefers. After this nothing remains to be done but caulking and painting.

For caulking small boats I prefer candlewick, which can be divided into any sized strand required. Force strands of a suitable size into the seams, and drive down enough to leave room to finish the seam with stiff whitelead ground in oil. Give two or three good coats of paint, inside and out; attach a ring and staple to bow of boat, and you have done.

In all boats of this kind the builder can vary dimensions given to suit his particular requirements or preference—thus, the ends of boat can be of more or less width, the sides may have more bevel, and consequently the boat will have more "sheer," or concavity, the boat may be of a greater or less width, keeping in mind that the larger the dimensions, the more the boat will carry, and the harder it will row. A boat of the dimensions I have given will carry five or six persons comfortably. Oars should be 7 to 8 feet long; rope to tie boat, hemp or manilla, ⅝ inches in diameter, and 12 or 15 feet long.

NAUTICUS.

THE YALE STROKE.

NEW HAVEN, July 2.

EDITOR FOREST AND STREAM:

"Is the Yale Stroke a Failure." This is the heading of an editorial (as consequent as most *Herald* editorials) that appeared in the New York *Herald* of July 5th, or thereabouts. Who can have fathered the article in question I cannot imagine, but it must have been either a fool or a venomous knave. From beginning to end the article is an attack on Mr. Cook, the man who has, by the *Herald's* own statement, done more for American rowing than any man in the country. Last year we were informed editorially by the *Herald* that Mr. Cook has inaugurated a new system of rowing, that it was undoubtedly the only correct one, that the country owed him a debt of gratitude for the work he had done in bringing together a crew that could row well enough to virtually defeat the London Rowing Club, and much more to the same effect. Verily the *Herald* is a consistent sheet. Now, before going into the question of strokes, let us form a minute look over the article and nail a few of the untruths therein contained.

We read that "The Yale crew went all to pieces, until, more than one witness testifies, that they actually did not seem able to hold on to their oars." Indeed! Yet we read in the *Herald* of July 1st that they rowed a superb race; that they held their own resolutely in the rough water; that in the last mile they made spurt after spurt, repeatedly lessening the distance between the boats, and that finally, water-logged as they were, they made a magnificent struggle at the finish, rowing forty strokes to the minute, and putting forth a burst of speed that nearly closed the gap between them and their rivals. Could men scarcely able to hold on to their oars do this, think you? Could a crew "gone all to pieces" so hold their own with such a superb crew as the Harvards were? This statement, like most others in this precious article, won't bear reading in the light of reason. No honest man who saw the contest will deny that it was superbly fought from start to finish. No reasonable man reading of the race, and aware of the facts that the course was a four-mile one; that one of the boats was nearly waterlogged; that there was a turn in the course which gave the inside crew the advantage; that the referee, after the positions had been drawn, moved the buoys marking the flats, and then ruled that the outside boat (Yale) should not go within 300 feet of them, forcing her over into shoal water throughout the second mile, and that there was only three-quarters of a length of clear water between the boats at the finish, can fail to see that the Yales were not "beaten easily all over the course," and that under different circumstances, the contest would have been even closer. Fairly beaten Yale undoubtedly was; easily beaten she was not. Both crews were exhausted at the finish—Yale more so than Harvard, but not more so than she should have been after such a race. The losing crew which does not come in exhausted after a race is dishonored. A fresh man at the end of a lost race indicates one who has spared himself at the expense of his fellows. A fresh crew at the end of a lost race, indicates a boat full of faint hearts. Again the *Herald* says, and in so saying gives the lie direct to dozens of its own statements, editorial and other, since '73: "Yale has spent four whole years on her present stroke, certainly ample time to test its every merit, and in them all she never won a clear or satisfactory victory until last summer, and then over a crew badly rigged, and so young and inexperienced that they hardly amounted to a respectable class crew." Now can a more contemptibly mean statement be imagined? Is it a pretty thing to see a great newspaper thus calmly print a statement which would seek to rob dozens of good fellows of their hard won laurels, which seeks to rob all graduates of Yale of the pride which they so justly feel in that grand old institution's boating record since '73? It is needless to say that the sentence we have quoted is utterly untrue. In '73 Yale's single sculler won his race with ease, rowing the so-called "Yale stroke." The following day the freshmen, using the same stroke, won their race with equal ease. Then the University crew came in ahead of a field of thirteen. They too rowed the "Yale stroke." Were not these "clear or satisfactory" victories. In '74 the foul took place, but Wilcox, of Yale, won the sculls with ease, pulling the "Yale stroke." In '75 Kennedy won the sculls with ease, pulling the "Yale stroke." In '76 the Yale eight, rowing the "Yale stroke," beat Harvard terribly. The *Herald* says that they beat "a crew badly rigged, and so young and inexperienced that they hardly amounted to a respectable class crew." Indeed! Well, six of these same young and inexperienced boys went to Saratoga, and with scarcely any practice and with great ease defeated Columbia, Union, Wesleyan and Princeton, and nearly beat Cornell. Does this speak well for the *Herald's* assertion in regard to the make up of the Harvard crew of '76? The Yale four went to the Centennial. They defeated every crew they met with the exception of the London four, and according to the *Herald* virtually defeated them. Were not these clear and satisfactory victories? They defeated Cambridge and Columbia in a race (to them a walk-over) for the championship of American Colleges a few days later. Was not this a clear and satisfactory victory? We thought that Yale had won nine clear and satisfactory races in the last four years; three in '73, one in '74, one in '75, and four in '76. The *Herald* says she has gained but one.

Again the *Herald* goes on to say, speaking of Mr. Watson, the Harvard coach:

"But the latter were taught by a gentleman who never saw England, who had not rowed a race in nine years, who was a member of the fast '68 Harvard crew, and who will testify to-day that nearly all the ideas he now inculcates he learned then, the chief change being only that required to adapt them to the sliding seat."

Now, honor where honor is due. To Mr. Bancroft belongs the honor of the victory. He taught his crew the stroke. And what stroke was it? The stroke learned in '68 by Mr. Watson? The English stroke—the "Yale stroke." Mr. Bancroft went to the Centennial and studied the English crews. He applied his study, and we saw the result at Springfield. *He* set the stroke, the coach drilled the seven men behind him, using him as a model. We don't think that Mr. Watson will "testify" to anything else. Mr. Bancroft has worked with rare perseverance and resolution for the attainment of the fine edition of the English stroke rowed by his crew this summer. Do not seek to rob him of the laurels which are his and his only.

And now for the question "Is the Yale stroke a failure?" Why not ask the same question of the Harvard stroke, for it was essentially the same thing. As I said before, the stroke rowed by Harvard was the English stroke—so is that pulled by Yale; at least so says Gulston of the London Rowing Club, though Mr. Goodwin, of Columbia (who will only allow that "Yale rows *pretty*"), has kindly pointed out to Yale that Mr. Gulston is mistaken, and that hers is not the English stroke. Now can there be no reason for a lost race but a faulty stroke? Does the beaten crew in the great English University races always seek a new stroke? If the Yale stroke is a failure, every crew that has won a college race since '73 can know that its stroke has been modeled on that same failure. In '73 Cook, of Yale, gave up one year of his college course and went to England, whence he returned with the so-called "Yale stroke." That year he won his race with it. In '74 nearly every crew on the course rowed as near an approximation to it as they could arrive at. Cornell used it in '75, and in '76 rowed it nearly as well as did the Yale men at Springfield the same year. Columbia rowed it in '74 and has rowed it ever since. At Springfield this year she rowed it, having learnt it from Mr. Kelly, the same man who coached the Yale crew last year. Yale rowed it at the Centennial, and Englishmen on the banks sang out, "Well rowed, Yale!"

Every year since '73 the great papers of the country have steadily indorsed the "Yale stroke" (meaning the English stroke), the *Herald* more than any of them. Last year after the brilliant struggle with the Londoners at Philadelphia, the *Herald* could find no words to express sufficiently its admiration for the English stroke as rowed by Cook's four, and after declaring that the country at large should feel grateful to Captain Cook for his work, went on to criticise in glowing terms his stroke, which never rose above 38, while the Londoners were rowing up to 40. Yet here we see this great and consistent newspaper solemnly and foolishly propounding the question, "Is the Yale stroke a failure?" and after a column of maundering idiocy, settling that question to its own entire insane satisfaction, in the affirmative.

Again I say, Yale was heavily overmatched physically, her men averaging ten pounds lighter than the Harvards. They knew from the start that they were overmatched, but hoped for victory on the grounds that they rowed their stroke so much better than did the Harvard men. So they did—four weeks before the race, but when race day came the reds had coached so faithfully as to row nearly as cleanly as they did themselves. The ten pounds per man extra weight in the other boat and the rough water did the rest. Yale will thankfully avail herself of Mr. Cook's services next year if she can get them, which is doubtful. If she cannot, she will adhere to his system. The *Herald*, in closing, says Yale should adopt another stroke "even though to learn it they must turn from a well meaning friend (poor Cook) and go to an ancient but always an appreciative enemy." Who may this ancient and appreciative be?

JUSTICE.

WILLIAMSBURGH YACHT CLUB.—A match race was sailed July 18th between the Rosina and Emma D., the course being from the foot of 104th street, East River, to and around the Gangway buoy and return, a distance of thirty miles. The Emma D. was the winner by 2 min. 11 sec. The following shows the result:

	Start. H. M. S.	Finish. H. M. S.	Elapsed Time. H. M. S.	Corrected Time. H. M. S.
Emma D.	12 34 20	6 25 00	5 50 40	5 50 40
Rosina	12 34 00	6 25 19	5 54 19	5 52 51½

BROOKLYN YACHT CLUB.—Twelve schooners and ten sloops constitute the squadron which started on the 20th for their cruise to the eastward. Their names are: Schooners—Madeleine, Estelle, Columbia, Comet, Dreadnaught, Mystic, Playful, Sea Witch, Tempest, Vision, Vista, Clytie. Sloops—Niantic, Arrow, Ada, Alice, Cyclone, Gracie, Kate, Lizzie L., Mattie, Schemer. Their ultimate destination is New Bedford. On their return they will disband at Newport.

CITY POINT MOSQUITO FLEET REGATTA—*Gloucester, July 16.*—Wind light and the water smooth. Everything adapted for a successful race for the tiny craft. Appended is a summary:

Boats.	Owners.	Time. H.	M.	S.
FIRST CLASS.				
Shoepeg	C. Borden	11	0	00
Lizzie	Maj. McDonough	11	0	45
Roslyn	J. Condon	11	2	00
SECOND CLASS.				
Chigmila	J. Buckley	11	2	15
Gnat	Com. J. Winslatt	11	4	30
THIRD CLASS.				
Mariquita	P. Dexter	11	0	15
Young Turk	C. G. Galloway	11	2	20
Niagara	A. Dean	11	2	45
Ivy	J. Woodward	11	4	50
Gazelle	J. Bertram	11	5	50

The start for 1st and 2d classes was at 23 minutes past 10, and the 3d class three minutes later. The course was four miles long, and by the table it will be seen that the Mariquita sailed over the course fastest by 2 minutes and 45 seconds. The prizes were gold medals, one for each class. The judges were C. T. Haley, J. F. Goodwin and J. Bertram.

A petition signed by over 500 yachtsmen for repetition of 4th of July regatta was referred to committee. KEDGE.

BOSTON YACHT CLUB—*City Point, July* 17.—First race of the championship series for 1877. Distance for second-class boats, 13 miles. Entries: Keel schooner Hermes, Capt. W. Goodwin; and the Loiterer, Capt. W. W. Killett. Won by the Hermes in 2h. 1m. 5s. Distance for third-class boats, 8 miles. Summary:

Name.	Length.	Act. time. H. M. S.	Cor. time. H. M. S.
Posey	22 1	1 40 45	1 08 45
Mariposa	23 0	1 43 05	1 12 05
Helen	18 6	Not taken.	
Ariel	22 3	Capsized.	

BEVERLY YACHT CLUB—*Swampscott, Mass., July* 28.—A union regatta, open to all yachts under forty feet water line, except catamarans, will be sailed as above. Handsome solid silver cups and other prizes have been presented by citizens of Swampscott.

NAHASSET YACHT CLUB—*Cohasset, Mass, July* 17.—Prizes: two silver cups for each class. Summary:

SECOND CLASS.

Course—From judges' yacht, leaving buoy on Chittenden's Rock on starboard, stake boat on Black Rock on starboard, Minot's Light on starboard and return to judges' yacht, 7 miles.

Name.	Time. H. M. S.	Cor. time. H. M. S.
Peri	1 21 51	1 13 22
Iris	1 23 44	1 16 09
Sankey	1 20 36	1 17 41
Aurora	1 21 20	1 18 26
Earus	1 27 54	1 19 05
Marion	1 30 33	1 20 30
Edith	1 30 58	1 20 55
Curlew	1 20 44	1 21 46
Holly	Not taken	

THIRD CLASS.

Course—From judges' boat, leaving buoy on Chittenden's Rock on starboard, stake-boat off Pleasant Beach on starboard, around Davis Ledge to judges' boat, five miles.

Dandelion	1 04 00	——

FOURTH CLASS.

Course—From judges' boat, leaving buoy on Chittenden's Rock on starboard, Grampus Ledge buoy on starboard, West Shag Rock on starboard, and return to judges' boat—3 miles.

Name	Time. M. S.	Cor. Time. M. S.
Scamp	34 47	28 50
Splash	41 59	34 55

NEWPORT YACHT CLUB.—The second regatta of this club was held July 18th. The course was from Long Wharf around Conanicu Island to Beaver Tail, and, on returning, going around the Can buoy near the Lime Rocks Lighthouse. The following is the official time of each of the entries:

	Arrive. H. M. S.	Time of Race. H. M. S.	Corrected Time. H. M. S.
Cruiser	4 23 07	5 14 07	3 47 28
Lilian	4 25 45	5 17 45	3 56 29
Titania	4 26 44	5 18 44	3 43 07
Sappho	4 30 00	5 22 00	4 09 29
Vesuna	4 30 00	5 22 21	3 55 41
Minnie	Not timed.		

PROVIDENCE YACHT CLUB—*Providence, R. I., July* 20.—There were four entries. The prize for jib boats was won by the Lenora, of Pawtucket; that for cat-rigged boats by the Gleun, of Providence.

ON THE DELAWARE.—An exciting race was sailed upon the Delaware from Gloucester to the Horse Shoe Buoy and return, for a silver ice pitcher. The contestants were the Lawrence and Lafayette, the former winning by 1m. 40s.

GODERICH YACHT CLUB—*Goderich, Canada, July* 20.—Distance 20 miles; prizes, champion silken flag, challenge cup and $100 in money. Fifteen entries. Won by the yacht Zeda Marlton; E. Blake, second; Foam, third, and James Friel, fourth.

RUDDOCK BOAT CLUB—*Boston, July* 18.—Course from Commercial wharf to Buoy 11 and return. The result was: Goldsmith Maid, 17m.; Atlantic, 17m. 20s.; Fitzgerald; 19m. 21s.; the Rice, fourth; Susan, fifth, and Jennie, last.

—George Hosmer and N. D. Driscoll are to row a single scull race, for $250 a side, on the Charles River, Aug. 9.

—A modern Citizen of the World is abroad, and has been visiting America:

"A distinguished Japanese traveler in this country writes home: 'The chief branch of education of young men here is rowing. The people have large boat houses called 'colleges,' and the principal of these are Yale and Harvard.'"—*New York Weekly.*

—Mr. Sampson W. George, the hotel proprietor at Greenwood Lake, offers $500 reward to any one who will prove that Courtney was poisoned.

—The whale boat, New Bedford, in which Captain Crapo and his wife undertook a voyage across the Atlantic alone, arrived safely at Cornwall, England, on July 21, about six weeks after it left New Bedford. The adventurers encountered three gales, and were obliged to lie to for fifteen days.

There are no truer sayings than that history constantly repeats itself, and that there is nothing new under the sun. Like all truths, however, there are exceptions to these. A new and unparalleled toilet soap, scentless but perfectly pure, equally adapted for childhood and maturity, the *ne plus ultra* of toilet and bathing soaps, has just been invented—B. T. Babbitt's Toilet Soap.—[Adv.]

—Five new varieties of sponges have been discovered by Dr. Meyer at the Philippine Islands and New Guinea.

Rational Pastimes.

NEW YORK ATHLETIC CLUB.—This club opened its new club house, foot of 138th Street, Mott Haven, Sat., July 21st. The house is built on a float, 70ft. long and 22 wide, is a structure of two stories, and fitted up with every convenience. The event of the day was the running high jump contest for the club championship. The entries were H. Edwards, Fricken and E. B. Foote. Won by Fricken, who made 5ft. 6in., the best amateur time on record.

RAVENSWOOD ATHLETIC CLUB.—The club grounds were formally opened to the public. The games resulted as follows:

Two-mile walk—W. Barnes, 16:51¾.

Four hundred and forty yards run—won by M. Burch in 63s.; S. A. Burt, second; S. Chevalier, third; T. Keeler, Jr., fourth.

Half-mile run—F. Banhom won in 2m. 30s., being a yard ahead of S. A. Burt.

Five-mile walk—Won by F. H. Armstrong, in 43m. 21s. S. K. Van Riper, second.

The wrestling match between Ed. Plummer and Chas. Wigzel was won by the former on a foul.

CALEDONION CLUB, GRAND RAPIDS, MICH., JULY 4, 1877.

Putting Stone, 21 lbs., 1. C. Matthews, 24ft. 9in.
" " 2. J. Mutchler, 24ft. 9in.
" " 3. J. Melville, 24ft. 3¼in.

Hitch and Kick—1. C. Matthew, 7ft. 1½in.
" " 2. A. Dale, 6ft

Running Jump—1. J. Melville, 15ft. 4in.
" " 2. W. B. Huff, 15ft. 1¼in.

Tossing Caber—1. J. Melville, 40ft. 3in.
" 2. J. Mutchler, 36ft. 6¼in.

Throwing Hammer (16 lbs.)—1. J. Mutchler, 59ft. 4in.
" " 2. F. Dennis, 59ft. 3in.
" " 3. J. Melville, 58ft. 9in.

Hop, Skip and Jump—1. C. Miller, 38ft. 4½in.
" " 2. W. B. Huff, 33ft. 6¾in.
" " 3. F. Schemerhorn, 33ft. 3¾in.

VALLEY CITY.

PEDESTRIANISM.—Miss Lefranc has completed the fifty miles she undertook to walk in twelve hours.

—A ten-mile sweepstakes walking race for £40 and the championship belt came off at Glasgow, Scotland, June 30. The starters were Smith, McLeavy, and Cummings, the latter dropping out on the fourth mile. The race was won by two yards by McLeavy in 56m. 10s. Following is the time of each mile: First, 5m. 2s.; second, 5m. 23s.; third, 5m. 14s.; fourth, 5m. 24s.; fifth, 5m. 33s.; sixth, 5m. 22s.; seventh, 5m. 33s.; eighth, 5m. 33s.; ninth, 5m. 34s.; tenth, 5m. 32s.

—John Allcock, of Macclesfield, Eng., recently accomplished the feat of walking backwards twenty-four miles in 5h. 41m. 7½s.

POLO—*Newport, July* 18.—Sides: Reds, S. Howland Robbins, Captain; Lloyd Bryce and S. S. Howland. Blues—Fairman Rogers, Captain; Geo. R. Fearing and Carroll Bryce. The Reds won all the games except the fourth.

CRICKET.—Toronto vs. Carlton, on the grounds of the former, July 14. Carlton, 107; Toronto, 117.

Schomberg vs. Bradford, Schomberg, Canada, July 14. Won by the former club by one inning and 56 runs.

Montreal vs. Quebec, Quebec, July 16.—Won by Montreal.

Belleville vs. Napanee, Napanee, Canada, July 16.—Won by the former by an inning and 14 runs.

Hamilton vs. Milton, Hamilton, Canada, July 17.—Hamilton, 113; Milton, 72.

Trinity College School vs. Port Hope, Toronto, Canada, July 17.—Trinity, 181; Port Hope, 113.

Belleville vs. Wellington, Belleville, July 19.—Score, Wellington, 92; Belleville, 93, with three wickets to go down.

BUFFALO vs. WELLAND, Ont.—*Buffalo, N. Y., July* 21.—Score: Buffalo, two innings, 107; Welland, 103.

HOBOKEN—*July* 17.—St. George vs. Longwood, of Boston:

Umpires—Messrs. Frank Crockett and James Smith.
Time of Game—Two hours and forty-five minutes.

ARCHERY—*Cincinnati, July* 16.—Is there not danger that our good friends "Awahsoose" and "Ahriman" will take too much to heart those Archery papers in the magazines for last month which created so much talk? The author, Mr. Maurice Thompson, thinks he has "struck oil," as he announces that he has been overwhelmed with letters pertaining to archery, and that in Scribner for September he will have another article giving some different phases of the question. He has given out (and it appears little short of ridiculous) that the Crawfordville, Ind., Archery Club (his club we may say) is about to inaugurate a series of matches with a prominent rifle club. The devotees of the bow and arrow hereabouts have had two clubs in operation for a year past. So far as concerns the deadliness of this resuscitated weapon as against furred and feathered game, I really think our friends need give themselves not a particle of trouble! I think the game will not be depleted very sensibly, and it may almost be looked upon in the light of a move in the interest of *game preservation.* For a long, long while will it be ere these embryo bowmen can speed a shaft truly enough to cause that slaughter of the innocents to which Mr. Thompson pleads guilty.

In the main, however, that gentleman, aided not a little by charming wood cuts, has written very cleverly. He is at it again, I see, in a different vein, in Harper for August, on "Pan Fish Angling," in which the illustrations are few and second rate, R. E. DUCAIGNE.

New Publications.

—The *Nuttall Bulletin* for July spreads before the ornithologist a most attractive bill of fare, and its perusal will be, to those interested in this science, a veritable feast of good things.

The number opens with a description of a new humming bird (*Selasphorus allent*) by Mr. H. W. Henshaw, the accomplished ornithologist of Lieut. Wheeler's survey, whose recent report on the birds collected during his explorations is such a valuable contribution to our knowledge of Western avian life. Mr. Ridgeway discusses the birds of Guadaloupe Islands with reference to the present genesis of species in a very able and interesting manner; and Mr. Brewster announces An Undescribed Hybrid Between Two North American Grouse From Europe a number of occurrences similar to these last have been reported but this is, we believe, the first time anything of the kind has been noticed in America. The parents of the specimens referred to were apparently *Cupidonia cupido* and *Pedœcetes phasianellus* var. *Columbianus.* The General Notes in the present number and the Recent Literature are much more extended than they have been heretofore. Among the interesting records are a description of the nest and eggs of *Myiadestes townsendi*, the capture of *Plectrophanes ornatus* in Massachusetts; of the true European *Surnia ulula* in Maine; of *Passerculus princeps* on Long Island; and the taking of a second specimen of the recently described *Helminthophaga leucobronchialis* in Pennsylvania. The editor makes an earnest appeal for more liberal support for the *Bulletin*, which we as earnestly second. The periodical is a necessity to every one interested in ornithology, and we bespeak for it the patronage of our readers.

Intending subscribers should address Mr. Ruthven Deane, Cambridge, Mass.

—The July *Atlantic* has the first installment of a story by B. Aldrich, entitled "The Queen of Sheba," which promises to be one of his best. The summer piece of the magazine, is "Recreation and Solitude," by W. J. Stillman, a plea for the so thing and strengthening influences of Mother Earth, "an *alma mater* uncorrupted by civilization, her power and sweetness undiminished by human association or human mending—the only complete refuge of man from labor." The author writes with much good sense, and by his descriptions of a summer retirement among the great forests of the Maine wilderness enforces his plea in a way which should lure many a weary worker to prove for himself the magic virtues of forest silence and solitude. Mr. Knight contributes the third paper of his series on the "Crude and Curious Inventions at the Centennial." There is a well-drawn "Night Picture," by Cranch, an amusing sketch of European travel, entitled, "At the Sign of the Savage," by Howells, a paper on the "First Century of Congress," by Garfield, and a story of early New England life by Rose Terry Cooke. Edgar Fawcett has a poem on "Fire-flies," and Lowell contributes one on "Night-watches." The Contributors' Club and the Literature and Music Reviews are full of interest.

POSTAL CARDS.—The magazines and papers advocate the use of sympathetic or "magic" inks in writing upon postal cards. For the benefit of our readers we give some formulas which answer this purpose.

Red sympathetic ink is made by dissolving the nitrate of cobalt; it becomes pink on the application of heat, and d s-appears on the absorption of moisture.

Chloride of cobalt gives a pink solution which, when used for writing, disappears when dry, but becomes of a brillant blue on the application of heat.

Writing made with a saturated solution of corrosive sublimate is invisible; but if brushed slightly with a very weak solution of Iodide of potassium, becomes of a deep scarlet. To much iodide or too little gives no result.

—A live loon was captured in a creek back of Fort Phœnix, New Bedford, on Sunday, July 15, by a young man who was bathing there.—*Boston Journal.*

—Deer are reported so numerous near the mouth of the Alligator River, North Carolina, that they are destroying the crops.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

Chas. F. ORVIS,

MANUFACTURER OF

FINE FISHING TACKLE,

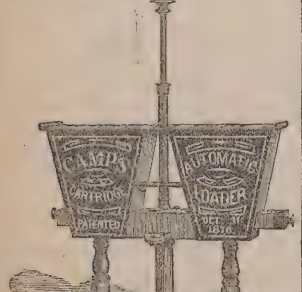
MANCHESTER, VERMONT.

VERY STRONG AND DURABLE ARTIFICIAL FLIES.
Fully Equal to any Made.

For Trout, $1.50 per dozen. Triple Hook Flies, $3.50 per dozen. For Bass, $2 50 to $4.50 per dozen. Any variety to order per sample.
Refer to Dr. J. R. ROMEYN, Keeseville, N. Y.; Com. L. A. BEARDSLEE, Little Falls, N. Y.
SEND FOR DESCRIPTIVE CATALOGUE. MENTION "FOREST AND STREAM."

LYMAN'S

PATENT BOW-FACING ROWING GEAR.



This invention enables an Oarsman to see where he is going. He sits with his face to the bow. Every Rower knows how awkward it is when pulling single, or as bow-oar in a crew, to have to turn and watch the course. By using this arrangement the Rower is brought into his proper position, and he can row as he would drive. There is NO LOSS OF POWER. Send for circular, directions and opinions of the press to the Patentee,

WILLIAM LYMAN, Middlefield, Conn.

OFFICE IN NEW YORK, 32 CORTLANDT STREET.

New Advertisements.

Attention, Sportsmen!

The Boss Loader of the World.

Each Loader adapted to both 10 and 12-gauge metal or paper shells of any length, each shell being accurately charged and wadded complete in one operation, at the rate of 100 in fifteen to twenty minutes. Amount of charge readily adjusted. Is substantial, safe and reliable. Price $8. Discount to trade. All orders for sample loaders must contain remittance. Manufactured only by

CAMP & WISE,

jy26 3t Stoughton, Dane County, Wis.

THE

New Dittmar Powder.

THE CHAMPION POWDER OF THE WORLD

For all off-hand shooting at short and long ranges. Unsurpassed for Cleanliness. Pleasant to shoot on account of little recoil and report. Desirable for hunting on account of little or no smoke. Unequaled for rapid firing, as it does not foul and heat up the barrel as black powder. Great accuracy, penetration and good pattern. Safer than black powder. Address

CARL DITTMAR, NEPONSET, MASS.

Live Moose For Sale.

Four live moose. Address Proprietors of FOREST AND STREAM, this office.

Wanted.

A Partner Wanted in Florida.

A situation as full partner in an establishment of forwarding Florida oranges. Market all secured; the only work is Receiving, Counting, Boxing and Shipping. The business pays from 100 to 200 per cent. profit. The party must not expect to hunt or fish but a small part of the time, although fish and game are abundant. To a person slightly ailing the position would be very desirable, as the work is light. The location is on the gulf coast, just below Cedar Keys. The business would pay for two thirds, as we have to hire two or three (as last year); but each must have at least $1,000 cash in hand to take with us immediately on notice of shipments. Sight drafts will be honored in Boston. Everything responsible and of the highest order, and connected with an old established house in Boston controlling the best of the trade. Address, immediately, P. O. Box 450, Putnam, Conn.

COUNTRY BOARD.

A gentleman and wife, or two ladies, desiring quiet country board, may learn of a pleasant home by addressing H. E. W. TALLMAN, Rockland County, N. Y. jy5 4t

WANTED—A second-hand breech-loader, 12 gauge, in good order, English built; also a hunting dog that will retrieve; terms moderate. Address W. C. G., 53 Prospect Place, Brooklyn. jy19 2t

For Sale.

FOR SALE—Double shot-guns, beautiful 15 gauge Damascus, and a laminated 8-gauge; both London; both bargains. HEATH, 16 East Fourth St., Cincinnati. jy26 1t

FOR SALE—A double-barreled breech-loading shot-gun, Lebeda & Sons, Austria, makers; very fine workmanship; an excellent gun. A very good double-barreled muzzle-loader in fine order. Also a finely carved sideboard, in black walnut, suitable for a gentleman hunter, representing deer, scenery, etc., and of great artistic value; received first prize for fancy carving at Paris Exhibition, 1867. Inquire of R. HAUFF, 7 Washington Place, cor. Mercer St., first floor, between 10 and 12 A. M. jy26 1t

FOR SALE.—For cash, cheap, or will trade for a good gun or bamboo fly rod, one of Fenner's patented boats, new and in good order, as the owner has no use for it this season. Address J. A. B., this office. jy19 2t

The Kennel.

FOR YOUNG COCKER SPANIEL STOCK FROM the choicest breeds. Inquire of
M. P. McKOON,
dec28-1y Franklin, Del. Co., N. Y.

FOR SALE—Red Irish setter pups, No. 1 stock; sired by Khan, he by Plunket, etc. For particulars and prices, address VICTOR KING, Lima, Allen Co. Ohio. jy26 3t

The Kennel.

"TO-HO" BLUE BLOODS.

HINTS ON DOG-BREAKING,

BY

W. H. HOLABIRD, a Western Amateur Sportsman.

Instructions for breaking setter and pointer puppies, half grown and old unmanageable dogs. Complete, clear and simple.

Illustrations of celebrated dogs, winners at the great shows at New York, Chicago and Memphis. Rules for Field Trials and Bench Shows, and other valuable information for the amateur. Pamphlet of 36 pages, price, postpaid, 25c. Address

TROUT FISHING!

The Wisconsin Central Railroad
THROUGH TO
LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland and return for $20 are sold at 63 Clark street, or the C. M. and St. Paul, Madison Street Depot, Chicago; also at low rates from Milwaukee. Dogs, guns and camp equipage taken free.

The points of attraction to sportsmen on this "Forest and Stream" route are Menasha (Doty Island) for bass fishing; Butternut Creek and Lake for muscalonge; the many branches and lak-s of the Flambeau and Chippewa which teem with bass, pike and pickerel, never till this season fished by sportsmen. Between Butternut Creek and Ashland all are trout streams, and many others can be easily reached along the shore from Ashland or Bayfield, while rock fishing and trolling in the Bay affords excellent sport.

The new hotel at Ashland, the "Chequamegon," will be opened in July. Meantime there is accommodation at the smaller houses.

Steamers from Ashland to all Lake Ports.

THE "FISHING LINE."
Brook Trout, Grayling and Black Bass Fisheries
OF NORTHERN MICHIGAN, VIA
Grand Rapids and Indiana Railroad.
(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike** and **Pickerel,** abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for **packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

Laflin & Rand Powder Co.
No. 26 MURRAY ST., N. Y.,
Sole Proprietors and Manufacturers of
Orange Lightning Powder.
No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,
For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.
The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.
All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."
BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order.
Safety Fuse, Frictional and Platinum Fuses.
Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

THE
HAZARD POWDER CO.
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."
Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting, it rivals any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT*, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.
The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office, 75

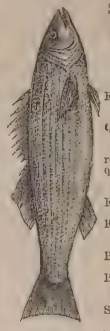
88 *WALL STREET, NEW YORK.*

NEW YORK, July 10, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Please say, for the information of some of my friends who may be misled by current statements, that I am still on the same powder for all out-door shooting, which I have used for several years past, never having risked the use of the nitrated powders except when shooting in a confined space indoors, when the smoke from any regular powder would produce a smell rather offensive to some people, and cause somewhat greater obstruction to vision.

CAPT. A. H. BOGARDUS,
Champion Wing Shot of the World.



Warren Powder Mills,
MANUFACTURERS OF
BLASTING AND MINING, SHIPPING AND SPORTING GUNPOWDER.

SPORTING BRANDS—Eureka, Continental, "Border Rifle," Soap-Shot, and Warren Sporting Cannon and Musket, U. S. standard. The above can be had of the dealers, or at wholesale at the office, 27 Doane street, Boston, Mass., and of the agents, JOHN P. LOVELL & SONS, corner of Washington, Cornhill and Brattle street, Boston, Mass.
jy19

Publications.

NOW READY,
THE
Sportsman's Gazetteer
AND
GENERAL GUIDE.
WITH MAPS AND ILLUSTRATIONS,
900 pp., Price, $3.
BY CHARLES HALLOCK,
EDITOR OF "FOREST AND STREAM;" AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.
NEW YORK:
"FOREST and STREAM" PUBLISHING COMPANY.

The book is a complete manual for sportsmen:
It gives every sportsman alike method for capturing every known game animal, bird and fish in North America.
It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.
It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)
It gives the scientific name and specific characteristics of each species it describes, with the *habitat* and breeding season of each—a most valuable contribution to science.
It describes 297 varieties of edible fish alone, that may be taken by the hook; 59 varieties of ducks; 50 varieties of snipe or waders, and the different methods of shooting each.
Its instructions for capturing large game are very minute, and the chapters on woodcraft, outfitting and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.
Every kind of dog used for sport is designated, and his points for bench judgments fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.
It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.
It contains very useful recipes and remedies for wounds, bites, poisons, illness, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.
It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

Drugs.

SEND FOR DESCRIPTIVE CIRCULAR.

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slighest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. $10.

All goods sent, charges paid, to any address on receipt of price. Address

Chas. L. Coate,

330 Fulton St., Brooklyn, N. Y.

P. O. Box 714.

Highest Honors
AT THE
CENTENNIAL WORLD'S AIR, 1876.
SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the **Judges** in their **Report**, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.'S** exhibit **as the best Instruments** at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS RANK.**

This Medal and Award was granted after the most severe competition of the best makers, before one of the **most competent juries** ever assembled.

New styles and prices just issued, which are in accordance with our rule, the **BEST ORGANS** for the least money.

We are prepared to appoint a few new Agents.

OF
Forest and Stream.
SEVENTH VOLUME, NOW READY.

First Four Volumes, $4 each, Others, $3.50.

A complete set of the FOREST AND STREAM—seven volumes, bound handsomely in cloth—a valuable library for the sportsman—can now be obtained on application to this office.

W. & C. SCOTT & SONS.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their **New Patent-Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.

[EXTRACT from FOREST AND STREAM, New York, December 26, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

Paper and Metallic Shells
FOR
Breech-Loading Shot Guns,

Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.
THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.
PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.
Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.
Not sold at retail by the manufacturers.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.
Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2½, 2¾, and 3 inches; No. 12—2½, 2¾, and 2⅝ inches. Longer Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of $1.75 for No. 12; $1.50 for No. 10.
Factory and office, No. 2,239 De Kalb street, St. Louis, Mo.

St. Louis Patent Shell Manufacturing Company.

TROUT FISHING.

BY DANIEL CONNOLLY.

ACROSS the fields and through the dew
We briskly trudge with rod and basket;
The morning sun, enthroned in blue,
Makes every leaf a diamond casket.
The woods before are dark and cool,
With here and there a golden glimmer,
And over many a wayside pool
The glancing beams make shade and shimmer.

With lisping, low-voiced monotone,
The brook flows by in curves and sallies,
And bears its rippling music down
To daisied slopes and verdant valleys.
But now to work with rod and line,
And dainty flies on trusty leader,
We'll take the first auspicious sign,
And cast below yon slanting cedar.

A gleam, a splash! By George, he's fast!
A lusty fellow! And how he rushes,
Now here, now there, then swiftly past
A band of fern and alder bushes!
The whistling line spins merrily out;
He leaps and flings a sparkling torrent
Of crystals round, then wheels about
And heads straight up the foamy current.

Behind a bowlder now he darts,
And now across to deep recesses
Beneath a brambly bank, then starts
For sheltering beds of tangled cresses;
But all in vain; subdued at last,
He yields and faintly gasps and flounders;
'Tis o'er, your sportive hour is past,
O royal prince of plump two-pounders!

Again with feathery touch the flies
Dance lightly over pool and shallow,
And darting through reflecting skies
The wary trout retreat or follow.
A "coachman" now their fancy takes,
And now a "miller" or now a "hackle,"
And many a plunging beauty breaks
To try our skill and test our tackle.

Still higher, higher mounts the sun,
The morn hastes on and noon is nearing;
New sounds come lightly borne upon
The breeze that blows from copse and clearing;
The low of kine, the jangling bell
That tells where browsing herds are straying,
The quail's shrill pipe in lonely dell,
The watch-dog's bark, the hound's loud baying.

Still down the grassy marge we go,
Now listening to the tall pine's moaning,
Now catching from a glade below
A drowsy mill's perpetual droning;
Still on the miller's brown-faced boy
Stands knee-deep in the shining water,
And near, with startled glance and coy,
The miller's comely, dark-eyed daughter.

So, through the long, bright balmy day,
In varying shade and sunshine ranging,
We speed the hastening hours away
Where sound and scene are ever changing,
Till all the hills are dashed with gold
That pales and dims eve's dawning crescent,
And twilight falls on field and wold.
Like veiling gauze o'er forms quiescent.

For Forest and Stream and Rod and Gun.

"The Old Suwannee River."

SOME time since I promised you some notes regarding this classic stream, but instead of something interesting I shall merely contribute a chapter of mishaps and disappointments. In my boyhood days, in my Northern home, before I had made a record of so many mile-stones on the way of life, and before numerous crow-foot wrinkles adorned my physiog, I often sang

"On the Old Suwannee river,"

and little did I think at that time that I would run its rapids, or take shelter under the hospitable hurricane deck of the steamer D. L. Yulee.

Supplied with a Delaware river gunning skiff, a representative of the colored persuasion, rifle, rod, blankets, coffee pot, sugar, coffee, Chicago canned beef and pilot bread, I left Jacksonville on the 11th of last June, at 6 P. M., on the lumber train. I arrived at the Suwannee River at the crossing of the Jacksonville and Tallahassee R. R. at 5:30 A. M. Near this point the Wishlacoochee unites with the Suwannee, and a beautiful river is the result. The water is comparatively clear and pure; and the banks are rocky and about fifty feet high.

At 6 A. M. we were afloat and rowing down stream. At a point about one mile below the R. R. bridge I espied a rapid and landed to take an observation, and concluded that the best channel was on the left-hand side of the river. Reaching the boat I took the oars and away we went as merry as a marriage bell. Proceeding half a mile another rapid appeared ahead, and we took the left-hand as the law did not direct, and we experienced no difficulty in reaching smooth water. The day was cloudy and no 'gators appeared to enliven the scene with their meek and placid countenances. Experiencing a hankering for a fish dinner we threw a spinner overboard and trolled for many a mile without being favored with so much as a glorious nible. At Ellaville we were informed that trout (bass) existed in great quantities, but we are inclined to question the veracity of our informant. The river is rapid, the bottom is hard, jagged limestone rock, the banks are very abrupt; bayous, sand banks, creeks and lilipads do not exist between the R. R. bridge and Old Town, and as a consequence fish must be scarce, with the exception of sturgeon and catfish. The former were airing themselves every few minutes; as our motto was onward, we could not stop for bottom fishing, and our midday meal consisted of coffee, Chicago beef and hard tack.

During the day we passed several clearings and primitive boats fastened to trees on the river bank, indicative of comfortable inglesides within reach. At 4 P. M. it commenced raining, and as I was unprovided with a shelter tent the prospect looked moist. I noticed a rapid ahead and kept to the right. Reaching smooth water I was gratified at sighting the steamer D. L. Yulee. Pulling alongside I was greeted by her affable commander, Capt. Reddick. He ordered his crew to remove the dunnage, and in a few moments my boat was on the steamer's deck. I had been troubled during the day with an attack of diarrhœa, and being unprovided with snake bite antidote I inquired of the captain if he had any bourbon on board, and received a negative reply. He however produced a bottle of cromatic Schiedam schnapps, of which I absorbed an allopathic dose with happy results. *Memo:* when suffering from diarrhœa schnapps are not to be despised. I inquired of the captain the distance to the R. R. bridge, and was informed that it was about 28 miles by land and 55 by the course of the river.

The steamer makes monthly trips up the river carrying provisions to the loggers' camps, and on her return takes a raft in tow. Having landed freight we started late Wednesday morning, and reached New Troy at noon. At this place two stores exist where creature comforts can be obtained, including fresh eggs at 20 cts. per doz., and snake antidote of fair quality. After dinner we commenced descending the river with the rain falling in torrents. We looked in vain for for alligators, for it is admitted that these varmints hate a shower bath as Old Scratch does holy water, and retire to the shelter of the bottom of the stream. We tied up early Wednesday and started Thursday morning. Old Sol enlivened the landscape with his beams, and the 'gators put in an appearance; and occasioually a slumberer would have his dreams disturbed by the disintegrating effects of a Winchester or Springfield rifle ball. At noon we landed at Old Town, and while the captain attended to freight I strolled to the Chalybeate Spring, distant from the landing one-eighth of a mile. The spring is very large, and it can be reached through its run by a small steamer. We found the water cool, transparent as ether, and highly impregnated with iron. During the winter months the climate at this point is all that can be desired, and we feel assured that the dyspeptic or consumptive patient could spend a few days or weeks at this point with advantage. Bream of large size can be caught along the river bank in sufficient quantity to keep the frying-pan busy; quail exist in immense numbers; at the store eggs can be purchased at 15 cents per dozen, and chickens at 25 cents per head. At the store will be found a post-office with a semi-weekly mail. Visitors would receive a hearty welcome from my esteemed and venerable friend, Senator Cottrell, who resides a short distance from the spring. The colonel is an old-time Floridian, and is proverbial for suavity, hospitality and kindness to all.

We left Old Town with its hospitable inhabitants, and *en route* amused ourselves during the afternoon by disturbing the slumbers of sundry 'gators; and in the evening we reached the Boom, distant from the Gulf sixteen miles. Logs are cut up the river and driven to this point where they are made up into rafts. At daylight, Friday, we took a raft in tow and reached the Gulf at 9 A. M. Some of your readers will accuse me of inhumanity in destroying 'gators; and to such I will simply say that I am a member of a game protection association, and make it a rule to destroy 'gators on all occasions. I will admit that a beneficent Creator formed the 'gator for a wise purpose, but the end for which he was created has been attained. Before the appearance of man on the scene his 'gatorship was useful for gobbling up and destroying fish and the young of aquatic birds; but man requires all these luxuries for his own specific uses, and the services of the saurians can be dispensed with. Florida is cursed with numerous bipedal pot-hunters who kill game in and out of season, and they deserve similar treatment to that which I am in the habit of extending to alligators. Between the necessities of our residents, and the destructive tendencies of 'gators and pot-hunters, our game will soon become a thing of the past.

This river differs from most of the streams of Florida, as the banks to within a few miles of the Gulf are high, rocky and steep. In many localities the soil is of good quality and well adapted to the culture of cotton, corn, oats, sugar-cane, barley, potatoes, grape and the orange. From our knowledge of the grape, based upon experience in vine culture in more than one climate, and for a long period of years, we feel assured that it would prove a success on the high and undulating banks of this noble river. The surface soil is, as a general rule, a sandy loam with clay sub-soil, which is underlaid by oolite rock. A capitalist named Ross has purchased over four thousand acres of land in one tract on the river within twenty-five miles of the Gulf, and he is arranging for its settlement by a willing and industrious class from the West.

We landed at a wood-yard on the western side of the river, about twenty miles from the Gulf, where we found a fine field of corn of about seventy-five acres. In the centre of the field I noticed three large orange trees, probably twenty years old, and to our surprise, they passed through the cold spell of last winter unscathed by the frost. In this case there was neither wood nor water protection, and to my surprise not a leaf had been injured. Taking the age and size of the trees, coupled with their *luxuriance*, we are forced to the conclusion that at least the lower portion of the river is eminently adapted to the culture of the orange. The lands along this stream are to a great extent unsettled, and are either State or U. S. lands. The former can be purchased from the State at one dollar or less per acre, in accordance with quantity selected; and the U. S. lands can be pre-empted by actual settlers. The river is a noble stream, the water is pure and soft, the section is healthy; and it is surprising that the region has not attracted the attention of settlers. For cattle raising or wool growing the entire Suwannee country is worthy of notice. From observations in Australia I have no hesitation in asserting that the Merino with grades of native sheep would prove remunerative if the Australian mode of sheep raising was introduced.

The Suwannee has three mouths or channels, and the person bound for Cedar Keys must take the eastern. For ten or twelve miles above the Gulf lilipads, reeds and grass bound both sides of the river, and the piscator will experience no difficulty in landing a mess of bass. One thing surprised me much, and that was the absence of aquatic birds along the river—proof conclusive that low lands or marshes do not exist. The boat with a raft in tow headed to the eastward, and soon after leaving the river we were opposite to the mouth of Gopher Creek. This creek can be navigated by a small boat for fifteen miles into the interior, and is noted for its alligators and bass. I bade the captain good-bye and headed up the creek, expecting a good time among the 'gators and fish. We had proceeded about two miles when the plate of starboard rowlock parted at a screw hole. The wind was southeast, weather was threatening, and as little could be accomplished by paddling an overloaded skiff, I found discretion the better guide and headed for the steamer. The steamer [illegible] little headway against a strong head wind; and with [illegible]us

rowing and paddling was overhauled her. Toward evening the tide changed, and we anchored in sight of Cedar Keys. I turned in about 9 P. M., as the captain expected to reach the dock [illegible]. At 4 A. M. on Saturday I was roused by the [illegible] informed me that "the raft was aground, that breakfast was ready for me, and that I could reach the depot before the departure of the train." Between paddling and cautious rowing the depot was reached at 5. Boat and dunnage were stowed in a car, and 6 A. M. found me at the Island House, where I did ample justice to the provender set before me by the attentive host, Dr. McIlwaine. We left Cedar Keys at 6:30 and 7 P. M. found me in Jacksonville.

If any of your readers should feel disposed to ascend or descend the "Suwannee River" a few directions may prove of service. Following the east channel at its mouth, to the left a surveyor's tripod will be noticed. To the east of this point Gopher Creek opens. To the eastward and about three miles away Deer Island will be noticed with a house on the point. Leaving Deer Island to the left two small islands will be passed, when Derrick Island will be noticed ahead and to the right. The latter island can be distinguished by two palms and a slender tree on the southwest end, and four palms on the northeast end. North of the island a small grassy islet will be noticed, and this must be kept to the left. East of these points two stakes with a cross piece will be observed; and to the right three stakes upon the point of an oyster reef, and the channel will be found between these guides. Hodson's mill will be noticed to the left on the point of an island, and by steering for the mill and leaving it to the right a land-locked boat channel will be found leading to Cedar Keys. Looking to the southeast Sea Horse Keys with the lighthouse will be noticed, but by keeping a chain of islands to the left and open water and the light to the right, a good channel with plenty of water will lead to the keys.

Hodson's mill is unoccupied and sportsmen can utilize it for shelter. On Deer Island a comfortable house will be found, and between these points excellent camping places exist on the islands. We have been informed by a number of reliable parties in whom we can place the utmost dependence, that during the winter months geese, brant, duck and beech birds exist in immense quantities in the channels, bayous, marshes and creeks between the mill and the mouth of the river. Thus far they have not been disturbed, and we feel assured that excellent sport can be obtained. In addition to feathered game superior fish can be captured, and the oysters of the neighborhood require no recommendation from me. As a sporting locality the neighborhood referred to is worthy of notice. Parties desirous of enjoying the sport can transport a boat from Jacksonville to Ellaville for a trifle and descend the Suwannee or have it taken direct to Cedar Keys at a cost of $1.38 per hundred weight.

If any of your readers are fond of adventure and life "Al Fresco," I would advise them to secure a light skiff and a suitable outfit of provisions, ammunition and a pair of nine-foot oars in Jacksonville. By taking the lumber train in the evening they will reach Ellaville in the morning. By applying to Gov. Drew they can obtain suitable boards at about $12 per thousand to construct a Noah's Ark. By taking two boards twenty feet long and eighteen or twenty inches wide, and nailing a bottom to these, a comfortable scow can be easily constructed with the aid of a carpenter and a few pounds of ten-penny nails, the end can be attained in a couple of days. In the centre a shanty can be constructed eight feet long and six feet wide, leaving a passage way on one side of say one foot wide. With two rough but substantial row-locks forward, and a place for a steering oar aft, in connection with a sixteen-foot pushing pole, such a craft would prove manageable. For cooking purposes a hearth can be constructed of a few stones. By using hinged berths, which could be dropped in the day time, or by sleeping on the floor, four persons could find accomodation. In such a cheaply constructed home from two to four sportsmen could spend a few weeks very pleasantly. During the descent of the river quail could be shot *ad libitum*, and venison and turkey enough obtained to gratify the palates of reasonable persons. By watching winds and tides, and keeping along the coast not the least difficulty would be experienced in reaching Cedar Keys, or if deemed expedient the coast could be run to the Withlacoochie, Homosassa or Anclote rivers. Between Cedar Keys and the Anclote there is an outlying reef several miles from land. By watching the tides and winds and keeping near the shore no difficulty would be experienced in working the coast to the south of Cedar Keys in a Noah's Ark. I am prepared to admit that a large sail boat or a comfortable yacht would be preferable, but where economy is an important consideration the primitive craft recommended would prove useful and comfortable.

AL FRESCO.

Jacksonville, July 10, 1877.

For Forest and Stream and Rod and Gun.

FISHING ON THE SAN JACINTO.

WHAT BEFELL A PARTY OF EXCURSIONISTS—SNAKES.

THE last time I had the pleasure of a chat with FOREST AND STREAM I gave an account of a hunting excursion on the prairies west of Houston, near Wimberly, on the Texas Western Railroad. A few days ago I went on an excursion on another new railroad, building northeast from Houston. This is the Houston East and West Line, a three-foot gauge. The owner, Mr. Paul Bremond, had just completed 26 miles of his road, reaching the San Jacinto River, and he invited a party of gentlemen, consisting mostly of bankers, capitalists and railroadists, to accompany him on a trip.

The country on this road is totally different from that on the Texas Western. There it is all prairie, with an occasional long line of forest a few miles in width; and here it is all forest, the deepest, darkest, heaviest sort of forest—consisting here of giant pines and there of white oaks, magnolia, hickory, walnut, cedar, elms and every other sort of timber common to a southern forest. At the San Jacinto we dispersed in groups to fish. In the deep forest near the river are numerous small lakes, from a few yards to 50 acres in extent, all of deep, clear water, and alive with fish, frogs and snakes. The fish are principally of three varieties: first, dark-colored, red-bellied, goggled-eyed perch, with enormous mouths, and quick to seize the hook. They are in size all the way from a pumpkin seed to the biggest man's hand. It is nice little sport catching them, for they pull well and keep things lively. One does not have to sit and nod a half hour between bites. When thrown into the frying pan at once and cooked in the woods they are delicious eating, insomuch that one can hardly tell when he has enough. The next is the trout, from the size of one's finger to four pounds weight—greedy, voracious, but not as hucks, and only to be caught by fishing deep or in hiding one's self out of sight in the bushes or the banks. Lastly, is the catfish, blue and yellow, from the tiniest kitten to twenty and thirty pounds in weight.

The snakes are mainly hideous cotton-mouths, perhaps the most villainous and venomous of all reptiles. There is not one drop of coward in the anatomy of one of these. When he sees you he immediately stops and lifts up his black, dirty head, stares straight at you, and opens, as wide as he can stretch it, his villainous white mouth; and there he stays waiting, as if saying to you: "Come to this mouth, my own stricken deer!" His mouth looks like it was lined with fine lint cotton—hence his name. Heave a chunk at him and still he will not go. He raises his head higher, his black, weazen eyes glisten, he swells with rage, and he stretches his mouth wider and wider. Heave another chunk and hit him a good one. He will blow like a turtle, but never an inch will he budge. He will stand his ground until he is mashed into a jelly, often striking his venomous fangs into the chunks that crush him. He is the bravest snake that ever I saw. I never saw one yet that tried to get away after being attacked, but I have seen them even when crippled almost to death start right for you as if determined to strike a death blow before giving up the ghost. Their bravery does not appear, however, of a very commendable sort, but simply downright stupidity, obstinacy and foolhardiness. When the chunks or stones begin to fly the rattlesnake will nearly always watch his opportunity and slip away if he can, but no amount of pelting can make these fellows slink. In fishing around these lakes one must look out for him, particularly where there is tall, slimy grass. He lives only about sluggish pools, and hates running water. He is a nasty, dirty looking "cuss," and might easily be taken for a rotten stick if he were not so quick to raise his head and display his disgusting mouth. He is generally about two feet long. He creeps upon frogs, seizes them in his mouth and swallows them whole, hind-legs foremost. While undergoing the process of being swallowed the poor frog cries at a terrible rate, and all frogs within hearing, stricken with horror, plunge into the water or hide away in the grass. I have retrieved many a poor frog from this dilemma by stepping up and striking Mr. Cottonmouth across the back with a good stick. He discharges his frog hastily to turn upon his assailant, and gets his head mashed for his pains. I do not know how it is with others, but I feel a real luxury in mashing a cottonmouth with a good stick, particularly when he has charged down upon a poor crying frog; and I am sure he would gloat in happiness if he could only stick his infernal fangs in me. He is all villainy, without a solitary redeeming trait. I reckon he must be the true old devil who so heartlessly ruined Mother Eve.

There is another snake, of a peculiarly disgusting order, that domiciliates about these lakes—a small, rusty looking moccasin, with a red belly, speckled with black spots, just like a leech's belly. He also is heavily provided with poison-sack and fangs.

A BIG FISH AND A DECEITFUL LOG.

Having amused ourselves enough with perch, catfish, trout and snakes, we proceeded to the San Jacinto to try our luck there. The river was roaring high, and its usually blue waters were dark, turbid and arrowy fleet. We found a little island on its west bank, separated from the land by a narrow channel on which lay a fallen tree. The water beneath this log was an eddy about six or eight feet deep. Here, thought we, was a glorious place to fish for big cats. Mr. Bremond, Mr. F. A. Rice, Mr. B. A. Botts and myself located on this log and threw our big hooks in the still water, baited with chunks of raw beef. We had been squatting on the log probably fifteen minutes without getting a bite, when suddenly Mr. Bremond's cork was pulled under the water out of sight. He gave a jerk, but instead of drawing up his fish, his pole was drawn downward and was rapidly being drawn under the log. All of us gathered around Mr. Bremond to assist him, when the bark of the old log, moist and half rotten, slipped off from the trunk and fell into the water, carrying Mr. Bremond and Mr. Botts with it. They tumbled in as gracefully as anything I ever saw—man and bark mixed up in promiscuous confusion. I did not have time to admire the scene as I could have done had I been on land, for the bark of the old log, having taken a start at slipping, was slipping off in every direction, so that it was as much as Mr. Rice and myself could do to keep from going off with it. We finally straddled the log and thus secured ourselves, not without getting the seat and legs of our pants very dirty from mashing the bugs and worms that dwelt under the bark. Mr. Bremond and Mr. Botts easily swam to the main shore, and came out dripping. What has become of Mr. Bremond's fishing tackle no one knows? The last seen of it it was going down the river at a terrible speed, only a few feet of the pole above the surface. None of us saw the fish that had been hooked, but there can be no doubt that it was a very large catfish. I have seen some taken out of the San Jacinto that were sixty pounds weight, and such fellows are hard to handle. This wound up our fishing for the day, and we returned to Houston a merry party, although two of our company did get an unexpected bath.

GEOLOGICAL.

While on the banks of the San Jacinto I picked up a pocketful of very pretty quartz pebbles, of almost all colors, some as black as jet. This river flows through a country of the latest geological formation. There is none of it, so far as I have seen, older than the Miocene, and much the most of it is later than that. Among these pebbles I found claystones as hard as marbles, and some others whose lithological character I could not fix. Some appeared to be bituminous petrefactions, but all that were clearly stones belonged to the older geological epochs. Can any of your scientific readers account for the presence of these ancient rocks in this recent alluvial formation? How did they get there? They are exceedingly abundant in the San Jacinto, so much so that its bottom is sometimes composed almost entirely of them. There are numerous sand banks in the river and along its banks, composed entirely of clear, sharp sand, and these innumerable rounded pebbles. There is not another stream in this whole region that has them. I thought awhile that the ocean deposited these pebbles and the white sand when it rolled over this country, and that the San Jacinto had exposed them by cutting into the former ocean bed; but the fact that these things are not found elsewhere in this region seems to militate against that notion.

Texas has never been geologically explored, except here and there in a slipshod manner, and I think there are more geological singularities in it than any country I ever saw.

Houston, Tex., July 4, 1877. N. A. T.

A California lion measuring 8 feet 4 inches from the tip of the nose to the end of the tail, and weighing 220 pounds, was shot recently near Hollister, Cal.

For Forest and Stream and Rod and Gun.

HUNTING AND FISHING ON THE PEE DEE.

WE do neither away down here in the scientific and fancy style which characterizes such sports in the North. For instance, a "trot line," which is a stout cord one hundred or two hundred yards long, with hooks attached by short lines at intervals of two or three feet, and baited with grub worms, one end tied to a stake or tree on the bank, and the other sunk by means of a rock or worn-out sledge hammer, will bring in enough "cats" during a night to make a most savory stew or fry. A kettle or pot, onions, salt, pepper, and fat pork, with a q. s. of bread, are all that are needed to furnish a repast to suit the daintiest epicure or most insatiable gourmand. Then there's the "red horse," a magnificent fish, of which the technical name is unknown to us. He is of the "sucker" variety, "bites only at musk, or a mixture of bread and cotton (*sic!*) bait, and when he does bite, he does it so gently and daintily that steady must be the nerve and expert the hand of him who captures. Only after the early frosts, and no later than February, can this noble fish be taken. His weight varies from three to seven pounds, though now and then a nine or ten pounder is caught.

The rod we use for this and other fishing is the native cane, which grows luxuriantly on the islands of our rivers. The hooks and tackle are such as we can buy at the village stores—such as you would laugh at. In the summer we have perch, pike, cat and trout. The latter is known as "weak fish," and chub elsewhere. It is a goodly and gamey fish; bites when wind and weather are favorable, very readily at live minnows or cut bait, and often reaches the weight of three to five pounds—(one was caught a good many years ago, within a few miles of where I write, weighing over nine pounds.)

But seines, dippers and traps have made sad havoc with our fish of late years. More stringent legislation than that now in force is needed.

Of game we have on lands which have been "posted," and on which pot-hunters, tramps and loafers are not allowed, squirrels, rabbits and partridges (?) in abundance. It October and February, during their migration, woodcock and snipe may be found in sufficient numbers to occasionally repay the sportsman for his long and oftimes profitless hunts for them. A few pairs sometimes stop and breed hereabouts—*truth*, for the writer knows it—but such instances are very rare.

During fall and winter wild geese and ducks—the latter of almost every known variety except the "leather-head" and "canvas back" are abundant. The wheat and pea fields, and the acorns, with the *crustacea* and *molluska* of our streams offer them fine feeding grounds, and the sport they afford, to say nothing of the glorious addition they make to the *menu*, is highly appreciated.

The deer has almost disappeared. Now and then one may be found, but the law must soon more successfully intervene and extend its protecting care, else the race will be extinct, and the hills and valleys of the Pee Dee no more forever be graced by the presence of the "antlered monarch."

The wild turkey is yet left in considerable numbers, and to those blest with skill and patience affords elegant sport, of which and other matters more anon.

A recent law of our Legislature, of which I claim the honor, prevents the killing of turkeys and all our game birds, including those herein mentioned, as well as the dove, robin and lark from April 1 to October 1.

All this may appear as primitive and pristine to you and your readers, that the question will occur, "Have they any dogs except

Mongrel, puppy, whelp and hound,
And cur of low degree

down there?" Yes; we have have some fine setters and pointers; not of fancy stock, perhaps, but yet good hunters staunch, industrious and reliable.

"Any guns except old fashioned flint and steel?" Yes; a breech-loader is not altogether unknown. Even I own an imported muzzle-loader, and have succeeded in beating some "cracks," who carried their high-priced breech loaders, in bagging game. In fact, let me take Wadesboro, Rockingham—neighboring towns—and the unpretending hamlet from which I write, with our own guns and dogs, and *ceteris paribus*, I can select a "team" which I honestly believe can successfully compete with the best that New York, Baltimore or Chicago, environs included, with all their modern appliances and new-fangled inventions, can produce.

Should this be favorably received, I will enter into particulars hereafter. E.

Leleville, N. C., July 10, 1877.

For Forest and Stream and Rod and Gun.

HOW I DIDN'T SHOOT MY FIRST DEER.

I NOTICE quite a number of correspondents have something to say about how they shot their first deer, but I propose to tell of the first deer I didn't shoot, thereby illustrating the oft-quoted saying, "There's many a slip," etc.

While returning from a fox-squirrel hunt during a sojourn in Florida, in the winter of '75-'76, I passed through a thicket of sweet gum sprouts on the edge of a large hummock, out of which bounded two deer. Shooting was out of the question, even if my gun had been properly loaded for such game, so I just stood and watched them out of sight, saying to myself I will be prepared for you to-morrow. The next day, about as soon as my breakfast was stowed away, I shouldered my rifle, and pointed for the hummock, which was in sight of the house, and only about three quarters of a mile distant. After getting through the thick brush and briars which fringed the field side of the hummock to the depth of about a rod, I paused to reconnoitre, as the hummock, save along the fence, was comparatively free from underbrush, so that a deer might be seen at a distance of three hundred yards, and sure enough right ahead, and at about that distance, was my deer, meandering towards the sweet gum thicket. My heart gave a great bound, but my body was motionless as death, while I waited for him to disappear in the thicket. When I thought he had got well along in his second course, I walked cautiously toward the spot where he disappeared, and came in full sight of him, not over sixty yards off, all of a sudden, so to speak, as I expected to see some movement in the bushes before seeing the deer, but there he was, broadside to, daintily nipping the tender leaves. I suppose every one at such a moment has his first thoughts. Mine were, that the animal before me was not wild game, but one of the many cattle that run on the range around the settlement.

However, I did not entertain those thoughts a great while before I thought, well you are my meat sure, so as long as he

did not see me, and wishing to be as sure of my aim as possible, I prepared to rest my elbow on my knee (a position, I suppose, not in vogue at Creedmoor, but one that comes the most natural to me), when, presto, up starts a little cottontail from under my very feet, and before I could say, or even think, Jack Robinson, Mr. Deer threw up his head, and the next glance I had was of a white flag bobbing between the trees, while at almost the same instant his mate rushed out of the thicket just beyond.

Although my thoughts concerning that rabbit were not expressed in words, they were none the less forcible, I assure you. Perhaps some old hunter may say that it is not very likely a novice could steal up to within sixty yards of a deer in the woods without being heard, but it is true nevertheless, and how much a three years' campaign, embracing times when life depended upon just such kind of stalking, had to do with it, those who have been there can imagine.

O. VERICUS.

A TRIP TO BURLEIGH.

AT the close of a lovely summer afternoon in June a party of nine (ladies and gentlemen—pleasure seekers) started for the lakes among the rocks and mountains of Burleigh, a distance of fifteen or twenty miles from Peterboro, to pass the time in fishing, boating, and roaming the forest, once the favorite haunt of dusky warriors.

After a lovely drive of four hours through a thickly wooded country, passing Hatchawannook and Clear Lake on our route, we arrived at the falls, where we left our horses and paddled to the camping ground at "Lovesick" Lake, one-fourth mile distant, crossing two booms on our way which the lumbermen have stretched to keep the logs from floating away—as many as 15,000 to 30,000 being in one drive at a time. The fire was then lighted, and what with pitching tents, getting supper, and putting things into a homelike shape, it was midnight before we were aware of it. The morn was then seen slowly rising above the trees in the distance, casting her pale spectral light across the waters, throwing shadows here and there, making everything enchanting, filling our hearts with love and thankfulness to the great Creator of the universe who has given us so much to be grateful for. Each seemed to feel the solemnity of the scene, as our voices floated over the waters in hymns of praise, echoed back by the clear but mournful notes of the whippoorwill. At last we turned to our tents and prepared for rest; but the romance, excitement and novelty of the situation had such an effect on us all (being the first experience of most of us in "camping out") that sleep was banished from our eyes. We talked and laughed till the woods rang with our echoes, till daylight dawned and one star after another disappeared in the sky. We were then tempted to a bath in the clear waters of the lake, which we enjoyed most thoroughly, reviving and freshening us for the day. What with satisfying the inner man, canoeing, singing, reading and conversation, the day wore pleasantly away. Some lovely romantic spots were visited by water and land. We threaded our way over immense rocks covered with a carpet of moss, that your feet would sink in at every step; wild flowers peeping in and out of the long grass, making our pathway bright; strawberries and huckleberries in clusters here and there; lovely lilies floating in sheltered nooks, and everything around us to make it charming. The second night we were all sufficiently tired out to rest well. The wind rose very high and our tents were in danger of being blown down but everything passed off quietly. Early next morning some of the party (including myself) started on a fishing excursion, there being good bass fishing at the Rapids. Had a delightful time there. The scenery around was something wild and grand. Huge rocks, towering high in the air, looking dark and gloomy enough; the water dashing madly down the ravines, casting the spray in our faces. We caught several fine bass, and then turned our steps campward, where we arrived for breakfast at the fashionable hour of 11 A. M.

Some of the party amused themselves catching small fish around the islands which dot the lakes in all directions, while others lounged around the tents, reading or otherwise engaged. A few of us paddled to "Lovesick" Rapids, over two miles up the lake, and were well repaid for the trip by the beautiful scenery. When we returned we partook of some refreshments, and then prepared to travel homeward. Canoes were laden with a precious cargo, and we sped swiftly o'er the lake to our landing place, where our horses were in readiness to take us "home again." After driving to the hotel, remained a few minutes and strolled to castle rock, where we could see for miles around. To our right, down many, many feet, was a large lumber slide, where hundreds of logs were rearing and plunging in the foaming, angry waters, one moment seen, the next gone. Directly in front of us lay the calm waters of Stony Lake; to our left the waters winding their way around the islands, which are so numerous in those lakes, covered with forest trees that one would imagine, from the depth of them, that game abounded there, as it seemed an impossibility for man to penetrate them. Two steamers ply these waters daily, which enable tourists to visit the Canadian wilderness (as yet) and enjoy many days sport and recreation, besides being free from the cares and worries of everyday life in their home in the mountains. The drive home was delightful, the evening being cool. Our time at our own disposal, we amused ourselves singing snatches of song, etc., to while away the time. Arrived at our destination at twelve o'clock P. M., thoroughly satisfied with our trip, and heartily sorry the pleasant time was over, hoping soon to all meet under as pleasant circumstances.

M. P.

"B'AR" STORIES.—We are in receipt of no less than thirteen "bear stories," and while we hold Mynherr Bruin in veneration, we are unable to pacify his *manes* by giving him free scope in our columns. We ask our friends to *bear* and for-*bear* lest we offend, and become ourselves lost, buried, under the accumulation of ursine matter.

"Qui Vive," writing from East Saginaw, Mich., tells us of a black bear trapped by Marvil Secord on the Tittebawassie River in April or May, who lugged off a heavy steel trap with a clog weighing 70 pounds, and the bay used to conceal the latter; the total weight being upwards of 150 pounds. He was found over a mile from where the trap was set, being brought up by the clog catching a hemlock log. When killed, his bearship weighed upward of eight hundred pounds, and his hide measured over eight feet in length. The writer truly remarks that he was a "whopper."

Mr. T. H. Esty, of Nicasio, Cal., gives his first experience in bunting bruin, as taking place in San Luis, Obispo Co.:

While riding along the trail, McCoy, who was ahead, suddenly pulled up his horse and jumped off, saying, "There's a bear!" Being behind, I did not hear the exclamation; but seeing Will dismount also, and both stand with their rifles pointing up hill, I followed suit. As I struck the ground both fired. And sure enough, at a large bear, though in such a hurry as to make a clear miss. The bear stopped still, giving me a fair shot back of the shoulder. At the crack of the rifle she threw her head between her forelegs and came down the hill end over end. Not knowing just what it meant, and all rifles being empty, we mounted and left somewhat in a hurry; but on looking back and perceiving we were not followed, we stopped and loaded our rifles. Upon listening, I could hear the bear groaning in the creek where she had rolled, so riding back, I saw her lying with a broken back, though her head was still up.

Dismounting, I walked to the edge of the bank, and shot her in the back of the head, killing her instantly. Then a new trouble came, in the shape of a year-and-a-half cub, which had not been seen before, and at the crack of my rifle, he sprang up the bank not twenty feet away. I did not take a long look, but mounted and got out of his way, while McCoy and Will coming up, shot him in the throat, killing him dead. After a good look to see if there were any more around, we went to the dead, and found the first was an old cinnamon, or sorrel, of large frame, but very poor, not weighing much over three hundred pounds. The cub had a fine skin of silver gray color, and anyone who had not seen the dam would call it a young grizzly. That it was the cinnamon's cub, there could be no doubt, as it was still nursing, though it would weigh almost two hundred pounds.

"Dock," in giving a very interesting account of a camp-out on the Jordan, gives an adventure at the Soda Springs:

Dell went ahead with his shot gun, in hopes to get a shot at sage hens, which almost always gave us a shot when we went to the spring. I followed with a bottle. As we neared the spring, bang! bang! went a gun, and Dell came through the scrub, his legs going at the rate of 100 per minute. He yelled out, "Run for it; he's after me." Without questioning, I ran for the boat, and shoving her loose, waited for Dell. Jumping in, he shoved out—not a minute too soon; for hardly ten feet behind him an old she-bear came booming through the bushes, and you bet we didn't take any extra time in getting to the other side of the river. She stopped a moment, and then, with a snort, plunged in. Handing the paddle to Dell, I gave her a charge of No. 4 shot, hoping to blind her, but she just pawed the harder, and gained fast. I slipped in a charge of 30 buck, and when she was within ten feet of the boat, I fired, and fortunately settled her. Casting a lariat over her head, we towed her ashore, where she dressed about 300 pounds. It seems that Dell came up to her as she was taking a bath in the mud, and as she rose up to see who disturbed her, he fired both barrels of No. 4 square in her muzzle. Pawing her head a minute, she gave a snort, and took after him.

Fish Culture.

THE CORREGONI—Their Natural History, Native Waters, Economic Value, and Implements Connected with Their Production.

No. 24—PART FIRST.

(*Corregonus Albus*—WHITEFISH, ARTEDI.)

THE whitefish is altogether the most valuable of the more remote members of the Salmon family. It is assuming, under artificial cultivation, an economic value and a commercial importance equal to any of the fresh-water food-fishes on this continent. Akin to the salmon, its flesh is of great value as an element of food. Were we disposed to dilate extensively upon the importance of this fish, as connected with the settlement and growth of those States bordering upon the great lakes, we should find, during seasons of scarcity of agricultural products, that the whitefishes had tided over many a pioneer family until plenty again smiled upon them in generous harvests. It is the rich man's luxury and the poor man's blessing. The Indians, too, during years of scarcity of game, have relied almost entirely upon the *atte-haw-meg*, as the whitefish is called in their language, and many have been kept from starvation by the whitefish which have been so abundant in the lakes from time immemorial. The native habitat of this group of fishes is the great lakes, where they thrive and fatten from the abundant supply of food, which consists of larvæ, fresh-water crustacea and aquatic plants. It is a fine feeder, and at all times, except during the breeding season, is toothsome in the highest degree. From being addicted almost exclusively to vegetable food, these fish rarely take to bait of any kind, although they are occasionally caught by fishermen on set lines in Seneca Lake, N. Y. As found upon the market tables of the lake cities, the following characteristics regarding their natural history may be noticed: Body more or less elongated and sub-fusiform in profile; head subconical; mouth small; snout truncated, sometimes quite protruding beyond the lower jaw; both jaws toothless; teeth on tongue; bronchial apertures continuous under the throat; ventrals inserted posteriorily to the anterior margin of the dorsal fin, and situated opposite the adipose fin; caudal fin furcated; scales of moderate development. The specific characteristics of the *Corregonus williamsonii* are as follows Head contained five times and a half in total length; mouth small; posterior extremity of maxillar bone not extending quite as far as the anterior rim of the orbit; eye moderate in size and sub-circular; its diameter enters about five times in the length of the side of the head; anterior margin of dorsal fin nearer the posterior edge of the base of adipose fin than the extremity of the snout; scales well developed, and disposed upon eighteen longitudinal series across the line of greatest depth; nine between the lateral line and the base of the dorsal, and eight between the insertion of the ventrals; color, bluish lead above, whitish beneath, with a silvery reflection. Ray Formula: Br. 7, 7; D. 2, 13 x 1; C. 5, 1, 9, 8, 16; V. 12; P. 16. Naturalists have discovered enough variation in this family group to warrant the following distinctions: *Corregonus albus, Corregonus albula* (resident of Europe), *C. angusticeps, C. clupeiformis, C. cousii, C. fera, C. labradoricus, C. claydii, C. maræna, C. merkii, C. otsego, C. oxyrhynchus, C. palea, C. quadrilateralis, C. Williamsonii.*

Argyrosmi—Cisco, Jordan.—For a long time naturalists were puzzled over the little fish of Geneva Lake, whose habits are so little understood, for the reason of their appearance and brief stay about the 10th of June each year, and the mystery connected with their lives and habits the rest of the year, and of the time and manner of breeding. That these whitefish are closely related to the *Corregoni* is manifest from the presence of the adipose fin and other characteristics in common with the whitefish proper. This genus was formulated from the *Corregonus* by Agassiz in 1850, which may be seen in a work entitled "Lake Superior and its Physical Characteristics." The distinctive marks of this genus have been found to differ so much in different waters as to give rise to the following generic names: *Argyrosmus agassiz, A. hayii, A. nigripinnis* and *A. harengus.*

The whitefish is a native of the great lakes, their connecting straits and rivers, from Lake Ontario to the farthest of those that constitute the great water chain that separates the United States from the Dominion, also of the lakes of the latter country to the Arctic Ocean. It inhabits the lower lakes of the Eastern Provinces, having connection with the St. Lawrence Basin, and all of those fresh water beds connected with the Mackenzie and Coppermine Basins. The whitefish, in a sense, is anadromous (migratory) for it enters the rivers from the Lakes to spawn in November and December, usually returning in about four weeks. Like the herring and shad of the ocean, it is gregarious, consequently moves from place to place in search of food. Until the modern art of fish culture had determined to the contrary, it was supposed that this fish was not adapted to the small inland lakes of the United States—indeed, it was thought that such bodies of water had too limited a range to meet the requirements of their successful cultivation. Mr. Samuel Wilmot, of Newcastle, Canada, hatched in the years 1867-8, large numbers of whitefish ova, and the fry were placed and reared in very small artificial ponds, until many of them gained the weight of a pound and upward. Many experiments of a like character have been repeated with like results.

Another experiment illustrative of the ability of the whitefish to live in very small bodies of water is related by Mr. George H. Jerome, Superintendent of State Fisheries of Michigan. He says: "On the seventh day of February, 1876, Messrs. Davis & Co., fishermen and fish dealers of the city of Detroit, presented me with five live whitefish, weighing about three pounds each. I moved them on the Michigan Central from Detroit in one barrel of water to Pokagon, and from there they were moved in a lumber wagon over a rough road to the State Hatchery, about two miles, and placed in a shallow pond, its area not exceeding one-eighth of an acre. In May following, three of them were taken from this pond, and removed to a fish preserve not exceeding five feet square, supplied with water that would flow through an orifice of less than one-fourth inch, under one foot of pressure. And there they have been ever since, and are now sleek and healthy. Though on a few occasions crumbs of bread have been thrown into the pond, yet we are not certain through all these months that they have partaken of any food, except such natural supply as is yielded by the water." This is a crucial experiment, and settles the question regarding their ability to live and thrive in all the crystal lakes of the Northern States, and perhaps in many of those of the Southern States; at any rate, the experiment should be tried to introduce them into every stable body of water, great or small, which maintains an ample supply of the pure element. Notably, we may mention that some of the New England States have already taken measures through their State Commissions, to introduce whitefish into their numerous lakes, where they will, without doubt, increase and thrive as in their natural haunts. As both whitefish and black bass are natives of the Great Lakes, they will multiply and live together harmoniously and without detriment to each other. The experiment cannot but be successful, and by all means should be liberally carried out. Of the value of our whitefisheries of the lakes, we have unfortunately but few reliable statistics; indeed, data are so meagre that we cannot give the public such an exhibit of their real value and importance as we would be glad to do, and as outward appearances indicate. It is a fact, however, that for home consumption, as well as for commerce, the great system of lakes affords the only field for supply. These inland fresh water seas once produced what seemed an inexhaustible supply of this most valuable food fish, and even now, after years of reckless and reprehensible fishing and unwarrantable waste, millions are annually produced. It would not be surprising if the whitefish crop annually reached millions of dollars in value, notwithstanding the blind avarice and human greed rule the hour, thereby greatly impoverishing these magnificent fisheries. The untimely capture of whitefish, as well as all others, is the same "penny wise and pound foolish" course that has brought about the universal impoverishment of the rivers and lakes of our country. Scientific research has determined that the natural process of increasing fishes, under such wholesale waste, is altogether too feeble to sustain the drain consequent upon reckless fishing, and the deadly enemies that destroy the spawn and fry to the extent that only one adult fish results from five hundred eggs, and some contend that only one fish results from a thousand ova. It is quite probable that the working capital invested in our lake fisheries nearly equals three-fourths of a million dollars. It is said that in the spring of 1871, the spring and fall fisheries of Lake Michigan employed eleven hundred and eighty men during eight months, while the year's fishing employed seven hundred and eighty-five men for seven months, in all about one thousand nine hundred and eighty-nine men, only nine hundred of whom received wages. Total outlay in wages for the season was about $180,000. While we possess no really reliable statistics, yet we know from the amount of whitefish, fresh and salted, that are constantly upon the market, the aggregate product is one of large proportions. Not only the capturing and curing

of whitefish involves a large outlay in capital and wages, but the handling of this fish employs a large amount of capital, for not only large warehouses are necessary for storing, assorting and inspecting the fish, but the salt fish trade involves the use of enormous quantities of salt, not only for original packing, but for use in repacking. During the winter season whitefish are shipped in a frozen condition almost over the the entire Northern States. Dr. James W. Milner, Deputy United States Fish Commissioner, who made an inspection of our lake fisheries, found it extremely difficult to obtain statistics of this great industry. For the year 1872, by records of trade and by approximation, he found the aggregate number of pounds at sixteen ports, between Rochester, N. Y., and Chicago, to equal a sum total of 32,250,000 pounds of fish, having a value of $1,600,000, the whitefish not being separated from other edible fishes of commerce and of lake origin. In 1868, soon after the artificial culture of fishes was introduced into our country, fish culturists began to interest themselves with measures for the augmentation of the annual products of the lake fisheries which were now beginning to exhibit strong indications of decay. It was thought if the principles of artificial culture could be applied to the whitefish, there existed a reasonable hope that these fisheries might be ultimately made much more fruitful. Growing out of united efforts among fish culturists in the near vicinity of the lakes, and from the success of preliminary experiments by Mr. Wilmot, of Newcastle, Canada, Mr. Seth Green, of Rochester, N. Y., and by Mr. Nelson W. Clark, of Clarkston, Michigan, a hatching-house was erected at the latter place in 1871, and one million of whitefish ova were laid down in the hatching-troughs in the autumn, probably in December, of this year. The experience gained in previous years in propagating trout and salmon, and later in experimenting with whitefish eggs, enabled Mr. N. W. Clark, superintendent of the hatchery, to obtain the most complete success. By the 1st of April the fish began emerging from the eggs, and before the 13th of the month the troughs were fairly swarming with tiny whitefish. By the 30th day of April these fry were all distributed in a number of beautiful crystal lakes of Oakland County, Michigan, and in the Detroit River. Thus was inaugurated the artificial cultivation of whitefishes in the United States and in the Dominion for the augmentation of one of the best fresh water food-fishes on this continent, which has grown into an industry of vast proportions, not only in the United States but in the Dominion. The great hatching establishments of Canada are located at Tadousac, Restigouche, Gaspe, Miramichi, and Newcastle, Ontario. The whole work is under the direction of the Hon. H. F. Whitcher, who is carrying forward a work which not only reflects his ability, but the enlightened progress of the Dominion. Money is appropriated by the Parliament in liberal sums, and the work of augmenting their fisheries is being pursued with a persevering energy that reflects the wisdom of the numerous officials having the work in charge.

NEW HAMPSHIRE.—Fish Commissioner Brackett has presented to the State the patent-right of the Brackett fishway, which has been adopted by the authoritics for use throughout the State. One hundred thousand young shad were put into the Winnipissocgee River, near Tilton, the 24th inst. They were obtained from the U. S. hatching station at South Hadley Falls, Mass.

TROUT CULTURE ON LONG ISLAND.—Albert Raco, of Foster's Meadow, has become engaged in the raising of trout. Mr. Raco is a wheel wright, and owned an acre of land by the road side, through which ran a brook of clear water, and in which were some trout. He caught six, put them in a spring, and prepared a spawning bed. He procured a work on trout culture, and as a result of this his first experiment, succeeded in raising one hundred and eighty young fish. The next year he raised about as many more, and last year would have had several thousand had not a freshet of snow water flooded his bed. As it is, he has several hundred. His two and three-year old fish are in fine condition, many of them weighing over a pound each. As fast as his stock increases he intends to prepare a pond on some recently acquired land. He has raised an embankment about his ponds to prevent the recurrence of last winter's accident. In addition to his trout, he has about half an acre devoted to the culture of water cresses, which promise finely.

SHAD FOR THE UPPER MISSISSIPPI.—Yesterday morning by the 6 o'clock train, Mr. H. E. Quinn and Mr. C. W. Schuermann, both United States Fish Commissioners of Washington, arrived in St. Paul, bringing with them 100,000 shad, which they deposited in the Mississippi River, at the foot of Jackson street. These fish were brought all the way from South Hadley Falls, Mass., by these gentlemen, who had to sit up with them all night and change the water every two hours, and watch the temperature of the atmosphere, as at no time during all the days and nights they were on the road was the temperature allowed to go above 65° or below 60°. If the temperature had been allowed to get above or below these figures it would have been death to the fish. These two gentlemen took turns attending to this business of changing the water and watching the temperature. This they did for three days and nights, as they came over the road from South Hadley. As above stated, they arrived here at 6 o'clock yesterday morning, and, without waiting, took the fish off the train and put them into the river. These fish, as they are called, are about one-quarter of an inch in length, and look like so many animated hairs. Looking down into the cans in which they came all that can be seen is an apparently innumerable number of little black hairs, with two black dots at one end of each, the bodies being transparent. The journey of these gentlemen must be called a success, judging from the number and vigorous condition of the fry brought safely through the trip of three days and nights, and considering the hot weather and distance traveled, great credit is due the gentlemen in charge for their care and attention, which results in success. They returned East yesterday.—*St. Paul Press, July* 25.

CALIFORNIA.—11,000 shad fry, hatched at Havre de Grace, Md., have been placed in the Sacramento River.

"THEM EELS."—That the squirmers are too much for the average telegraph operator is evident from the following letter of our friend Geo. H. Jerome, Supt. of Fisheries of Michigan, to the Niles *Republican*:

Editor Republican:

I have "one" too rich to keep; like murder "it will out." A resident of Michigan, venerable in years and honor, consented to act as my depositor of eels. By pre-arrangement I was to telegraph him of the arrival of the eels in Detroit, and he was to meet them at the Detroit depot. So, having information that the eels had left Troy, N. Y., I telegraphed him as follows:

DETROIT, June —, 1877.

MR. ——, ——, Mich.
The eels will arrive in Detroit at 11 to-morrow. Don't fail to be here on their arrival. GEO. H. JEROME.

The boy at the other end of the "string" took it off as follows:

The girls will arrive in Detroit at 11 to-morrow. Don't fail to be here on their arrival. GEO. H. JEROME.

Our depositor, in the innocence of his heart and in the simplicity of his nature, took the dispatch home, where it encountered the eyes of his wife and daughter, and, as you may imagine, a small sized domestic row was the consequence. And instead of heeding my earnest injunction to meet them on their arrival, the man failed to put in an appearance at all, whether from a lack to obtain the key to his shirt and collar drawer, I am not informed. Pray, what are the times coming to? and this man almost a deacon in his village church!

SHAD IN WESTERN WATERS.—The fly fishers on the Iowa River have recently taken several true shad near Iowa City, weighing about one pound each. The shad were planted in the Mississippi River by the United States Fish Commissioners several years ago, and this is believed to be the first catch in any of the tributaries.

—Mr. Charles D. Griswold, of the United States Fish Commission, has recently placed fifty thousand young shad in the Chattahoochee River, near Columbus, Ga. An equal number has also been deposited in the Chattahoochee, near West Point.

—Oyster culture is becoming quite an important industry in France. A recent Government report describes nearly thirty different localities and several hundreds of beds where the work is carried on. French ingenuity has solved the problem of keeping these bivalves, fresh by training them to keep their shells closed while on the way to market.

SPRATT'S DOG BISCUIT FOR FISH.—A new use has been discovered for dog biscuit. Fish breeders are now feeding them to their trout, with results gratifying to themselves and evident satisfaction to the fish. Messrs. Stone & Hooper, of Charlestown, New Hampshire; G. A. Sharkey, of the Monadnork Trout Ponds, at Troy, N. H., and others have used and highly recommend them. One breeder says that since he has used this preparation he has not been troubled with fungus, which previously involved him in much loss. The biscuit can be had of F. O. De Luze.—[See advertisement.

Natural History.

THE CENTRAL PARK MENAGERIE.

There were on exhibition during the year 1876, at the Central Park Menagerie, nine hundred and eighty-three specimens, comprising three hundred and ninety-seven mammals, five hundred and twenty-nine birds, and fifty-seven reptiles. The total value of the collection is placed at $62,944. Of the three hundred and ninety-three registered additions, one hundred and eighty-seven were loaned, while for the year previous, there were two hundred and thirty-five. This decrease, with a similar falling off in the presentations, makes a total difference for the two years of one hundred and fifty-eight. This may be readily accounted for by the establishment of various other zoological gardens throughout the country, which now furnish a ready market for specimens formerly deposited for safe keeping in the park. Formerly, too, the managers of the menagerie assumed the support of all animals entrusted to their care; but in March last an order was issued refusing all specimens unless their owners defrayed their expenses.

The losses by death were few, the most noteworthy being that of a grizzly bear, which died from injuries received at the time of its capture in 1868, and an Axis deer, which, having served a captivity of ten years, met a well deserved death from old age.

There were fifty-seven births, including six lions and two leopards. The three black swans hatched in November are believed to have been the first ever bred in this country. The Commissioners complain that it is almost impossible to protect the nests of the water fowl from the depredations of the visitors. Of the animals most in favor the lucory antelope and the sea lions have been the subjects of the most curiosity; while the crab-eating raccoon, by his strange antics while eating was a never failing subject of wonder and delight.

Although no record is kept of the visitors, a fair estimate may be gained from the register of the adjoining Museum of Natural History. From this basis the Commissioners calculate the number at nearly three millions, an attendance far exceeding that of any previous year, and doubtless due to the great influx of centennial visitors. A large number of students and artists availed themselves of the opportunities afforded by the menagerie for studying and modeling, peculiar facilities for which were offered by the presence in one building of nineteen lions, ten tigers and ten leopards.

This practical and educational work, now confined to students, might be extended to the people, and the collection, with judicious management, become not only, as now, a source of relaxation and amusement, but of popular education as well. The information now to be gained by the average visitor is lamentably meagre. Name and habitat of the specimen is as much as most visitors ever learn; beyond that not even the most solicitous questioning of gruff keepers can elicit the desired knowledge. Simple and cheap handbooks, such as are in use in European zoological gardens, would doubtless meet the want and materially enhance the benefits now to be gained.

A BIRD-HUNTING SPIDER.

WHEN the veracity of any person has been impugned, it is the duty which we owe to society, if it lies in our power, to endeavor to establish it; if that person is a lady, gallantry redoubles the obligation. Our chivalry is on this occasion excited in favor of Madame Merian, who, toward the close of the seventeenth century, and during a two years' residence in Surinam, employed her leisure in studying the many interesting forms of winged and vegetable life indigenous to that prolific country. After her return to Holland, her native land, she published the results of her researches. Her writings, although abounding in many inaccuracies and seeming fables, contained much curious and new information; all the more valuable from the objects of her study having been, at that period, either entirely unknown to the naturalists of Europe or vaguely reported by stray seafaring visitants, who, with the usual license of travelers, were more anxious to strike their hands with astonishment than to extend their knowledge. These works were rendered still more attractive by numerous plates, the result of Madame Merian's artistic skill, with which they were most profusely embellished. It is one of these which, with the description accompanying it, has caused her truth to be called in question by subsequent writers, who, we must conclude, had either not the good fortune or the good eyesight to verify her statements by their own experience. The illustration alluded to represents a huge spider carrying off in its jaws a humming bird, whose nest appears close at hand, and who had apparently been seized while sitting on its eggs.

Linnæus, however, did not doubt the lady, if we remember, but called the spider (which belongs to the genus *Mygale*) *avicularia*—bird eating. Whether this ferocious-looking hunter does occasionally capture small birds, or whether he subsists entirely on the wasps, bees, ants and beetles which everywhere abound, what was seen in the forest by a gentleman thoroughly reliable and greatly interested in the subject of natural history will perhaps help to determine: "Shortly after daybreak one morning in 1848, while staying at a wood-cutting establishment on the Esseguibo," he said, "a short distance above the confluence of that river and the Magamni, we, a tall Yorkshireman and myself, started in our 'wood-skin' to examine some spring-hooks which we had set during the previous evening in the *embouchure* of a neighboring creek. Our breakfast that morning depended upon our success. Our chagrin may be imagined on finding all the baits untouched save one; and from that, some lurking cayman had snapped the body of the captured fish, leaving nothing but the useless head dangling in the air. After mentally dispatching our despoiler—who had not tricked us for the first time—to a place not very far distant, we paddled further up the creek in search of a maam or marondi, or, indeed, of anything eatable, bird, beast or reptile. We had not proceeded very far, when my companion, Bartlett, who was sitting, gun in hand, prepared to deal destruction on the first living creature we might chance to encounter, suddenly fired at some object moving rapidly along the topmost branch of a tree which overhung the sluggish stream a short distance in advance. For a moment or two the success of his aim seemed doubtful; then something came tumbling through the intervening foliage, and I guided the canoe beneath, lest the prey be lost in the waters.

Our surprise was not unmingled, I must confess, with vexation at first, on finding that the strange character of our game removed the possibility of a morning's repast as far off as ever. A huge spider and a half-fledged bird lay in the bottom of our canoe—the one with disjointed limbs and mutilated carcass, the other uninjured by the shot, but nearly dead, though still faintly palpitating. The remains of the spider showed him to be larger than any I had previously seen, that may have measured two-and-a-half inches in the body, with legs probably twice that length. He was rough and shaggy, with a thick covering of hair or bristles, which besides giving him an additional appearance of strength, considerably increased the fierceness of his aspect. The hairs were in some places fully an inch long, of a dark brown color inclining to black. His powerful jaws and sturdy arms seemed never adapted for the death struggle of prey less noble than this small member of the feathered race, for whom our succor had unfortunately arrived too late. The victim had been snatched from the nest while the mother was assisting to collect a morning's meal for her offspring. It had been clutched by the neck immediately above the shoulders; the marks of the murderer's talons still remained: and although no blood had escaped from the wounds, they were much inflamed and swollen. The few greenish-brown feathers, sparingly scattered among the down in the wings, were insufficient to furnish me a clew toward its species. That it was a humming-bird, however, or one of an allied genus, seemed apparent from the length of its bill. The king of the humming-birds, as the creoles call the topaz throat (*Trochilus pella* of naturalists), is the most exclusive frequenter of Marabella Creek, where the overspreading foliage here and there admitting stray gleams of sunshine—forms a cool and shady, though sombre, retreat, peculiarly adapted to its disposition; and I strongly suspect that it was the nest of this species which the spider had favored with a visit. After making a minute inspection of the two bodies, we consigned them to a watery grave, both of us being convinced that whatever the detracters of Madame Merian may urge, that lady was correct in assigning to the bush spider an ambition which often soars above the insect, and occasionally tempts him to make a meal of some stray feathered denizen of the forest. This conclusion, I may add, was fully confirmed some weeks later by witnessing a still more interesting *rencontre* between members of the several races. "Eat the eater," is one of Nature's laws, and after preventing its accomplishment by depriving the spider of his food, strict justice would probably have balked us of ours. Fortunately not: one of the heartiest breakfasts I ever made, and one of the tenderest and most succulent of meat, was that very morning. Well I remember exclaiming at the time: "*Haroldus membissa jucabit*" it was my first dish of stewed monkey and game."

KELEA.

A "MAN-CROCODILE."—Those who visited the New York Aquarium last spring will remember the sensation caused by the exploits of the "fish-woman" who used to remain a couple of minutes under water in a glass tank, where all her movements could be plainly observed. In London they have now on exhibition a semi-amphibious man named James Swan, whose performances at the Pavilion, in Coventry street, are thus described by Frank Buckland in *Land and Water*:

When the curtain drew up I observed on the stage a pretty large tank, with a glass front, filled with water. In the water were floating five living crocodiles, averaging from four to six feet long.

The band strikes up a lively tune, and the man-crocodile climbs up a ladder at the side of the tank, and at once jumps into the water, which comes nearly up to his neck. He first of all walks round the tank, and (as it were) stirs up the crocodiles, making them swim about in all directions. There is one of his aquatic beasts, however, of which he seems to be in wholesome dread. This is a large snapping turtle, but I could not get near enough to make out distinctly of what species he was. Having looked around to see where these reptiles are swimming, Mr. Swan dives down to the bottom of the tank, and quickly seizing Mr. Snapper Turtle, brings him up into the air, where he flourishes him about over his head, much to the delight of the audience and the discomfort of the turtle. The reptile having been thus performed with, is allowed to go, and he descends with a heavy, lazy motion to the bottom of the water. Mr. Swan next feels among the thick of the crocodiles, which have by this time crawled into one corner. Having chosen two of them, he very adroitly takes one in each hand round the neck. This, I should imagine, was a difficult thing to do, as the crocodiles object considerably; they make the water boil again with the lashings of their tails.

At last a firm hold is obtained round their necks, and they are flourished about in the air, opening their mouths and snapping about right and left.

Mr. Swan then descends again, and remains under water for a considerable time. When under water he drinks, eats and writes on a slate, in this respect rivalling, if not outdoing, the "Human Frog," who performed in London a few years ago.

The inscription he writes on the slate is "Swan, the man-crocodile." He causes the crocodile which he has at the bottom with him to make pretence to rub out the writing with his paw. Ascending again to the surface, Mr. Swan is offered a box by the attendants. He opens the lid of this box, and extracts therefrom a good-sized boa constrictor. This he entwines round his neck and chest, and again descends to the bottom, wearing his serpent necklace. From the bottom he allows the boa constrictor to ascend and swim about the tank where he likes. The serpentine mode of swimming by the boa constrictor, as seen in the water, is highly interesting. The largest of the crocodiles has yet to be exhibited. Mr. Crocodile seems to know from experience quite well what is coming, so he swims round and round at a tremendous pace, causing the water to become so full of bubbles that one can hardly see what is going on in the tank. At length Swan catches the reptile; he has evidently considerable difficulty in keeping hold of this fellow, who lashes his tail about in a most wonderful manner.

At length, after remonstrances with the crocodile, he manages to get hold of his head with the right hand and his tail with the left. He lifts him out of the water, and apparently is glad to let him go again, so violently does he struggle for his liberty. Other performances are then gone through, such as opening the crocodile's mouth, making the large snake swim round in a circle, etc., etc.

This performance is interesting to those accustomed to feats of diving and to naturalists. Managers of aquaria may also take a hint from it, inasmuch that they may learn that crocodiles in aquaria are really graceful swimmers, and not the lethargic, sleepy brutes that one sees basking like logs of wood in shallow water behind iron bars. Of course the difficulty would be in keeping these crocodiles in large tanks, that of the water being always of one temperature, that is, 60 deg. to 70 deg. FRANK BUCKLAND.

A BOLD LITTLE CRAB.—Very little is known about the animals and small creatures that dwell at the bottom of the sea beyond the merest facts relating to their anatomy and species. The great depth of water under which they pass their monotonous lives, is an effectual barrier to the curiosity of scientists; consequently their habits, manner of feeding and other interesting features of their every-day life are but little understood by the unscientific world. Since the establishment of the New York Aquarium many peculiarities and intelligent traits have been discovered in different kinds of fishes, particularly in the lower order of animals, and which were hitherto supposed to be devoid of any more intelligence than just sufficient to procure food for themselves. Opportunities are now, however, provided of observing these curious little creatures, and noting their habits just as if they resided in their native haunts. One of the results of close observation has been to discover a degree of intelligence in the hermit crab altogether unsuspected before. Its boldness and villainy were known, but that its audacity was of such a character as to actually lead it to attack and destroy fish ten times its own size, was but recently found out. The circumstances were these, and it is a good illustration of the knowledge and precociousness of these little fellows, not larger, some of them, than an inch. One morning a good sized Layfette fish was seen with one of these small crabs clinging to its gills. The movements of both were watched intently for some time, when the fish was observed to gasp as for air, and to struggle violently and shake itself in efforts to get rid of its tenacious enemy, all of which proved unavailing. The crab would not let go. This struggling continued for some time, when the fish was noticed to grow gradually weaker and weaker, its struggles less frequent, until, its strength entirely leaving it, it sunk to the bottom of the tank. The crab now began the repast for which it had fought and which it had secured, and commenced to feed upon its victim. But the feast was not permitted to proceed—science must be served—they were both taken from the water (the crab still holding on to its prey), and, upon examination, it was discovered that the crab had actually pinned the gills of the fish to its sides preventing it from breathing, thus really suffocating it. From this remarkable incident, it is supposed that large fish weighing many pounds have been killed and eaten by crabs. R. F. H.

—Petrified and agatized wood, and petrified turtles and cocoa nuts are found in earth mounds in Southern Colorado.

OH SNAKES!—The Deckerstown *Independent* gives birth to the following:

"Mrs. Dr. Nobles killed a cricket the other evening of mammoth size, after which three small snakes crawled forth from the intestines of the dead insect, each about two feet in length, the size of a knitting needle. They were captured and put into a bottle, and the next day one of the imprisoned reptiles gave birth to three smaller snakes. We have the entire progeny on exhibition at this office."

[We pass—have only two of a kind.]

MASSACHUSETTS—*Milford*.—A Natural History Society was recently organized, and by Sept. 1st expect to have a fine room on Main street. Prof. Denton has offered very kindly to contribute to the departments of geology and mineralogy as a nucleus for a collection. Others have contributed to other departments, and prospects are good for a live society. Friends of the cause in other places sending specimens will be duly noticed by the society. C. A. SOMNER, Sec.

—F. K. Andrews, of Grasscut, Lawrence Co., Pa., found a medium sized bullfrog July 25th, which had five legs, the extra one growing out of its right hind leg near the upper part of the thigh. He is in the aquarium in good condition, and if it is of any scientific interest, he may be addressed as above.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN DURING WEEK ENDING TUESDAY, July 24, 1877.—Five common seal (*Phoca vitulina*) purchased; one chameleon (*Anolis principalis*—Linn), presented; five striped lizards (*Chemidophorus sexlineatus*—Linn), presented; four gray lizards (*Seeloporus undulatus*) presented; one brown lizard (*Eumeces fasciatus*—Linn), presented; one racer (*Scotophis alleghenienis*), presented; one crow (*Corvus americanus*), presented; one mud tortoise (*Cinosternum pennsylvanicum*) presented; one green heron (*Ardea virescens*), presented; two chicken tortoises (*Chrysemys reticulata*), presented; one woodchuck (*Arctomys monax*), presented; one swift fox (*Vulpes velox*), presented; one red-tailed hawk (*Buteo borealis*), presented; one snapping turtle (*Chelydra serpentina*), presented.

ARTHUR E. BROWN, Gen'l Supt.

Woodland, Farm and Garden.

A MARVELOUS GARDEN OF EXOTICS.

ONE hour from New York by the Central R. R. of New Jersey leaves us at South Amboy, and a nice drive through oak and hickory woods, brown with dead branches, the work of the seventeen-year locusts, takes us to the noted horticultural establishment of George Such, Esq. Here, under the genial guidance of Mr. Taplin, his able and enthusiastic manager, we pass several pleasant hours, and fairly revel amid Orchids and Pitcher-plants, Ferns and Palms, till we almost imagine ourselves in the veritable tropics. The first plant house to which our attention is directed contains a fine collection of Orchideæ, and though at this season not many are in flower, yet there are enough to make a fair and interesting display, while numbers are giving evidence of an abundance of bloom for the fall and winter months. A group of Cypripediums first claims our notice, conspicuous among which is a magnificent plant of C. Roczelii, over four feet in diameter. This is one of the most remarkable as well as useful of the genus, as it is almost constantly in bloom. Fine plants of C. Reichenbachii, C. Stonei, C. Barbatum in several varieties, C. Pearcei (three feet in diameter and showing six spikes), C. caudatum and others follow, while arranged among them are good plants of many of the newer and rarer varieties, such as C. Dayanum, Villosum, Lowii, Naevium, Concolor, etc. There are also fine plants of the El Spirito Santo, or Dove flower (*Peristeria elata*), with from two to five spikes each, each spike producing on an average thirty of its singularly beautiful, waxlike flowers, a six foot long spike, bearing over 500 blossoms of the graceful Oncidium obrizatum; a number of plants of a Calanthe, something like C. veratrifolia in general appearance, but much superior to that well-known species. The colors vary from pure white with a yellow eye, through light to dark purple, and are exceedingly showy. Mr. Taplin informs us that not being able to place it with any described variety, specimens have been sent to the veteran orchidologist, Dr. Reichenbach, for name. We fear, however, we would weary the reader were we to mention all the interesting varieties we saw, and will merely mention a few of the more striking: Phalænopsis amabilis, P. grandiflora and P. Schilleriana; Dendrobium McCarthiæ, D. Nobilis, D. Crassinode, D. thyrsiflorum, etc.; Cattleya Leopoldii and C. Mossiæ; Ærides suavis, A. quinquevulnerum and A. Fieldingii; Saccolabiums and Vandas; immense plants of Coelogyne cristata that bore over 500 blooms each last winter; Zigopetalum crinitum, a lovely and aromatic species over four feet in diameter; Sobralia macrantha, with its large, rich purple blossoms; Calanthe masuca and Epidendrum fragrans major, with six spikes of bloom each; Odontoglossums and Oncidiums, etc., in great variety. We must not overlook here some fine plants of the beautiful Cape orchid, Disa grandiflora, one pan of which is just coming into bloom showing 15 shoots. This orchid is rarely seen in such perfection, and will remain in bloom for several months. One side of the orchid house is devoted to the East Indian pitcher plants. Only imagine a fine plant of Nepenthes intermedia, with nine pitchers that would hold over a pint each; N. Rafflesiana, bearing a dozen pitchers, the largest of which measured 14½ inches in circumference and 10 inches in length; N. Hookerii, whose pitchers measure 11 inches in circumference; N. Dominiana with 25, and a neat plant of the exceedingly rare and curious N. lanata, with five well-developed pitchers. Mr. Taplin has been very successful in raising a fine batch of seedling Nepenthes, hybrids between N. Distillatoria, N. Rafflesiana and N. Sedeni. He counts them by hundreds, and quite a number of them already show character, and vary very much in the size, shape and coloring of the pitchers, as well as in their general appearance and style of growth. This is a most interesting and successful hybridization, and is a notable example of good judgment and taste directed into the same channel with the skill and perseverance requisite to its accomplishment. Closely connected with this family come the Sarracenias (the trumpet leaf of the Southern States) and of which we find some notable examples. S. flava, a noble plant with trumpets 2½ feet long and from 75 to 100 in the cluster, closely followed by S. Drummondi, the horns being 3 feet long and beautifully variegated. S. rubra, S. psittacinus are also well represented, as is also the curious Darlingtonia California. All these are grouped among the carnivorous plants, as is also the Venus fly-trap (Dionæa) of which we find many large and sensitive specimens.

Palms, probably the most graceful and ornamental, as well as useful part of the vegetable kingdom, come next in point of beauty, as well as interest and value. Who has not read of the manifold uses to which the various sorts are put by the inhabitants of the "Isles of Palms." They not only provide food, milk and whisky, but clothing, cordage, firing, candles, roofs for their huts, as well as poles for its support—indeed there is little the aborigines of some of these Isles require that is not furnished by one or other variety of the Palm tree. Our attention is first directed to a fine specimen of Cocos Weddelliana, perhaps the most graceful as well as beautiful of the whole genus; a noble plant of Cycas circinalis with leaves 8 to 10 feet long, and plenty of them; Veitchia or Kentia Canterburyana, 25 feet in diameter, with leaves 15 to 20 feet in length; and, in addition to many good specimens of the more generally cultivated species, fine plants of many of the rarer and more highly prized sorts are seen in various parts of the establishment. Areca glancophylla, A. nobile and A. crinita; Ceroxylon niveum, and C. rubra; Verschaffeltia melanochætes; Thrynax nobilis and T. Argentea; Martinezia erosa and Weifia regia; Geonoma Schottiana, etc., etc., with the closely allied Encephalartos villosus, Zamias and Macrozamias of South Africa. All these well repay the lover of the beautiful, even if he does not see the magnificent and numerous collection of Tree Ferns. The Gleichenias, ferns from New Zealand, probably the largest and finest plants in this country, more notably G. dicarpa, G. dichotoma, G. microphylla, G. speluncæ and G. flabellata, all averaging 12 feet in circumference and four feet in height. These are well matched by superb specimens of Hypolepis distans, 15 feet in circumference, and Pteris scaberula, almost as large. Many other varieties, as Adiantums, Asplenums, Blechnums and Brainea, etc., also gave evidence of careful culture, while the Filmy ferns, the Todeas, Hymenophyllums and Trichomanes are alone well worth a journey to South Amboy to see.

Of the pure white most chaste and lovely lily of the Amazon (Eucharis amazonica) we find over twenty specimen plants, their equals hard to find anywhere; plants 5 to 6 feet in diameter, with leaves so vigorous and healthy they are almost of a black green color. These not only give an almost unlimited supply of bloom during the duller three-fourths of the year, but also give a scattering of bloom during the hot summer months. This most beautiful flower is much in demand wherever really rich and chaste flowers are desired. The Flamingo plant (*Anthurium scherzerianum*) next stops our progress, and claims its meed of approbation.

The two specimens over ten feet in circumference, though not now in flower, show well for winter's work, while the large stock of young and thrifty plants of this as well as all the various plants cultivated for sale well evince genial treatment and careful namagement.

To specify the many good specimens of what are generally classed as Stove Plants would be an endless task. We can merely mention a few of the more notable, one or other of which meets us at every step: Ananassa sativa variegata, the variegated pinecapple, strong plants of which are in fruit; Pandanus Veitchii, Alpinia vittata, Alocasias Zebrina Veitchii and Sedeni, Crotons Veitchii, Majestica, Youngii, Interrupta and Disraeli, Ixoras and Dracænas of many sorts; Marantas tubispatha, Virginalis major, Wagneri, Veitchii and a noble plant of Makoyana 10 feet in circumference, while the rich variegated and spotted leaves of the Caladiums, Sonorilas, Dieffenbachias, etc., vie with the rich purple flowers of the Dipladenias, the yellow of the Allamandas, the blue of the Thunbergia Harrisii and the shell like pink, or white drooping flowers of the Lapageria. The more hardy greenhouse plants are not neglected, as many good plants of Azaleas of the best varieties, Camellias, Sikim Rhododendrons and many well known species will testify. Nor must we forget the fine pyramidal plant of Eurya latifolia variegata, over 5 feet high, with its green leaves heavily edged with delicate creamy yellow, the contrast of the rich brownish orange color of the young growth rendering it peculiarly attractive. The best plant we have seen in this country of Luculia gratissima, that gives its lovely waxy pink clusters of blossoms in profusion, during winter is also in this section and is worthy of a prominent place in every collection. While thus endeavoring to give an outline of the many "rich and rare gems" in Mr. Such's greenhouses, we may mention that he does not neglect that ornamental part of gardening which comes more immediately home to the possessor of a country seat or even a small garden in the country, when the proprietor has perhaps neither the time nor convenience for a plant house or even a cold frame.

Mr. Such has long been a lover of the Hybrid Gladiolus, as his large and varied collection will show; Tuberoses and kindred bulbs he grows by the thousand. Verbenas, Zonal and other Pelargoniums, and other so-called bedding plants he handles in quantity. Lilies of many sorts, Pampas grass, the beautiful and perfectly hardy variegated Eulalia Japonica, Colocasias, etc., etc., are household words at South Amboy, while his stock of Cannas is second to none, being carefully selected and of great variety. Indeed we cannot do better in closing this rambling article than by thanking Mr. Taplin for his courtesy and attention to us while making these notes, and mentioning a few of the most desirable varieties of Cannas we saw growing splendidly in the hot, dry sand. The following we consider the most desirable: C. *Gustave Dippe*, large pure yellow flowers; *President Faivre*, dark foliage with crimson flowers; *Adrien Robine*, the best of the dark sorts, its foliage of deep copper color, flowers rich

Orange red; *Adele Levallois*, dwarf, leaves green with brig crimson flowers; *Livingstone*, rich dark foliage, with brillian rosy, orange-colored flowers; *Victor Lemoine*, green leave with orange salmon flowers; *Warscewiczii*, dark foliage a n brilliant flowers; *Bihorelli floribunda*, large crimson flowers with orange tint; *Metallica*, foliage ruddy chocolate with bronze lustre, red flowers; *Ornament du grand-rond*, deep green leaves, flowers crimson scarlet; *Souvenir de Hyeres*, leaves green, flowers bright orange edged with gold, and Ed. Morren, a very free flowering variety, with light yellow flowers spotted with red.

FOREST TREES.—Connecticut exempts from taxation for a period of ten years all plantations of forest trees, after the trees have attained an average height of six feet. The Massachusetts Society for Promoting Agriculture offer prizes to be awarded ten years from the 1st of next March, for the best forest of white ash, European larch, and white and Scotch pines.

THE ALLANTHUS TREE.—Another instance of the poisonous influence of this tree has just came before the New Haven Board of Health. The presence of these trees in many of our cities and towns should receive prompt attention from sanitary bodies. To their baneful influence may be attributed many cases of now inexplicable diseases.

—To protect trees from "forest worms" and other like pests, wash the trunks with lime or soap. Begin very close to the ground and wash upward. This is said to be much better than the common and injurious method of tarring trees.

—The project of cutting a canal through Cape Cod, which has been talked over since 1776, now promises to be carried out. A company now chartered for the undertaking propose to cut through from Barnstable Cay to Cohasset Narrows. Such a canal would save a distance of 90 miles, and an annual loss of 30 lives and $500,000 worth of property. The cost is estimated at $2,000,000.

FLORA OF ARIZONA.—J. A. Spring sends to the San Francisco *Post* an account of the distinctive flora of Arizona. Some peculiar uses of the strange plants are described.

The candelabra cactus has been employed by the Apache Indians for communicating signals; its height is 15 or 20 feet, but occasionally specimens are found 50 feet high. To make it a signal light it is only necessary to set fire near the ground to one of the vertical rows of prickles with which the plant is adorned; the flame runs to the top, and the candelabra becomes a torch. But the plant is not destroyed, nor indeed apparently injured by such burning on the surface. When dead and dry the wood is found to be hollow, and it separates at once into a number of sticks or poles, these having been chiefly held together by the rind. The fruit of this cactus makes a pleasant preserve. That of another, the "prickly pear," is well known to travelers. The young leaves of the prickly pear cactus are cooked as a vegetable, the dish produced being something like string beans in appearance and taste; the leaves are also highly esteemed for use in making a poultice to draw a splinter. The "niggerhead" cactus furnishes ready made fish hooks in countless numbers; by surrounding the plant with fire it produces water for the thirsty traveler, the heat driving its fluids to the interior, whence nearly a half gallon is obtained. "Maguey" is a palatable preparation made by roasting the leafy heads of the century plant; it saved a whole garrison in Arizona ten years ago from scurvy. The "ocotillo" is an assemblage of green poles, 10 to 15 feet long, joined only at the base. Each pole is surmounted by a scarlet flower. The poles are cut off and planted (rootless) as fences, and continue green for several years, but do not flower if the tops are cut off. Very serviceable fences are thus obtained, as the poles have sharp thorns in vertical rows. Among the valuable timber trees of Arizona is the mesquite; in the summer months a gum flows from this tree which has all the good properties of gum arabic, and if clarified cannot be distinguished from the medicinal gum. It seems not improbable that some of the products peculiar to the Territory may have a commercial value.

TO ARRANGE A STUMPERY.—Before all the old tree stumps have been blown in pieces by the new blasting powders, which do their work so thoroughly, let us plead that one may be dug out in the old-fashioned way. It is a troublesome piece of work, we acknowledge, but we know of no cheaper ornament for the lawn, and few afford equal satisfaction.

Select a stump of good shape—one from which the tree has been sawed off smooth and flat. In digging out cut off the straggling fine roots, but leave the stump as scraggy as you can. When you have selected a location for it, dig and enrich the ground thoroughly so that any vines you may plant around it will have good soil. You will need horses or oxen to draw it to its place, as a stump of any size is very heavy. Set it firmly in its place, root end upward. Now we have a stump, and the question is what to do with it. It is far from being ornamental as it stands, but have patience for two months and you will hardly recognize the rough scraggy thing.

To prepare the stump for its pretty summer dress, have plenty of fine rich earth, and put it in every corner where earth will lodge. You will find many places among the roots where you can have quite a depth of soil. As to what plants shall be set out, a stump offers almost unlimited resources. There should be plenty of vines to droop over the sides, and erect plants to give height. It is also a very pretty place to pot such small plants as look well in the summer. The pot can be put out of sight among the roots, and you have the advantage of being able to change the plants as soon as they lose their beauty. Our plan with a stump is to fill it in, the first season, with annual vines and short-lived plants that grow rapidly; planting in the ground at the base, at the same time, some hardy vines that will do their duty in years to come.

We have a stump covered with an interlacing of Maurandia, balloon vine, canary bird flower, and nasturtium—with ferns variegated vica, lobelia, and a Dracæna in a pot. Of course a stump planted in this way needs as much watering as a garden vase, but meanwhile your hardy vines are growing, and in a year or two your stump will not need replenishing every spring, but will be covered beautifully with gracefully flowering vines that will only require the ground about them kept rich, and this can be done by forking in manure in the spring.

A prettier effect is produced when two kinds of vines are planted. We have seen no finer combinations than the golden-leaved honey-suckle and clematis jackmani. The yellow leaves of the former contrast beautifully with the deep purple flowers of the latter, which has also the advantage of being of rapid growth and blooming all summer. Hall's ever-blooming honey-suckle and clematis flammula are also good—the latter looks well alone, and will cover the stump like a snow-wreath. For fine foliage alone we would suggest the akebia quinata, with beautifully-shaped leaves, and the variegated cissus. Almost all hardy vines are suitable for this purpose. These seem to delight in clambering over this trellis of nature's own making. We should except, however, the Wistaria, Virginia creeper and trumpet creeper, whose growth is far too rampant for such small quarters.—*American Garden.*

LAWNS.—Mow lawns sufficiently often to preserve a neat appearance, as, when the grass is allowed to get too long without cutting, instead of saving it entails more labor. During the summer months mowing machines should be set so as to leave the grass half an inch longer than earlier in the season and late in the autumn; this is especially needful where the land is dry, and the roots of the grass are liable to be burnt up.—*Scientific American.*

A COSSACK AND HIS HORSE.—A correspondent of the *Times* gives the following laughable proof of the perfect understanding and sympathy that exist between a Cossack horse and his master. "Many stories are told of the cleverness of the Cossacks in obtaining what they need for themselves or horses, and all tend to show that their morality is of a different type to that of European civilization generally. Some of the stories may possibly have been invented, but they show the general tone of feeling and what is expected from these quaint, reckless, merry troops. Passing through the streets of Galatz, the thin, weary-looking horse of a Cossack fell suddenly and lay apparently lifeless on the grounds. Its master was moved even to tears, and bewailed the unhappy fate which had not only deprived him of a favorite, but left him horseless just at the most interesting moment of the war. A crowd gathered round, and in it were men whose kind hearts would not suffer them to leave the poor man without some practical expression of their pity A subscription was made, and the man, taking the saddle from the lifeless animal, went on his way with dried tears, for he had actually wept. As the crowd were bending over the little horse in pure sympathy, a whistle was heard at the other end of the street. The horse sprang to his feet, and with a joyful neigh joined his master, whose clever trick was much admired, even by those who suffered by it."

—A correspondent of the Boston *Journal* gives his experience in outwitting the mosquitoes, by constructing an insect-proof tent.

Two stakes, three feet high, with a pole across the top, made the framework, over which the big sheet was put, with the edges extending out over the grass three or four feet. These extended flaps were loaded with stones and wood, so that not a fly could crawl under. One end was closed in the same way, and the other shut down after we had crawled in, and the edges pinned closely. Of course the interior was small, and the ventilation not of the best, but during a week in the mosquito land scarcely one of the pests succeeded in effecting an entrance. Sound sleep left us in the best of condition to sail and fish, and not once did the tent fail to protect us.

The tent should be a simple parallelogram, a little longer than wide, and sufficiently large to extend several feet along the grass. With proper cloth the ventilation is not bad. The heat of a close tent, however, is little annoyance compared with mosquitoes.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed; signs of suffering, etc.

CANINE THERAPEUTICS AND PATHOLOGY—Fourth Paper.

ANATOMY OF THE DOG AS COMPARED WITH MAN.

FIRST SECTION.

IN these days, when the outlines of anatomy and physiology are taught in the public school, it does not seem necessary to offer any apology for a few chapters upon this subject, particularly as it is essential to the perfect understanding of therapeutics; and, moreover, is a subject of which every sportsman should be well informed, and of which so many are ignorant.

We may first observe of the dog that its legs are shorter in proportion to the trunk than in man, the length of whose steps depends entirely on the extent of his inferior extremities. However, to balance this, the trunk of the dog is proportionately longer and smaller, and his spine more flexible, by which he is able at each step to bring his posterior extremities nearer to the anterior. His common integuments are much the same as with other animals, except they allow less passage for perspiration, the superfluous matter finding an exit by the salivary glands; for, when over-heated, he lolls out his tongue and slavers plentifully. This is in accordance with the well-known physiological law of elimination; any one organ of the economy readily adopting the duties of another when absolutely essential, acting as a sort of compensation balance. The perspiratory glands of the dog are not adapted to the work of regulating the temperature of the body, except under the ordinary conditions of life. They are not susceptible of the stimulation that may occur to similar organs of man, and consequently the excess of fluid accumulated by over exertion is excreted by other glands. This removal allows of greater exertion than when the evaporation is more general, as causing less bodily depression. In the dog the minute blood vessels pour out their ingredients into the slender cavities of the glandular tubes, and these, as they become filled, discharge their contents through their external openings in the skin, so that the skin is constantly exuding a watery fluid upon the surface. Nevertheless, we do not see this fluid; indeed, it does not remain upon the skin, but is at once taken up by the atmosphere and dissipated by evaporation. No better proof of the insensible transpiration of the skin is needed than the fact that the animal has an odor peculiar to itself.

It is generally asserted that the pyramidal muscles are wanting in the dog. This is a fact; and, paradoxical as it may be, untrue also. In man the same is frequently wanting; or, when present, found upon one side only. So, with the dog, they are frequently absent, but in a large proportion of cases may be detected in a rudimentary form upon one side. The fleshy part of the *rectus abdominis* is inserted directly into the *os pubis*.

The *omentum* reaches down to the *os pubis*, which, considering the posture of the animal, is a wise provision, since its use is to provide lubricating material for the intestines, and thus facilitate peristaltic motion. Man in his erect posture is supplied by gravitation, but the horizontal position of the dog demands the extension of the *omentum* that every portion of the bowels may receive the necessary fluid. The inferior and anterior lamellæ of the omentum is fixed to the spleen, fundus of the stomach, pylorus, liver, etc., in the same way as in the human; but the superior, having no colon to pass over, goes directly to the vertebral column. This serves to explain the formation of the small omentum in the human body, which is nothing but the large omentum deprived of its fat passing over the stomach and colon, where it reassumes its pinguedo; so proceeds and is firmly attached to the liver, spine, etc. The strice of fat are pretty regularly disposed through it, accompanying the distribution of the blood vessel to guard them from pressure of the super-incumbent viscera.

The stomach bears a close resemblance to that of the human subject, but is somewhat differently situated. It is placed more longitudinally, as are all the other viscera, in order to accommodate themselves to the shape of the cavity in which they are contained; that is, its pyloric orifice is much further down with respect to the cardiac than in man, by which means the gross food has an easier passage into the duodenum. The fundus of the human stomach stands almost directly forward when distended, owing to its orifices being tied down to the spinal column by the omentum; but in the canine subject the fundus is always posterior, which answers very well, the shape of the different cavities, the distance between the cardiac and fundus being greater than that between the two sides. The stomach, too, is much larger in proportion, that it may contain a greater quantity of food at once, which is very necessary, as it does not get its sustenance as men do. The turbillion is not so large, nor is there any coarction forming the *antrum Wiesii*. It is considerably thicker and more muscular, however, in order to break up and macerate the food, which is usually swallowed with but slight mastication. The ruge of the tunica villosa are neither large nor situated transversely, but go from one orifice to another. The reason of this is, perhaps, that they might be in less danger of being injured by the hard substances the animal frequently feeds upon; for a like reason there is no coarction at the pylorus.

The intestines are proportionately much shorter, for the food which is natural to the animal soon dissolves and putrefies, there being no occasion for a long tract of bowel, as the contents demand speedy evacuation. The same may be observed in all carnivora, and the muscular coat of the intestines is also much thicker than in man, evidently for the same reason.

The valvular conveniens are few and placed longitudinally. Along the whole alimentary tract also a slime is exuded, seemingly for the purpose of lubrication, facilitating the passage of and guarding against the acrimony of the excrementious matters.

The duodenum differs considerably in its situation, being fixed at the pylorous to the surface of the liver, hanging loose and pendulous with the mesentery backwards into the cavity of the abdomen; then turning upward again is fixed to the vertebral column, where it ends in the jejunum. The bile and pancreatic juice are poured into the most dependent part of the duodenum, apparently with the view of giving the chyle, after the fluids of the liver and pancreas are poured into it, a disadvantageous course that they may become the more intimately mixed before entering the jejunum, where the lacteals are very numerous. Thus by reason of their different posture, the same design is brought about in both the canine and human subject, though by a very different order of the parts.

With the exception of being proportionately shorter, the other small intestines are the same as in man. The large bowels are also shorter, and less capacious; and it may be taken as a general rule that all animals which live on vegetable food have not only their small intestines proportionately longer, but the greater more capacious than those that are intended to feed upon flesh alone. The reason for this difference seems to be that animal food is not only much more easily converted into chyle, but also more prone to putrefaction, consequently too long a remora of the juices might occasion serious results. So it becomes necessary that their receptacles should not be too capacious, but, on the contrary, being short and narrow, may conduce to the seasonable discharge of their contents. But vegetable diet undergoing slower transformation, is a necessity that such creatures as feed thereon possess a long intestinal canal, that the food in its passage may be considerably retarded, and have time to change its indoles into one more agreeable to the nature of the consumer.

The *appendix vermiformis* justly enough deserves the name of *intestinum cæcum* in this animal, though in man it does not. On its internal surface may be observed a great number of mucous glands, which, as they all secrete a slimy fluid, it is probable that their entire office is to provide the lower intestines with a lubricant.

The colon is the appendage Mayhew denies to the dog, thereby showing an originality of thought and purpose, which for ignorance and stupidity, is rarely equaled. The colon has no longitudinal ligaments, and consequently is not pursed up into sacs or pouches, as in man; neither does it make any circular turn round the abdomen, but passes directly across the sacrum where it obtains the name of rectum.

At the extremity of the rectum, or verge of the anus, two bags or pouches are found, which contain a most abominable fetid mucous, yellowish in color, for which we know no use, unless it serve to lubricate the strained extremity of the rectum, and defend it against the asperity of the feeces, or to modify some secretion that would otherwise prove detrimental. There is nothing analagous to these sacs in the human subject, unless we consider as such the mucilaginous glands that are found most frequent and largest about the lower part of the rectum.

The mesentery is considerably longer than in the human subject, that, in the horizontal position, the intestines may rest upon the soft cushion of the abdominal muscles. The fat is disposed in the same manner and for the same reason as the omentum, the interstices being filled with a fine membrane.

Instead of a great number of glandular vagæ, we find them few in number, and those chiefly connected together; as there is but one large gland to be observed in the middle of the mesentery, which, from its imagined resemblance to the pancreas and the name of its discoverer, is called *Pancreas Asselli*; but the resemblance, if any, depends chiefly on the connection, the structure being entirely different. The reason why this in man is, as it were, subdivided into many small glands may possibly be that as the intestines of the human body are proportionately much longer than in the dog, it would have been inconvenient to have gathered all the *lacteæ primi generis* into one place; whereas, by collecting a few of these vessels into a neighboring gland, the same effect is much more easily procured. Whether the food of the dog needs less preparation in its passage through these glands, is a matter not fully understood, though some changes certainly take place.

The pancreas in man lies across the abdomen, tied down by the peritoneum. But the capacity of the canine abdomen does not allow of a like situation, so it is disposed more longitudinally, being attached to the duodenum, which it accompanies some way; its duct enters the duodenum about an inch and a half below the ductus communis.

The spleen differs much, both in figure and situation; being much more oblong and thin, and lies more according to the length of the abdomen, like the pancreas. In man, it is firmly tied to the diaphragm, which is necessary in the erect posture he assumes to prevent it falling downward. But here such fastening is unnecessary, as by this prone posture the posterior parts of the body being higher than the anterior—it is always contiguous to this muscle, and is as effectually subjected to an alternate pressure as is the spleen of the former.

In all animals possessing large flexion of the spine the liver and lungs are divided into a great number of lobes by deep sections, reaching the large blood-vessels, that with the movements of the vertebral column they may easily pass over the other, and avoid the danger of being torn or bruised, which, as a solid body of these organs, would be liable to, as in the case of the cow, horse, and such other creatures as have the back bone stiff and immovable. The human liver has no fissures or divisions, unless we choose to reckon as such the small one between the two pylæ where the large vessels enter. The dog has no *ligamentum latum* connecting the liver to the diaphragm, as by the horizontal position it naturally gravitates forward, being in no danger of pressing upon the vena cava. Had the liver been connected to the diaphragm, respiration would necessarily have suffered, for this muscle is here movable at the centre as well as the sides. But in man the liver is necessarily thus connected to retain the viscus in place, and is fixed mostly in its tendinous part; that is where the pericardium is attached to it on the opposite side, so that breathing is not impeded and suspended by the mediastimum and bones of the thorax. In consequence of the liver being divided into so many lobes, it follows that the hepatic ducts cannot possibly merge into one common trunk until they are quite out of the substance of the organ, as a branch is given off from every lobe, all of which, when united, form the hepatic duct, whence we are led to conclude that hepatocystic ducts mentioned by some of the older writers do not exist. The gall-bladder is wanting in several animals such as the deer, horse, ass, etc., but in such, the hepatic duct, at its beginning is widened into a reservair of considerable size, which is supposed to answer the same purpose.

ANOTHER DOG MURDER—DEATH OF OBERON.—Many of our readers doubtless remember Oberon, who was a prize winner at the Baltimore and Philadelphia Dog Shows. For some weeks he has been in the hands of a breaker, Mr. E. H. Haight, of Allaire, N. J., who, Sunday, July 22, while out walking with the dog, stepped in to inspect a newly finished building; a moment later he heard the report of a gun. On leaving the house Oberon could not be found, but on inquiring of a boy standing near was told that the dog had been shot by Thos. Allen, a man who has obtained considerable notoriety as a murderer of canines. This was corroborated by a man near by, who witnessed the affair.

Allen being called upon for an explanation of his conduct, offered no excuse, acknowledging the shooting, saying that the dog had done no harm, but was "smelling around." He also remarked that he killed him with No. 4 shot, but preferred B. B. We understand that Mr. E. S. Sanford, Jr., of the Adams Express Co., who was the owner of the setter, proposes to sue Allen for the value of the animal, and Mr. Haight proposes to have him indicted for violating the law forbidding the use of firearms on Sunday. It is understood that Mr. Bergh will also take a hand in the matter, when Allen will probably find himself in warm water.

This statement is subscribed to by Mr. Sanford, in the following writing. The shooting seems to have been done from pure willfulness and in a spirit of bravado:

MR. EDITOR.—The above is a true statement of the shooting of Oberon, July 22, 1877, by Thos. Allen, of Allenwood, N. J., as received by me from Mr. Haight, of Allaire.

E. S. SANFORD, JR.

—E. H. Gillman's fine cocker spaniel, Adelina Patti, died recently. She was valued at $500, and had won three first prizes at bench shows this season.

THE BOSTON DOG SHOW.—This exhibition will open September 3, at Music Hall, Boston, and continue one week. One thousand dollars will be paid in cash premiums, and extra awards are to be made for trick animals.

The following are the Classes:

DIVISION 1.—Class 1.—Champion English Setters—For the best dog, prize valued at $25. For the best bitch, prize same value.

Class 2.—Champion Irish Setters—For the best dog, prize valued at $25. For the best bitch, prize same value.

Class 3.—Champion Gordon Setters.—For the best dog, prize valued at $25. For the best bitch, prize same value.

Class 4.—Champion Pointers.—For the best dog, prize valued at $25. For the best bitch, prize same value.

Judges in this class will be instructed not to discriminate with regard to weight.

Class 5.—Imported English Setters or the progeny of the first generation.—For the best dog, $20; second best, $10. For the best bitch, $20; second best, $10. For the best dog puppy, under 12 months of age, $10. For the best bitch puppy, under 12 months of age, $10.

OPEN CLASSES.—Class 6.—Native English setters. For the best dog, $20; second best, $10. For the best bitch, $20; second best, $10. For the best dog puppy, under 12 months of age, $10; for the best bitch puppy, under 12 months of age, $10.

Class 7.—Imported red, or red and white Irish setters or their progeny of the first generation. For the best dog, $20; second best, $10. For the best bitch, $21; second best, $10. For the best dog puppy, under 12 months of age, $10; for the best bitch puppy, under 12 months of age, $10.

Class 8.—Native red, or red and white setters, either Irish or crossbred. For the best dog, $20; second best, $10. For the best bitch, $20; second best, $10. For the best dog puppy, under 12 months of age, $10; for the best bitch puppy, under 12 months of age $10.

Class 9.—Black and tan, or black, white and tan Gordon setters, either native or imported. For the best dog, $20; second best, $10. For the best bitch, $20; second best, $10. For the best dog puppy, under 12 months, $10. For the best bitch puppy, under 12 months, $10.

Class 10.—Pointers of 50 pounds weight or over. For the best dog, $20; second best, $10. For the best bitch, $20; second best, $10.

Class 11.—Pointers under 50 pounds weight. For the best dog, $20. second best, $10. For best bitch, $20; second, $10.

Class 12.—Pointer puppies. For best dog puppy, under 12 months of age, $10; for best bitch puppy under 12 months of age, $10.

Class 13.—Retrieving and field spaniels other than pure Irish. For the best dog or bitch, $15; second best, $10.

Class 14.—Cocker spaniels. For the best dog or bitch, $15; second best, $10.

Class 15.—Fox hounds. For the best couple (dogs or bitches), $15; second best, $10.

Class 16.—Fox terriers. For the best dog or bitch, $15; second best, $10.

DIVISION 2—Class 17.—Mastiffs. For the best dog or bitch, $10; second best, $5.

Class 18.—St. Bernards. For best dog or bitch, $10; second best, $5.

Class 19.—Newfoundlands. For the best dog or bitch, $10; second best, $5.

Class 20.—Dalmatian or Coach Dogs. For best dog or bitch, $10; second best, $5.

Class 21.—Shepherd Dogs or Collies. For best dog or bitch, $10; second best, $5.

Class 22.—Greyhounds. For best dog or bitch, $10; second best, $5.

Class 23.—Bull Dogs. For best dog or bitch, $10; second best, $5.

Class 24.—Blenheim, King Charles or Japanese Spaniels. For best dog or bitch, $10; second best, $5.

Class 25.—Poodles. For best dog or bitch, $10; second best, $5.

Class 26.—Siberian Bloodhounds. For best dog or bitch, $10; second best, $5.

Class 27.—Pugs. For best dog or bitch, $10; second best, $5.

Class 28.—Black and Tan Terriers. For best dog or bitch, $10; second best, $5.

Class 29.—Skye Terriers. For best dog or bitch, $10; second best, $5.

Class 30.—Yorkshire Terriers. For best dog or bitch, $10; second bitch, $5.

Class 31.—Miscellaneous. (Dogs or Bitches.) The sum of $15 will be given, to be awarded by the judges' discretion, for breeds of dogs which have not been assigned special classes.

Class 32.—Prizes will be awarded for the best performing dogs. This premium will be awarded by a committee appointed for the purpose, and after competitive exhibitions, to be given on each afternoon and evening of the show.

The entrance fee will be $1, including admission for each day. Experienced attendants will be appointed, and proper care and attention will be bestowed; stalls, kennels, food and water will be provided for the dogs free of charge.

Certificates, entitling the holders to exhibit their dogs and to free admission during the exhibition, can be obtained at the box office of Music Hall, on and after Monday, August 6. Persons residing at a distance have the privilege of entering in any class by addressing the management at Music Hall.

THE IOWA DOG SHOW.—Dr. Leas, the president of the Iowa Sportsmen's Club, informs us that all arrangements have been made for the meeting of the American National Kennel Club at that place Sept. 4. The trials will continue seven days, and many of the best shots of the country will be there, and such a gathering of dogs as is rarely met with. The club at Hampton propose to reserve one township entirely for sport. This section of the country being one of the best hunting grounds in the West no better place could have been chosen for the trials.

RANGER.

—The Germantown *Telegraph* is ahead on dog and fish stories. Here is its latest:

The laziest fisherman in the United States is said to reside at Manayunk. He has trained a dog to take bass, and therefore don't worry himself with the labor of holding a rod or undergo the exertion of landing a fish. He casts his line with float attached into one of the pools below the Flat-Rock dam and attaches the other end around the fore-shoulders of his dog. As soon as the animal feels a pull it gives a spring forward and rapidly ascends the bank, at the same time uttering a sharp bark, which awakens his master in case he is sleeping in the shade of a neighboring tree. A number of fine bass, it is said, have been secured in this peculiar manner.

HOW PHILADELPHIA KILLS DOGS.—Unmuzzled dogs when captured are taken to the pound on Lamb Tavern Road. At the expiration of the time allowed for redemption, the canines are induced to enter a small brick building containing two rooms, one above the other. Once in, the modes of exit are closed. A charcoal fire is started, and the windows are shut and dampers reversed, so as to prevent air from entering the rooms. In about a minute the carbonic acid generated causes the dogs to become insensible. They are left in the room, however, for eight or ten minutes to make sure that life is entirely extinct. The windows are then opened, and, after the poisonous gas escapes the dogs are removed.

IMPORTED DOGS.—On the 26th July arrived three splendid setters from Ireland in good condition, one dog and two two bitches; the dog and one bitch, black, tan and white, by McDonagh's field trial Ranger out of Belle, by Riple out of Champion Nell 1st; one bitch, black and tan, by Champion Duke (1592) out of Leah, sister to Champion Nell 1st. They were imported by J. S. Niven, of London, Ontario, Canada, and were selected by best judges with especial care.

HONOR TO WHOM HONOR IS DUE.

MEMPHIS, July 18, 1877.

EDITOR FOREST AND STREAM:

In your issue of 12th inst., your correspondent, "A Victim, 1874," corrects you for giving Captain John M. Taylor credit for inaugurating field trials and bench shows in Tennessee, viz.: on this assertion you are greatly in error, as Captain R. W. Lightburn was the party that first proposed a bench show and field trials, and through his indomitable will and indefatigable energy and the assistance of one or two friends, T. M. Horsfall and J. W. Alley, he inlated and carried through successfully the first bench show of dogs ever held in Tennessee and the first field trial of dogs ever held in America under an organized body—the Tennessee State Sportsmen's Association. Even this association was framed and formed by him." "Victim" plucks the mote from your eye, but fails to see the saw-log in his own. He omits to mention the names of others who helped to organize the Tenn. S. S. Assoc.; helped to initiate bench shows and field trials; helped to compile the rules from Stonehenge's Dogs of the British Isles, and carried through the trials successfully without any help from those he has named. Their indomitable wills and indefatigable energies did not desert them the day before the field trials, causing their absence therefrom, neither did they send in their resignations before the meeting was ended when the association was known to be heavily in debt (all of which was said by a few members of the association). Practical sportsmen generally, and especially those who have attended the bench shows and field trials of the T. S. S. Asso., know too well the names of those whose indomitable wills and indefatigable energies have made their meetings successful for me to mention them.

Yours respectfully, DEAD BEAT.

RUSSIAN SETTERS.—E. S., writing from Baltimore, Md., says: I am glad to see one of your correspondents enlightening the public with regard to the Russian setter. I have a cross-bred one out of an imported Russian bitch by a native English setter. He is chestnut and white, powerfully built with an expression of rare intelligence, and he certainly is possessed of good sense; the best retriever I ever saw, a fine ranger with a remarkably good nose, although seven years old he is to-day a very good field dog, and possessed of a courage that nothing can daunt. The Russian setter is so little known however that sportsmen have often been surprised at his being a good dog, thinking him a cross with the spaniel. The fact that this dog has traveled over five thousand miles in quest of game, having been hunted in Florida, North Carolina, Virginia, Maryland and Pennsylvania, should be evidence of the good qualities of the breed, and I agree with Canonicus that the timid dogs of the day might be improved by an admixture of this blood. Some years since I spent the summer in the country, and used to amuse myself by shooting frogs which were very abundant on the banks of a neighboring stream. My dog accompanied me, dropping to shot at the report of my pistol. He learned to take quite an interest in the frogs, though never ordered to retrieve them, as I did not suppose he would take them in his mouth. You can imagine my astonishment when he brought a live frog to the house one day, having been down to the stream alone. It was strictly uninjured.

HYDROPHOBIA.—An exchange says:

Dr. Offenburg, of Munster, claims to have cured a case of hydrophobia by hypodermic injections of curare seven times in four hours, to the amount of three grains. Symptoms of paralysis ensued, free from convulsions. The recovery was slow.

[This statement carries more probability with it than any yet promulgated. Curare is the only drug that has as yet offered the least possibility of success, by mitigating the symptoms. Were we suffering from this dread disorder, we should insist upon the exhibition of this drug hypodermically in doses that would otherwise be fatal, and risk the result.—ED.]

—Queen, winner of the ROD AND GUN cup for the best brood bitch at Chicago, has whelped eleven dogs and three bitches by S. B. Dilly's champion Ranger. Five of them are marked alike, and are exactly like their sire, and the balance almost nearly so, being very dark liver and white. All are strong and healthy, and perfect beauties. S. B. DILLY.

NAMES CLAIMED.—I claim the name of Ida F. for my Rob Roy, Nell bitch, aged three months. The dog for whom I claimed the name of Czar, is, I find, of Leicester Peterel blood, instead of Peeress as stated by me last week.

P. H. MORRIS.

—I claim the name of Con for my Red Irish Setter by Miley's imported Buck, out Jerome's (formerly Barlow's) bitch Nelly, not Maud, as per notice of the same from *Turf, Field and Farm* of June 8, 1877.) In your last issue I notice that Mr. R. H. Morris claims the name. Granting the right of Mr. Morris to name his dog as he choses, still I think I have a prior claim.

F. R. RYER.

—A young man in Lower Gold Hill visited his sweetheart last night, and when he left stole the dog of the house and got a half dollar for the brute at Marshal McCleery's canine asylum. A man cannot afford to spend his time for nothing these hard times, not even when courting.—*Gold Hill News.*

DOG DOCTORS.—Is it not more than strange that a creature which has always been so popular, so intimately and pleasantly associated with man, so useful to him, and indeed of all God's inferior creatures, his ONLY COMPANION, should have been so long left to the care of the low and ignorant when attacked by disease? Yet even to-day there are not to be found anywhere half a dozen men of the standing of gentlemen, who, holding a doctor's degree, have courage enough to defy the arbitrary "proprieties" of their profession, and attend upon these noble brutes.

This liberal minded city cannot produce one certificated doctor and scarcely half a dozen persons in all who understand the medical treatment of dogs. Nearly all dog doctors *experiment*, and if they have a *tough* patient with a *trivial* ailment, they can restore him. But what if the dog is *seriously* sick, or it should happen to be a *diminutive* beauty? It would be "experimented" to the Indian's happy hunting grounds, which must be already crowded by similar victims. It takes years to become a good dog doctor! Ask Dr. Henry Gardner, of 146 West 30th street, in this city, if cases which are new to him do not sometimes arise notwithstanding his experience of 31 years.

The doctor says that if the *strangers* to whom these sick dogs are sent for treatment, only knew how much they court and love their sympathy they would not withhold it, especially as it is a very active agent in effecting cures.—[*Ade.*

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Sciænops ocellatus.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*

	Kingfish, *Menticirrus nebulosus.*

FISH IN MARKET.—Fish are now very scarce. Our quotations for the week are as follows:

Striped bass, 18 to 25 cents per pound; bluefish, 8 to 10 cents; salmon, green, 30 cents; frozen do, 25 cents; mackerel, 25 cents; weakfish, 10 cents; Spanish mackerel, 15 cents; green turtle, 12½ cents; terrapin, $12 per dozen; halibut, 18 cents; haddock, 6 cents; king-fish, 25 cents; codfish, 8 cents; blackfish, 15 cents; herrings, 6 cents; flounders, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 20 cents; soft clams, 30 to 60 cents per 100; salmon trout, 15 cents; Long Island trout, $1; Canada do., 50 cents; hard shell crabs, $4 per 100; soft crabs, $1 50 per dozen; whitefish, 15 cents; frog legs, 35 cents per pound.

ORVIS REEL.—We have had the pleasure of handling one of the new Orvis reels, nickle-plated. It is by far the neatest implement we have seen, and combines beauty and lightness with utility. This reel is manufactured by C. F. Orvis, Manchester, Vermont, who also furnishes a very superior article in flies, very strong and durable, of home manufacture.

THE WRENSHALL BASS FLIES.—We have received from Messrs. Trimble & Kleibacker, 300 West Baltimore street, Baltimore, twelve samples of bass flies, adapted to the waters of the Potomac, Alleghany and Shenandoah rivers. They are exquisitely tied, and we most readily recommend such of our readers as purpose fishing in those waters to obtain their flies from the firm above mentioned.

—T. N. J. sends us a letter from Moosehead Lake, in which he takes occasion to extol the comforts of the Lake House as a resort for sportsmen. Messrs. Sawyer & Savage, whose antecedents date back to the lumberman and aboriginal Indians, are the proprietors. The writer and his friends visited the neighboring streams and ponds, and fished in the lake, and were rewarded with full baskets of good-sized fish.

—Mr. Thos. J. Havemeyer recently returned from his annual salmon cruise to Canada. He captured over one hundred salmon. Messrs. Catlin, Phelps, Streit and Imbrie, are among the gentlemen now on the rivers, and from all accounts the fishing exceeds that of any previous year.

THE DOBSON—*Corydalis cornutus.*—This is the celebrated black bass bait, a perfect imitation of which is now in the market, introduced by T. F. Marster of 125 Nassau street. The Dobson has a number of local names, such as "crawler," "hellgrammites," etc., the latter being, perhaps, a more correct designation than any other, as the true dobson is the larvæ of the hellgrammite fly. Fred Mather remarked to us not long since, that the remembrance of the noble strings of bass he had taken with the dobson when spoons, worms, flies and minnows failed, causes him to love this little creature, in spite of his ungainly aspect. "Don't be afraid of his ugliness," he says, "but take hold of him and hook him on as if he were a minnow, and go home with a good string of bass." It is now unnecessary to hunt the crawler, as his counterfeit is so perfect that even the wariest old veteran, the hero of a hundred fights, perhaps, is seized with gnawings as he sees the dobson drop temptingly in the water.

FISHERMAN'S LUCK.—Three of the faculty of the Deaf and Dumb Institute, of Washington Heights, themselves mutes, went on a fishing excursion from Babylon, L. I., a few days since. Off East Island, while "chumming" for bluefish, they struck a school of sharks, several of which were hooked, though without result. Finally Mr. Lloyd hooked one, but found him too strong, and called the skipper of their yacht to his aid, when the two succeeded in bringing the shark to the surface near the side of the boat. After a prolonged fight, the shark being several times struck on the head with a hatchet and boat hook, he succumbed sufficiently to be lifted on board. When measured, he was found to be seven feet seven inches long, with teeth an inch long, and his weight was estimated at about three hundred pounds. After lying on the bow of the yacht a few minutes, he having ceased struggling, all but the skipper walked away, when, by a tremendous effort, the shark leaped clear of the yacht and, although doubtless mortally wounded, escaped.

KEEPING ANGLE WORMS FRESH.—A correspondent writes: I see writers so often in your paper mention the fact of their keeping angle worms in a box with *plenty of earth.* This suggestion is not new, but an important one to every one who angles, and essential to every one who carries angle worms on a long journey; and I pray you pass it on:—Don't use any earth, but use damp moss; angle worms will keep bright and clean therein on the longest journeys, when they will decay and corrupt in twenty-four hours in earth. Pick them over and reject the wounded ones once in a day or two, and they will remain fresh a month. CHAS. E. WHITEHEAD.

[We have advised the use of sand, not earth; but the moss is better.—ED.]

☞—The run of Penobscot salmon is diminishing. The yield this season has been very large.

MASSACHUSETTS—*Salem, July* 30.—Fishing in salt water is first-rate around Salem now, including small mackerel and other ordinary varieties. Black bass are being taken at Lynnfield Pond. Mr. F. Nichols, of Salem, caught one weighing nearly six pounds, and reports the fish as very gamey to handle. Mr. H. Bowks and myself lately enjoyed some good sport with a rod and reel, catching pollock fish of from two to three pounds each, they were decidedly lively fish to take; we also caught mackerel with a rod—it makes real good sport. Grand good fish weather lately. Mr. Small, of Plum Island, caught a sunfish last week weighing some 500 pounds; he turned it into oil. A horse mackerel was recently taken off Swampscott, weighing some 700 pounds. It was on exhibition as a sea serpent, and sold a good many. TEAL.

MOVEMENTS OF THE FISHING FLEET.—The number of fish ing arrivals reported at this port the past week has been 84, viz.: 13 from the Banks, 34 from Georges, and 37 from mackereling trips. The latter vessels report a continued scarcity of mackerel, and the present indications are that the shore-fishery will be a failure this year. Two vessels brought fares of 100 bbls. each, one 70 and one 30 bbls., but many of the vessels were bare, and some had not seen a mackerel for a fortnight. The railroad strikes have interfered with the movements of fish, and but little has been done the past week. Prices remain firm at previous quotations. The fish receipts at this port the past week have been about 1,000,000 pounds codfish and 200,000 pounds halibut from the Banks, 475,000 pounds Georges codfish, 10,000 pounds Georges halibut, and 400 bbls. mackerel.—*Cape Ann Advertiser, July* 27.

NEW YORK.—*Kingston, July* 27.—William H. Sleight, Abram Brink and Ed Styles went fishing in the Wallkill, near Gardiner Station, on the Wallkill Valley Railroad, near Kingston, on July 25, and each caught a fine mess of fish. Styles caught eight bass that weighed when dressed 7¾lbs.; and Sleight and Brink together caught six bass that weighed 5½lbs. dressed. The fish were caught with the Dobson, or Scorpion crab for bait. This is the same bait advertised as the natural food for black bass by J. F. Marsters in the FOREST AND STREAM. OUR HARRY.

—The biggest bass taken in Greenwood Lake this season weighed five and a half pounds. It was taken by Mr. Arthur, one of the Greenwood Lake Club members.

NEW JERSEY.—*Kinzey's Ashley House, July* 27.—Fishing poor all the week. To-day, at the Inlet, some boats have taken as high as twenty-four bluefish. Sheepshead are biting better to-day, over sixty taken before 9 A. M. First weakfish taken Wednesday; one boat forty-seven, averaging 2¼lbs. B.

PENNSYLVANIA.—Capt. Wm. Auchenbach recently caught in the Schuylkill, at the Limerick station dam, a black bass weighing three pounds and twelve ounces, and measuring twenty inches in length.

WISCONSIN—ISLAND HOUSE—*Bayfield, July* 23.—The streams are in splendid condition, and the catch by the numerous visitors is very fine. Prof. La Bombarie, of Racine College, brought in over one hundred trout on Thursday, the result of four hours' fishing. WM. KNIGHT.

VIRGINIA—*Leesburg, Va., July* 23.—Our sportsmen have killed a few woodcock. Plover are showing themselves. Black bass are being taken in strings of eight and twelve, and ranging from one to two and a half pounds. I took seven bass in Sycolin, a tributary of Goose Creek, with fly, and eight chubfall fish, and perch, all with academy fly. River (Potomac) is clear, Goose Creek clearing, small streams clear. T. W.

CANADA—*Matipedia, N. B., July* 20.—Owing to the low water in the rivers and the hot and dry weather but few salmon are being caught in this vicinity at present, though there are plenty in the "Restigouche," and they can be taken in some quantities if light, fine tackle were used instead of the heavy clumsy kind generally used. This the writer has clearly proved by killing eight salmon—the largest of which "kicked the beam" at twenty-four pounds—in the "Big Pool" above the railroad bridge, where it was impossible to raise a fish with coarse tackle. Among the parties up the "Restigouche" are that of Mr. A. N. Shewan's, our worthy Secretary of the Province of Quebec Fish and Game Protection Club. STANSTEAD.

St. John, N. B., July 26.—Striped bass are now caught here in the river, near the Suspension Bridge. The sportsman who visits the river at 5 A. M. has the best luck in taking them. This morning bright and early I saw Mr. Dingee Scribner land an 18-pounder, which is the average weight of these fish. The best bait for them is either the "eel bait" or a Kilby minnow. STANSTEAD.

Upper Camp, Grand River, P. Q., July 23.—We are having great sport. Just had a salmon take out over 400 feet of line, leaping as he ran. He made a magnificent fight. IMBRIE.

HALIFAX, N. S., *July* 28.—The Fishery Commission have reconsidered their motion for adjournment, and have commenced work. After a three-hours' session to-day they adjourned until the 30th, when evidence will be submitted.

SPLIT BAMBOO RODS.

To Our Customers and the Public: In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
—[*Adv.* Manufacturers, 65 Fulton Street, N. Y.

—Literary young man at a party: "Miss Jones, have you seen Crabbe's Tales?" Young lady, scornfully: "I was not aware that crabs had tails." Literary young man, covered with confusion: "I beg your pardon, ma'am, I should have said, read Crabbe's Tales?" Young lady, angrily, scornful: "And I was not aware that red crabs had tails either." Exit young man.

—The average college graduate who applies at this office for a place, generally wants to know "if there is a vacancy in the position of dramatic editor or literary critic." He expects to receive $50 a week the first month, and $100 a week afterward, and is always sure he was born to be a great journalist. But after he is sent to a fire, as his first job, he finds new light break in on him, and discovers that his true mission is "the bar."—*Boston Globe.*

Rational Pastimes.

OLD GREEK ATHLETICS.—There is no doubt that among the Greeks the pursuit of high muscular condition was early associated with that of health, and that hygiene and physical training were soon discovered to be closely allied. Thus Herodicus, a trainer, who was also an invalid, was said to have discovered from his own case the method of treating disease by careful diet and regimen, and to have thus contributed to the advancement of Greek medicine. Pausanias also mentions (vi. 3, 9) the case of a certain Hysmon, an Elean, who, when a boy, had rheumatism in his muscles, and on this account practiced for the pentathlon that he might become a healthy and sound man. His training made him not only sound, but a celebrated victor. It would be very interesting to know in detail what rules the Greeks prescribed for this purpose. Pausanias tells us (vi. 7, 9) that a certain Dromeus, who won ten victories in long races at various games (about Ol. 74) was the first who thought of eating meat in his training, for that up to that time the diet of athletes had been cheese from wicker baskets. It must be remembered that meat diet was not common among the Greeks, who, like most southern people, lived rather upon fish, fruit and vegetables, so that the meat dinners of Bœotia were censured as heavy and rather disgusting. However, the discovery of Dromeus was adopted by Greek athletes ever after, and we hear of their compulsory meals of large quantities of meat, and their consequent sleepiness and sluggishness in ordinary life, in such a way as to make us believe that the Greeks had missed the real secret of training, and actually thought the more strong nutriment a man could absorb the stronger he would become. The quantity eaten by athletes is universally spoken of as far exceeding the quantity eaten by ordinary men, not considering its heavier quality. Our suspicions that, in consequence, Greek athletic performances were not greater, if even equal, to our own, is, however, hard to verify, as we are without any information as to the time in which their running feats were performed. They had no watches, or nice measures of short subdivisions of time, and always ran races only to see who would win, not to see in how short a time a given distance could be done. Nevertheless, as the course was over soft sand, and as the vases picture them rushing along in spread-eagle fashion, with their arms like the sails of a windmill—in order to aid the motion of their bodies, as the Germans explain (after Philostratus)—nay, as we even hear of their having started shouting, if we can believe such a thing, their time performances in running must have been decidedly poor. In the Olympic games the running, which had originally been the only competition, always came first. The short race was once up the course, and seems to have been about 125 yards. About the year 720, B. C., races of double the course, and long races of about 3,000 yards were added: races in armor were a later addition, and came at the end of the sports. It is remarkable that among all these varieties hurdle races were unknown, though jumping was assigned a special place, and thought very important. We have several remarkable anecdotes of endurance in running long journeys cited throughout Greek history, and even now the modern inhabitants are remarkable for this quality. I have seen a young man keep up with a horse ridden at a good pace across rough country for many miles, and have been told that the Greek postmen are quite wonderful in their speed and endurance. But this is compatible with very poor performances at prize meetings. There were short races for boys at Olympia of half the length. Eighteen years was beyond the limit of age for competing, as a story in Pausanias implies, and a boy who won at the age of 12 was thought wonderfully young. The same authority tells us of a man who won the short race at four successive meetings, thus keeping up his pace for sixteen years—a remarkable case. There seems to have been no second prize in any of the historical games, a natural consequence of the abolition of material rewards. There was, of course, a good deal of chance in the course of the contest, and Pausanias evidently knew cases where the winner was not the best man. For example, the races were run in heats of four, and if there was an odd man over, the owner of the last lot drawn could sit down till the winners of the heats came together, and run against them without any previous fatigue. The limitation of each heat of four competitors arose, I fancy, from their not wearing colors (or even clothes), and so not being easily distinguishable. They were accordingly walked into the arena through an underground passage in the raised side of the stadium, and the name and country of each proclaimed in order by a herald. This practice is accurately copied in the present Olympic games held at Athens every four years.—*Macmillan.*

THE ORIGIN OF HANDICAPPING.—The origin of handicapping is to be found in a custom at one time, perhaps, as prevalent in England as the modern practice of raffling. One person, let it be supposed, had a pocket knife which he wished to exchange for another person's pencil case. He would "challenge" the owner of the pencil case to make the exchange with him, and this being agreed to a third person would be found to "make the award," or, in other words, to arbitrate as to the respective values of the two articles, and to award a certain sum by way of equalizing them. Before the award was made all three would deposit in a hat or cap a certain stake, which the arbitrator would appropriate in the event of his award proving satisfactory to both parties, or in the event of his award proving satisfactory to neither party. The way in which this willingness or unwillingness to abide by the award of umpire was expressed seems originally to have been this: The two exchangers were to stand each with a "hand-i'-the-cap," and on the award being uttered—after an amount of circumlocution purposely intended to confuse them—they were instantly to withdraw their hands and open them. If both hands held money in them, both were understood to accept the award, the exchange was made, and the arbitrator pocketed the stakes. If neither held money the bargain was not concluded, and the stakes were still forfeited to the arbitrator. If only one of the two displayed a coin, that one drew the stakes, and the exchange was not made. According to modern rules "a handicap match is A, B and C to put an equal sum each into a hat; C, who is the handicapper, makes a match for A and B, who, when they have perused it, put their hands into their pockets and draw them out closed; then they open them together, and if both have money in their hands the match is confirmed; if neither have money, it is no match." Thus it will be seen that, whereas the old practice was literally a "hand-i'-the-cap," the modern has become a "hand-i'-the-pocket."—*New York Times.*

RULES FOR BATHING.—The following are some timely instructions issued by the Royal Humane Society: "Avoid bathing within two hours after a meal, or when exhausted by fatigue or from any other cause, or when the body is cooling

after perspiration; and avoid bathing altogether in the open air if, after having been a short time in the water, there is a sense of chilliness, with numbness of the hands and feet; but bathe when the body is warm, provided no time is lost in getting into the water. Avoid chilling the body by sitting or standing undressed on the banks or in boats after having been in the water or remaining too long in the water. Leave the water immediately there is the slightest feeling of chilliness. The vigorous and strong may bathe early in the morning on an empty stomach, but the young and those who are weak had better bathe two or three hours after a meal; the best time for such is from two to three hours after breakfast. Those who are subject to attacks of giddiness or faintness, and those who suffer from palpitation and other sense of discomfort at the heart, should not bathe without first consulting their medical adviser."

SCOTTISH-AMERICAN GAMES.—The first of a series of handicap athletic games under the management of the Scottish-American Athletic Club, was held July 28 on the club grounds, at Fifty-fourth street and Ninth avenue. The first feature of the programme was the throwing of a 16-pound hammer for a gold medal, which was won by J. B. Hanna. The next feature was a half-mile run for a gold cup presented by John Fraser, Captain of the club, won by W. Dittmar, in 2m. 11¾s. The last contest was a one-mile walk. T. Buckley won in 8m. 7¾s., J. V. Woolcott coming in second.

CRICKET.—On July 21 the Toronto Cricket Club defeated the Lacrosse Club at cricket by a score of 133 to 45. Behan, of the Toronto eleven, made 52.

The St. George second eleven will play an eleven of the young Columbia Cricket Club, of Hoboken, on the St. George Grounds on Tuesday, beginning at 1 P. M.

The score of the Hamilton Club in their match with the Montreal Club last week was the largest one-inning score ever made in Canada, and Mr. R. Leisk's one-inning score of 202 the highest ever recorded in a match in America. Mr. Kennedy led the bowling on behalf of Hamilton, and Mr. Terrance on the part of Montreal.

Picton, Ontario, July 26.—Oswego, 154; Picton, 81, with four wickets down when the game was drawn.

BASE BALL.—*St. Louis, Mo.*—The eighth championship game between the St. Louis and Boston clubs was played July 28, resulting in a victory for the former by a score of 3 to 2. This is the sixth game won by the St. Louis.

ALLEGHANEY CITY.—The Alleghaneys, of Pittsburg, and Stars, of Syracuse, contested for the supremacy July 28th. The scores were 6 for the Stars to 3 for the Alleghaneys.

PHILADELPHIA, PA.—The Germantown Amateurs defeated the Athletics, of Philadelphia, on Thursday, July 26, on the grounds of the former at Wayne Station, by a score of 9 to 7, after an exciting game of eleven innings.

BASE BALL MURDER.—A base ball murder was committed on Thursday, July 26, during the playing of a game of ball at Fair Haven, Otsego County, N. Y. Two of the players of the contesting nines, named Wright and King, quarreled over the decision of the umpire, and in the heat of the war of words Wright struck King on the head with the bat he held in his hands, fracturing his skull and killing him. Wright was promptly arrested.

—In the game between the Montreal and Hamilton, Can., cricket club last week, one of the Hamilton men, Leisk, made a score of 202, and carried his bat. The highest score ever made on this side of the Atlantic.

Syracuse, July 25.—Onandaga, 146; Syracuse, 72.

Newport, R. I., July 25.—Six games were played by the following sides: Reds—J. W. Brooks, C. Bryce and L. S. Bryce. Blues—G. R. Fearing, Farmian, Rogers and S. S. Howland. The Blues won all except the fifth game.

—O'Leary has accepted Weston's challenge to walk for a purse of £2,000, and the race will probably come off in London next September.

—All fond mothers take great delight in clean, pretty children. It is a conclusion from this postulate that they all use B. T. Babbitt's Toilet Soap, when they learn of the superiority of this new brand. The reasons are obvious. Its excellence as regards purity, inocuousness, and pleasantness to the sense are simply unrivaled. For old and young it is the nonpareil of toilet articles, desirable alike for the chamber and the bath.—[Ed.]

New Publications.

SELF-LOVE, A BOOK FOR WOMEN, and also for Young Ladies, with their Prospects in Single Life, Love, Hope, Married Life and Middle Age contrasted.

That's the whole of the title, but it does not begin to give an idea of the book, which, being written by a woman for women, and exposing in a burst of feminine confidence the innermost feelings and emotions of womanhood, deals with a truly astounding variety of topics. And shall we confess that, with masculine temerity, we have profaned this shrine? No! *Procul, O procul este profani!*

FRUIT AND BREAD, A SCIENTIFIC DIET.

This book, which is a translation by Dr. M. L. Holbrook from the German of Gustav Schlickeysen, is an exposition of the views of a certain class of food reformers, whose principles accord in the main with those held by the vegetarians of England and America. The arguments here presented for the adoption of a frugivorous diet are based upon comparative anatomy and physiology, and are considered from a Darwinian standpoint. Man, says the author, is of the order of anthropoid apes. All anthropoid apes are frugivorous, therefore man is frugivorous. This term frugivorous must be understood as applied in its German usage, including the English frugivorous and graniforous. Whatever may be the opinion of the reader as to the views here expressed, he will at least give consideration to the highly original and scientific treatment of his subject. The book is to be had of M. L. Holbrook & Co., New York.

—The current number of *Fur, Fin and Feather* contains a compendium of all the game laws, and in the miscellaneous matter has some pleasant reading about game, dogs, sporting adventure and other topics suitable for camp and cruise.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

H. A., Detroit.—Ink stains may be removed by a concentrated solution of pyrohosphate of sodium.

C. R., New York.—When and where does the next National Sportsmen's Convention meet? Ans. Wilkesbarre, Pa.

H. L. B., San Antonio.—Do brook trout have regular scales? Ans. They have scales, but they are very minute; so minute as to be almost microscopic.

NATURALIST, Wilmington, N. C.—Sponges are bleached by being washed in weak hydrochloric (muriatic) acid, and then in cold water. When clean, they are soaked in weak sulphuric acid, and rinsed in rose water.

S., Danville, Ky.—Can good fishing be had at Put-in-Bay about the first of September? What kind of bait would you recommend? Ans. Yes, we believe so. Use minnows.

E. S. H., Grand Rapids, Mich.—I wish to communicate with your correspondent "Archer." Can you consistently send me his name and address? Ans. Address him at this office and it will receive attention.

O. B., Newport, Ky.—What is the best dog for hunting in Florida, pointer, setter, or cocker spaniel? What is the most serviceable tackle for tide water fishing? Ans. Pointer; but springer is better than either.

R. W. B., New York.—Is there a book published on the care of rabbits and pigeons, giving descriptions of breeds, etc.? Ans. *Fancier's Gazette*, "Boys' Book of Animals," "Chambers' Information for the People," "Columbarium," by John Moore.

C. P. Corry, Pa.—Will you please tell me through your paper, what to do with canary birds that have lice? Ans. Dust them over lightly with sulphur. Hang a muslin bag filled with the same, in the cage, so near the perch that the birds can rub against it.

H. B., Harrisburg.—I have a fine setter pup eight months old which has the mange very bad; his hair is coming out. I should very much like a cure. Ans. Five drops Donovan's Solution in water three times a day. Wash with Casswell, Hazard & Co.'s Juniper Tar Soap, also apply black wash.

G. S., Jr., New Orleans.—Could you inform me where I could get silk worms or their eggs? Ans. Probably of E. V. de Boisstere, Williamsburg, Franklin County, Kansas; Albert Brewer, Los Angelos, or Leon Gambert, East San Jose, California.

SILLIE BIRD.—What distance ought an F. Wesson rifle shoot with accuracy at a target—calibre 32, barrel 26 inches? Ans. With ordinary cartridges, about 100 yds. Long cartridge, 150 yds., and extra long cartridge, 200 yds.

RUXTON.—The person who borrowed from this office one Ruxton's "Life in the Far West" will oblige us by returning it at once. Any person having a copy of the same to sell, or a copy of Ruxton's "New Mexico and Arizona" will oblige us by notifying us.

STRIPED BASS.—Will you please inform subscriber as to best locality for large *striped* bass fishing? Ans. Go to New Bedford; inquire of J. H. Thompson, who will recommend a skipper to take you to No-Man's Land, not far distant. You can catch bass there now which weigh 50lbs.

C. M., Goshen, July 28.—In shooting at glass balls eight men shoot at 10 balls each, first, second and third money. A gets 10, B., 9, C., 9, D. S. B. and C. shoot off; C. wins. Who gets third money? Ans. The three prizes belong to the three best men. D. (S) gets nothing; 9 is better than S. B. gets third money.

G. E. H., Boston.—There was an error in printing the question in this column last week. The question was not as to the origin of the Gildersleeve and Laverack strains, but whether a couple of dogs were from either of these bloods. As we no longer possess copies of the register we were compelled to refer to the party in whose hands they were.

T. W. D., Boston.—Will you be so kind as to inform me of the game law of Maine, and regarding the first of September for shooting on Montauk Point, Long Island. Ans. In Maine woodcock and ruffed grouse season closes Dec. 1. On Long Island you can shoot ducks and geese after Sept. 1.

J. A., Rawsonville, Vt.—1. Do the American Arms Co. make a single breech-loader? 2. Where can I get the "action" (in the rough or fitted) for a double breech-loader? 3. Where can I get chilled shot in N. Y.? 4. How short a twist would be best for a long-range muzzle-loading rifle of .44 and would you advise a "gain?" Ans. 1 No. 2. Of almost any maker 3. Henry C. Squires, No. 1 Cortland St. 4. Depends entirely upon circumstances. Your gun maker can inform you.

J. S. S., Bloomington, Ill.—What is the name of fish caught in the lakes and ponds of Florida, which they call trout? It is described, as near as I can remember, as average weight, 6 to 7 lbs., whitish color, very large mouth. What we wish to settle is whether it is a representative of the trout family or not? Ans. The fish locally known as trout is the black bass (*Grystes salmoides*), belonging to the family of Percidæ. Full description in Hallock's Gazetteer.

F. H., Boston.—Is there good fishing at Chatauqua Lake, N. Y.? Would next month be a good time to go, and what would be the best kind of flies to take for trout. Ans. Chatauqua Lake is a very pleasant summer resort, and was stocked by Seth Green three years ago. There is fair fishing there, but we think you would be better satisfied to go to Findley's Lake, eight miles from the town of North East on Lake Shore R. R., or seven from Sherman on the Corry and Pittsburgh road. Salmon, trout, black bass, pike, etc., as well as good snipe, woodcock and game shooting.

W. W. Mc., Pa.—Is the sale of game killed in Wisconsin, Kansas, Iowa, Minnesota and Illinois forbidden by statute? If so, when was such law enacted? Ans. We suppose you mean to inquire if game killed in these States may be sold out of the States. There is no law of this character that applies to Illinois, Iowa and Wisconsin. There is a law in Kansas prohibiting game of any kind being taken out of the State and one in Minnesota that applies to all game except ruffed grouse (locally known as pheasants), approved March 5th 1877.

E. L. F., Baton Rouge, La.—I wish to get a magazine rifle, but liking for hunting, a large calibre rifle, the Winchester being only .44, and the Evans carrying too little powder I have thought of the Spencer. A large quantity of Spencers are advertised for sale by a certain firm, new, but as they have not been made for years I'm afaid they may be guns gotten up "for sale" by private parties. Do you think any Spencers (new) for sale now are genine? Ans. The new Winchester .45 cal. uses 70 grains powder, and will probably suit your wants. The Spencer patents are held by the Winchester Co., and no Spencer rifles are now made.

D. W. S., Harrisburg.—We have no kennel register. We have turned all pedigrees, etc., over to the Secretary of the National Kennel Club, Mr. L. H. Smith, Strathroy, Ontario, whom you must address.

H. W. C., Shin Creek, N. Y.—In playing croquet can a rover take anything but a light croquet from a ball which he has hit? Can a ball hit another more than once before going through the next arch? Ans. Yes, any ball can play on any other ball once each hoop without going through a wicket.

E. C. H., Manchester, Vt.—1. If in a target shoot with rifles a bullet strikes a stone, and, glancing, hit the target inside of one of the rings does the shot count? 2. What are the best rules for target shooting and where can I get a copy? Ans. 1. No. 2. National Rifle Association, 23 Park Row, N. Y. city.

HIGH JINKS, Pittsburgh, Pa.—The section of the game laws of Pennsylvania which relates to field plover reads thus: "No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any upland or grass plover, between the first day of January and the 15th day of August, in any year, under a penalty of $10 for each bird so killed or had in possession."

R., Warren, Pa.—Often, for want of anything else, I feed my setter dog on fresh meat. Will it hurt his scent or injure him in any way for hunting? He is three years old, and has an abundance of exercise, so that he keeps thin and hard and in good working condition. Ans. No, it had best be well cooked, however.

JAY, New York.—1. Please tell me by whom and where were sliding seats invented, and what crew first used them? 2. What is the regular weight of a rifle for shooting at 200 yards? 3. What age is the youngest allowable to shoot at Creedmoor? Ans. 1. Do not know. 2. Any weight to suit the buyer. 3. Two years and upward.

MICROSCOPE, Boston.—The following makes an excellent mounting fluid for microscopic objects: gelatine, 1 oz.; honey and distilled water, of each 5 ozs.; alcohol, 4 drs.; creosote, 6 minims. Mix and filter through fine flannel. Always heat the honey before adding it to the gelatine, which must previously have been dissolved in boiling water. Add the creosote last of all.

WIDGEON, Cairo, Ill.—What is the advantage of using one size larger wad than the calibre of shell? Will it not expand the shell so as to prevent its easy passage into chamber of gun, or if there is a loader or other device, by the use of which such expansion could be avoided, where can it be obtained, and at what price? Ans. Use wads same size as shell. The wads used are generally one size larger than the gauge of gun, not shell.

DR. H. L. S., Joliet, Ill.—Where, in New York State or Pennsylvania, can I find good deer and bear hunting in November and December? Also, would you buy a Winchester or a Remington 44 cal. for such shooting? Ans. The Adirondacks, in New York, going in by way of Lowville, north of Utica. Ridgeway, Elk Co., Pa., reached via Philadelphia and Erie branch of Pennsylvania Central Railroad. You ought to have the "Gazetteer." Both are good. We are not at liberty to decide such questions.

T. S. S., E. 34th St.—What can I do for a setter five years old? He vomits everything he eats, it matters not what I feed him; does not have much fever; is cheerful, and does not show any sickness. He was always in the country till last May; since then I have kept him in back yard of my house in New York. Ans. Cause: Non-assimilation of food; he does not get exercise enough. You had best half starve him a week, then give 10 grains of the following powder morning and evening: Rhubarb, 6 drs., powdered white castile soap, 2 drs., heptandrin and powdered cubebs, of each 1 dr.

ICEBERG, City.—If you are bound to have ice water in the woods you had best use the finely powdered crystallized ammonia nitrate. Dissolve it in an equal weight of water at 50 degrees Fahrenheit, and a pail of water set in the mixture will sink to a temperature of 3.20 Fahr. This is the best freezing mixture, for the simple reason that if this solution be placed in a shallow pan in the sun the water will evaporate, and thus the ammonia may be used again and again to freeze with.

A. L. F., Elkhart, Ind.—1. How shall I manage live wild geese decoys? 2. What is the nearest point at which I can find good duck shooting in season? also prairie chickens? 3. Does the inclosed sample of paper correspond with the English paper used to test penetration of shot? Ans. 1. Anchor them so they cannot fly. 2. Bureau Valley, Ill.; Syracuse, Kosciusko County, Ind.; on the Kankakee marshes in Stark County, and at South Bend, Ind. 3. Yes. Penetration favorable.

E. D. C., Boston.—I have a setter eight months old, whose skin seems to be nearly covered with red blotches, and if he gets a scratch it festers; his eyes run a little, but his hair is glossy and bright, and he has a good appetite; is the least bit dull, but hardly enough to notice it. Ans. Use Caswell, Hazard & Co.'s Juniper tar soap to wash the animal with morning and evening. Also give him ½ teaspoonful of the following mixture three times a day: Iodide of potassium, 1 dr.; Dentoiodide of mercury, 2 grs.; comp. spirits of lavender, 1 dr.; simple syrup, q. s., to make four ounces. Donot give on an empty stomach.

BUCK SHOT, Tiffin, Ohio.—This spring we killed what was supposed to be a crane; but on picking him up we found that it was different from anything ever seen here before. In size and shape it was about the same as a crane, but its toes were shorter, its back and wings were the color of the common blue crane, and its head was black and white with a few long feathers extending back from the top of its head five or six inches. The breast was lightest brown with fringe-like feathers. Please name? Ans. We presume that it was a great Blue Heron, *Ardea herodias*, probably a male in the breeding dress.

U. D., Wanesburgh, N. Y.—1. I shot at a paper 16½x22 inches that had marked on it four circles, viz.: 8, 10, 12 and 16 inches in diameter, with a Parker gun, 12 gauge, 28-inch barrels, 8 lbs., 3 drs. powder, 1¼ oz. No. 10 shot. The result was as follows: In the whole paper, 742 pellets; in the circles, 102, 214, 424 and 595 pellets respectively. Do you call this a good shot? I counted the pellets in 1¼ oz. No. 10 shot and found 911. 2. Did H. Thompson import a black and tan Gordon setter by the name of Prince? If he did I want to know his pedigree and whereabouts. 3. My Gordon setter has had two or three fits or spasms this summer. He is taken all at once, and as soon as they leave him (which is in three to five minutes) he is as well as ever. He seems well, is very playful, and is in good order. What shall I do for him? Ans. 1. Depends upon the distance shot. We presume it is good. 2. Write to L. H. Smith, Strathroy, Ontario, Secretary of National Kennel Club. 3. Give a large dose of castor oil. Also give ten grains of the following powder three times a day: Rhubarb, powdered, 6 drs.; white castile soap, powdered, 2 drs.; heptandrin and cubebs, powdered of each 1 dr.

—Undoubtedly one of the best and cheapest stocks of Carpetings, Oilcloths, Mattings, etc., to be found in the United States is that of Messrs. JOHN H. FRAY, SONS & CO., Washington street, Boston. I. W. Adams is the sportsman of the firm, and will take special pains to please any of our friends calling upon him or with any orders sent him. It is a good, reliable house.

FOREST AND STREAM AND RIFLE AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, AUGUST 2, 1877.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

☞ Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS, Business Manager. S. H. TURRILL, Chicago, Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, August 3.—Trotting: Buffalo, N. Y.; Freeport, Ill., Jefferson, O. Running meeting: Saratoga, N. Y. Base ball: Hartford vs. Athletics, at Philadelphia; Athletic vs. Hartford, at Philadelphia; Boston vs. Allegheny, at Pittsburg; Auburn vs. Haymaker, at Lansingburg; Resolute vs. Cohoes, at Cohoes, N. Y.; Star vs. Sylvan of New York, at Greenville. Cricket: Ottawa vs. Port Hope, at Ottawa. Creedmoor: Infantry, 2d brigade, 1st division.

Saturday, August 4.—Running meeting at Saratoga. Base ball: St. Louis vs. Cincinnati, at Cincinnati; Alaska vs. Arlington of S. I., at West Brighton; Magnolia vs. Astor, at Stapleton, S. I.; Resolute vs. Haymaker, at Lansingburg; Star vs. Clipper of New York, at Greenville; Orange vs. Chelsea, at Orange; Lafayette vs. Winona, at Brooklyn; Boston vs. Athletic, at Philadelphia; Manchester vs. Tecumseh, at London, Can. Cricket as above. Regattas: Delaware (Mass.) Yacht Club, South Shore; San Francisco Yacht Club. Creedmoor: 10:30 A. M., sixth competition for Sharps Rifle Co.'s prize; 3 P. M., Seventh Regiment Rifle Club Competition for Diamond Badge.

Monday, August 6.—Base ball: Boston vs. Athletic, as above; Manchester vs. Tecumseh, as above; Chicago vs. Louisville, at Louisville; St. Louis vs. Cincinnati, at Cincinnati; Jefferson of Brooklyn vs. Monitor, at Waterbury. Regatta of Riverside Rowing Club, New Orleans; regatta of Rockaway Yacht Club. Creedmoor: Infantry, 3d brigade, 1st division.

Tuesday, August 7.—Trotting: Hudson, N. Y.; Prophetstown, Ill.; Tiskilwa, Ill.; Sullivan, Ill. Base ball: Cincinnati vs. Chicago, at Chicago; Louisville vs. St. Louis, at St. Louis; Boston vs. Hartford, at Brooklyn; Indianapolis vs. Chicago, at Indianapolis; Lafayette vs. Union, at Brooklyn. Regattas: Scull race for championship of Halifax Harbor; Riverside, as above; Rockaway Yacht Club, as above. Creedmoor: Competition for selection of American Team.

Wednesday, August 8.—Trotting, as above. Base ball: Boston vs. Hartford, at Brooklyn; Manchester vs. Maple Leaf, at Guelph, Canada. Creedmoor: Competition for American team, 3 P. M.; Seventh Regiment Competition for the "Rifles;" also competition for Sharps Special Military Prize.

Thursday, August 9.—Base ball: Manchester vs. Maple Leaf, as above. Scull race between Hosmer and Driscoll. Regatta of West End and Lakeman Clubs at Silver Lake, Mass. Creedmoor: Infantry, 5th brigade, 2d division.

THE EDITOR AFLOAT.—The editor of this paper has devoted himself with wearing assiduity to book and paper making for the past year, and needs a rest. The results of his labors are shown in the improved and enlarged FOREST AND STREAM, and more especially in the very complete encyclopedia which has recently been published under the title of "The Sportsman's Gazetteer and General Guide." This volume contains 900 pages, of which 250 are in small type, and covers more ground than any kindred work extant. The labor bestowed upon this book has been immense, and certainly entitles the editor to an extended vacation. To-day he follows the steps of illustrious predecessors and goes West, intending to visit northern Michigan, Wisconsin, Minnesota and Manitoba.

Mr. Hallock will return by the 1st of October, at which time we shall look to the columns of the paper for evidences of his recruited health. The Western railroad companies have voluntarily extended every courtesy to him, and it will not be the fault of considerate officials if new vigor is not infused into his body and mind by his tour through northern Michigan and Wisconsin.

THE GAME OF CHESS—2d Paper.

TO refer again to the origin of chess, while discussing the modifications to which it has been subjected by the lapse of time. It is now acknowledged that the best means of dissipating the obscurity which involves this subject consists in the philological analysis of the terms of this game used among the different nations, and in the examination of the rules to which they submit in playing. We shall not repeat here all the results of this research, it will be sufficient to mention the principal conclusions drawn: 1. That the noble amusement is of Indo-Persian origin. 2. That it was unknown to Greco-Roman antiquity. 3. That it was the Arabians who, in the course of their conquests, introduced it into Spain and Sicily, whence it spread into Italy, France, England and Germany. 4. That in Europe it has experienced many important changes in the terms as well as in the rules of the game.

These results, though very accurate, being principally drawn from certain linguistic and historical data, it would surely be interesting to confirm by the witness of a nation which should have received the game of chess, not of the Spaniards and Italians (who, as before noted only received it through the medium of Arabians), but directly from East India—Persia itself. This nation is the Russian, or Muscovite, which, in the almost complete state of isolation in which it remained during several ages, after its conquest by the Moguls (and even a century before), up to the time of Peter the Great, could only learn the game of chess from its ancient conquerers, who themselves learned it from the Persians.

It has never been doubted that chess was already played in Russia during the interval of time mentioned. It is therefore necessary to cite but one of the hundreds of historical data—that of Czar John the Terrible playing a game of chess with one of his favorites at the moment of being struck with apoplexy. This happened in 1584.

Besides, were there not any historical proof, any public notoriety, philology is there with its clear incontestible facts to dissipate the least doubt which might exist. We know the very extraordinary etymology of the *queen* of the game of chess, an etymology which has only latterly been clearly made out. From the primitive Persian word *ferz* (corresponding to the Turkish vizier), which means the commander-in-chief of the army, the ancient French have first made *fierce*, then *fierche*, then vierge, which they afterward replaced by the queen. In the same manner the Italians, the Germans—and, in imitation of them, all the Western nations—have taken the *ferz* for a virgin, or queen. How do you suppose this piece is called in Russian? It is called precisely *ferz*; a word which in the language of the country signifies nothing at all, so that the Russians who are not linguists (that is to say the greater number), are absolutely undecided as to the gender of the substantive, and decline it sometimes with the masculine, sometimes with the feminine, preoccupied as they are with the idea of the queen. Is any more striking proof needed as to the origin of the game? Besides the interpellation *schaka*, which signifies chess in Russian as in German, is it not directly addressed to the Persian king, or ruler Schakah?

Here follows a philological data quite as striking. We know that from the Arabian *alfil* (al is the article), which means the elephant, the Italians have made *alfire*, and the French *le fil*, then *le fol*. Well! how is this piece named in Russian? Precisely *stone*, the elephant. Certainly these denominations cannot be borrowed from the West.

The king is called *tsar* (king), as it ought to be. The knight, *kogne*, which signifies courser, horse. The pawn, *piechke*, a characteristic denomination, and appropriated exclusively to this single object; it means merely a little infantry soldier.

That which is very singular is the name of the castle—it is called *ladia* (vessel). This denomination can only proceed from a mistake. The ancient Muscovites must have taken for vessels the figures of war chariots, constructed nearly in the form of vessels. But it is essentially necessary to remark that these denominations are ancient—that not one of them indeed is modern. The Russian monarch has not for a long time been called Czar, he is called Emperor; the knight is no longer called *kogne*, but *lochad;* the vessel is no longer called ladia, but *korable;* the preceding denominations only exist in the written language and not in the spoken language. In a word *ferz* and *piechka*, as we have said, signify nothing out of the region of chess. Here is a manifest proof of the antiquity of chess in Russia, for these denominations of the pieces can only have been invented at a period when they were still in use in the spoken language.

We know that since Peter the Great, the manners, the customs, the language even of foreigners have invaded Russia, and Chess has felt their influence. At first the foreigners have aspired to change the name of the pieces, and some modern Russians, little scrupulous, have imitated them. From *tsar* they have tried to make *korol* which is only applied in Russia to the kings of Western Europe. From *ferz*, the General, they have tried to make *korolena*, a queen of Western Europe. From *ladia* they have made *bachnia*, a castle. Some have pushed their audacity so far as to name the bishop, or fool, elephant (*dourak*); but all Russians who attach any value to the purity of their language, as well as the preservation of what is good in their ancient customs, agree in repelling these foreign innovations. In truth, if the Russians have any need to envy the Western nations it is certainly not for having turned the General of their chess army into a virgin, or a queen!

In the meantime, if the national denominations were preserved, the rules at least of the West prevailed in Russia. We feel sure from reading ancient authors—for example, Lopez—that the castle, at any rate the manner of castling as now practiced, did not anciently exist. Besides the Turks, the Persians, the Georgians (and there are players of the first strength in Georgia, where the nobility made a special study of the game) do not castle up to the present time. Do we wish for a philological but sure proof that up to Peter the Great they did not castle in Russia? How is castling called in Russia? *Rokirovrat*, a word which has neither grammatical Russian form nor root, and which is directly taken from the German *rochiren*. The Russians have, besides, borrowed their laws from the Germans, their masters in the military art. Thus, the latter not permitting the plurality of the queen, the Russians have imitated them, and we must, to have a new one, absolutely wait until we are widowers of the first. A small number only of amateurs of the St. Petersburg Club, having felt how much more natural and equitable the French and English laws are in this respect, have abolished (for themselves, indeed) this hard and unjust German usage.

In the early days of the game the powers of the queen were but small. The chess-boards used by Tamerlane were larger and contained many more squares than those at present in use. Carrera invented two new pieces to be added to the eight commonly in use. One of these, which he called *camepione*, is placed between the king's knight and castle; the other, named *centaur*, between the queen's knight and castle, has the move of the bishop and knight united. This invention, however, did not survive its author. In another of this kind the two additional pieces are called the *centurion* and *decurion;* the former situated between the king and his bishop, in its move the same with that of the queen, but only for two squares; the latter moves as the bishop, but only one square at a time. This, like the former, died with its inventor.

The chess-board of Tamerlaine was a parallelogram, having eleven squares one way and twelve the other. In the memoirs of Marshall Keith we find it related that he invented an amusement something similar to that of chess with which the king of Prussia was highly entertained. Several thousand small statues were cast by a founder; and these were ranged opposite to each other as if they had been drawn up in an army, making the different movements with them as in real service in the field.

There is an amusing variety at the game of chess in which the king with eight pawns engages the whole set by being allowed to make two moves for every one of his adversary. In this he is almost certain of coming off victorious, as he can make his first move into check and the second out of it. Thus he can take the queen when she stands immediately before her king, and then retreat, for he cannot remain in check. He cannot be checkmated unless his adversary has preserved his queen and both castles.

It seems improper to close this article without some allusion to the wonderful chess automaton which astonished all Europe a century since.

In 1738 there was exhibited, in Paris, an androides, or automaton flute-player, the invention of M. Vaucanson, of the Royal Academy of Sciences. This stimulated M. de Kemplen, of Presburg, Hungary, who declared that he would not only equal, but excel M. de Vaucanson. This he did in 1769, presenting to the world his wonderful chess-player. Now, all must know that chess, so far from being mechanically performed, requires a greater exertion of the judgment and rational faculties than is sufficient for the accomplishment of the majority of matters of greater importance. Hence an attempt to make a wooden chess player must appear as ridiculous as to make a wooden clergyman (this, however, is not so difficult as supposed) or Secretary of State. That this machine really was made, however, there is no doubt, as it was exhibited in England for upward of a year—1784-5.

It was a figure as large as life, in Turkish dress, sitting behind a table, with doors three feet and a half in length, two in depth, and two and a half in height. The chair on which it sat was fixed to the table, which was mounted on wheels. The automaton sat with the right arm on the table, the left holding a pipe; this was the arm used in playing, the pipe being removed. A chess board of eighteen inches was fixed upon the table in front of the figure. The table, or rather cupboard, contained wheels, levers, cylinders, and other peices of mechanism, all of which were publicly displayed. The vestments of the figure being removed showed the body full of like appliances. A little door in the thigh being opened, the vestments removed, and all the doors open, Mr. Kemplin would wheel his automaton through the audience which he is entertaining, inviting the closest scrutiny and inspection.

When about to play, the doors were all shut, and the automaton always made the first move. At every motion, wheels were heard; the image moved its head, and looked over every part of the board. When it gave check to the queen, it shook its head twice, and thrice when the check was to the king. It likewise shook its head when a false move was made, replaced the piece, and made its own move, by which means the adversary lost one.

M. de Kempelen remarked as the most surprising circumstance attending his automaton, that it had been exhibited in the largest cities of Europe to thousands, many of whom were mathematicians and chess-players, yet the secret by which he governed the motion of its arm was never discovered. He prided himself solely on the construction of the mechanical powers by which the arm could perform ten or twelve moves. It then required to be wound up, after which

it was capable of continuing the same number of motions. This androides could not play unless M. de Kempelen or his substitute was near to direct its moves. A small square box, during the game, was frequently consulted by the exhibitor, and herein consisted the secret, which, he said, he could in a moment communicate. He who could vanquish M. de Kempelen was of course capable of conquering the automaton.

Another chess-player made its appearance a few years later, and conquered the best players of Europe. But while at Moscow, exhibiting the Imperial Count, the peculiar game of the automaton was detected as identical with that of a dwarf formerly a hanger-on of the court, and celebrated for his skill at the game. This dwarf was concealed in the body of the image, and directed the movements of the arm of the "Grand Turk," that offered him concealment.

GAME PROTECTION.

VERMONT, *Manchester*.—The Ondawn Fish and Game Club, of Factory Point, Vermont, placed a number of wild deer upon the mountain May 10. Other clubs in different parts of the State are also moving in the matter of restocking the mountain lands of Vermont with deer. The law in regard to their protection is very stringent, and as the clubs are at considerable expense in the matter, it is safe to say that they will prosecute all violations of law with the greatest vigor. If the State can only have her mountain lands again stocked with beautiful deer, and the streams filled with speckled trout, Vermont will indeed be a paradise. It can be done with proper legislation and forbearance on the part of the people.

Cape Vincent, June 22.—T. B. writes that no fish can be found near Grenadier Island except yellow perch, and that the trouble is entirely due to the free use of nets in the contiguous waters. "From the nets around Fox Island (close to Grenadier Island, and very much smaller than the latter), were taken and sent to Cape Vincent in all last week, fifty-six hundred pounds of black bass! And this in June! Now, can nothing be done to stop this short of public indignation? The people of this village are now troubled about it. The farmers see that it will hurt the value of their property, and yet all are doubtful whether they would be justified by the law in removing the nets if the fishermen, after warning, refused to take them up. Would not the Jefferson Co. Supervisors have the power to interfere on petition of the people?

[We see no reason why the county authorities should not take action in this matter, for other counties have put an end to netting that was depopulating their waters. We do not see, however, why Grenadier Island should not furnish plenty of black bass, particularly as Clayton—a better point for netting than the island—still furnishes the tourists with sport. We fear our correspondent had an unlucky day. Perhaps a second trial of their waters would be productive of better results.]

—Sandford F. Sherman, of New Hartford, N. Y., has published the game laws of the State, in convenient form, with a copious index which adds much to the facility of consultation.

—Our correspondent below makes a very natural and just complaint, but we are sorry to say that there appears to be no law to prevent seining in the salt waters of New Jersey:

SEAVILLE, N. J., July 23, 1877.

EDITOR FOREST AND STREAM:

"I would like to ask what method we should take to prohibit the hauling of large seines for salt water fish in their spawning season. For six weeks past there has been eight or nine large seines, catching large amounts of fish, one net (positively to my knowledge) catching 105 sheepshead at one haul, and for several days after 60, down to 35 per day, which frightened the balance so they will not take the hook. No uncommon thing for one man to take with hook twelve or fifteen per day before the seines haul the grounds. Carson Inlet has been noted for years as being the boss place for sheepshead. Small fish, such as bluefish, weakfish, kingfish, flounders, etc., are caught by tons every day in seines, and a great number of them put into a compost.

CURLEW.

PENNSYLVANIA, *Meadville, June* 21.—Cannot the State Sportsman's Association put a stop to the night spearing on Chatauqua Lake? One evening last week I stood on the dock at Lake View and counted forty "jacks" out, and each boat averaged fifty pounds of fish. Seth Green stocked the lake with salmon trout, I believe, and he certainly should take some action in the matter as it is being rapidly depleted of fish by this wholesale slaughter. W. G. L.

—Warrants have been issued in Blair County, Pa., against eighteen individuals who are accused of seining in the Hollidaysburgh reservoir.

FOND DU LAC GAME CLUB, WISCONSIN.—At a meeting held July 18th the club decided to employ a game-keeper at two dollars per day, also to offer a reward of ten dollars for information leading to the arrest and conviction of any person violating the provisions of the game law. This reward is offered in addition to the penalty of ten dollars prescribed by State statute for each bird killed out of season.

S. M. HYATT, Sec.

ILLINOIS—*Chicago, July* 19.—One of the best laws enacted by the Illinois Legislature at its last session was the act requiring the Governor to appoint two officers—one for the Union stock yards of Chicago, and one to be stationed at the stock yards of East St. Louis at a salary of $1,200 a year—whose duty it is to enforce the laws of the State for prosecution of cases of cruelty to animals. Illinois, we believe, is the first State which has appointed special officers and provided for the payment of their services. Reports from various sections of this State are highly flattering as regards the prairie chicken and quail. They are doing fine, and an abundance of sport is expected. ROVER.

Oak Park.—Tom Tracy writes that the new game laws of Illinois, concerning the shipping of game, reads: "That it shall be unlawful at any time for any person or persons, who is or are non-residents of the State, to kill, trap, etc., in any county in the State, any prairie chicken, quail, grouse, etc., for the purpose of shipping, marketing or removing the same outside the State." This is, I understand, to apply only to non-residents, while residents will enjoy the same privileges as before. The intention was, I think, to prohibit all shipping of game; but the law will certainly allow residents of the State to ship, and from the looseness of the provision is very liable to be twisted about to suit the convenience of non-residents. All parties contemplating trips to Illinois should bear in mind that the opening on prairie chickens is changed by the new law from Aug. 15 to Sept. 1. The law was approved May 14, 1877, and is in force July 1, 1877. I think there will be a good supply of prairie chickens this year from all information I am able to get. The other changes in the law were published last month.

FLORIDA GAME LAW, ETC.

OFFICE "FLORIDA CRESCENT," }
FORT REED, Fla., July 9, 1877. }

EDITOR FOREST AND STREAM:

Hope you won't resent this familiarity on the part of one you have never seen, but really—like the old lady—"I do set a sight of store by you" and your FOREST AND STREAM: and as your representative pays its regular weekly visits I feel as though I was sitting down to enjoy a pleasant chat with an old acquaintance.

The game law is a fact and is doing wonders for the game, which is daily becoming more and more plentiful. Many farmers complain bitterly of the deer, for their destruction of their potatoes and peas, but when they are too bad they can be invited out with a few buckshot. The general disposition, however, seems to be to give the game a fair chance. If you desire good sport this winter shooting birds just come down this way. I have seen thirteen different coveys this week; some of the young birds are already two-thirds grown. Deer and turkey are numerous, and plume birds, alligators and frogs abundant. Of the latter, you can get any size desired, from a fellow of Falstaffian proportions down to one no larger than a good-sized bean. The mocking birds seem to thoroughly understand that they are protected now and henceforth, and make themselves very much at home. I know of two nests, each with four young ones; one is on the edge of the public road, where persons are passing every hour of the day and night, and the other is in my young grove, where my three inquisitive youngsters can and do visit it at all times of the day; but in neither case do the birds seem in the least disturbed by the constant presence of humanity.

By the way, speaking of the game law, Dr. Kenworthy and Maj. Alden just took all the merit (*vide* FOREST AND STREAM, May 31, 1877,) and walked off with it, never leaving a poor fellow a morsel of credit for the work he has been doing for the past three years: and hard work it was, to create a sentiment among the natives favorable to a game law. I certainly did my part that way in Orange county, and used all the little influence I had with our senator and others in authority to secure its enactment. And then to have these two most worthy gentlemen appropriate all the credit is too bad. I have but one objection to the law; it does not go far enough, or rather does not throw its protecting arms around a sufficient number of our little feathered friends.

In your comment on the law you say "It is a good game law; it permits the winter visitor a shot at pleasure, etc." True; and just here is a defect that for one I confess my inability to see a remedy outside of the sportsman's honor. To his credit be it said, this kind of a man will never kill for the love of killing, but there are those who come among us who kill and kill, making use of every appliance that skill and science can bring to bear to run up a big score. I do not exaggerate when I say I have seen a two-bushel basket of fine birds thrown away after they had been counted and booked by the—shall I call them sportsmen?

FRED L. ROBERTSON.

MIGRATORY QUAIL.

TWENTY-FIVE years ago Sam Patch's barber's shop in Rutland, Vt., was the favorite resort of a band of choice spirits, who afterward became somewhat celebrated in a corporate capacity as the "Rutland Fur Company,"—good fellows all, keen and ardent sportsmen, but Sam himself was the king*liest* of them all. There, night after night, would they congregate to talk over the last fox-hunt, shooting or fishing excursion, and to form plans for future sport. In time it came to pass that the frequenters of the place found it more convenient to leave guns, fishing tackle and the like there than to carry them home; the dog's, too, following their masters, became domiciled there, and the whole establishment looked more like the gamekeeper's cottage than like an orderly, well-conducted barber's shop; and in truth little cared Sam who was shorn or who unshorn if there was sport to be had or to be talked of. Some person, noticing this nightly gathering of sportsmen, in a spirit of jest christened them the "Rutland Fur Co." The name was gracefully accepted, and stuck, and to this day all Rutland sportsmen are classed and considered as belonging to the "Rutland Fur Co." Of the original members but few, alas! live to remember and laugh over the jolly larks of that olden time. Many of those yet living have gone to other fields. Sam himself is, I believe, following his profession somewhere in the State of New York, and report says of him that he is as fond of dog and gun as ever; but he must be too old to follow the hounds, as was his wont in the days of which I write. The name, however, as I have said, stuck, and the "Fur Co." is now as fixed an institution as any of our banks. The old headquarters have long since been abandoned for new, where nightly, as of yore, you may find our keenest and best sportsmen assembled. Some three or four years ago the custom obtained of bringing to headquarters the skins of such fur-bearing animals as might have been captured by any member of the club, and here they were left, stretched and dressed to look their biggest and prettiest; and as spring approached and the season drew near its close the room was completely hung with the skins of foxes, raccoons, and the like. Then arose the question what should be done with them. No one cared to carry away his contribution, and the senior member was, therefore, directed to dispose of them by sale, and to deposit the proceeds in the savings bank to the credit of the Company. Then it came about that we had, not only a local habitatation and a name, but we had a bank account as well; we could pay dividends; things were looking up with us. At about this time Dr. Middleton Goldsmith of this place, visited Europe for the purpose of studying the game laws and observing their effects. Many of your readers will remember his very interesting letters on that subject published in the ROD AND GUN, in in the spring and summer of 1875.

One of the letters contained some allusion to the Migratory Quail, which at once attracted the attention of Hon. Martin G. Everts, also of this town, who had for some time been studying the question of how to introduce them into this country. He once addressed an open letter to Dr. Goldsmith, which was published in the ROD AND GUN. To this letter the Dr. replied through the same columns, and Mr. Everts at once opened correspondence with Hon. Geo. H. Owen, then as now, United States Consul at Messina, in the Island of Sicily. Arrangements were made for the shipment of one hundred pairs of the birds in the spring of 1876, but a violent storm drove the birds out of the course of their usual migrations northward, and they could not be procured in that locality, and the attempt was, for the time, abandoned. Early in the spring of 1877, however, he again opened correspondence with Mr. Owen, and was so fortunate as to receive on the 8th of June, one hundred and ninety-seven strong healthy birds, out of two hundred shipped, only three having died or been lost on their long journey of four thousand miles. The birds were turned down in a quiet, retired place, near Rutland, on the 11th of June. It seemed that they immediately scattered and paired, for we heard of them within a week, miles away and always in pairs. The farmers took great interest in the matter (as most of them do in matters pertaining to the propagation and preservation of fish and game), and kept us fully posted as to their observations. On the 7th of July, we were cheered by the report of the discovery of the first nest; and straightway his Honor, Judge Everts, leaving bench, bar and jury to their own devices, hied himself away to become satisfied that the good news was true; and it was true. There, in the midst of bushes, placed about it by the merciful farmer, after having unwittingly almost destroyed it, was the nest and the mother bird, sitting on thirteen eggs. The experiment then, is so far a success; this much is proved. The birds can be had, they bear confinement and transportation wonderfully well, and they are breeding here. It yet remains to see whether, like the salmon, they will return to the place where they were bred. In appearance these birds resemble our own quail to a striking extent; they are not, however, as large, although at the time we had the best opportunity to observe them. While they were in the cages they did not of course show at their best, worn as they were by long confinement. Neither are they, as I judge, as strong on the wing, although it will require a keen eye and ready finger to bring them down. They have not the pleasant, cheery call of our own "Bob White," their note more nearly resembling the "phweet" of the young of the ruffed grouse. In the matter of food they seem to be omnivorous, eating with equal relish small grain, berries or insects. In plumage, color, etc., they so nearly resemble our native quail, that our fear is that sportsmen in the Southern States may, without soon enough noticing the difference, kill some of them during the winter. Will you not, Mr. Editor, caution Southern sportsmen on this point. It would be a great pity if any of these birds should come to grief by such a mistake. Now for the cost of all this, for we hope that others will wish to try this for themselves. As soon as it became known that Judge Everts had determined to make this venture alone (he would say "play it alone"—such is the force of habit), a meeting of the club was called, and it was solemnly decided to devote the entire capital of the Fur Co. to this most worthy object; and if that should be found insufficient, as we supposed it would be, that the members should be assessed for at least a portion of the additional sum required; but behold, when the bill came, it ammounted to the sum of ninety-one and one-half livre, which being interpreted means sixteen dollars and eighty-six cents, to which add for transportation, steward's fee for care on shipboard, food, etc., eighteen dollars and fourty-four cents, and you have thirty-five dollars and thirty cents, or about eighteen cents per head; actually less than we can get the dead birds for from Chicago, and the Fur Company still have money in the treasury.

Now, if any persons or clubs desire to embark in a like enterprise—and I hope many will—I should advise them to negotiate with Mr. D. Bonauno, of Messina, Sicily. Arrangements for shipments to the Northern States should be made as early as January 1st, in order to make sure of the birds before they have passed to the northward on their migrations. If the birds are to be introduced into the Southern States, it would probably be best to procure them in the autumn that they may winter in the South, and be ready for the northward movement to their breeding grounds in the early spring. In this case probably the African ports on the Mediterranean would be the best place to procure them from.

VERDE MONTE.

P. S.—Since the above was written, we are advised that many other nests have been discovered, and many broods hatched out; two nests have been accidentally destroyed. "The little beggars persist in nesting in the meadows instead of the pastures, and as they sit very closely the mowing machine makes sad havoc with them. We hope, however, that next year they will nest earlier and be out of the way before the haying season commences. They appear to have a quavering ventriloquil note, so that it is impossible to locate their whereabouts by the call they give; neither can you tell whether they are fifty feet or fifty yards away. Two or three persons listening to the note of a bird, will locate him in opposite directions, and each be willing to bet that he is right, while the fourth man may safely bet that they are *all* wrong."

GOING TO CALIFORNIA?—Here is what our frequent correspondent, R. E. Ducaigne, says about it:

That is, are you going to emigrate thither? If so, and if your decision has been arrived at after digesting such superlatively flowery accounts of that *paradise* as have been written by Mr. Nordhoff and others, *don't go;* or, going, arrange things. not forgetting finances, in such shape that you can come back East speedily. Things there are not in such charming condition as have been represented, and this year in particular is one of most decided depression. In every part of California I met multitudes of persons—bitterly lamenting their sad fate—who had gone there on the strength of statements, "well calculated to deceive." Some of the more sensible of the newspapers on the slope, seeing at last the evil that is being done that State, have raised their voices against the awful influx of deceived people from the East. To such as have five or ten thousand dollars about their clothes that they'd just as soon toss away as not, I say no word; they can have a gay time there, and stay or come back as they may elect. It is to those whose means are limited that I would say: Do not go to the Pacific Coast unless you have a dead sure thing of it beforehand. "Genteel employment" is not to be had, and charity—well Californians are charitable as things go, but not as we understand things here. In that, as in most other things, their resources have been overtaxed, and the poor there are pretty apt to die uncared for.

NEW MOSQUITO NET.—Mr. A. A. Cowing is the inventor of a new mosquito bar, which cannot fail to please sportsmen and campers. It is so arranged as to be readily folded and packed in dimensions suitable for the pocket, weighs less than a pound, and can be folded or set up in less than half a minute. Once tried, it will be considered as indespensable to the outfit of the traveler and tourist.—[See advertisement.

LAWN SETTEE.—C. Webster Peck, of 110 Chambers street, City, furnishes a superior lawn or garden settee, either with or without a folding tent top. The back of the seat reverses like a car seat, and the canopy may be thrown backward or forward as desired. It is four and a quarter feet in length, the extreme height of canopy being six and one-half, with a spread of four feet. The canopy folds up like a pocket rule and may be renewed at pleasure. These settees have become a necessity with those fortunate possessors of lawns or gardens.

Mr. Peck also manufactures that almost indispensable article of utility and comfort, the hammock. They are a luxury to the healthy, a necessity to the invalid, and furnish a safe bed for children. As a substitute for the cradle it is unequalled.—[See advertisement.

DOG BREAKING.—W. H. Holabird, of Valparaiso, Ind., has issued a neat pamphlet of thirty-two pages, entitled "Practical Hints on Dog Breaking." This is especially adapted to the wants of Western amateur sportsmen, and is a very thorough and comprehensive digest of the art of training canines for the field. It also contains field trial rules, list of awards at the N. Y. City Bench Show, and a descriptive price list of Holabird's Shooting and Fishing Suits. Price 25 cents by mail.

OBITUARY.—Western sportsmen will be pained to hear of the death of Mr. Henry Jedkins, at his residence in Ludlow, Kentucky, after an illness of only two days. He was much esteemed.

GLASS BALL SHOOTING.—Captain Bogardus, "Champion Wing Shot of the World," offers a superb gold medal to be shot for, the winner to hold the Championship of America. This medal is to be held two years against all challengers, matches to take place every two months if challenged. The conditions are: $10 entrance fee, open to all comers; one hundred (100) glass balls each; the winner of the medal to have $10; all other moneys to constitute second, third and fourth prizes, fifty per cent. to second, thirty per cent. to third and twenty per cent. to fourth. All entries to close the morning of the match, the time and place to be hereafter indicated.

OUR KENNEL DEPARTMENT.—We are fortunate in having recently obtained the services, with especial reference to our Kennel Department, of G. A. Stockwell, M. D., whose articles on Western fauna and diseases of dogs, over the signature of "Archer," have been conspicuous in our columns for several years past. The editor feels sure that the patrons of the FOREST AND STREAM, especially those who have kennels, will profit by the acquisition. Those who wish treatment for their dogs will please heed the injunction at the head of the Kennel column. They will be sure to receive such prescriptions as an intelligent diagnosis of the cases in hand may require. Hitherto no journal in this country has been competent to treat diseases of dogs with the skill which a thorough acquaintance with canine therapeutics enables. This paper is now able to fill the bill.

—The Easton (Pa.) *Free Press* has discovered near Catasaqua a quail's nest, containing forty eggs, with three quails sitting on them; and now, not to be outdone, the Richmond *Dispatch* comes forward with a nest occupied in common by a hen and partridge, each of which had eggs in it.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grilse and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from $15 to $150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining, to imitate the genuine article) without letting our customers know just what they are getting.

P. O. BOX, 1,294.—[Adv. ABBEY & IMBRIE, 48 Maiden Lane.

The Rifle.

CREEDMOOR, July 28.—The large clientage which Creedmoor enjoys among the members of the National Guard was shown in the falling off in the attendance at the range during the riot troubles. With the whole National Guard under arms, the range was left vacant, and beyond the competition for places on the team the range has been deserted during the past week. With the dismissal of the troop on Friday evening it was thought that Saturday's shooting would be well attended, but at 10:30., when the Remington match was called, but four marksmen responded, Allen, Rathbone, Millen and Fisher. As it requires at least ten entries to fill the match, it was declared off, and the men set at private practice, putting in an enjoyable, and no doubt profitable, day of personal coaching. It was the first time in the history of the association that a match was allowed to go thus by default, and the fault may be jointly laid upon the strike excitement and the peculiarly repressing conditions of the match, requiring the shooters to use what they consider an inferior article of ammunition. In the afternoon the second competition for the third *Turf, Field and Farm* badge was called, and here again the influence of outside excitement was seen in the total of but sixteen entries in place of the usual half hundred, or more. The scores, however, were good, J. F. Rathyen, of Bergen Point, N. J., and J. A. Lowell—the little crack of the Massachosetts Rifle Association—crowding for first place very closely, but upon the arrangement of the figures the Jerseyman won. The full scores stood:

J F Rathyen, Ballard	44	G Waterman, Sh	37
J A Lowell, Sh	44	E E Lewis, Rem Sp	35
W M Farrow, Ballard	43	A G Holcome, Sh	38
T Rogers, Maynard	43	Homer Fisher, Sh	36
A Anderson, Rem mil	41	M Francis, Rem mil	34
F Hyde, Sh	41	J E Irwin, Rem Sp	34
M M Maltby, Sh	41	J McGlensey, Ballard	25
F H Holton, Rem Sport	40	L C Bruce, Rem Creed	retired
H W Gourley, Rem Sport	39		

THE IRISH-AMERICAN RIFLE CLUB.—*Creedmoor, July* 28.—Third contest for Burton trophy. Scores:

	200 yds.	500 yds.	Tl
F F Millen, Rem Creed	27	31	58
H Burton, W. Burton	26	26	52
J F McHugh, Rem mil	26	21	47
J R Irwin, Rem mil	24	16	40
G F Merchant, Rem mil	21	12	33

THE AMERICAN TEAM OF 1877.—The process of selecting the best of the choicest from among those of the American crack shots willing to wear the honors of the coming victory of 1877, was continued at Creedmoor on the 24th and 25th insts. Tuesday, the 24th, showed some excellent scores, the leading eight aggregating 1,634 points, five running over the 200-point mark. Several new faces appeared on this competition—Col. Bodine, R. Rathbone and J. H. Crowell stepping into the ranks. Gen. Dakin, called off by military duties, was counted out. On the second day of this second week's competition, the leading eight aggregated only 1,609 points; fair, but capable of improvement. The full scores are as follows:

JULY 24. JULY 25.

THE CREEDMOOR PROGRAMME FOR AUGUST.—*Monday.*—6. Infantry, 3d Brigade, 1st Division. 13. Cavalry, 1st Division. 20. Infantry, 2d Brigade, 1st Division. 27. Infantry, 11th Brigade, 2d Division.

Tuesday.—7. Competition for selection of American Rifle Team. 14. Practice. 21. At 2:30 P. M., Washington Grey Troop Cavalry, Prize Match; and, at 4:30, competition for "Kent Glass." 28. Practice.

Wednesday.—1. Competition for selection of American Rifle Team. At 3 P. M., first competition for the "Wylie Badge;" at 2:30 P. M., N. Y. Stock Exchange Rifle Club competition for the "Woersboffer Rifle." 8. Competition for selection of American Rifle Team; at 3 P. M., 7th Reg't. Rifle Club competition for "Remington Special Military Rifle;" at 3 P. M., 7th Reg't. Rifle Club competition for the "Rifles," also competition for "Sharps' Special Military Rifle." 15. At 3 P. M., 3d competition for a Ballard mid-range rifle, N. R. A.; at 2:30 P. M., N. Y. Stock Exchange Rifle Club competition for the bronze "National Rifle Association Medal." 22. Practice. 29. 7th Reg't. competition for "Regimental Medals."

Thursday.—2. Practice. 9. Infantry, 5th Brigade, 2d Division. 16. Infantry. 11th Brigade, 2d Division. 23. Infantry, 3d Brigade, 1st Division. 30. Infantry, 1st Brigade, 1st Division.

Friday.—3. Infantry, 2d Brigade, 1st Division. 10. Infantry, 11th Brigade, 2d Division. 17. Infantry, 1st Brigade, 1st Division. 24. Infantry, 5th Brigade, 2d Division. 31. Infantry, 2d Brigade, 1st Division.

Saturday.—4. At 10:30 A. M., sixth competition for "Sharps' Rifle Company's Prize of $250 in gold;" at 3 P. M., 7th Reg't. Rifle Club competition for "Diamond Badge." 11. Practice. 18. At 10:30 A. M., fourth competition for a Parker shot gun; at 3 P. M., 7th Reg't. Rifle Club competition for "Sharps' Special Military Rifle." 25. Fourth competition for "Remington Prize $300 in gold;" at 3 P. M., third competition for the new "Turf, Field and Farm Badge;" 7th Reg't. Rifle Club competition for "Shells and Remington Special Military Rifle."

—The Twenty-second Regiment men will practice on the range at Creedmoor for the challenge badges, 200 and 500 yards, on Tuesdays.

THE BRITISH RIFLEMEN.—Sir Henry Halford, captain of the United Kingdom riflemen, writes: "The team will sail for the United States on the 16th of August. If there should be any alteration in the composition of it I will let you know. I do not, however, think there will be." (This evidently means that Dunlop and Young will be able to go.) "I am writing to Mr. Schermerhorn to-day to ask for more than two days a week for practice. As the range at Creedmoor is the regular practice range of the Americans, and we shall not be able to shoot together again before sailing, it would be manifestly unfair to restrict our practice."

THE ENGLISH TEAM.—Sir Henry Halford seems again unduly excited about lack of practice facilities at Creedmoor. The committee have, in the opinion of many, made a blunder in putting the international match at the fag-end of the fall meeting, but the Englishmen need have no fear of being at all cut short of necessary preliminary practice. Under date July 28, Sir Henry says:

ZETTLER RIFLE CLUB held their weekly shooting for the bull's-eye match (to be won during the month), July 17 inst., at 207 Bowery, 100-feet, off-hand, Creedmoor target reduced, with the following result:

	Bull's-eyes.	Pts.		Bull's-eyes.	Pts.
L G Beates	8	48	Max Engel	6	46
P Fenning	8	48	J Dahl	6	45
Gus Scharman	7	47	C Zettler	5	44
D Miller	7	47	R Zimmerman	4	43
C Judson	7	47	R O'Donnell	4	43
W Klein	6	46	M Dorler	4	42
Score July 24:					
W Klein	7	47	L G Beates	5	45
C Judson	7	47	P Fenning	6	44
M Engel	6	46	D L Beck	6	41
R Zimmerman	6	46	J Dahl	6	44
D Zettler	6	46	G Scharman	4	43
D Miller	6	46	M Dorler	6	42

—B. S. Brown, of the Zettler Rifle Club, in company with J. Q. Adams and J. Maguire of the Centennial Rifle Club of this city, are spending two weeks in the vicinity of Peekskill. Their baggage was principally ammunition and fishing tackle.

Ogdensburg, N. Y., July 24.—Three members of the Ogdensburg Rifle Club were out to-day trying for the first time the three long ranges in the regular way. The day was bright and hot, strong wind, increasing all day, and veering from six to four o'clock. The object of the day's shoot was experimental on some new Ballard Creedmoor rifles just received, and with different styles of shell and bullet. Mr. Ives used the straight shell with the Ballard bullet at 800 and 900 yards, using 95½ grains of Hazard FG powder, and at 1,000 yards, 102½ grains. Mr. Hastings used, also, the straight shell, but with Sharps bullet, employing 3¼ drs. of Hazard FG powder. Mr. Callaghan used a bottle-neck shell. The scores stood:

James Ives, Ballard Creedmoor.

800	5	5	5	5	4	5	5	5	5	4	5	5	5	4	—72
900	5	5	5	5	5	4	4	5	4	5	5	5	5	5	—71
1,000	5	5	5	5	5	5	5	5	5	5	5	5	5	5	—73—216

W B Hastings, Ballard Creedmoor.

800	5	5	5	5	5	5	3	5	4	5	5	5	5	5	—73
900	5	5	5	5	4	3	5	5	4	5	5	3	5	4	5—68
1,000	5	5	3	5	3	5	5	5	4	5	5	5	4	5—68—208	

A Callaghan	66	59	68	184

Mr. Ives, writing of the above, says: "The above scores we feel proud of, and considering, in addition to the extreme accuracy of the rifles, we have no bursted or expanded shells on hand, and during the shooting got no slaps in the face with gas and burnt powder, we must give the Ballard the place of honor over any rifle we have yet seen. The rifle which made the 216 points is the one recently targeted at Creedmoor by Mr. Farrow, and shipped by you to Mr. Warner, agent for the rifle in this city."

Hudson, N. Y., July 26.—Final competitions for places on the team to represent the Parthean Rifle Club at Creedmoor in the inter-State match, resulted in the following selections being made: Leonard Geiger, Thos. E. Denegar, T. H. Sargent, C. F. Jones. Reserves—J. E. Blaco, Byron Parker. The prizes were awarded as follows: First prize, silver-plated tea set, to L. Geiger; second prize, a pair of field glasses, to Thomas E. Denegar; third prize, silver ice pitcher, to T. H. Sargent; fourth prize, leather gun case, to C. F. Jones, and the fifth prize, a picture, to J. E. Blaco.

MASSACHUSETTS, *Worcester*, July 27.—The rifle team of the Sportsman's Club was out for practice at the Greenwood range yesterday, and made the following scores, the highest possible score being 75 at 800 yards:

A G Mann	5	5	5	5	5	5	5	5	5	5	5	4	4	5	—73
N Washburn	5	4	5	5	5	5	5	4	5	5	4	5	5	5	—72
A L Rice	4	5	5	5	5	5	4	5	5	4	5	4	5	4	4—69
G J Rice	5	5	5	5	5	3	4	5	5	5	5	5	5	2	5—69
S Clark	3	5	5	3	5	5	3	5	5	5	0	4	4	5	5—62
F Wesson	0	0	4	5	5	5	5	4	5	4	5	5	4	6	4—60

Walnut Hill, July 26.—Massachusetts Rifle Association; third contest for the Ballard mid-range rifle; 14 competitors; each 7 shots at 800, 8 at 900, and 10 at 1,000 yards, the scores standing:

	800 yds.	900 yds.	1,000 yds.	Total.
Wm H Jackson	32	39	43	114
C C Hebbard	31	33	43	107
A P Clark	33	36	36	105
J Weymss, Jr	30	36	39	105
Wm Gerrish	32	39	31	102
T H Gay	31	35	33	102
John A Lowell	32	26	28	86
F J Haberth	33	29	30	94
A W Howland	28	34	32	94
J E Shepard	31	30	31	92

The third contest for the Sharps' long-range rifle was held at 200 yards, ten shots standing. The scores stood:

D Kirkwood	45	G L Winship	41
W H Jackson	44	T Weymss, Jr	41
J B Osborn	43	L L Hubbard	41
L W Farrar	43	E H Tilton	41
F Borden	43	W Gerrish	40
N W Arnold	42	H T Rockwell	40
		R S Gray	40
		S E Wing	38
		J S Sumner	38
		John A Lowell	35

FROGMOOR—*New Orleans*, July 23.—The third team practice took place July 22. The light was all that could be wished. The wind became very troublesome at 900 yards, and continued so during the rest of the shooting. Mr. Selph led at 800 yards with 15 bull's-eyes; Arms next with 14; Eyrich, 13; at 900 yards Eyrich took the lead, scoring 71. The following are the scores:

	800 yds.	900 yds.	1,000 yds.	Total.
R G Eyrich	73	71	68	212
Dudley Selph	75	68	68	211
Wm Arms	74	64	58	196
John Gilpin, jr	63	62	66	191
A D Baobolt	68	63	59	190
E T Manning	71	57	60	188
John K Renaud	68	63	52	183
Jules Pillaut	49	59	47	154

Gessin.

WASHINGTON, D. C.—The Columbia Long-Range Rifle Club of this city has affiliated with the N. R. A., and are preparing to send on a team for the inter-State match at Creedmoor next month. In recent test shootings at Benning's range, each man fired 45 shots at 1,050 yards. A badge was provided by the president of the club, Col. J. O. P. Burnside, to be won three times. On June 19, at the first contest, Charles H. Laird led with 180 points in the possible 225; on June 26, P. J. Lauritzen led with 164; July 17, Laird again ahead with 177, and July 24, Laird again with 181 points. At this last contest the leading scores stood:

Laird	184	Lauritzen	173
Burnside	176	Bell	132

COLORADO, *Denver*.—The shooting men here are beginning to think they should receive a special invitation to come on and lead the American team to victory on the morning of the 21st. According to the Denver *Times*, the following scores were made:

	800 yds.	900 yds.	1000 yds.	Tl
Carlos Gove	74	70	73	217
C A Treat	67	69	74	190
G B Patterson	59	62	56	177

—A Sacramento paper is responsible for the following: "Mrs. Rothenbucher, of Virginia City, is gaining a reputation as a sharpshooter. While practicing lately she knocked the centre out of two ten-cent pieces at a distance of thirty feet missing two and hitting two in four shots. Subsequently she shot ten times at a small oyster can forty yards distant, putting every bullet in the can. The most of them very near the" centre.

—The thirty-first annual prize shooting festival of the Philadelphia Schutzen Society, 1,200 members strong, will take place in that city, Aug. 13 (one day only). They will give $500 in prizes on the various targets, also $150 donated by the society. Quite a number of New York marksmen will participate.

EXPLOSIVE BULLETS.—W. H. Miller, of Sterling Run, Pa., writes: "I have made explosive bullets, which I have used in the Maynard and Roper rifles, and I find this ball very effective on large game. Cast the ball with a cavity in the front end of such a size and shape that a No. 22 rim-fire pistol cartridge will be a tight fit, then take a pair of nippers and cut off the ball close to the rim of the pistol cartridge. Insert the shell and press down so the rim rests on the end of the rifle ball. This will be found to be very effective on large game. The rifle ball is blown to pieces and scattered in different directions through the animal shot."

DON'T DO IT.—A. P. P., in the FOREST AND STREAM of June 28, inquires concerning the practicability of making explosive bullets by inserting in the end of them the caps used to explode giant powder, which brings forth the following from a civil engineer in Cerro Gordo, California: "I would say, Don't try it! emphatically, Don't do it! If you do you will have a ruined barrel. The concussion of the powder charge is too quick for it. A 75-grain charge in a .45-cal. rifle will explode three out of five giant powder caps in the barrel, soon ruining the barrel by bulging and scratching. Four years ago, while experimenting with explosive bullets I made up a dozen cartridges charged with hollow pointed bullets, the cavity being filled with five grains of dynamite, with a giant powder cap in the end for a primer. My rifle was a Remington .44-cal., 1¼-inch octagon barrel. The first shot I put into a tree at 100 yards. The bullet on exploding made a tremendous report, and tore out a funnel-shaped cavity a foot deep. The second shot I put into a box, knocking it into smithereens. About this time I began to congratulate myself that I had a soft snap on the big grizzly that stole our deer meat, when just then my pard, coming in, wanted to see the effects of the new invention. Dropping the third cartridge into the barrel, I pulled trigger on a big stump. Well, I guess a piece of that barrel is going yet. The barrel burst into a hundred pieces, the bullet dropping to the ground at my feet in melted globules. When my shoulder got all right I bought a new gun, and have come to the conclusion that giant powder explosive bullets are dangerous. MOUNTAINEER.

Game Bag and Gun.

GAME IN SEASON FOR AUGUST.

Woodcock, *Philohela minor*.
Black-bellied plover, ox-eye, *Squatarola helvetica*.
Ring plover, *Ægialitis semipalmatus*.
Stilt, or long-shanks, *Himantopus nigricollis*
Red-breasted snipe or dowitcher, *Macrorhamphus griseus*.
Red-backed sandpiper, or ox-bird *Tringa americana*
Great marbled godwit, or marlin, *Limosa fedoa*.
Willet, *Totanus semipalmatus*.
Tattler, *Totanus melanoleucus*.
Yellow-shanks, *Totanus flavipes*.

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc, coming under the group *Limicolæ* or Shore Birds. Many States permit prairie fowl (pinnated grouse) shooting after August 15th.

☞ The frequent alteration of game laws makes such confusion that sportsmen are kept quite in the dark as to when shooting on various kinds of game is permitted. We therefore append the following table for reference:

States	Pinnated Grouse.	Ruffed Grouse	Quail.	Woodcock.
Ill	Sep 1 to Jan 15	Oct 1 to Feb 1	Oct 1 to Feb 1	Sept 1 to Jan 15
Ind	Oct 1 to Feb 1	Nov1 to Jan 1	Nov 1 to Jan 1	July 1 to Jan 1
Iowa	Aug 15 to Dec 1	Sep 12 to Dec15	Jan 1 to Oct 1	July 1 to Jan 1
Minn	Aug 14 to Oct 1	Sep 1 to Dec 1	Sep 1 to Dec 1	July 3 to Nov 1
Wis	Aug 15 to Nov15	Sep 15 to Jan 1	Sep 15 to Jan 1	July 4 to Nov 15
Neb	No Shooting	No Shooting.	No Shooting	No Restrictions.
Kans.	Aug 1 to Feb 1	"	Oct 1 to Jan 1	

A law was passed in Nebraska last February, prohibiting the shooting of any kinds of wild bird except waterfowl, snipe, waders and woodcock. No close season is specified for woodcock.

A MULTIPLE LOADER.—Mr. B. F. Dorrance, of Wilkesbarre, Pa., sends us the drawing of an apparatus for loading shells. It is virtually the same as described by one of our contributors some months since. A block of sufficient size is selected, according to the number of shells it is desired to load at once, and of a thickness equal to the extreme length of the shell used, less one-half inch. Upon one side holes are bored of exact size and depth to receive the head of the shells; then they are extended through the block by means of a bit, of the size of the body of the shell itself. To the bottom is fastened by hinges a thin board, through which holes one-fourth inch in diameter are so bored as to lie, when closed and fastened, directly over the centre of the shell; this holds the shells in the block when once inserted, but the openings through it prevent pressure upon the primers, thus doing away with all danger of explosion. By reversing the block the open mouths of the shells are brought upward for the purpose of loading. This may be used for all shells of the same gauge. Mr. D. proposes also to make the block three-quarters of an inch *thicker* than the length of the shell, making the opening through the extra thickness of the block of the same gauge as the shell, slightly reaming the top that wads may be easily inserted and driven home. This virtually acts the same as the loading muzzle of a rifle. By this latter plan there are two shoulders to each hole; one to receive the head and the other for the muzzle of the shell. If this be used the block should be of some hard wood, as lignum vitæ, and be accurately and smoothly finished. By the first plan, accuracy of finish and absolute smoothness is not essential.

CAUSES OF RECOIL.—*Detroit, Mich., July 20.*—On seeing the only "demonstrable" theory of the cause of recoil in a recent issue, I thought the writer would do to give us an essay on perpetual motion next; he so gently and easily shoved aside some of the simplest laws of philosophy and mechanics. I was surprised to see the article commended by Major Fulton in your last issue.

Is it not one of the plainest laws of motion and force that action and reaction are equal?—that is, that a moving force acting between two bodies will affect them with equal power. The power or momentum of any moving object is its weight multiplied by its velocity; is accurately calculated and reckoned in foot-pounds, foot-tons, or horse-powers, by mechanics, engineers and artillerists. If by burning powder I generate in a 34-inch rifle barrel force enough to drive out an ounce bullet at an initial velocity of 1,600 feet per second, the power is called 100-foot pounds, and the rifle is thrust in the opposite direction with just the same force at the same time. The bullet traveled about 32 inches before it left the muzzle. Was the rifle unmoved while it was doing so? Certainly not. The barrel commenced its recoil simultaneously with the starting of the bullet, and with exactly the same momentum. As in weighs 160 times as much as the bullet, it moved back the 160th part of 32 inches before the bullet lost its contact at the muzzle, or one-fifth of an inch.

In practice this fifth is materially diminished by the weight of the rifle being materially supplemented by the grasp and the shoulder of the rifleman, and the recoil is mathematically opposite to the course of the bullet, saving a slight deflection caused by the weight of the stock being below the line of fire. As the rifleman and rifle take almost exactly the same positions every shot, the slight deflection given to the path of the bullet (if it be worth taking into consideration at all) is the same in each shot, and will not be a cause of irregularity.

If a long-range rifleman take a different position each shot, or if the grasp of the rifle varies from loose to very firm, will not the elevation of his sights have to be watched very carefully and be badly affected? Can two persons, who vary widely in weight and strength, use the same rifle and *elevation* at long range? I don't know, but ask for information.

The jet of gas reacting on the air after the bullet has left the barrel has a slight rocket-like effect in increasing the recoil. How much can be ascertained approximately by firing the usual charge of powder in a rifle with nothing over it—not even a wad?

The recoil I have spoken of is the minimum, or least possible in the most favorable circumstances. It may be increased by friction of the bullet in the bore—dirt, rust, leading, etc. Perhaps the shape of the powder chamber has something to do with it. Can any one tell us how? The air in the barrel before the bullet acts as a light spring to slightly check the motion of the bullet, but not enough to take into account, and to speak of its flattening the point of the bullet is absurd.

I would like to ask an explanation of the veterans, why are beginners cautioned in off-hand practice to extend the left arm in aiming, and not to have it against the side? The latter is for me by far the steadiest. One must learn to pull a three-pound trigger very correctly that way—but isn't it necessary to do so in the other style? D. D.

NEW BRITAIN, CONN., July 16, 1877.

EDITOR FOREST AND STREAM:

The theory that the gun receives its recoil motion after the ball leaves it would seem to require no further answer, only for the reason that one of "America's crack shots" has indorsed the article by "Straight Bore," which is to be found in your valuable issue of the 5th instant.

I shall not attempt to answer all the positions assumed in that article, only the leading ones seem to require it. He asks the question, "What is recoil?" My answer is, the pressure on the breech-pin which is equal to that exerted on the ball while being forced out of the barrel by the gases behind it. And what does he do with this back pressure? Just what he is obliged to do to maintain his proposition that the recoil takes place after the ball leaves the gun—he wholly ignores it. And yet this back pressure from moving the ball is all there is to the question; action and reaction are equal. Now let us experiment a little. We will charge the gun with 100 grains of powder. In exploding this is nearly all expelled, together with the air which filled the barrel above it; but the weight of the air is about equalized by the gases and solid residuum of the powder left in the barrel. Here we have an amount of recoil exactly in proportion to the weight and the distance it moved, as compared with the weight of the gun. Now charge with the same amount of powder and a ball weighing 500 grains. After discharging this, if we have carefully conducted the experiment, we will have six times as much recoil in the latter case as in the former.

In the article under consideration the writer admits that the theory that recoil is the effect of the inert missile being forced from the gun has found its way into scientific works, and it will always remain there, for it is as incontrovertible a position as that two and two make four.

A few inquiring minds cannot understand how a gun can send a bat straight if it moves when the ball is passing out. If the gun recoils in a straight line with the center of the bore it does not and cannot vary the ball, only as it throws it with a little less force, and it is a principle known as long as guns have been used that the heavier the gun the less the recoil, and the swifter the flight of the ball. Another proof, if it were necessary, is, the recoil takes place during the passage of the ball out of the gun, but if the gun is so supported that a backward motion will press in such a manner as to throw the muzzle away from the centre, then, of course, it will carry the ball with it. The writer has seen a light pistol carrying a disproportionately heavy ball, with other conditions favorable to varying the ball by the recoil of the barrel, throw the ball more than forty-five degrees from the point aimed at. Now, if the barrel did not move until the ball was out of it, how will these men with an inquiring turn of mind account for this phenomenon?

One more statement in "Straight Bore's" article needs a little attention, and we will trespass no longer on your patience. He says that a ball forced out of a gun standing on a scale, the forcing power being gas or air, will indicate no additional force on the scale. If the ball is forced up out of the gun it might not show it on the common scale; but if some of the more delicate scales were used it would show, even if the ball were an hour in passing out, and if "Straight Bore's" idea is correct in the above, we will pledge ourselves to build a perpetual motion on that principle which will far outshine the Keely motor.

MARTEAN D'ENCLUME.

NEW GUN CLUB.—A gun club has been formed at Jersey City Heights, to be known as the New Jersey Gun Club, with the following officers: John Pearson, President; Wm. Hopsley, Vice-President; Wm. H. Tuttle, Secretary; Jas. Barclay, Treasurer.

GLASS BALL SHOOTING.—The above cut will give a faint idea of the Bogardus trap, and mode of shooting at glass balls. The whole mechanism is very simple, and requires no attention other than to see that the cups are perfectly secured to the spring. The idea of arranging the traps thus is to give the shooter right and left as well as straight shots.

It is believed that glass balls and the Bogardus trap offer better practice to the tyro than pigeon shooting, and that when able to break two-thirds of the glass balls shot at he will become an expert wing shot. The trouble with many of the glass ball traps is, that they offer no shooting analogous to the flight of a bird skimming low along the ground. With the Bogardus trap, such practice is obtained by turning the ball-cup half way around on the spring, so that the long level is uppermost. All who have shot at both pigeons as sprung, and glass balls as thrown from a trap, unite in declaring the last to be the most difficult, demanding greater skill and power of control.

The price of Capt. Bogardus' traps has been reduced to $6. Glass balls may also be obtained at $2 per hundred.

A NEW DECOY.—B. R. B., of Galveston, Texas, sends the following:

Take three dozen mallards and gray duck decoys, which arrange in two flocks about thirty yards from the blind, with heads in different positions as naturally as possible. Now, place a white-crane decoy near the blind; it may be made from wood and painted. This will do the business most effectually, for the white crane is the sentinel of the ducks, who respect his powers of observation, and believe that where the crane is safety is to be found.

—A new air gun, the principle of which is very simple, and may be easily adapted to any firearms with very little expense, has been granted to a firearm manufacturer in Gotha, Germany. The weapon is to be largely adopted for practice by the German army.

—A gun club has been organized at Princeton College, Princeton, N. J., for the encouragement of field sports. Mr. H. S. Johnson, '78, has been elected president, and F. S. Presbrey, '79, secretary.

—The farmers in the vicinity of Soap Lake, near Gilroy, Cal., are distributing great quantities of poison for the destruction of the squirrels, which are doing great damage to the crops.

CHALLENGE.—I will shoot any man in the world a match for from $500 to $5,000 a side, I to shoot 100 of the best birds that can be found in America or England, 21 yards rise, English or American rules, against my opponent's 100 glass balls, 18 yards rise, Bogardus' rules.

Any person desiring to accept the above challenge may address the FOREST AND STREAM AND ROD AND GUN, 111 Fulton street, N. Y. CAPT. A. BOGARDUS.

MASSACHUSETTS—*Salem, July* 30.—There was quite a flight of summer and robin snipe last Friday and Saturday. I got some birds at Swampscott both days. Birds are not very numerous at Ipswich as yet. Upland plover are reported at Essex, together with sand birds, grass birds, beetle-heads, Jack curlew, winters, and a few other varieties of waders. Sportsmen in this vicinity say they care not about our game laws this year or whether enforced or not: the laws are a "flummux" as they read, and virtually good for nothing.

TEAL.

LANE'S SPORTSMEN'S RETREAT—*Shinnecock Bay, July* 27.—We are having high times down here. Fine weather, splendid breezes, good sailboats, tip-top surf and still bathing, excellent clams and fish, with abundance of bay birds of several varieties; all these, with as capital company as ever rallied together. The past week has been a royal one for bay birds. Doctor Paul and Mr. Harris, of Belvidere, N. J., killed forty, and Will Lane sixty on Monday, duplicating the scores the following day. The undersigned, with Charlie and a younger Lane, bagged sixty-eight yesterday. I wish you were with us; you would enjoy yourself greatly, for one can wear his old clothes and doesn't have to "shine" his boots to go to dinner. To-day we all go to Shinnecock settlement for a clambake. After that a dip in the surf, which is the regular daily arrangement. It seems hard to think we have to go back to the boiling city; but, if the "strikers" do not prevent, we shall return on Saturday. JACOBSTAFF.

PENNSYLVANIA—*Columbia, July* 28.—Partridges will be plenty in York Co., and the northwestern section of Lancaster Co. this year, and Chief Burgess, who is a mighty hunter, has been after woodcock with indifferent success, but says when old "Phœbe" "blows her nose" in August, when plovers can be shot, she will tell a different tale. S. E.

IOWA.—*Iowa City, July* 22.—We have just visited the northern and western portion of this State, and from sportsmen we learn that the prospect for a splendid fall shoot are such as to fill the heart of the sportsman with pleasure. The season for quail and grouse has been a splendid one. R.

TEXAS.—*William's Ranche, Brown County, July* 17.—There are any quantity of quail and jack rabbits round here, and I hear of bear, wolf, deer and wild hogs in the mountains about six miles from this. I expect to have some fine sport among them this fall. I also propose going on a buffalo hunt.

JNO. JOE LEE.

Galveston, July 21.—Sport is commencing. Lone plover, or as they are called along the gulf "papa-bottes," are arriving, and some have been killed in good condition. Young prairie chickens are likewise getting into shooting condition; indeed I have seen some nearly fully grown. I shall go after them with two brace of first-class Gordons shortly and report results. F. W.

PIGEON MATCHES.

RHODE ISLAND—*Newport, July* 23.—Rises of 5 single birds. First match: S. Robbins, 5; M. Van Buren, 4; T. Van Buren, 3. Second match: T. Van Buren and M. Van Buren tied on 4, Robbins 2; shoot off won by M. Van Buren. Third match: Tie on 4 all around; shoot off won by Robbins. Fourth match: A tie on 4 all around; not shot off. Fifth match: T. Van Buren and Robbins tied on 4; not shot off. Total: Robbins, 19 out of 25; M. Van Buren, 17; T. Van Buren, 13.

NEWPORT, R. I.—Five pigeon matches, five birdst 28 yards rise, were shot July 29, on the grounds of the Narragansett Club. The result was as follows:

First Match.

M. Van Buren	0	1	1	1	1—4
T. Van Buren	1	1	0	1	1—4
S. H. Robbins	0	1	1	1	1—4

Tie won by M. Van Buren.

Second Match.—M. Van Buren, 4; T. Van Buren, 3; S. H. Robbins, 4. Tie won by M. Van Buren. Third Match.—M. Van Buren, 4; T. Van Buren, 3; S. H. Robbins, 4. Tie again won by M. Van Buren. Fourth Match.—M. Van Buren, 4; T. Van Buren, 3; S. H. Robbins, 3. Fifth Match.—M. Van Buren, 3; T. Van Buren, 3; S. H. Robbins, 1. Tie not shot off. Total.—M. Van Buren, 19 T.; Van Buren, 16; and S. H. Robbins, 16 out of 25.

NEW YORK—*Oswego, July* 23.—At the prize shoot of the Leatherstockings, C. Coe and U. Z. Maltby tied on 8, again on 6 at 26 yards, Coe winning first prize on 3 at 31 yards. L. Wright and G. W. Lyman tied on six birds; Wright won shoot off and second prize J. G. Skinner, third prize.

DEXTER PARK.—The Long Island Gun Club held their monthly contest at Dexter Park, July 27. The winner of the cup last month was Mr. E. H. Madison, but he was handicapped at twenty-seven yards, and others stood at 25. The cup was won by Henderson. The following is the score:

Henderson	1	1	1	1	1	1	1	1	1	1	1	1	1	0	1—15
William	1	1	1	1	1	1	1	1	1	1	1	1	1	0	0—13
Yates	6														3
Gildersleeve	6														2
Thomas	5														1
Edwards	4														1
Valkman	2														1
Wynne	3														
Miller	2														
Martin	1														
Walters	1														
Thompson	1														

Baylis, Madison, Brown and King each shot and missed their first bird, and then withdrew. Several sweepstakes were afterward shot.

MOUNT PLEASANT.—At Prince's Bay, July 26, a pigeon match took place between ten picked men of the Midway Club of Mattcawan, and ten from the Fountain Gun Club of Brooklyn. Ten birds, 21 yards rise, 80 yards boundary. The following is the summary:

Midway Club.

J Van Bracket	1	1	1	1	1	1	1	1	1	1—10
T W Hyne	1	1	1	1	1	1	1	1	1	1—10
T Lambourn	1	1	1	1	1	1	0	1	1	1— 9
A Teneyck	0	1	1	1	1	1	1	1	1	1— 9
W J Conover	1	0	1	1	1	1	1	1	0	1— 8
H A Warne	8									
W A Dunlop	8									
C H Warner	6

J Lambourn	4									

Fountain Gun Club.

Madison	1	1	0	1	1	1	1	1	1	1—9
C Williams	1	0	1	1	1	1	1	1	0	1—8
McLaughlin	1	1	1	1	0	1	0	1	1	1—8
Blakely	1	1	1	0	1	1	0	1	1	1—8
Eddy	0	1	1	0	1	1	1	1	1	1—8
Slane	7									
Miller	7									
Kearney	7									
Race	6									
White	4									

PENNSYLVANIA—*Petroleum Centre.*—The Fur, Fin and Feather Club held a series of matches, July 24. The summary is as follows: First match: Ten blue glass balls; $7.50, $4.50 and $3, as first, second and third prizes, respectively; entrance fee, $2.

O C Wilkins	9	Wilcox	9
H Metherell	10	A J Lewis	8
H G Davis	w	J Denman	7
H W Egoff	6	O B Park	7
Layman	5		

H. Metherell first money. In shooting off ties Wilkins took second money; A. J. Lewis third.

Five single birds, $5 entrance; $15.75 to first, $9.50 to second, $6.25 to third.

F Wilcox	5	A J Lewis	4
Metherell	4	Egoff	3
Wilkins	3	Park	3
Layman	5	W B Davis	3
H G Davis	5		

Wilcox, Davis and Layman divided first money, Lewis and Metherell divided second, Wilkins and Davis divided third.

Third match, 10 glass balls, $2 entrance; $6.75 to first, $4 to second, $2.75 to third.

Egoff	9	Wm Van Syckle	10
Wilcox	8	Metherell	9
Park	9	Denman	7
Wilkins	8	Dan Maloney	6
Lewis	8		

Wm. Van Syckle first money. Ties on nine, 2 yards, won by Metherell; third money to Lewis, after tieing Wilkins four times.

Fourth match, five birds, $5 entrance; $17.50 to first, $10.50 to second, $7 to third.

Egoff	3	Layman	4
Lewis	2	Metherell	5
Wilcox	3	Denman	5
Wilkins	3	D Maloney	3
H G Davis	4	W B Davis	4

Metherell and Denman divided first money. In ties on four, Davis, Jr., won second money, Ed. Wilcox third.

Fifth match, 5 glass balls, $2 entrance; $7.85 to first, $4.75 to second, $3.10 to third.

A J Lewis	2	W T Lewis	5
Wilkins	5	W B Davis	4
Maloney	5	Denman	4
Wilcox	3	Park	4
H G Davis	2		

Ties on five gave O. C. Wilkins first money, Davis, Sr., and Park divided second, Wilcox won third.

Sixth match, 5 glass balls, $1 entrance; $3.15 to first, $2.10 to second.

Wilcox	5	Maloney	2
Denman	5	W T Lewis	5
Park	4	Maj Goodwin	2
Davis, Sr.	4		

Ties on 5, Wilcox first money; ties on 4, Davis second. H. G. D.

KENTUCKY—*Louisville.*—Match between members of Gun Club, held Saturday, July 21, 1877. Ten single birds, tame pigeons, 21 yards rise, 80 yards boundary; five pairs double at 18 yards rise, 100 yards boundary; Lexington Club rules.

Single Birds.		Double Birds.	
J Val Cowling, Captain	9	Cowling	7
L W Noel	7	Noel	7
E Y Peak	5	Peak	5
S B Duff	9	Duff	6
A Stokes	4	Stokes	1
Total	34	Total	26

Single birds.		Double Birds.	
J M Barbour, Captain	9	Barbour	8
G S Moore	6	Moore	7
J Griffith	7	Griffith	8
W F Booker	5	Booker	5
Isaac Tyler	7	Tyler	7
Total	34	Total	35

LEON.

VIRGINIA, *Norfolk, July* 28.—Below I hand score of match shot July 24, at 15 glass balls, 18 yards rise, for the champion cup of the Norfolk Game Protective Association. This cup is to be shot for on the second and fourth Tuesdays of each month during the season ending October 15. A winner of five consecutive matches will own the cup, but failing to be won in five consecutive matches it will be the property of the contestant who shall have the best average score at the end of the season.

T S Garnett	15	T F Rogers	11
J T Allyn	13	F Hardy	10
L B White	12	S R White	10
D Dey	11	F Johnson	9
J B Corprew	11	H L Worthington	8
H L Cranmer	11	C E Yeatman	7

The cup was won in the first match, June 19, by L. B. White, with a score of 15. In the second match, July 10, by F. Hardy, score 13. This is the third match.

Very respectfully,

F. HARDY,
Chairman Match Committee.

—The Cincinnati Shooting Club will have a glass ball tournament in a few weeks. They intend to go through the States of Ohio and Indiana.

BOATS AND BOAT-BUILDING—2d Paper.

THE SKIFF.

THE skiff is an improvement on the scow, and is nearly as easily built. It draws but little water, and rows nearly as well in smooth water as a boat of curved sections; last, but not least, it is a cheap boat. To make one, procure two boards for the sides, each sixteen feet long, sixteen inches wide, and one inch thick; select the boards as directed in the article on the scow. For the "mould board" take a piece four feet long, twelve inches wide and one inch thick, bevel the ends to your fancy, say four inches to a foot; this will leave one edge of the board four feet long and the other three feet four inches. Set the side boards up as directed for scow, care being taken to have them parallel and out of wind; fasten the four foot "mould board" between them, as directed in the same article. Now cut a piece for the permanent stern board out of pine or oak plank, one and a half inches thick, three feet long and eight or nine inches wide; bevel the ends the same as the "mould board," four inches to the foot, or more, and saw the ends of the side boards to the same level at the bow, and the side boards can be sawed to the same level, or the stern piece can be left straight. Pass ropes around bow and stern, and draw the stern up until the stern boards fit in place. Draw up the bow until it fits snugly up to a strip of inch board placed between the two sides. "Stay lath" the "mould board" to the side, and fit and nail the stern board permanently in place; curve the side boards from lower edge of stern board to the bottom of the boat. A curve of six feet radius will be a good pattern. The dimensions and form of the stern can now be obtained from the inclosed space between the two side boards at the bow. Mark out on a piece of paper the angle between the side boards at the bow, and make a drawing like diagram (No. 1), and you will have

the size and shape you are to make your "stern" piece. Make the stern long enough to project one inch below bottom of side boards, and a couple of inches above the top, or gunwale of boat. Fit the stern into place and nail securely. Make the stern of good tough oak. There will be considerable convexity to the bottom of boat arising from the beveling of the sides. This should be much reduced, or the bottom made flat and straight for at least one-half its length, measuring from curve of stern to stem. Put on bottom boards three-fourths inch thick in the same manner as directed for "scow." At the bow where stem projects below the bottom of boat, saw into it on a line parralel with the bottom of side boards, until the saw cut extends into the stern as far as the ends of the side boards. Split off the sawed portion square across, and fit the last bottom board snugly up in place. Afterward saw off the remaining portion of stern level with the bottom of boat.

Plane the ends of bottom boards when sawed off down even and smooth, turn the boat over, fit a piece of board in the angle between the side boards and stern on the upper edge or gunwale of boat, letting the grain of the wood run crosswise the boat; use one and a half inch stuff, eight or nine inches wide, which is to be nailed in place flush with the top edge of side boards; saw off the projecting end of stern, or it can be cut in ornamental shape to suit the fancy. Put on the mouldings around upper edge of boat, making them two or two and a quarter inches wide, three-fourths to an inch thick, and as long as the boat; nail around the outside of side boards, letting the strips come flush with the top edge, using clinch nails; bevel the ends of strips where they lap in the stern to make a neat finish. Lengthwise through the boat on the bottom nail with clinch nails a strip three-fourths of an inch thick, eight or ten inches wide, and the length of the boat—at the stern where bottom curves up, the board may be planed down thinner to allow it to bend more easily; bevel the two upper corners of the board to give a better appearance. For the rowing seats take pieces of boards an inch thick and nine or ten inches wide, placing the back seat just aft of the middle of boat. The front rowing seat may be placed three feet ahead of this, measuring from centres of seats. Place the row-locks as before directed; also follow directions already given about height of seats, etc. The seat at stern of boat may be eighteen inches or more wide, or of any width desired, and should be fastened crosswise the boat four or five inches below the gunwale; nail through the sides of boat, and also nail a strip on the stern board, and fit the seat boards from one to the ther, lengthwise the boat.

Next caulk and paint after fitting a staple and ring on bow, to which fasten a painter made of twelve or fifteen feet of five-eighth hemp rope, when we are done. The oars should be seven or eight feet long. The materials to build this boat or the scow will cost about $5, oarlocks and oars extra. A skiff canoe, much used on the Hudson for duck hunting, is constructed substantially on the same plan as described above. The ducking skiff is made fifteen to sixteen feet long over all, and has a stern at both ends, the side boards being fourteen inches high; mould-board, or temporary middle board, is made three to three and a half feet hull long, and beveled about four inches to the foot. The convexity of bottom is mostly taken out, so that the boat is nearly straight on the bottom, otherwise there would be so much noise or "clacking" of water under the ends of boat as to scare the game. These boats are propelled by short paddles, worked close alongside. They are painted white, and used mostly among floating ice, and with "batteries," contrary to the laws of the State. For working between floating ice, over the same, or in shoal waters, they are probably the best gunning boat made. The side boards are made three fourths of an inch thick, and those for the bottom the same or an eighth less. Such a boat is best built of cedar for lightness; no seats are used, a movable bench answering for rowing purposes; movable row locks are placed to suit convenience. When hunting ducks straw and old blankets are placed on the bottom of boat, and the hunters with white coats and hats, or a piece of muslin wound around their heads—crouch as low as possible on the bottom of boat.

NAUTICUS.

INTERNATIONAL BARGE RACING.—An exciting boat race took place at Yokohama, Japan, in June last, between the barges of the U. S. flagship Tennessee, and H. B. M. flagship Audacious.

The "Magic," the Tennessee's barge, is a sister boat to the "Danny," so celebrated as the barge of the Hartford. The barge of the Audacious, the "Albert," was built for H. R. H. the Prince of Wales when he visited Canada in 1861, and presented by him to Admiral Ryder.

The Englishmen based their hopes of winning upon a heavy wind and sea, and on the day of the race they were favored, as it was very rough, though it began to moderate toward the hour appointed for the race. Word was sent to the Tennessee that the boats must start half an hour earlier than the time appointed, or the race would be declared off. Although the American crew desired smooth water, they were not to be thus baffled, and being the challenging crew they consented.

The "Magic's" crew started off rowing 38 strokes to the minute, to 40 to 44 of their opponents, and showed ahead after a dozen strokes. At the light ship, which constituted the turning point of the race, the Americans led by upwards of 500 yards, and at the close they were 6m. and 48s. ahead of the English, besides having fifteen inches of water in their boat shipped over the bow. After tossing oars the Tennessee crew pulled two hundred yards to the windward to show they were not exhausted. The course was upwards of three miles, and the roughness of the sea and wind forbade anything like good time being made.

ROCKAWAY YACHT CLUB.—The Rockaway Yacht Club inaugurated its sixth season by a clam bake and ladies' picnic, on Saturday, July 28, when an enjoyable time was experienced by all parties. On August 6, the club regatta for ferry and excursion boats will be held. The following day the fifth annual regatta for sloops and mainsail boats will be sailed, the start being made at 3:30 P. M. precisely. August 23 a moonlight excursion and reception will be held.

COLLEGE POINT REGATTA.—The College Point Yacht Club held their annual regatta July 29. Entrance $5, the prize being an elegantly chased silver goblet. The course was from a stakeboat moored between College Point and Boulevard Hotel, to and around a stakeboat moored off Rikers Island, thence to and around buoy off McClellan's Hotel, City Island, and then home. The Ariel carried away the honors in the first class, the Emma D. in the second, and the Quits in the third.

PROVIDENCE YACHT CLUB.—*Narragansett Bay, July 27.*—The regatta was successfully carried out despite the unfavorable weather. The prizes were one for sloops, and two for cat-rigged boats. The course was from the stakeboat at Rocky Point down to the Can buoy off Long Meadow, then turn and down to and around Hope Island and back to the starting place—a distance of sixteen miles. The result was as follows:

TIME OF THE REGATTA.

	Cor. Time. H. M. S.
Sonora	2 8 46
Gleam	1 58 15
Wanderer	2 8 51
Lizzie Bull	2 16 51

DUXBURY YACHT CLUB.—*July 28.*—The fifth championship regatta of this club resulted as follows:

FIRST CLASS.

Name	Cor. Time. H. M. S.
White Swallow	1 25 54
Idle Hour	1 30 06
Bristol	Not taken.

THIRD CLASS.

Zephyr	1 52 18
Little Charlie	1 52 33
Bornet	1 54 33
Annie Clark	Not taken

—The Seawanhaka Yacht Club regatta for open boats, which was appointed for July 28th was a failure. The race was from Oyster Bay over a triangular course twice, a distance of twenty-two miles. The boats were becalmed during the race, which was finally declared off.

—The cruise of the Brooklyn Yacht Club this year has been a dismal failure. But seven yachts participated, there was little enthusiasm, and the calm weather farther depressed the spirits of the amateur sailors.

BEVERLY YACHT CLUB.—The regatta of this club was not sailed on July 28, as intended, the weather being unfavorable, but has been postponed until Saturday, Aug. 4th, at 12 M.

ROCHESTER YACHT CLUB—*Charlotte, N. Y., July 26.*—The regatta of the Rochester Yacht Club was unsuccessful, owing to a calm which prevented the contesting boats from making the course in the required time, the race was consequently postponed until this week.

CANADA—*Brockville, July 26.*—The yacht race of twenty-four miles resulted as follows: Surprise, of Trenton, first; Victorine, of Alexandria Bay, second; Zitella, of Kingston, third; Sleepy Canadian, of Brockville, fourth, and took second place and money on tonnage allowance.

ROWING ON THE KILL VON KULL.—A race was rowed on the evening of July 29, between fours of the Neptune and Hesper Boat Clubs, of Staten Island. The course was from stakeboats achored off the Neptune Club House round corresponding stake boats a mile distant, in the direction of Elm Park, and return. The following were the contesting crews:

HESPER.	Pounds.	NEPTUNE.	Pounds.
S. Pratt, bow	140	— Sharpe, bow	140
L. O. Henderson, 2	156	J. Hamilton, 2	150
S. H. Pratt, 3	155	S. Whitman, 3	
C. G. Didriksen, stroke	145	C. King, stroke	160
J. W. Edwards, coxswain	135	B. Beckwith, coxswain	140

The Neptune men appeared to be the more mature crew, but their antagonists were young, hardy, and full of vim. From the start the Hespers slowly but surely drew ahead, and ere the turning point was reached, they had gained three boat lengths, which lead was kept until the finish. Time 15m. 3s.

—The long talked of scull race for $1,000 between Wallace Ross, of St. John, N. B., and Warren Smith, of Halifax, was rowed on the Kennebeccasis July 25. Distance, three miles with a turn. In the start home Ross was leading by a length and a half, when Smith's patent row lock came in contact with the button of his left-hand oar, and he was thrown out of the boat. Ross won the race in 26 minutes. Another match will doubtless be arranged.

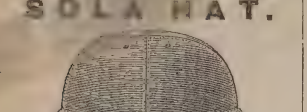
—John Snellgrove and John Kennedy rowed a single-shell race at Gowanus Bay, July 28. The course was three miles with a turn, from the long dock, foot of Thirty-eighth street, South Brooklyn, to and around a stakeboat anchored off Bay Ridge Point. Snellgrove was the winner in 22m. 12s.; Kennedy's time, 22m. 18s.

PAIR-OARED RACE.—A pair-oared race came off at South Cove, N. J., July 27, between the members of the Hudson Rowing Club, and two of the Orion Rowing and Athletic Club, the course being one and one-half miles—three-fourths and return. The Hudsons were the victors by 1m. 14s. Time, 12m. 31½s. The stiff wind blowing accounts for the slow time.

—The boat race between Amos Seibert and F. Denmarsh, rowed on the Alleghany River, at Hulton Station, Pa., was won by Seibert. Distance, 3 miles; time, 24m. 1½s. Denmarsh has challenged his opponent for another race for a purse of $1,000 or $2,000, to be rowed on the Upper Monongahela.

AMUSEMENTS.

MISS ANNA BOYLE AS JULIET.—This young lady of but fourteen years made her *debut* to a New York audience at Booth's Theatre on Monday evening, July 30, it being but her second appearance on any stage. It is to be regretted that there was not a larger audience to greet her, for the representation was unsurpassed in the annals of New York. Her Juliet was astonishing, not so much on account of her age as the superb interpretation, which surpasses in faithfulness and perception of the author's mind any reading heretofore attempted. That Miss Boyle fully appreciated the difficulties to be overcome was evident during the first act, when her acting was somewhat marred by diffidence and the difficulty of filling so large a theatre with her voice; but all this disappeared before the plaudits of a sympathizing audience. The fact that Shakespeare's Juliet was "a fortnight and odd days" less than fourteen years of age, so seldom recognized by delineators of the character, was impressed in such a manner that it was felt that no counterfeit was before us, but the veritable Juliet herself, hence Miss Boyle's rendition was a pleasant surprise to all, and was notably without an absurd stage action, usually deemed essential to the part. Her reading was almost, with out exception, beyond criticism, evincing not only thorough training, high cultivation and power, but a keen and comprehensive perception, which enabled her to grasp the subtler meanings.



To see Miss Boyle's Juliet is to desire to see it again, and we hope that certain critics will not only see her again, but witness more than the first act before rushing to the nearest restaurant to give vent to their doughty opinions. We predict for the lady an unrivalled popularity in the ranks of histrionic talent, as she possesses all the attributes of genius, youth, beauty, sweet and melodious voice and perfect enunciation.

Miss Boyle was fairly supported; Mr. Treville's *Romeo*, Mr. Levick's *Mercutio* and Mrs. Jordan's *Nurse* being most worthy of mention.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

A Partner Wanted in Florida.

A situation as full partner in an establishment of forwarding Florida oranges. Market all secured; the only work is Receiving, Counting, Boxing and Shipping. The business pays from 100 to 200 per cent. profit. The party must not expect to hunt or fish but a small part of the time, although fish and game are abundant. To a person slightly ailing the position would be very desirable, as the work is light. The location is on the gulf coast, just below Cedar Keys. The business would pay for two others, as we have to hire two or three (as last year); but each must have at least $1,000 cash in hand to take with us immediately on notice of shipments. Sight drafts will be honored in Boston. Everything responsible and of the highest order, and connected with an old established house in Boston controlling the best of the trade. Address, immediately, P. O. Box 450, Putnam, Conn.

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
OF NORTHERN MICHIGAN, VIA
Grand Rapids and Indiana Railroad.
(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the **Grand Traverse Region** will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also **Muscalonge, Pike** and **Pickerel**, abound.

In no other streams east of the Rocky Mountains is the famous **American Grayling** found in such numbers.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as **ice for packing fish** can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st **Round Trip Excursion Tickets** sold to **Points in Grand Traverse Region,** and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, **Mackinaw and Lake Superior** Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

J. H. PAGE, C. P. & T. A., Grand Rapids, Mich.

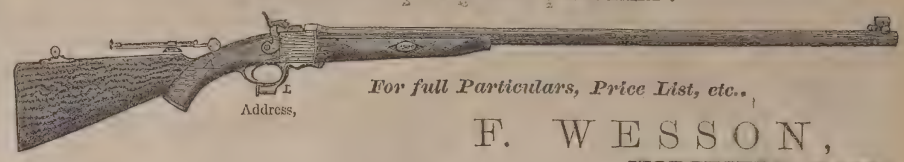
Laflin & Rand Powder Co.
No. 26 MURRAY ST., N. Y.,
Sole Proprietors and Manufacturers of
Orange Lightning Powder.
No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.
Orange Ducking Powder,
For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6¼ lbs. each, and canisters of 1 and 5 lbs. each.
Orange Rifle Powder.
The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.
All of the above give high velocities and less recoilnum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."
BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order.
Safety Fuse, Frictional and Platinum Fuses.
Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

THE
HAZARD POWDER CO.
MANUFACTURERS OF
GUNPOWDER.
Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*
Hazard's "American Sporting."
Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.
Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech guns.
Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 4 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.
Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT*, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.
The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office,
88 *WALL STREET, NEW YORK.*

NEW YORK, July 10, 1877.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Please say, for the information of some of my friends who may be misled by current statements, that I am still on the same powder for all out-door shooting, which I have used for several years past, never having risked the use of the nitrated powders except when shooting in a confined space in-doors, when the smoke from any regular powder would produce a smell rather offensive to some people, and cause somewhat greater obstruction to vision.



CAPT. A. H. BOGARDUS,
Champion Wing Shot of the World.

Warren Powder Mills,
MANUFACTURERS OF
BLASTING AND MINING, SHIPPING AND SPORTING GUNPOWDER.

SEND FOR DESCRIPTIVE CIRCULAR.

A VICTORIOUS INVENTION

The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when, set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST.

No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.

SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

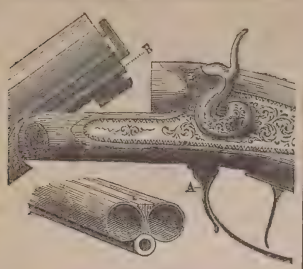
Their comparative excellence is recognized by the **Judges** in their **Report**, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.'S** exhibit **as the best Instruments** at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either 'shrink, swell or split.'" **THE ONLY ORGANS AWARDED THIS RANK.**

This Medal and Award was granted after the most severe competition of the best makers, before one of the **most competent juries** ever assembled.

New styles and prices just issued, which are in accordance with our rule, the **BEST ORGANS** for the least money.

We are prepared to appoint a few new Agents.



Illustrated Catalogues mailed, postpaid, upon application to

251 and 252 Broadway, N. Y.

W. & C. SCOTT & SONS.

First Prize Medal and Diploma, awarded at the Centennial Exhibition, for excellence of workmanship and material in their **Premier Quality** and medium grades. Their New Patent **Triplex** Lever Grip Action and **Compensating Lump.** The attention of sportsmen is requested to the above new action. Its superior strength and solidity impart greatly improved shooting powers. Hard hitting being the desideratum required, is obtained by this powerful gun. Prices of the New Triplex Lever Grip, $175, $225 to $400. Marked the Triplex 10-bores extra. Our highest grade is as usual marked the PREMIER QUALITY.

[Extract from FOREST AND STREAM, New York, December 28, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about $10 extra. Choke-bores, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

Paper and Metallic Shells
FOR
Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2½, 2¾, and 3 inches; No. 12—2½, 2¾, and 2⅞ inches. Longer Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.

Factory and office, No. 2,239 De Kalb street, St. Louis, Mo.

St. Louis Patent Shell Manufacturing Company.

Capt. Bogardus' Patent Glass Ball Trap and Rough Balls.

These Traps and Balls patented by Bogardus and used by him many thousand times, proves them to be just what is wanted by all

SPORTSMEN'S CLUBS AND AMATEURS.

THE PATENT ROUGH BALL—The only Ball that will break sure when hit by shot. Use none but the best. Every ball marked. Patented April 10, 1877; Traps, March 13, 1877.
